## CONGRESSIONAL RECORD.

### The Tariff.

### SPEECH

OF

HON. WALTER EVANS,  
OF KENTUCKY.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 24, 1897.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States—

Mr. EVANS said:

Mr. CHAIRMAN: After more than one hundred years of tariff discussion, it would really seem to be wholly unnecessary to further discuss the general proposition. In an attempt to do so from a standpoint somewhat different from that of those who have preceded me I shall endeavor to address myself to the questions involved, with candor and with as little as possible of partisan feeling. I am not vain enough to suppose that I can convince anybody that a protective tariff is wise if I do not advance some sound reason for it. Nor have I the slightest disposition to engage in this or any discussion upon any other line than that of a desire to aid in the accomplishment of what may seem best for the people we represent.

As a member of the Committee on Ways and Means, I have been anxious to contribute anything I could toward the perfection of the pending tariff bill. I am the first Republican who was ever upon that great committee from the section that we usually call the South. I regret to say that that section has hitherto been dominated by influences which have repelled the doctrine of protection. The keynote of that doctrine used to be sounded from the South. Its foremost champion was the illustrious statesman who so richly dowered the history of Kentucky and of the country with his genius, courage, and eloquence; yet before Henry Clay had departed from the Halls of Congress his voice had almost lost its weight in the South, and influences then controlled that section of the country which were hostile to the great principles to whose advocacy he had devoted his life work.

This bill is very simple in its objects. They are fully and accurately stated in the title. They are, first, to provide revenue for the Government, and second, to encourage the industries of the United States. Practical questions are presented, and in my judgment their discussion and treatment should be equally practical. The first can be easily and briefly disposed of, so far as any argument upon it may be concerned.

I have before me the official statement of the condition of the Treasury on the 5th of March, the first day of the present Administration, and about the end of the eighth month of the current fiscal year. It shows that there was then a deficit in the revenues for the first eight months of the present fiscal year of \$49,648,334.87. There has been for the last four years an average monthly deficit in the revenues of the Government of over \$4,000,000 per month.

These facts alone not only show, but they clearly demonstrate, that there should be a prompt increase of the revenues to meet this deficiency. The fact that month by month and year by year during the past four years we have upon an average run short in revenue \$4,000,000 each month is demonstration conclusive and positive that there is something wrong somewhere and that the evil should be remedied at once. This bill proposes to deal with that question in an effective manner. It proposes such rates of duty as shall increase the revenue up to the standard needed for the monthly expenses of the Government. Surely this is the dictate alike of common sense and patriotism.

But there is another, and to my mind a more important matter, if possible, proposed in the bill, to wit, the encouragement of the industries of the United States. I am in favor of increased reve-

nue, but I still more insist upon protection. Revenue is essential, but protection is paramount. Revenue will help the Government proper, but protection will relieve the whole people. If the figures I have given demonstrate the need of revenue, the facts known to every member who represents an industrial constituency of any character emphasize in a twofold degree the demand for encouragement to our industries of every kind.

In 1892 every man who cared to find work could do so at fairly good wages. Since 1893 the labor of finding work to do has generally been greater than the doing of the work after it has been found. No man can fail to experience the sincerest distress who goes through any of our cities, to see the idle men and the suffering women and children. Nothing further is needed to admonish us in the most significant manner that all our industries must be stimulated and encouraged.

And while I favor the speediest means of raising ample revenue for the Government, and believe that this bill should be passed because it will adequately do so, I am still more for it because it will put into forceful activity that doctrine of the Republican party which demands that there shall be encouragement given to the industries of the people of the United States. Our people are without work. Enforced idleness is the greatest calamity that can come to an industrious population.

As we all know, the McKinley bill was passed in 1890. It underwent in this House, and, indeed, in both Houses, a more elaborate discussion, perhaps, than this bill will receive. If I am not mistaken, though I was not here, the same prophecies of evil were hurled at that bill as at this—prophecies of disaster to the country if it passed, prophecies of every harmful result, as a reason why that bill should be rejected. And those of us who remember the history of the times after the bill became a law know that the people of the country were treated to prophecies of woe to the like of which possibly we had never been treated before. The people were fooled, and badly fooled. Everybody knows that in 1892, as a most unfortunate result, they reversed the policy of the Congress that passed that bill, and forced a new discussion of the question of the tariff upon different lines.

It was not long, however, before the people awoke to the fact that it was not the McKinley bill or its principles which were wrong, but that it was the Democratic leaders who had hoodwinked and deceived them. With fearful promptitude and completeness they overthrew those leaders, and by great majorities sent us here to pass a protective-tariff law. That was their demand. It imposed upon us a duty. We will perform it. That duty was to pass a protective-tariff bill, and the people knew that revenue would incidentally but adequately come from it.

The Republican members of the Committee on Ways and Means undertook to frame such a bill, and the one submitted to the House is the result. We know that the people in 1892 rejected the McKinley bill and rejected William McKinley. But, Mr. Chairman and gentlemen of the committee, again has the stone which the builders rejected become the head of the corner. William McKinley, who was repudiated, whose bill was repudiated in 1892, is now the President of the United States, and the bill we propose to you, which was built upon the McKinley bill as a foundation, will again, in my judgment, be the law of the land and a bulwark of prosperity to the people under McKinley's Administration. And we see, too, not only was that rejected stone made the head of the corner, but we see, furthermore, that that eminent statesman who presided over this House, and who was as much as any other force under Providence a factor in the problem of passing that bill, is for the third time the Speaker of the House.

The people of this day will not repeat the mistake of 1892. They have commissioned us, as I have said, to pass a tariff bill. The one that we have proposed is a tariff bill in the true sense of the word. We hear it derided, we hear it denounced as monstrous in most extravagant language; but when you come to look at it in the light of candor, when you come to look at it with a desire to know what it is, with a desire to understand what it in fact contains, you will find that the framework of this bill is precisely the same

in substance (varied only in rates and details) as the bill Mr. McKinley passed, the same as the bill that Mr. Wilson passed through the House. The only essential differences are as to the rates proposed in this bill and in the manner of adjusting those rates to the dutiable article, whether by specific designation or by ad valorem rates. In fact, and almost of necessity, all tariff bills proceed largely on the same lines so far as language and framework are concerned.

If we go back to the first resolution for the first tariff bill ever introduced in this House, we shall find the germ of the schedules contained in the tariff bill of to-day, and so all the way down. Not only have the articles on the dutiable lists many times doubled, but the articles upon the free list have also increased. The improved schedules have come in the regular classification in each of things that were homogeneous. This first appeared in the lettered schedules of the act of 1893. Again in 1890 and in 1894 that character of schedules was adopted by the framers of the tariff bills. But, practically considered, it is impossible to frame a tariff measure without taking into consideration the conflicting doctrines and theories of protection on the one side and those of free trade or a tariff for revenue only on the other.

Nothing better exhibits the relative value of the two theories than the fact that the East availed itself of protection, and greatly prospered; while the South scouted it, and is behind. The East has money to lend, and is abused; the South has it not, because of its own shortsightedness.

I have felt that the interests of the South have been sacrificed to the idols of prejudice and the sophisms of free trade. The people have been lured into neglect of the things most essential to their prosperity and advancement. No part of our people more need the benefits of protection, and none has suffered more by neglecting or repelling its teachings.

It will be found by anyone who really studies the question without jumping at conclusions that many things might have been made factors of prosperity in the South if only an energetic attempt had been made, but her statesmen would not look after them. On the contrary, they refuse even an offer to protect them, and broad and catholic as are the principles of protection, it has been impossible to force upon a people an advantage they have constantly repelled.

It seems to me it is time for this to be changed, time for the South to diversify and build up, broaden, and strengthen the industries and the industrial sentiment of that section and of her people. If, with all her bountiful resources, the South is behind any portion of the country to-day, it is because prejudice has caused her statesmen to sacrifice her real interests upon the altar of unsound theories. If this course could be reversed, the improvement we so admire and almost envy elsewhere would equally be hers. She has given it all up in order to follow the lead of those who were afraid to teach her to go forward lest their personal ascendancy might be overthrown by her advance. No delusive appeal has been spared to preserve this status. Even in this debate we are asked if any people ever got rich by being taxed, and the triumphant repetition of this inquiry of the sciolist indicates that it is supposed to leave nothing else to be said, and for years—yes, generations—men have been deluded by this suggestion, which embodies a palpable absurdity to the man who thinks. While in truth no people can well tax themselves into wealth, the inquiry I have mentioned proceeds upon the assumption that a tariff is a tax to the full extent of the rate of duty imposed.

I shall recur to this after a while, but for the present it may be sufficient to say that there is no tariff tax imposed upon any domestic manufacture. There is no tariff tax imposed upon any article that is made by our own people. We impose the tariff duty on the foreign article in order to give our home people a chance to make what we need. Reduce it to its elements, and the thing done is this: When a product of foreign growth or manufacture attempts to find a market in the United States, it is required to pay a price for the privilege. The difference between us is as to how large that price should be. The protectionist says that it should be a price which will at least bring the cost of the foreign product up to what it costs to make it here, and thus equalize the wages of the laboring man on this side of the water with the wages of the laboring man upon the other side, while the free trader insists that that is an element that should have no place in the problem except incidentally for revenue.

In my judgment it is unfortunate that the people of the southern part of our country—a people with whom I have always been identified, not in sentiment, but by birth and by all the ties that could bind me to any people—I say it is unfortunate, in my judgment, that that great people should have allowed prejudices and the power of early political association and teaching to lure them into a belief in the sophistries of free trade, and to cause them to repel and to exclude the efforts of the Republican party to give to that section of the country the same advantages that have made other sections rich, prosperous, and happy.

I indicated awhile ago that the natural home of the doctrine of protection was in the South; but after the cotton gin was dis-

covered and Calhoun had apostatized from that great doctrine, the South, under his leadership, gradually repelled it. It sought a more hospitable home elsewhere, and it was favorably received in the eastern part of our country. The people of the East were quick to see its advantages, and while others would not avail themselves of it, they did. And what has been the result? The people in the eastern part of this country have few or no natural advantages over the people in the southern part, but with a more enterprising genius, with a greater practical knowledge of the business of the world, they took advantage of this great American doctrine that had been offered to them by Henry Clay and the fathers, they availed themselves of it to the fullest extent, and, as I have stated, the consequence to-day is that it is a matter of reproach to them in this debate that they have money to lend.

COTTON.

They are prosperous, when they have the chance to be, and excite the envy of those in other portions of the country who ought to be equally prosperous. But instead of availing themselves of this doctrine and applying it, the statesmen of the South have been so wedded to the doctrine of free trade, to the doctrine that the tariff is a tax and a burden instead of a benefit, that we find just one man having the courage to come up from the State of Mississippi, a young man of apparent intelligence and information upon this subject—we find that young man coming here upon the invitation of the committee, an invitation that was extended not, as falsely alleged, to trusts and corporations and combines, but to everybody, poor and rich, high and low, all over the United States, who are interested in this great industrial question. That young man came up here, solitary and alone, and asked that a duty be placed upon long-fiber cotton, and when his proposition was heard before the Ways and Means Committee, the gallant leader of the Democracy from the State of Alabama [General WHEELER], as the hearings show, inveighed against it as an attempt to destroy the birthright of the South! I for one have told my friend from South Carolina, my associate upon the committee [Mr. McLAURIN], that if he would prepare a classification of the sort of cotton that he wants protected, I would cheerfully vote for it. Cotton is cotton, and if you undertake to put a duty on long fiber it is extremely difficult, indeed, well-nigh impossible, to tell where the line on different grades or character of fiber ought to begin and where it ought to end.

One of the theories of protection is that there is no need of protection for any industry which is perfectly independent of it. If any industry in the country was independent of protection, any that did not need it, it was the cotton industry up to the beginning of a small competition on the long-fiber variety.

In the earlier portions of the century, with a labor that defied the cheapest, with an almost absolute monopoly of the world's market, American cotton was indeed king.

When the late war made it necessary to get cotton elsewhere, means were found to cultivate it in other countries, and that is done to a large extent to-day. Still the United States produces very much more than half of the crop of the entire world, and exports over 70 per cent of what she raises. So that, speaking generally, the cotton-raising industry needs no protection and fears no rival. Of long fiber we import a comparatively few thousand bales for special manufactures, and it is now claimed, contrary to what at first appeared to be true, that we can raise an equally good long fiber in the South, and protection was asked by the young Mississippian for the effort.

If it be true that it can be done in this country by our planters, I am cordially in favor of giving it protection. Cotton generally does not need it; we all concede that. But if this variety does, it should have it, and if our planters can make it they should be stimulated to do so. On cotton generally a wholly unnecessary duty would look ridiculous in the face of 70 per cent of exports, and might invite reprisals; but if our friends can frame an intelligent and satisfactory classification and differentiation, I favor a duty upon the long fiber. I invited them to make the effort. The invitation was not accepted.

But, notwithstanding the facts I have stated, let us look at the history of tariffs on cotton, for I believe it will illustrate this question as well as any other subject that could be brought to the attention of the committee. After the doctrine of protection was first broached under our Government, there was never any disposition to exclude cotton from its benefits until it was done by the South itself. On the contrary, cotton was put upon the dutiable list by the tariff act of 1789, and it remained on the dutiable list until some years after the act of 1842. Then, in some way, it disappeared from the dutiable list—I do not know how—to reappear again on the list of taxed articles during the war. But as that was an exceptional period, and as it was for exceptional reasons, I need not dwell upon it, particularly as it was an internal-revenue tax. Now, there may have been some humbug in putting cotton on the dutiable list originally, because at that time there was no sort of danger of competition from any rival on the face of the earth. There was, as I have shown, no place in the world where cotton could have been produced of such

quality and in such quantities as to compete with our cotton industry, and especially the cotton industry as carried on by slave labor in the United States.

Still a duty was kept on cotton until about 1846. After that the free-trade tendency in the South became so strong—and especially as the doctrine was industriously inculcated that protection was injurious to the interests of slave labor—that the duty was taken off.

The devotion to free trade continued and expanded in the South until at the setting up of the Confederate government it was crystallized into a constitutional provision in the fundamental law of that organization in these words:

Sec. 8. The Congress shall have power to lay and collect taxes, duties, imports, and excises, for revenue necessary to pay the debts, provide for the common defense, and carry on the government of the Confederate States; but no bounties shall be granted from the treasury; nor shall any duties or taxes on importations from foreign nations be laid to promote or foster any branch of industry; and all duties, imports, and excises shall be uniform throughout the Confederate States.

I cite this, Mr. Chairman, only to show the strength of a notion that probably had its strongest support in the fact of slavery, but which, logically, should have disappeared with that institution. I fear, however, that the shadow of the most colossal of all recent mistakes—the late rebellion—hangs over and beclouds the minds of many of the good people of the South, especially on the subject of protection to home industries.

In 1862 there was an internal-revenue tax put upon cotton—largely upon the ground that, as the Southern States had brought on the war for the suppression of the rebellion, but had contributed so little to the expense of maintaining the struggle, it was just, in that exceptional instance, to put an internal-revenue tax upon its chief product. So the tax was imposed, yielding to the Government a revenue of over \$35,000,000 per annum. But on February 3, 1868, under the Administration of President Johnson, that tax was removed by an act which also contained a proviso that all imports of cotton should be free of duty, and from that day to this cotton has been upon the free list. Indeed, so far as customs duties are concerned, it seems to have been so ever since 1847. So far as my investigations enable me to judge, not a single word of protest, or entreaty, or request was ever heard from any Southern statesman from that day to this in behalf of placing cotton on the dutiable list. Whatever feeling there may have been in favor of such a tax, this, like all the other industries of the South, has been sacrificed to the insane prejudice against protection, and because the leaders of the South, having so long been dominated by that argument, have been fearful of their own ascendancy—too fearful of it, indeed, to permit themselves to come up with any demand for protection for cotton. My friend from South Carolina [Mr. McLaurin] stands alone, and he only speaks generally and makes no specific motion.

#### SOME GENERAL PROPOSITIONS.

It may not be amiss at this point to advert to a few general principles.

While somebody must contribute to the revenues of the country—must, if you please, pay taxes—in order to support the Government, maintain its foreign service, its vast customs and internal systems of revenues, its Army and Navy, its Judiciary, its generous pension list, its Indian contracts, its magnificent postal service, and pay the principal and interest of its debts, it is essential that our people shall in some way earn the money to pay it themselves or exact it from somebody else in consideration of something which that somebody else wants—such, for example, as the right to enter our markets and sell his products to our people.

If our own people have to pay the necessary money into the Treasury, it is wise statesmanship to provide a way for them to make it; otherwise they can not pay it.

No people can make money unless they can work or do business on some profitable basis. The fact is too universally known for it to be necessary, or even admissible, in this House to give figures to show how much higher and better the normal scale of wages in this country is over that of other countries. If our people can not do the work necessary to make the things we need, the money to be thus earned is lost to them, and goes to some other people alien to us. In that event our people suffer and the foreigner is benefited. We lose; they gain. The fundamental notion of protection is the devising of some plan by which the people at home get the benefit of all the opportunities for these earnings.

Starting with the postulate that if rates of wages were uniform the world over there would be no such struggle for opportunity locally, we are met and confronted at once with the momentous fact that there is a vast difference in rates of wages, and the problem for our statesmanship is, How shall we guard our people against foreign lower wages? The plan hit upon is one which can be maintained and supported by our magnificent home markets, and is to charge on foreign-made products a sum of money (or duty), for the benefit of our Treasury, which shall make their cost, when laid down in our ports, at least as great as that of the same articles made by our people at our wages.

This imposes no tax on what our people make nor upon any product of their labor; but if any tax is paid it is paid on the arti-

cle made abroad and collected for the benefit of our Treasury, in order to keep up the wages of our workingman, so that from those wages he can live like an American citizen and not like a foreign serf. [Loud applause.] This is what we call protecting and stimulating American industries, and what our Democratic friends call taxing them to death. By our system, as shown in 1892, our industrious man gets plenty of work and good wages; by their system, as shown since 1893, he gets little work and plenty of starvation. The American people will take their choice, and it is not believed they will condemn this bill, which seeks to impose our system in place of the Democratic system.

We hear much of prosperity and we all long for it.

It may help us to recognize it when it comes by knowing what it is. I believe it may be correctly described as being that condition of things where every man can, at a fair price, dispose promptly of what he has for sale, whether it be of brawn or brain, whether it be labor or commodity.

If we have it for sale and can sell it readily, and at a fair price, we are prosperous; otherwise not.

The McKinley bill brought this condition of things in 1892. The Wilson bill destroyed it since 1893. If we have a return of that condition, as we hope and believe we shall, it will be proof positive of the superiority of our system over Professor Wilson's.

We are all desirous of bringing relief from present conditions, and it is better to industriously address ourselves to the effort than to waste time in ad captandum speeches. We have done our best to frame a bill that will bring relief alike to Treasury and people.

#### NOTHING SECTIONAL.

That bill, Mr. Chairman, is before us, and in its whole structure is as broad as the United States. There is no section of the country that is not favored or meant to be favored by it. It was my agreeable privilege through the whole time of its construction to urge that every industry in the South of which I had any knowledge that it needed it should be put under the protective influences of the American system. I did this because I felt that that great section of the country had lost by scouting and repelling this advantage; lost by the timidity of her statesmen, who, while they will perhaps in private admit that the protection principle is right, yet have not the courage to come out and say so because of the fearful doom which they apprehend may await them under the prejudices of their people. My friends of the South, we ought to get from under the dominion of these prejudices and fears. If there is any good in protection—and we have seen it demonstrated in the East; we have seen it demonstrated in all the industries of the North—if there be any good in the protection you inveigh against, let us avail ourselves of it in the South.

This bill, taken up by the four corners, will be seen to have protected all sections of the country. It has as carefully protected the fruits and products of California as it has those of the looms of New England. It has as well guarded the wrapper tobacco of Florida and Georgia—and some gentlemen here do not know, possibly, how much some of those constituencies are interested in that thing—as it has that of Connecticut, Pennsylvania, or Ohio. It has equally cared for the monazite and mica of North Carolina, the bauxite of Alabama, the barites of Virginia, the cattle of Texas, the sugar of Louisiana, the rice of Carolina, and all the products that we could think of that needed protection or which anybody suggested as wisely and properly needing it, as anything in the North. There is nothing sectional in the bill, and I am glad of it.

#### COTTON TIES.

But, my friends, you have been deluded—I say it in all kindness—by that specious pretext (there is nothing in it when you come to analyze it) that a tariff is a tax on the commodity on which it is levied, as though it reached anything domestic. If there is anything that can demonstrate the contrary, it is the facts with regard to cotton ties, to which allusion has been frequently made. If the duty imposed is a tax, then certainly the home price of an article ought to be equal to the amount of the cost of its production, plus the rate of duty that is laid upon it. Now, I beg your attention to some statements of fact, the truth and accuracy of which I believe no one will deny. I challenge contradiction of the statements I am about to make. I want to make statements that are strictly accurate, and I want to draw a conclusion from those statements which, if it has any value, must result only from their accuracy.

In 1890 a bundle of cotton ties was worth at the place of production about \$1.25 or \$1.30. In that year the McKinley tariff imposed upon cotton ties a duty that was equivalent to about \$1.03 per bundle. Now, if it be true that a tariff duty is a tax, then naturally, logically, inevitably, the price of that bundle of cotton ties ought to have been \$2.28 or \$2.33. Can anybody cavil or dispute about the logic of that conclusion? But what was the fact? After the duty was imposed upon cotton ties—when protection was accorded to that industry—the manufacture of cotton ties in the United States was so stimulated that the price actually went down to 80 or 90 cents per bundle under home competition, and it never rose again until the Wilson bill restored cotton ties to the free list, after which the price went back in 1896 to \$1.40.

And so surely has the passage of this bill now before you been forecast by the business world, a gentleman in this House, under the certainty that this bill will be passed, assures me he will contract now to deliver to any man interested in the cotton-tie trade 5,000 bundles of cotton ties at 65 cents a bundle. [Applause on the Republican side.] If anything can demonstrate the absolute valuelessness of the argument that a duty is a tax, it is such facts as I have stated.

I might refer to a similar demonstration which has been afforded in the instance of steel rails and in tin plate. I believe to-day, Mr. Chairman, there is not a manufactured article coming from the workshops of America under the benign influence of the protective principle which is not cheaper by 75 per cent than it would have been had it not been for the adoption of that principle—not one. There is, therefore, no room to doubt that a tariff duty is not always a tax. And when men talk of a tariff being a tax, they talk without judgment; they talk under the impulse of strong political bias; they talk under the influence of mere feeling, enthusiasm, and exaggeration. They do not talk according to the facts of the case or the dictates of sound judgment. Instead of tariff rates being taxes to increase the price of products, except in case of the luxuries we do not produce in this country, and which ought to bear a tax, protective tariff rates, in every instance where the industry has been established, have lowered the price of the article by the home competition among our own manufacturers. It was so in cotton ties. It was so in tin plate. It was so in steel rails. It was so in nails and cutlery. It will be so in case of every great manufactured article, because, if protected properly, we can make all we want at fair prices and still pay American wages, which, after all, is the matter of prime importance, for that gives our great laboring class money to buy and pay for other products, and thus contribute to general prosperity.

Again, my friends from the South, let me say that I will be glad to go with you, not into any mere antagonistic discussion of this great question, but I would like to sit with you and reason about it; I would like to discuss with you in friendly fashion the real facts bearing upon it. I do not care about indulging in rodomontade or mere partisan declamation in the consideration of a question of this character. I do not desire to take into consideration or go into a discussion of the question of the great disaster that will come on the country if you put a duty of 10 cents rather than a duty of 5 cents upon a particular article! That is mere exaggeration and there is no logic in such a discussion as that. But I have wanted to get at the principle upon which the bill is based, to reason with you upon that, and to show what I regard as a proper working of that principle in this bill.

#### TRUSTS.

The cry of trusts and combines, the claim that the tariff rates certainly add to the price of the poor man's necessities, and all kindred humbugs will be unavailing, and should be remanded to the hustings where the gentle demagogue hopes to fool his home rustic. They are out of place here, because if there should be some increase of the prices of things, and particularly some increase of the demand for things, it is just what everybody wants. It is what is necessary, so the increase extends all around. One man can not reasonably expect to get a higher price for his commodity while everybody else suffers a decline. If all go up equally, it will be because greater labor has given greater purchasing power and greater demand for everything.

The great bugaboo in this debate and in others has been trusts, and the charge is made that protection fosters and encourages trusts and great combinations of capital which oppress the people. Whether so-called trusts be good or bad, one thing is undeniable and undeniable, namely, that they originated and still flourish in free-trade England. It is clear, therefore, that as they exist alike in England and the United States, some other cause than a protective tariff produced them. For the present this fact is useful to show the lack of candor in those who make the charge. Trusts have in truth nothing to do with the case, except that they are made use of as vehicles of misrepresentation and invective. If they are bad, we have statutes to enforce against them. If those laws are inadequate, amend them; but stop the false imputation that protective tariffs foster them.

The tariff has nothing to do with their creation. They originate in causes entirely outside of tariff duties; and because some of them flourish is no more a reason for abandoning duties than would the existence of a "moonshine" distillery be a reason for removing the tax on whisky. In one case the trust, and in the other the moonshine distillery, springs up possibly in disregard of law, but for the same reason, namely, a desire of the promoters to make money. Trusts are great combinations of capital in comparatively few hands which impede the chances of success of weaker combinations or individuals who may be rivals; but luckily in this country conditions have been so fortunate so far as to compel the great trusts to market their products at very greatly lowered prices. For example, sugar was never so low as the sugar trust has sold it; nor was coal oil ever so low as the

Standard Oil Company put it. While we should sternly hold trusts in check, these facts show that tariff duties have not fostered them.

#### SCHEDULES.

When we come to make the schedules, to do so properly involves difficulties. Any person who has had to do with their preparation knows that to be a fact. Then comes the real trouble that men unfortunate enough to be engaged in that work have to encounter. Then it is that selfishness comes into play. When people specially interested appear before the committee and want some advantage given to a particular interest, then judgment and discretion must be exercised as against appeals intended to excite sympathy. Then it is that care must be exercised in the consideration of appeals that have a tendency to influence us against what we believe to be the true theory of the protective principle. Then it is that the specious and not unnaturally selfish plea of raw material must be resisted. Now, what is it that you ought to have constantly in mind in determining the details of a proper system of tariff legislation? It is the great principle, with which all are familiar, that a protective duty is to be levied on articles which we can grow or make here at least equal to the difference between the cost of making and distributing them in this country and the cost of their growth or manufacture in some foreign country. Now, when anybody wants to impose a duty higher than that, or to place a duty on an article which gives it greater protection than the difference in cost, it ought not to be done. The appeal should be rejected unless in a most exceptional case. When we come to the schedules, therefore, and have to meet these appeals and the contest of rivals, especially over so-called raw materials, we have a very stern duty to perform. We have been able, I hope, to guard against injurious discriminations on this account. We have had the friends of the sugar trust before us, also those of the Standard Oil trust, and of Armour & Co., but I can confidently assert in refutation of what has been suggested during this discussion, that in not a single instance have these appeals had any influence on the mind of the committee in framing this bill. [Applause.] On the contrary, they adhered with absolute strictness, as far as in them lay, to the principle laid down, subject always to the infirmities of human judgment and the liability to error of the human mind.

Furthermore, Mr. Chairman, in considering the free list we had regard to the other principle, and also in other schedules as well, that where anything was an article of luxury, it was a proper subject for raising revenue upon. We addressed ourselves also to the task of raising revenue, and as far as it was practical to do so, we have placed a higher duty upon luxuries than upon other articles, especially the necessities of human life. The duties on luxuries do not often or at all affect the common people; as a rule they will affect those only who have money to pay and are willing to pay for luxuries. Those duties can not affect those who have no money to pay and consequently they have no interest in the duty upon them, and if you see proper to call duties upon this class of articles, if we do not produce them at all, a tax, you are not far wrong. Knowing the great necessity for raising revenue for the support of the Government, we nevertheless kept in view steadily the true principles of the Republican party with reference to a protective tariff. It may be that some duties were made higher than they ought to be. But we could not ignore the facts as we found them; we could not fail to consider them; we needed revenue in largely increasing quantities, and we had to frame the bill with a view to meeting that condition as well as the need of protection.

I have not risen to reproach the Democratic party generally, nor to animadvert upon the shortcomings with which they have been charged in connection with the condition in which the country finds itself. That would do no good now, nor am I here to revamp any speech made by me during the late campaign. I want to support and explain the work of the Ways and Means Committee. We have endeavored to deal kindly, fairly, and intelligently with all of the questions demanding our attention.

Hereafter we have got to consider this bill in detail; we have got to consider it paragraph by paragraph and line by line, and all will be called upon in time to take part in the discussion of the matters as they come up. Then it is that we shall have an opportunity to explain and state the reasons why many provisions of the bill are inserted which it may not be practical to consider in the general debate now progressing.

We had before us in the preparation of the bill the most expert of the custom-house officials, in order to have the benefit of his experience and judgment in recasting the language of the bill. In some cases we found in the Wilson bill language greatly superior to that employed in the McKinley bill, and without hesitation we adopted it where it could be done with profit to our bill, and I believe there was never a revenue measure framed in the House that had less of prejudice involved in its preparation than there was in the preparation of the bill which the House is now called upon to approve or disapprove. On the contrary, with an earnestness

of purpose that I have never seen surpassed, we have worked night after night, and day after day, anxiously desiring to get that bill, as far as we could, into a perfect state; and while many of us doubtless did not agree and could not agree to each and every one of its provisions, upon the whole we have presented to this House and to the Committee of the Whole a bill that will stand the test of any discussion and any intelligent criticism of its main features.

#### THE FARMER.

And, Mr. Chairman, I want to express the profound conviction that there is no class of our community whose interests have been better protected and guarded than the farmers. There was no man upon that committee, so far as I know, who was not willing to accord to the farmer all of the protection he deserves, full measure and running over, indeed. Many of us were farmer boys. I go back to the farm myself. I was born on a farm. The farm has always been dear to me, and there is nothing about the farmer that I can not sympathize with. As much as any class of our people, the farmer depends upon the good that comes from protection. If the people who labor are prosperous, the farmer can readily and profitably sell his product at good prices. Otherwise he can not and suffers. Now, I should like to ask my friends from Texas if they think there should not have been some sort of a protective duty levied upon cattle? I should like to know if it was a tax, in an offensive sense, to guard by a customs duty the great plains of Texas against the incursions of the cheap Mexican steer. I should like to know if it is an offense in their estimation to protect the great wheat and corn fields of Texas against any possible corn crop or wheat crop that may be produced in Mexico by the peon labor of Mexico.

We have put a duty upon cattle that may be too high or may be too low, but we have carefully investigated the subject; we have felt that Texas needed protection for her cattle; we have felt that Texas was as much entitled to that, with its 100,000 Democratic majority, as the State of Kentucky, with its 265 Republican majority. [Applause.] I believe that no Texan here would be so untrue to the Lone Star State as to say that we did wrong in putting a protective duty upon cattle, or corn, or wheat.

So it is upon the Canadian border. It is true that the farmer who raises corn in my State, or in any Central State, or who raises any crop in a Southern State, may not be materially injured by competition from Canada; but we can not frame a tariff bill without having some regard for the people who live along the great stretch of border land from the coast of Maine to the coast of Washington.

We know that, extending for thousands of miles, there is another country on the other side, largely separated from our own country only by an imaginary line, but sometimes by a lake or river of easy navigability.

We must guard the people who have to pay American wages for their labor against the cheap products of Canada, where they do not pay what we call American wages.

And while it is true that possibly the influence of that protective tariff is not felt very far from the Canadian border, yet if we allowed Canada to come into the United States and compete with our farmers upon equal terms, it might be that those farmers along the border would push a little farther down upon their neighbors and those in turn farther down, until the corn of Canada, and the wheat from Canada, and the produce from Mexico might exert a very material influence upon the prices of products of like character far in the interior of our country.

So that we had to consider all those things, and the members of the Ways and Means Committee, looking at the existing condition of things, not being bounded by any little selfish interest, not considering simply the welfare of their own constituents, but endeavoring to have in mind the interests of the people of the whole country everywhere, regardless of politics, regardless of race, color, or previous condition, have done their best to give to this House a bill that will meet with the approval of the people of the country.

#### PROSPERITY—REAL FACTORS.

We know that if prosperity is about to dawn, it has not yet come in full tide. We know that prosperity was upon us in 1892-93, and without inquiring into the cause of the change we know that from 1893 to 1897 there was something—whether you call it a lack of prosperity or hard times—we know there was something that was hurting the American people almost beyond the power of endurance. We know that in 1892 our industries flourished, while those in Europe languished. We know that since 1894 Europe's industries have flourished, while ours have been smitten with fateful paralysis, and it was the great mission of that committee to endeavor to do something that would relieve this situation, that would relieve the stress of these hard times, that would relieve the severity of those disasters that in some way or form, or from some cause, had undeniably come upon the people of the country. They have endeavored to do this. And whether McKinley's inauguration immediately brought back prosperity or not, whether that event could with magic wand invoke a

return of the prosperity that was upon the people in 1892, we profoundly believe that if prosperity does come to the country, if there be a restitution of the good times that certainly existed in 1892, if they come to the men, women, and children of the land, it will, in our judgment, be under the operation, the benign and beneficent operation, of the bill now under consideration by this committee. [Applause on the Republican side.]

I would not prophesy upon either side of this great question. While I certainly would not allow myself or my imagination to run away into prophesying everything that was disastrous if the bill should fail, while I would not join in a witches' dance around any caldron from which was expected to come only evil from the rejection of the proposed measure, I would at the same time avoid the counter-exaggeration upon the other side of leading the people to expect that instantly upon the inauguration of McKinley and the enactment of this bill we should see enterprise blossom as the rose, every furnace put into instant operation, or every man who did not have work now get it at once at increased wages.

If these great results come, as we believe they surely must and will at last, it were better that they came in a natural way. Then, God willing, they will come to stay. Then they will build up the waste places, and smiling plenty will feast the land.

It were better that we should have no booms. It would be better when prosperity does come, when good times do again visit business, that they should come permanently; and if this bill is passed in anything like its present shape, if no other delusion come over the minds of the people, in my judgment it will gradually but surely bring back such times, and the American people will wait long before they will again be smitten with such a delusion, misfortune, and blindness as overcame them in the summer of 1892. [Loud applause on the Republican side.]

I should close now if I did not fear that no opportunity would be reached of discussing some other features of the case.

I submit, Mr. Chairman, that what we want to do is to start our people to work, and we hope this bill will help to do it. In 1892 we were at work. Europe was idle. In 1896 Europe was at work, and we were idle. We want to change this so far at least as to get work for our own people. We can not do it unless our industrial enterprises are in some way stimulated into a life and activity that they do not have now. Our opponents here still expend all their time talking about taxes. Everything we propose to do they say will be the imposition of a new and additional taxation. We remind them that we are putting no taxation upon any article which is, in fact, produced in this country by the labor of our own people. We show them by every instance that, instead of this protection increasing the price, it has reduced it by the vigor of home competition, which restrains prices within reasonable bounds, as I have shown, as an apt illustration, it did in the instance of cotton ties. In short, we only attempt to encourage the production here by our labor, and as the result of our enterprise, of the same kind of articles, by putting a duty upon them when produced elsewhere. Instead of putting a tax upon our home products, we only protect and encourage the efforts of our people to produce here. We would simply erect a barrier against the influx of cheap foreign products which would break down our own industries. The duty that we would impose should be such as would equalize the cost of production and distribution of the articles, so that the foreigner shall not have the full benefit of our markets on better terms than our own people can get them under our rates of wages.

The Democrats persist in calling this taxation, but we insist that it is protection. The people have made and can maintain their choice between these two contentions. It is clear that if we all work at good wages we have purchasing power in our own people for all of our products at fair prices, and this condition of things we rightly call prosperity; but if we do not work, or if we work at poor wages, our purchasing power is curtailed, and that curtailment is the very essence of hard times. I shall not read tables to show the differences between our rates of wages and those of other countries. Everybody knows that those differences exist as well as they know the multiplication table. My only fear on the subject is that unless we shut out newcomers to a very great extent we shall soon have so much competition for our present laborers as to greatly decrease wages. I am in favor of maintaining wages, even if we have to curtail immigration, for I would prefer to see our present number of laborers getting good wages than for other countries to increase our force of laborers and diminish our rates of wages.

#### STRIKES.

Our opponents have said a great deal about strikes, and charge them up to the doctrine of protection. It is true that in prosperous times strikes are more frequent, but this is because labor feels independent and more inclined to take risks and to do as it pleases with the employer; but in times like these the most valiant laborer is afraid to strike. His wages are lowered, but it is better, in his estimation, that he should submit to the decrease, because nothing better offers itself, and he fears, if he loses the job he has, it will be without hope of finding another.

## SPECIFIC VS. AD VALOREM.

A practical question we have had to consider has been whether duties should be levied by specifically designated rates, clearly showing their subject and amount, without any person having any advantage in the race for low valuations, or whether the rates should be fixed by the value placed upon the article at the custom-house. One of these systems might be as good as the other if we could fix valuations by an accurate and perfectly reliable rule, but in the nature of the case values at the custom-house are largely fixed by persons most interested in keeping them at the lowest point. The system of ad valorem rates has been the cause of enormous frauds through false affidavits and fabricated invoices, and the particularly corrupt system by which foreign manufacturers and others consign goods to their own agents here, whereby they can invoice them at their own prices, whether it be the real value or a fraudulent one. The Ways and Means Committee of the Fifty-fourth Congress heard a great deal of testimony on this subject, and became thoroughly convinced that the most extensive and injurious frauds were perpetrated by reason of ad valorem rates, the loss of revenue on some of the schedules alone amounting to millions of dollars. There is little, if any, difference of opinion on this subject among customs officers, who are practically acquainted with the actual operations of the law, and the value of the specific as against the ad valorem mode of assessing duties was never more strongly demonstrated than by the report of the late Secretary Fairchild. Specific duties have always been the favorite method of Republican Congresses, and that method has been pursued in this bill wherever it was practicable. In some cases, where values were very various or rates impossible to fix in specific descriptions on a just basis, ad valorem duties are unavoidable.

Take, for example, the pottery schedule as the most notable instance of the impossibility of fixing specific duties.

## RAW MATERIALS.

But, Mr. Chairman, the greatest difficulty is always found in the conflict—sharp conflict—between producers of what are called raw materials and the manufacturers of the so-called finished products. Oftentimes when one man desires to use a lower form of product out of which to manufacture a more highly finished and expensive article, he calls it his raw material, and if, as is often the case, he is very selfish, he at once begins to clamor that his raw material shall come in free. This clamor, while not invented by the late President Cleveland, was immensely increased in vehement resonance under his insistence. But what is raw material? The ore is the finished product of the miner; it is the raw material of the furnace. Pig iron is the finished product of the furnace, but it is the raw material of many other manufacturers. Corn, wheat, etc., are the finished product of the farmer—finished by his labor and toil—but they are the raw material of others. And so on through the whole list. When any selfish interest appealed to us for free raw material we had to inquire whether his raw material was the finished product of some other producer in this country, and remind him that that protection would be class legislation indeed which protected one man in our country at the expense of all his predecessors in labor and production. The true doctrine which we have continually tried to keep in view, whether always able to precisely and ideally adjust it or not, has been to grant protection wherever needed to give our people work, and our capital means of employing labor, so that our people might be busy, and our own country prosperous by reason of that employment as the true source of it. We have not been deterred by the constant iteration of the word tax as falsely applied to our protective duties; for we knew two things, namely: First, that such talk had already fooled our people once too often, and second, that there was never a protective tariff law passed in this country that did not bring prosperity, nor a free-trade tariff that did not bring hard times. We knew that history would verify this statement.

## WOOL.

I shall only say of the woolen schedule that it is substantially the same as in the McKinley bill. Under that bill our country flourished as never before, and with its displacement came disaster and all our woes. None suffered more than those engaged in the wool industry, unless it were those engaged in the manufacture of woollens. If the people ever plainly announced their command to any Congress it was that this Congress should reenact a protective tariff law closely approaching in its provisions the McKinley law, and we have endeavored to obey that behest in the woolen schedule. We restored the McKinley duty on wool, and that involves both the protective and the compensatory duty on woollens. Until the compensatory duty is added, the protective duty does not begin on woolen manufactures. Briefly, the compensatory duty means this: Our foreign competitors in woolen manufacturing have access to washed and scoured wools. We have not that access as long as we have a duty upon wool, for those wools do not come in. The wools we import into this country contain enormous quantities of dirt and grease, amounting sometimes to

as much as 60 per cent or over. Many times it is less. This dirt all pays wool duty. Unless there is compensation for this loss in the duties imposed on woollens for manufactures, any fair-minded person would see at once the trouble our woolen manufacturers would encounter.

## TOBACCO.

And so I might say as to tobacco, for that schedule is not far from what it was in the McKinley bill when that bill was passed by the House in 1890. As this schedule advances some of its items above the Wilson bill rates, and as there has been industriously worked up through the efforts of a few of our cigar manufacturers on the seaboard some exaggerated fears about the results of those advances, it may be proper to go into the subject with care and fullness. And right here has appeared one of the most glaring instances probably in the whole bill of that selfish claim for free raw material, so called, as against the producer of it.

With the expectation that the duty on wrapper tobacco should be \$2 per pound, the McKinley bill, as it passed Congress, fixed the duty on cigars at \$4.50 per thousand, and in addition 25 per cent ad valorem. The Wilson bill fixed it at \$4 per thousand and 25 per cent ad valorem. We restored the McKinley rate on cigars in this bill as compensation for the increase on tobaccos. It may be confidently stated that few, if any, industries are more generously protected than that of the cigar maker, nor has anywhere the result been to reduce importations in greater proportions. Out of 4,238,000,000 cigars consumed in this country last year, only 37,000,000 (less than nine-tenths of 1 per cent) were imported, showing how well our cigar industry is protected. We have not interfered with that protection otherwise than to restore the full amount of the McKinley rates, fortified as they are under the present law by an internal-revenue tax of \$3 per thousand on all cigars, domestic and foreign. But while thus highly protected, some few of the cigar manufacturers have insisted that the farmer, who grows filler and wrapper tobacco, shall not be protected at all, in order that they might get their so-called raw material free, or at least at a low duty.

This may be business, but it is not Americanism, and I do not believe it will strike the great body of cigar makers themselves as being either fair, just, or generous. In this country we raise tobacco suitable for wrappers and fillers in many portions of the United States, largely, indeed, in Pennsylvania, New York, Ohio, Wisconsin, and Connecticut, and in rapidly increasing quantities in Georgia and Florida. The growers in those, and perhaps other sections, insist upon a much higher duty than we have fixed in this bill. On the other hand, in recent years a Netherlands syndicate has established very extensive plantations in the Island of Sumatra, where, at comparatively trifling cost, they raise large quantities of tobacco of a pretty color and extremely thin but tough-fibered leaf, which has become a fad for cigar wrappers. It is a most remarkable weed, and 1 pound of it will wrap 500 cigars, some two or three times as many as the best American or Cuban wrappers. It is worth in the market over 75 cents per pound in bond, while our farmers get less than 20 cents on an average.

Upon this tobacco the syndicate referred to has earned most astonishing profits, as shown by the evidence, and a large proportion of those profits were made from its trade with the United States, which is one of its largest and most valuable customers. This tobacco is extensively used for wrappers, and supplants enormous quantities of American-grown tobacco, probably nearly as good, but not quite so fashionable, and thus throws out of profitable employment a large number of American farm laborers. While the committee did not deem it wise to go to the extent the farmers asked in the way of protecting their industry, it was, after most careful consideration, deemed best as a fair adjustment to restore the McKinley rate of \$2 per pound on wrappers, as against \$1.50 per pound under the present law, and then raise to the McKinley rates the duty on cigars. If we had supposed that this would cause the cigar maker any serious loss, we would have refused to do it; but we did not, and do not doubt that the Netherlands syndicate will stick to this most profitable market; that it will itself retain the market by paying the additional duty, as is done and as the foreigner can afford to do in many similar instances in other lines. The syndicate may not make quite as much profit from our people after this, but our cigar makers will lose nothing, and our Government, so much in need of revenue, will be largely the gainer. The Government will divide to some extent the profits with the Dutch syndicate. And in considering the whole question, it must not be forgotten, that the tobacco we use in this country in making cigars is always about three-fourths American product. The farmer needs protection for this, and should not be sacrificed to the foreigner or any rival home interest, even on the plea of raw material.

As to Cuban wrappers and fillers, I desire to say a few words. The facts about them present a most remarkable state of case. The duty on wrapper tobacco of every kind of course included Cuban wrapper and the duty on filler, which under the old law was 35 cents per pound, also included Cuban, the law making no distinction in language between tobaccos grown in different countries.

The Cuban farmers pack their crops in bales promiscuously, without assorting or culling it, including in the same bale tobacco suitable for wrappers as well as that fit only for fillers, although, in point of fact, nearly one-fourth of it is usually suitable for wrappers. To meet this habit of the Cubans, the McKinley law provided that if in any bale there was any quantity of tobacco suitable for wrappers it should all pay the wrapper duty of \$3 per pound instead of the filler duty of 35 cents per pound. Under some curious influence, particularly the shrewd arguments of the Florida importers, the general appraisers construed this to mean that if there was an "appreciable" proportion of the contents of the bale suitable for wrappers the wrapper duty should be assessed, otherwise not, and thereupon proceeded to hold that less than 15 per cent was not an appreciable quantity. This was a most astonishing ruling, but it so pleased our opponents that they accepted it as sound, and expressly adopted the idea in the Wilson bill. What has been the result? Mark the statement well. From Cuba in the fiscal year 1898 there was imported 26,749,911 pounds of tobacco, of which only 22,406 pounds, or less than one-twelfth of 1 per cent, was rated at the custom-house as suitable for wrappers and assessed with wrapper duty. Yet in Florida alone the cigar manufacturers used Cuban wrappers on 120,000,000 cigars made there and the rest of the country used Cuban wrappers on 60,000,000 more. All of the wrapper thus used except the 22,406 pounds escaped the wrapper duty of \$1.50 per pound.

Was there, Mr. Chairman, ever so palpable a fraud perpetrated on the revenues of the United States? It is demonstrated by the figures, which show that 180,000,000 cigars were wrapped with 22,406 pounds of Cuban wrappers. It is estimated that by this fraud alone the Government lost millions of dollars, and that the Key West and other seacoast manufacturers got the benefit of it all. Those in the interior got none. Indeed, they used but little of it. One most reputable firm in my district, which in 1896 made 6,614,000 cigars, used tobacco in the following proportions: Habana filler, 7½ per cent; American or domestic filler, 92½ per cent; Habana wrapper, 2½ per cent; Sumatra wrapper, 93 per cent; domestic wrapper 4½ per cent.

This firm got no benefit of the seacoast frauds on the revenues of the country. It was in view of facts like these that the committee considered it wise not to foolishly attempt to collect wrapper duties in name only on Cuban tobaccos, and subject the custom-house to such ridiculous frauds as I have mentioned, but to endeavor to get the aggregate amount of revenue which the Government ought to get by putting a round duty of 65 cents on fillers, and compel its collection in spite of the ingenuity of the Florida evaders of the law under the remarkable ruling of the custom-house officials. Foreign-grown tobacco is a luxury, and was thought to be an especially fit subject for revenue, and our home article was regarded as especially worthy of protection. We have tried to reach both objects, knowing that for a few years the duty on Cuban used was likely to be somewhat immaterial, as little was likely to be produced because of the war, and knowing also that now was a good time to encourage the American industry of growing these fine tobaccos.

In all this there were four things to be considered: First and most important, the Government, which so greatly needs revenue; second, the grower, who needs protection for this product of the farm; third, the cigar manufacturer, whose protection is certainly ample, and who, therefore, should not make the grower a victim on the score of raw material; fourth, the consuming public, who should not have duties so high as the other interests in different ways insist. The committee have tried to consider all of these various interests the best we could, and the arrangements made are the best and most equitable the committee could devise in its efforts to deal justly with all, without special favor to any one at the expense of the other.

## SUGAR.

Now, on the sugar question. Some talk is made about the consistency of the one party or the other in the discussion of that question years ago. Both sides may have made exaggerated speeches upon it—those upon one side and those on the other. But although Mr. Cleveland has departed from power, although when he departed the party that put him into power was ready to throw, not the benisons of good will after him, but the hoots and scowls of scorn and contempt, still Mr. Cleveland said one thing that comes into my mind now, namely, that it was "a condition and not a theory that confronts us."

It is indeed a condition that confronts us now. Look at the revenues of the country! If in the Wilson bill there had been a proper arrangement of things, there would have been no deficit; we would not now be \$200,000,000 behind in revenue nor borrowing money with which to run the Government exceeding in amount all that it cost the Government to run for the first sixty years of its existence. We have had to borrow this money in time of profound peace. We had no means of raising sufficient revenue. We have come to the practical part of that question: How shall we raise that large amount of money?

Now, one of the chief sources of raising revenue is sugar. The

people of this country had repudiated one idea, and the Republican members of the Committee on Ways and Means recognized that repudiation and did not intend to run against it. They had repudiated the idea of paying a bounty on the raising of sugar. Instead of that, therefore, inasmuch as all of us believe that the people of this country can and should raise all the sugar we need, we determined that the best thing to do was to put a duty upon it, not merely for the purpose of protection, but also for the purpose of raising revenue.

Mr. Chairman, I am one of those who believe that in the broad confines of the United States, with its infinite variety of soil and climate, we can raise and produce almost everything for which polar and tropical conditions are not necessary; and I am one of those who believe, also, that the genius of the American workingman and the enterprise of American capital are equal to the production of anything whatever that the art of man can contrive. In this matter of sugar, we believe that the people of the United States could produce all that is wanted if the industry is adequately protected and encouraged. While it may be that orators upon this floor, who have more regard for dramatic effect than they have for candid statement, may tell us of the horribleness of imposing a duty on sugar, I challenge contradiction of the statement that the duty imposed by the Wilson bill was meant to be almost if not precisely the same as this bill puts upon sugar. If you will remember, sugar was very much higher then than now. It was higher at that time than to-day, and a duty of 40 per cent was intended to raise revenue upon each pound of sugar that would equal the duty we impose upon it now. With a view to the revenues of the country, and with a view to encouraging and promoting the raising of all the sugar we need in this country, we attempt to restore the duty that was meant to be put upon sugar then.

Taking, therefore, raw sugar of a saccharine strength of 96°, which is the average brown sugar of commerce, as a basis, we put a protective and revenue duty upon it of \$1.75 per 100 pounds and raise or lower the rate as the grade of raw sugar goes up or down from that point, so as to make the duty on the real saccharine strength—that is to say, on the real sugar in the mass—precisely the same on all raw sugars.

But it costs something to refine sugar. The precise amount of that cost nobody who accurately knows, not even the refiner, would tell us, but we know the work can not be done for nothing. The best information we could get was that it would average not far from 35 cents per 100 pounds to do it. It costs possibly a little less to do it in other countries, say 12 or 15 cents per 100 pounds less, and so we put an additional duty on refined sugars of one-eighth of 1 cent per pound to protect the refiner, by making refined sugar cost the foreign manufacturer, when he lays it down in our markets, as much as it costs our refiners, and at least prevents him from having an advantage over them in doing the work. So that while the duty on raw sugar of 100° of saccharine strength is \$1.75 per 100 pounds, the duty on refined sugar is always \$1.87½, equal to one-eighth of a cent per pound more than the highest grade of the raw. This one-eighth of a cent increase on refined sugar is commonly spoken of on the outside as the "differential" duty, though the law uses no such term. It is really protection to the refiner to the extent I have stated, viz, to the extent only of the difference in cost of refining.

We have been somewhat amused at the criticism of the unthinking upon this part of the sugar schedule. Some very gravely inquired as to the duty on refined sugar of less degree than 100 per cent of saccharine strength. Such critics should know that all well-refined sugar has just 100° strength—that is, it is pure. Refining only removes the impurities, and 100° is as high as it can go, and it always as nearly goes there as human effort can make it. That is the perfect mark.

The bill reads at this point as follows:

And on sugar above No. 16 Dutch standard in color, and on all sugar which has gone through a process of refining, 1.875 cents per pound.

There is no inducement to inadequately refine sugar, because if it has gone through any process of refining at all the rate of duty is the same, viz, \$1.87½ per hundred pounds, and nothing can be gained by it. There is no object in refining sugar except to get out the impurities, and thereby improve its color and appearance, and when this is done it never, in fact, varies materially from the 100-degree point of strength.

Some critics, whose gravity greatly exceeds their information, entirely forget these facts, and, further, that in refining sugar it loses very greatly in weight, while it gains in purity. For example, 100 pounds of 96-degree sugar will refine to about 92 pounds, while 100 pounds of 75-degree sugar would probably refine to less than 70. These critics claim that the so-called differential is largely to the benefit of the sugar trust on low-grade raw sugars, as though there were any low grades of refined sugars to correspond to those of the raw. In truth, the so-called differential should be and was fixed simply to protect the manufacturing refiner to the extent only of the difference between the cost of the work of doing it here and that of doing it abroad. We have tried so to limit it

In proportion it benefits the American Sugar Refining Company (the so-called sugar trust) no more than it does any of the other American refiners of sugar, many in number.

Our friends on the other side ought to remember that the sugar trust is not satisfied with this protective differential. Quite the reverse is the fact. It has now a much better thing under the Wilson law, where it has the one-eighth differential or protection openly given, and a further protection called a concealed differential in the ad valorem rate of duty all round on all sugars, raw and refined. Thus at the time the Wilson bill was passed raw sugar was worth about \$3.75 per 100 pounds, which, at 40 per cent ad valorem, yields a duty of \$1.50, while the refined was worth about \$4.50, on which the duty would be \$1.50, or a difference for refining of 30 cents.

In that way, when the bill was passed (though it is much less now since sugars have fallen), the sugar trust and all the refiners were protected to the extent of 12½ cents, the expressed differential, and 30 cents, the concealed differential; in all, 42½ cents protection to refiners was given by the Wilson law. The aggregate differential to-day is about 23 cents per hundred pounds. We limit it to 12½ cents in our bill, and yet we are charged with gratifying the sugar trust. Not much. We had no doubt that we ought to protect the production of sugar in this country. Either from cane or the beet we can in a few years, under protection, produce all the sugar we need. Cane-sugar production can be greatly extended, and if Germany and France and other northern European countries can produce such enormous quantities of beet sugars, why can not the magnificently fertile fields of our vast country yield abundantly all we want? They can do so, and it would be absurd not to try it and thus give our own people the labor and the profit of doing it. So we might go through all the schedules.

HEMP.

I do not say that everything in the schedules is precisely what I would like. On the contrary, down in my country there is one article I wanted protected better than it is, namely, hemp. I fought for it the best I could, and the duties put upon it in the bill would be ample were it not that jute is on the free list. I did not think that jute, the natural enemy of hemp and flax, the extremely cheap-labor product of India, the facile fraud that bears the same relation to hemp and flax that shoddy does to wool, should any longer ornament the free list, especially as we could produce here every ton of it we needed. It had not long been on the free list, and I thought it should be taken off. I thought that this back door should not be used in an attack on hemp and the hemp industry, which formerly so flourished; but my colleagues differed with me on the ground of raw material, and particularly that the industry of raising it here was not successfully established. I offered an amendment to that effect, but it was not agreed to. I sincerely trust my fears of harm to hemp and flax may prove groundless. I also hope the defect may yet be corrected by a duty of a cent and a half on jute.

I do not stand here, as a comparatively young member of this House, to array at this time my judgment, even as to jute, against those who have had longer experience. I was afraid that the stress and pulling of adverse interests in this connection had twisted the bill a little out of shape at this point, under the plea of raw material made by jute manufacturers. But be that as it may, take the bill as a whole, from beginning to end; read it carefully, gentlemen of the committee; look at its effort to protect American industries, and to stimulate the business of the country; or regard it from the standpoint of revenue, and I think you will agree with me that in the not far distant future the verdict will be that no bill was ever presented to Congress by the Committee on Ways and Means that had in it more that ought to commend it to the sound judgment of the people of the country. [Loud applause on the Republican side.]

### The Tariff.

### SPEECH

OF

HON. EDWARD D. COOKE,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 29, 1897.

On the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. COOKE said:

Mr. CHAIRMAN: It is not my purpose to enter upon a general discussion of the pending bill, but simply to call the attention of the Committee of the Whole, as well as that of the members of the Committee on Ways and Means, to the great interest which is felt

by the people of Chicago in the schedules of the pending bill, so far as they relate to books, engravings, photographs, scientific periodicals, and educational apparatus, especially such as are imported for public libraries, and those used by the blind and in colleges, schools, and seminaries of learning.

Without taking up the time of the committee, I submit to be printed as part of my remarks a letter from Mr. J. V. Cheney, librarian of the great Newberry Library, of Chicago, and a letter in the nature of a memorial from A. C. McClurg & Co. and others, including President William R. Harper, of the University of Chicago; Mr. Clement W. Andrews, librarian of the great John Crerar Library, and Mr. Fred. E. Hild, librarian of the Chicago Public Library.

As I consider the suggestions and arguments set forth in those letters to be much stronger and clearer than anything I could say upon the subject, I insert them in full. I also insert in the same way a letter from Hon. E. G. Halle, president, and Hon. W. A. S. Graham, secretary, of the board of education of Chicago, bearing upon the same subject, with the earnest hope that the committee may by amendment grant the requests thus made.

The letters I have referred to are as follows:

CHICAGO, March 25, 1897.

SIR: In the pending tariff bill the following classes of books and kindred articles are omitted from the free list, in which list for several years they have been included:

"Books, engravings, photographs, bound or unbound, etchings, music, maps, and charts, which shall have been printed more than twenty years at the date of importation, and all hydrographic charts, and scientific books and periodicals devoted to original scientific research, and publications issued for their subscribers by scientific and literary associations or academies, or publications of individuals for gratuitous private circulation, and public documents issued by foreign governments.

"Books and pamphlets printed exclusively in languages other than English; also books and music in raised print, used exclusively by the blind.

"Books, maps, music, lithographic prints, and charts, specially imported, not more than two copies in any one invoice, in good faith, for the use of any society incorporated or established for educational, philosophical, literary, or religious purposes, or for the encouragement of the fine arts, or for the use or by the order of any college, academy, school, or seminary of learning in the United States, or any State or public library, subject to such regulations as the Secretary of the Treasury shall prescribe."

These omissions reverse much of the policy under which the Government has for some time permitted and now permits the importation of such books and kindred articles as could not materially compete with American productions.

The undersigned greatly regret, and therefore protest against, these changes as needlessly burdening libraries and scholars, as tending to impede the general diffusion of knowledge, and as interrupting the course of business without promising any compensating advantages to the national revenue.

Neither a regard for the policy of protection to American industries nor a solicitude for increased revenues would seem to dictate a change of policy in regard to these slight exemptions. Those of the signers who are engaged in the manufacture and publication of books see no danger to their own interests in the introduction of such books as those named free of duty, and it is our belief, on the other hand, that their subjection to duty charges at this time will result in a practical suspension of such importations, so that the United States revenues will not be increased.

A. C. McClurg & Co.; Scott, Foresman & Co.; Donahue & Henneberry; W. B. Conkey Company; E. B. Myers & Co.; Herbert S. Stone & Co.; Way & Williams; Rand, McNally & Co.; H. O. Shepard Company; R. B. Donnelley & Sons Company, per T. E. Donnelley, vice-president; The Open Court Publishing Company, per M. A. Sacksteder, manager; Mason Brothers; Geo. W. Smith; John P. Wilson, one of Newberry Library trustees; Clement W. Andrews, librarian of the John Crerar Library; Fred. H. Hild, librarian Chicago Public Library; Huntington W. Jackson, one of the directors of the John Crerar Library; James L. High; William R. Harper, president of the University of Chicago; E. W. Blatchford, president of the board of trustees of the Newberry Library; John Vance Cheney, librarian Newberry Library; Franklin H. Head, trustee Newberry Library.

Hon. EDWARD D. COOKE,  
House of Representatives, Washington, D. C.

CHICAGO, March 19, 1897.

MY DEAR SIR: May I trouble you once again? This time it is a matter of serious importance. As you are aware, there is now a tariff bill before Congress. It is said that this bill will be put through immediately. If it goes through, one feature of it will seriously cripple the work of this library and of all the public libraries of the country. I refer to the duty imposed on foreign books imported for the use of public libraries. Heretofore works imported for this purpose have come free of duty. Why this burden should be laid upon so many educational institutions already carrying more than they can well bear is not easy to be seen. I question the wisdom of taxing two other orders of books which now come free of duty to everybody, namely, books more than twenty years old and all works published in other than the English tongue. I question the wisdom of laying a duty upon these, but it is regarding the works of all sorts for public institutions that I ask your help at this time. I need not enlarge upon the importance of the matter. I simply call it to your earnest attention.

Very truly, yours,

J. V. CHENEY.

Hon. E. D. COOKE.

CHICAGO, March 25, 1897.

HONORED SIR: We have the honor to inform you that the board of education, at its meeting held Wednesday evening, March 24, unanimously adopted the following resolutions, which were presented by Dr. Wm. R. Harper, President of the University of Chicago, Hon. George E. Adams, and Hon. Thomas Brennan:

"Whereas in the tariff bill now pending before the Congress of the United States, books and educational apparatus, which have hitherto been on the free list when imported for the use of public schools, are now placed on the dutiable list; and

"Whereas the adoption of such a provision will militate against the highest interest of education and of educational institutions in our country; Therefore,

"Resolved, That the board of education of the city of Chicago urgently request the Representatives and Senators of the State of Illinois to use all the influence at their command, by voice and vote, to have replaced on the free list, as heretofore, all such books and educational apparatus as may be needed for use in public schools.

"Resolved, That a copy of these resolutions, signed by the president and secretary of the board of education, be forwarded to each of the Senators and Representatives in Congress from the State of Illinois."

Respectfully submitted.

E. G. HALLE, President.  
W. A. S. GRAHAM, Secretary.

Hon. EDWARD D. COOKE,  
House of Representatives, Washington, D. C.

### Lumber and the Tariff.

### SPEECH

OF

HON. ROUSSEAU O. CRUMP,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 31, 1897.

On the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. CRUMP said:

Mr. CHAIRMAN: As a plain business man and struggling manufacturer, I can speak from personal experience of the hardships we have had to endure for the past four years, and how it has taxed our best efforts to keep from going into bankruptcy.

But when we look backward over these last few years of hard times and prevailing low prices with small margins and few orders, there is one thing that shines out in dazzling brilliancy which almost dispels the dark clouds that have been hovering over us; that is, the good times of 1892, when we were booking orders at good prices, our mills all running full blast, and our workmen were all employed at good wages.

These days of prosperity almost shine through the dark clouds of adversity that seemed to grow darker as the years of the Democratic Administration dragged their slow length along, until the election of last fall, when our standard bearer, the champion of protection and prosperity, Hon. William McKinley, was declared elected as the President of the United States. Then I, with every other business man throughout the length and breadth of our country, felt the impulse that came from the heart of the people, when confidence was again restored. We all felt that we were on the eve of prosperity; our bankers smiled again, and they would, as of yore, offer to help us with our loans and discounts; for they felt, as we all did on that morning of the 4th of last November, when the telegraph announced to the world that Republican principles were again triumphant, and that the false theories and dogmas of that hydra-headed free-silver Demo-Popocratic monstrosity was not elected into power.

From that moment, I say—and say it with all truthfulness and sincerity from actual experience felt in conducting my own business affairs—that although our deluded friends on the other side of the Chamber often allude with sneers and derision to our good times and the returning prosperity; and with their calamity howling and demagoguery try to make good, sensible people believe that times are no better, that business is no better, and that the soup houses are still flourishing, and that millions of men are still seeking for work.

But I can again testify to the contrary from actual experience, that in my own and neighbors' factories, at least, we have gradually been putting more of our employees at work, until most of us are now running nearly full-handed. Of course, we are selling our products at low and reduced prices; consequently profits are small, but our workmen are at work and their wages have not been materially lessened; and all this cry about the greedy manufacturer grinding his workmen down, and himself living in luxury from the sweat of their brows while they are getting scarcely enough to eat or to wear, is false, and is only used by the demagogues and Democratic charlatans of the other side to inflame the passions of our workmen, trying to make them believe that they are misused and not half paid for their labor, and all such rot; for it is with such talk as this that the campaign orators of the Demo-Popocratic party inflame the minds of their hearers and try to make them believe that they are a downtrodden people. For, Mr. Chairman, I can again speak from personal experience, as I have been a workman myself; carried the tin dinner pail many years and know a little something about the sweat that will gather on a man's brow if he actually does work and earn his wages, as I honestly believe that I tried to do. I know all about how such demagogic talk is discussed among them.

But the eyes of the intelligent workmen are beginning to be opened. They were deluded into putting the Democratic party

into power in 1892, and bitterly have they all regretted their mistake, and again, in the campaign of last fall, they started another battle cry, not of free trade this time but free silver. This, they said, would be the panacea for all your troubles; come with us and you will be saved; money will be free; and when the workmen and farmers had both been suffering from the ill effects of a Democratic Administration that brought our country onto the verge of ruin—when labor was scarce the farmer was getting low prices for his crops—then demagogues like my friend from Missouri, with his silver-tongued oratory and by false promises, nearly captured them all again.

For although we had a grand Republican victory last fall, I do not ignore the fact that our majorities were not so large but that we were very near the danger line.

God alone knows how near, and what a calamity would have happened to us had William J. Bryan been elected and our splendid American William McKinley, the Napoleon who led us to victory, been defeated.

Republicans, we must be alert and on our guard all the time, and the tariff bill which we now have before us for consideration, which our committee have so carefully prepared, making it as a whole the equal if not surpassing that great measure called the McKinley bill, which became a law too late to receive a fair test before the election of 1892, and consequently never had a chance to show the people what good results might accrue from its workings; and a bill with no name, called the Wilson-Gorman-Brice-whatever-not bill, was, after a long wrangle, substituted for it, and we all know after four years of trial what that has done for us.

I believe that had the Democratic Administration left the McKinley bill on the statute books and really enjoyed its revenues, which would have come into the Treasury in spite of themselves, Mr. Cleveland would not have had to borrow money to pay the running expenses of the Government, but that the surplus would have been so large that even the Democratic Congressmen, with all their extravagance, could not have spent it all. They, in spite of themselves, would have had to pay something on the national debt, to have kept the surplus down to a safe limit, where the more conservative members of this body could control their wild-eyed brethren and keep them from getting up some scheme of extravagance to waste the people's money.

So much for that. They got up their bill and passed it, and it is now a matter of history of how inadequate it was to produce revenue enough to pay the running expenses of the Government, for Mr. Cleveland, that much-abused member of the Democratic party, had to borrow and keep on borrowing to keep us from bankruptcy and ruin, until, when he retired from office, the public debt had increased over \$200,000,000.

And, Mr. Chairman, it will take years of prosperity to put us back where we were before this great calamity of putting a party into power who never had capacity enough to successfully manage the affairs of a great government like ours, for they were given full and unlimited power on March 4, 1893—had their President and both branches of Congress—and again failed, utter and complete ruin almost being the result of their many "isms" and theories being applied to practice.

Our distinguished chairman of the Ways and Means Committee has given us a tariff measure, which is now before us for consideration, and which will, in my humble opinion, give us the needed relief; we will apply the remedy, and our depleted Treasury will again show that our receipts exceed our expenditures, and that we may possibly accumulate a surplus in time to again commence paying something on our public debt, as we have always done heretofore when a Republican Administration has been in full power. But, Mr. Chairman, in my humble opinion, even so wise a measure as this bill, upon which the committee have spent months of honest hard work, listening patiently to hearings from all the different interests that would be affected may have some faults and be open to criticisms in some of its provisions.

Among the schedules to which I wish particularly to call your attention is Schedule D, paragraph 195, page 47, where you place whitewood, sycamore, and basswood on the dutiable list at \$1 per thousand feet, and all other kinds of lumber at \$3 per thousand feet, which, of course, includes white pine, in which the district I have the honor to represent is probably more largely interested than any other in the United States.

To explain, my district, the principal part of the renowned Saginaw Valley lumbering region, was once covered with pine forests, which were the pride and boast of their people. Immense cork-pine trees grew and flourished along the banks of her many streams, the lumber of which was eagerly sought by the manufacturers of the East.

Their fame awoke the attention of the capitalist of the East and the hardy and experienced lumbermen of Maine were among them, who came to the famous cork-pine country, building immense mills and investing thousands of dollars in lumbering operations, giving employment to thousands of workmen, and in the early

days, when men were scarce, extra large wages were paid; and right here I might say that the scale of wages paid by the operators in this lumbering region have always been higher than that paid in other sections for the same work. The result of it all has been that cities and towns have been built and other industries dependent upon lumber have sprung up, until a great army of American workmen find employment in the mills and factories of this region. Great ships and steamers loaded with the product of these mills convey it across the lakes to the sorting yards of Buffalo, Tonawanda, Chicago, and other ports, and it is a well-known fact that in my home (the Bay Cities) there is more shipping or tonnage of vessels entering and clearing from our port than from the great cities of Boston and Baltimore combined.

And now, since the pine forests of Michigan have been nearly exhausted and the lumbermen have had to look elsewhere for logs to keep their mills running, they have all bought largely of Canadian pine-timber limits, investing thousands of dollars for the same. Large fleets of the finest and largest lake tugs have been built and called into service for towing the rafts of pine logs across the lakes, this also employing an army of men. The logs are cut, banked, and made into rafts largely by Michigan men sent there from our section to do this work. For instance, one large lumbering firm in my district sent 250 men to Canada last winter to run their lumbering camps, and pay them American wages with American money upon their return home to work in the mills.

These various interests feel that in order to keep their mills running they must first have Canadian logs, and their fear of the Canadian Government putting an export duty on these logs is groundless; and I do not think it is wise to throw down the gauntlet to them by threatening them with a retaliatory clause in case they should put an export duty on logs. Would it not serve the interests of all concerned by showing them a spirit of fairness and putting on a uniform duty of \$1 per thousand feet, board measure, for all kinds of lumber? I think this is protection enough, and it will please the farming interests along the Canadian border and far Western States, whose people are large users of lumber. It was the amount imposed by that popular measure, the McKinley bill, and will stimulate the market just enough to give it a healthy tone; and with this uniform duty on all rough lumber coming from Canada you will need no retaliatory clause in your bill, and in my opinion it affords ample protection for all lumbermen—North, South, East, and West.

With this duty placed on the rough lumber, add \$1 for being planed one or two sides, and if tongued and grooved one or two sides, add \$1.50 per thousand feet, board measure. This would be a fair and equitable adjustment of this duty, and being a specific duty there would be no chance of fraud or juggling of figures, as in the case of an ad valorem duty being imposed.

Going through this lumber schedule, further on I find that you have placed a specific duty of 30 cents per thousand on shingles. This is duty enough, as is also the duty of 15 cents on lath per 1,000 pieces; these two articles are protected in about the same proportion as rough lumber, if you place it at \$1, as I propose; and all being specific, then there will be no trouble in collecting it, and it will make Republican votes throughout the length and breadth of our land, for the American people like a fair and equitable adjustment of the tariff measure so that it will give justice to all and special privileges to none.

Now, Mr. Chairman, I represent a district largely interested in the box-packing and box-shook business. In my cities of East and West Bay City alone there are some nineteen large plants devoted exclusively to this business, employing nearly 2,000 people, paying out annually \$600,000 in wages, and cutting up annually 123,000,000 feet of lumber, with a capital invested of \$500,000, and an annual output of \$2,000,000.

Now, these various box factories in my district and the many thousands of others like them throughout these United States are users of raw material in the shape of lumber, and by cutting up and working the same add to its value and give employment to thousands of American workmen.

That is one of the reasons why I believe there should be a moderate tariff on this article of lumber, which, as far as white pine is concerned, is about exhausted in this country, and we have to look elsewhere for it, and must get it at fair prices in order to successfully compete with the Canadian and Southern box-shook manufacturers.

And in this connection I would like to call the committee's attention to paragraph 204, where they again adopt the unpopular Democratic expedient, an ad valorem duty of 30 per cent on box shoos. This paragraph I would divide up so as to read as follows:

Casks and barrels (empty) and made-up or finished packing boxes made of wood, 30 per cent ad valorem.

For on these articles, being of various sizes, and the cost of manufacture not always being the same, it would be necessary to place an ad valorem duty, and as proposed would be ample.

But, Mr. Chairman and gentlemen of the committee, regarding

packing-box shoos, which, as you well know, are the sides, tops, bottoms, and ends of boxes, all made of lumber, and after being cut into exact sizes, are tied into bundles, each kind by itself, and called box shoos, and as the cost of them is always based upon the number of feet of lumber used, the duty should be specific, and in proportion to the other schedules I have named. And, based upon your proposed ad valorem duty of 30 per cent, there should be a specific duty of \$3 per thousand feet.

Sugar-box shoos and packing-box shoos of all kinds made of wood, \$3 per thousand feet, surface measure.

Then the Government would not be defrauded, as they have always been heretofore, both under the McKinley bill, when the duty was 30 per cent, as proposed in this measure, and under the Wilson bill, where it was cut to 20 per cent. Box shoos, coming into this country under both acts, never paid the honest tax; for about three years ago a committee of box-shook manufacturers was appointed to investigate shipments coming in at Rouss Point and other places along the Canadian border, and found that box shoos were being shipped into the United States from Canada at an undervaluation of from \$3 to \$5 per thousand feet by using false invoices, etc. The matter was remedied in a measure by calling the Government officers' attention to it; but if there had been a specific duty, as I propose, of so much per thousand feet, the Government would have been protected in collecting the duty, and the interests of our American manufacturers would have been honestly looked after; for any ordinary person of fair ability can look into a car loaded with box shoos and easily determine about how many thousand feet of lumber it contains; and as all box shoos are usually shipped in cars there would be no trouble for the officers to see that the Government was not being defrauded out of its rights.

Now, Mr. Chairman, there is another matter in this connection to which I wish to call the committee's attention, and which I find they have again allowed to be considered in this bill. It is the rebate clause in section 24, page 160, which, as usually construed by the officers of the Treasury Department, allows, for an example, the Standard Oil Company, who—as can be shown under the working of the McKinley bill, which imposed a duty of \$1 per thousand feet—bought all of their lumber in Canada for boxing the tin cans used in exporting oils to foreign countries, paid the duty upon bringing the lumber into the United States, and upon shipping the boxed tin cans out of our country they received back, less 1 per cent, the duty paid upon the lumber.

And I might say, in this connection, that in framing this bill the only difference from the McKinley bill regarding rebates is that you have not allowed them to buy English tin, as they did before, but owing to there being no rebate on this one article they will be compelled, owing to its lower price, to use American tin. You have knocked it off from the tin and why not do as well for lumber? They are a wealthy corporation and should be willing to stand their share of the burdens imposed to increase the revenues, and under these conditions would give their trade to American box-shook manufacturers.

Another article largely manufactured in my district is salt. In this I note that you have allowed the big meat trusts of Chicago and elsewhere to get a rebate on salt, if used to cure meats for export; and their claim that the foreign salt is the only kind that will preserve the meat is false. Our salt, made in the Saginaw Valley, is as fine and pure as any in the world.

Mr. Chairman, I am opposed to all rebates; let everyone use American goods, or if they use foreign articles, why not collect from them the duty and pay no rebates?

There is one more article in the wood schedule to which I desire to call the attention of the committee; that is the paragraph relating to cedar or other wood paving, posts, railroad ties, telegraph, trolley, electric-light, and telephone poles, upon which you impose a duty of 20 per cent ad valorem.

Now, when the Ways and Means Committee was in session, there was prepared for them by one of the largest shippers of cedar in the country, located and doing business in my district, a concise and short schedule of specific duties on these articles, basing it upon a duty of 25 per cent; and again you have taken up with another Democratic idea of ad valorem duty instead of the more correct specific duty, under which the Government gets its just dues, and which can not be done under the ad valorem duty.

Now, Mr. Chairman, it is nearly 3 o'clock, the time agreed upon when we are to take a final vote upon the passage of this bill. The reading has stopped at the twenty-third page, and the lumber schedule, which begins on the forty-seventh page, will not be reached. I had thought of introducing several amendments on these items I have mentioned, but now it is too late. We will have to appeal to the Senate for relief. A member of the committee informed me, upon pressing the matter to them of changing the box-shook schedule from an ad valorem to a specific duty as a committee amendment, that they were afraid to offer it, because it would open up the whole lumber schedule to criticism; so

he kindly invited us to look to the Senate for relief. In my humble opinion, if these lumber schedules will not bear discussion, it is a weak measure in this respect at least; and knowing as I do the utter folly it would have been for any of us members offering any amendments outside of the Ways and Means Committee themselves, I and other representatives of the people have had to content ourselves with remaining quiet at this end of the Capitol and look to our Senators at the other end to help us out.

In conclusion, Mr. Chairman, allow me to say that this is not fair to the Republican members of this Chamber, who, like myself, are strong believers in protection to American industries, but also want to so regulate the schedules as to make this measure, the Dingley bill, a popular measure, and one that Democratic campaign orators can not pick flaws in and again deceive the workmen into the belief that the bill is largely in the interests of the trusts and combinees of capital.

And with this part of the bill I have mentioned, with which I am familiar, amended as suggested, I know that it will meet with the approval of the Republican party in general throughout our country. For I believe that our party should stand united for the principle of exact and impartial justice to all and special privileges to none.

#### The Tariff.

### SPEECH

OF

HON. S. S. BARNEY,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 30, 1897,

On the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. BARNEY said:

Mr. SPEAKER: The subject of taxation and of protective tariff is an old one, and yet, in a certain sense, it will remain new as long as we have popular government. This subject has been under discussion for several days by members of the Committee on Ways and Means, who necessarily, by reason of the information which they have received upon the subject during the last three months, are much better able to discuss it intelligently than we who are outside of that committee. For this reason, at this time, it may appear almost presumptuous for one to attempt to say anything new upon the subject; in fact, it is quite impossible.

One of the first things, in my judgment, to be considered in a discussion of this subject, and one which we must never lose sight of, is that we require for the ordinary and necessary expenses of this Government a certain amount of money each year. You may talk about the extravagance of this Congress or the extravagance of any prior Congress, and yet the fact remains that but a small portion of the money which has been expended in the last twenty-five years in this country could have been dispensed with. The people of this country want public buildings to be erected—new post-offices, new custom-houses, and other public buildings. The people all over this country, north, south, east, and west, desire that liberal harbor improvements shall be made, and millions of dollars are necessary to be expended in this direction. So it is with the large number of old soldiers upon the pension list, who must receive their quarterly stipend.

Now, all this money must be raised in some way; it must be raised from the people by some sort of taxation, either direct or indirect. I think it is unnecessary for me to say at the present time that the people of this country of all parties are opposed to the raising of money for purposes of Federal expenses by direct taxation. It must be done, then, by duties imposed upon importations from foreign countries and by internal revenue.

Now, in my judgment it is idle to stand up here upon this floor or anywhere and talk about the Republican party desiring or claiming to make the people rich by taxation, or to claim that such is the policy of the Republican party, or that any prominent Republican in this country claims that the people of the United States can be made wealthy by imposing any kind of taxation upon them. There is no use of talking any such nonsense as this. No one believes this; but nevertheless it is true that this country must raise hundreds of millions of dollars every year for the purpose of defraying its necessary and legitimate expenses. This can be done only by some kind of taxation. It must come out of the people in one way or another, and the Republican party claims that its

policy of taxation is one which rests upon the people with the lightest burden; in fact, it is the claim of the Republican party that its system of taxation in the past has been such that the people have hardly noticed it. We must pay our honest debts in some way; we must pay the expenses of this Government in some way, and if we can do that, and at the same time build up our domestic industries in this country, give labor to the people, and keep all of our money and resources here at home, then in my judgment we have gone a great way toward increasing the prosperity of the American people.

It is very easy and very cheap to theorize upon almost any political subject. I do not think it is logical for any man, be he Republican or Democrat, to claim that the theory of free trade or the theory of protection is susceptible of demonstration, the same as any problem in mathematics. There is no doubt that there is much which can be said on all sides of this question when we come to discuss it as a mere matter of theory; but it seems to me that there is no better way to judge as to which policy is the best for this country than to look over the history of the past and see what effect upon this Government the continuance of one policy or the other has had. Let us look back over the history of this country for the last thirty years, and it seems to me that our history during that time is one of the best object lessons in the world to teach us what kind of a policy of taxation this Government should pursue. Thirty years ago the public debt of this country was nearly \$3,000,000,000, bearing a high rate of interest. This country then had come out of the most terrible war in modern history. Untold millions of property had been destroyed, both North and South; hundreds of thousands of the choicest of American citizens had lost their lives upon the field of battle, and thus the country had been deprived of some of its most valuable labor element. And you and I can remember that, as we looked over the scene just after the close of that terrible war, it seemed impossible that the country could recover from that scene of devastation within the next century. And yet what has been the actual result? On the 1st day of January, 1892, this Government had paid more than two-thirds of this immense indebtedness, and had funded the balance at a rate of interest less than one-half of what it was at the time it was incurred. And yet I doubt whether in the whole history of this or any other country there had ever been twenty-five years of greater prosperity than the twenty-five years immediately preceding the 1st day of January, 1892. True, our Democratic friends were continually going up and down the country howling to the people about how they were paying taxes upon their hats, upon their coats, upon their shoes, and upon everything which they ate upon the breakfast table or upon the dinner table, and that they were lying down at night and sleeping upon a taxed bed, and were being robbed on all hands by this robber system of taxation. Yet, notwithstanding all this, during these twenty-five years the people of this country prospered as no people have ever prospered in the history of the whole world; and I undertake to say that the material wealth of this country increased more rapidly in those years than it ever had before in this or any other country for a century.

There is another fact to which I desire to call your attention in this connection, and that is that not only had the manufacturing interests and the business men of this country prospered during those times, not only had the farmers and the professional men prospered, but there never was a period in the history of the whole world when the common everyday laborer prospered as he did during all of that time; and I venture the statement, without any fear that it can be successfully contradicted, that there never was a time when a day's wages would buy more of the necessities, and even luxuries, of life than it would on the 1st day of January, 1892, and more, that there was not a single man in this country, North, South, East, or West, who could not get employment at good, remunerative wages if he wished to work.

In the campaign of 1892, which all of us well remember, our Democratic friends went up and down the country telling these same people, who were then prospering as they never had prospered before, that they were being oppressed; that they were being robbed by this system of taxation, and that all that was necessary to do in order to bring about complete happiness to the people of this country was to tear down this system of protective tariff and establish a tariff for revenue only. They were chanting the same song that they have been singing upon this floor ever since this bill has been under discussion. Well, the people of this country, prosperous as they were, were convinced that this was true, and in the Presidential campaign of that year voted for a change of American policy; voted in favor of a party which, for the first time in the history of this country, placed in its platform the statement that a tariff for protection was unconstitutional and therefore void; voted to place in power a party which was pledged to revise the whole revenue system of the country and to give us a tariff bill framed upon the principle of raising revenue as against that of both revenue and protection. Now, what was the result of that change? Within less than six months after the news flashed

through the country that Grover Cleveland was elected President of the United States the business of this country was paralyzed everywhere. Hundreds of thousands of men were turned out of employment; mills were closed; factories were stopped; banks were wrecked; business men failed, and desolation spread over the land where for years before that time there had been prosperity and good times; and from that day to this this fall of depression has continued to rest upon this country. Laboring men are out of employment; those who have employment are working upon short time and at reduced wages. Men who are willing to work are traveling our highways begging for bread, and for the first time in the history of this country, not long after the election of 1892, an army of tramps was even besieging the capital of this country.

This is not all the evil resulting from this change, for while, under a system of protective tariff, we were continually raising more revenue than we needed for the ordinary expenses of the Government, and were enabled to gradually pay off our national indebtedness and leave a surplus in the Treasury, under this new system of revenue tariff the Government has been running behind at the rate of more than \$50,000,000 a year. Notwithstanding this fact—notwithstanding, therefore, that we are raising by revenue about \$100,000,000 less per annum than we did under the system of protective tariff—yet the people are oppressed by this system of taxation and feel it much more than they did when the national income was far greater than it is at the present time.

The following is a statement of the receipts at the custom-houses in this country for the first thirty months under the McKinley law and the first thirty months under the Wilson-Gorman bill, showing a difference in the receipts in favor of the McKinley law of \$106,227,586:

## CUSTOMS RECEIPTS.

First thirty months—McKinley law.		First thirty months—Wilson law.	
1890—		1894—	
October.....	\$24,904,114	September.....	\$15,564,990
November.....	15,227,941	October.....	11,932,118
December.....	16,104,533	November.....	10,280,662
1891.....	182,251,594	December.....	11,203,049
1892.....	191,737,936	1895.....	164,452,627
1893.....		1896.....	145,424,989
January.....	21,102,478	1897.....	
February.....	16,930,395	January.....	11,276,874
March.....	19,664,875	February.....	11,587,290
Total.....	487,959,564	Total.....	291,731,978

Decrease under a "tariff for revenue only," \$106,227,586.

Not only have we this loss in the receipts at the custom-houses, but, on account of the decrease in the business of this country everywhere, there has been a proportionate decrease in the internal-revenue receipts. The following figures show the internal-revenue receipts during the first thirty months of the McKinley law and the first thirty months of the Wilson-Gorman law, disclosing a difference in favor of the McKinley law of \$43,338,241:

## INTERNAL-REVENUE RECEIPTS.

First thirty months—McKinley law.		First thirty months—Gorman law.	
1890—		1894—	
October.....	\$12,840,250	September.....	\$6,182,149
November.....	11,822,047	October.....	6,493,438
December.....	12,944,173	November.....	7,774,074
1891.....	146,304,062	December.....	9,938,009
1892.....	160,355,496	1895.....	137,301,701
1893.....		1896.....	147,122,812
January.....	12,052,918	1897.....	
February.....	11,316,832	January.....	11,031,840
March.....	12,300,928	February.....	10,888,422
Total.....	380,066,716	Total.....	336,728,475

Decrease under a "tariff for revenue only," \$43,338,241.

Mr. Speaker, not only has the business of this country been destroyed and laboring men turned out of employment everywhere, but in addition to this there is no price for anything which either the manufacturer or the farmer has to sell; and this because the American manufacturer and the American farmer has lost the best market on this earth—the American home market. The American factory is idle because there is no one to buy its products; the produce of the American farm is cheap because there is no one to eat it. There is no production because there is no consumption, and there is no consumption because there is no production. Our free-trade friends talk to us about the markets of the world, while we have here at home the very best market on the face of the earth; and it has been made the best and is the best, except during free-trade times, because all classes of people here earn more and hence consume more than the same classes anywhere else in the world. A man who earns \$2 per day consumes 50 per cent more than one who earns \$1 per day. We must keep this market and maintain it just as it is, the best market in the world, by our system of protective tariff—by a system of protective tariff which will protect the American laborer and never

reduce the wage earner of this country to the same base level as that of the wage earner of Europe.

It hardly seems possible, and yet it is a fact, that the people of this country have consumed within the last three or four years far less, even of the common necessities of life, than they did during the period of good times. The statistics show that during the year 1895 the consumption of wheat was about a bushel and one-half less per capita than it was during the period of good times under the McKinley law. The consumption of corn was about one-half as much per capita during the year 1895 as it was during the prosperous times under the McKinley law. If this is true regarding such absolute necessities as wheat and corn, what must have been the result upon the finer products of the farm, such as butter, cheese, milk, eggs, and meat, which under this beautiful system of free trade have become a luxury to the wage earners of this country? No doubt the consumption of these products of the farm during the last two or three years has been little, if any, more than one-half of what it was during our season of prosperity.

But, Mr. Speaker, our free-trade friends say, "Give us free raw material." They are willing that some kind of a duty may be placed upon what they call manufactured articles, but they insist that raw material should be allowed to come into this country free of duty. What is raw material? Why, such a theory as this leaves the farmer entirely out in the cold and unprotected, because according to the theory of the free trader everything which the farmer raises is raw material. Now, there is nothing in the world which has ever received one touch from the hand of labor that can be truthfully called raw material. Just as soon as labor in any way has modified any product of the earth, it has become, so far as that laboring hand is concerned, finished product. The wheat, barley, corn, beef, and wool as they leave the farm are the finished products of the farmer. So we can go all through the commercial world. There is no such thing as raw material, except those things produced by nature unaided by the hand of man. The ore turned out of the earth by the miner is his finished product, which in turn is the raw material of the pig-iron manufacturer; whose pig iron, his finished product, is the raw material of the steel manufacturer; whose finished product constitutes the raw material of the manufacturers of all articles into whose composition steel enters; and so on almost indefinitely and in other lines of industry.

Mr. Speaker, the free trader of this country has always had a great solicitude for the farmer, and it has been among the farming class generally that he has done the largest part of his preaching. They have been told repeatedly that everything which they have to buy is enhanced in price by reason of the tariff law, while they have never received any benefit from it whatever. Now, I want to say that in my opinion there is no class of people in this country that receives more benefit from a well-adjusted, fair, equitable protective tariff than the farmers. It brings the producer and the consumer closer together, thus saving the cost of transportation, which is a benefit always to the producer. More than all that, it gives a market to the farmer for many products of the farm which do not bear transportation. Under a system of free trade the farmers of the far West can expect to raise for transportation only cereal crops and the products of the dairy farm and stock for the market, while if we foster domestic industries in this country and build the factory in close proximity to the farm, the farmer has a market and a market right at home for all the coarse products of the farm—his hay, straw, vegetables of all kinds, and the products of the garden—thus yielding him a profit and an income from a source which would yield him nothing under a system of free trade.

Within the last year I had a conversation with a gentleman engaged in the milk business in one of the most prosperous manufacturing towns in my district—that is, it was one of the most prosperous manufacturing towns in Wisconsin prior to the election of Cleveland in 1892—and this gentleman told me that after the panic of 1893 the consumption of milk alone in that city fell off about one-half. Families which before that time had taken 2 quarts of milk took but 1, and those which had taken 1 quart thereafter took a pint. Many of them were not able to buy any at all. This gentleman called my attention to another fact concerning that same city, showing the depression caused to the farming industry on account of the general stagnation in the manufacturing industries. Surrounding that city were hundreds of acres of good farming lands that before that time had lain practically idle by reason of having been subdivided into city lots. Just as soon as the factories in that city were closed and men were turned out of employment, hundreds of these laboring men went out upon these lands just outside of the city and spent their time there raising potatoes and garden vegetables, such as they needed for their own use, and also some to sell to the wealthier classes in town, thus depriving the farmers of that locality of the market which they had theretofore had for their milk, butter, cheese, potatoes, and garden vegetables, and in fact all products of the farm.

It has always seemed to me, Mr. Speaker, that the makers of

the Wilson-Gorman law appeared to have a particular grudge against the farmers of this country, because it does seem as though that law was framed to hit them harder than any other class of people. The idea of putting wool upon the free list and at the same time keeping up a reasonable duty upon the manufactured article is absurd, and about as audacious a piece of business as Congress was ever guilty of. In the fall of 1894, in traveling through my district, I found that the highways in some localities were lined with flocks of sheep that were being driven to the market and sold for almost nothing, because at that time they had been rendered valueless by the placing of wool upon the free list. Before that time we were told by the free traders that this duty on wool, the duty on barley, the duty on the other products of the farm, did not make any difference in prices; that the farmers would get just as high a price if they had no duty; that it was a humbug and a snare, and in the interest of the manufacturers and not in the interest of the farmers and laboring men of this country; and yet I call the attention of the farmers of this country to the fact that since the passage of the Wilson-Gorman act the wool of this country has sold in the market for just about as much less as the amount of the tariff; and it is a remarkable coincidence that the same can be said of barley, butter, cheese, eggs, and most other products of the farm. If you injure the sheep farmer of this country you injure every other farming industry, because the sheep farmer is compelled to drive his flocks to the butcher and go out of that kind of farming business and into some other. He must necessarily raise something else; he must raise either barley, corn, wheat, cattle, hogs, or go into the dairy business and compete with other kinds of farming industries. A blow at the sheep farmer is a blow at every variety of farming industry in this country.

The Statistical Abstract of the United States for the year 1896 shows that in the year 1893 there were in this country 47,273,553 sheep, of the value of \$125,909,244. In the year 1896 there were in this country 38,298,783 sheep, of the value of \$85,167,735, a decrease of about 25 per cent in the number of sheep and of almost 50 per cent in their value; in other words, that the people of this country, and necessarily the sheep farmers, have been robbed of \$40,000,000 by the placing of wool upon the free list.

I was talking the other day with a gentleman from the State of New York regarding the duty upon barley, and he said that down in his country they did not want any duty upon barley, because there were a great many malt houses along Lake Ontario doing a large malting business, and that they obtained all their barley from Canada; that the placing of a duty upon barley would be practically prohibitory upon them and they would not be able to get any more barley from Canada. I told him that was just why I was in favor of this duty upon barley; that I did not think the maltsters of his district, or of any other district in America, ought to get any of their barley from Canada or any other foreign country; that the statistics of this country showed that the farmers of this country were able to raise all the barley that was needed in this country, and more, and that for that reason I was in favor of putting a tariff upon barley which should actually be prohibitory and compel the maltsters and brewers of this country to obtain all the barley which they needed for use from the American farmer. It is the American farmer upon whom they largely depend for a market for their product, and it is no more than right that they should buy of him the material out of which they manufacture the product of the malt house and the brewery.

I received this very morning a circular issued by some free-trade club in the city of New York, the same being an extract from that great free-trade organ, the New York Evening Post, and it is headed, "Dissatisfaction of importers with the wool schedule." I did not take time to read it carefully, but I simply made up my mind that if the importers of the country are dissatisfied with the Dingley tariff bill, that is the best reason in the world why I should be in favor of it. The importers of the city of New York can make money only at the expense of the producer, the manufacturer, and the wage earner of America, and any tariff bill which is distasteful to them I think ought to be satisfactory to every patriotic American citizen.

We were told by these free-trade orators that the passage of a revenue-tariff bill would enable the farmer and the laboring man of this country to buy all the necessities of life much cheaper than they had been able to buy them before the passage of that bill. Well, I do not know whether I am right or not, but my experience is that the ordinary necessities of life, except the products of the farm, have gone down very little under this revenue-tariff bill; but even if they have, and its effect has been to decrease the price of the articles which are purchased by the American farmer and the American laborer, what benefit is it to him so long as he has not the money with which to purchase? I think the American farmer of this country has at this day discovered the fact that he can afford to pay a little more for his suit of clothes, that he can afford to pay a little more for his farming machinery, if he can but get 30 cents a pound for his wool and 75

or 80 cents a bushel for his barley; that he is benefited but very little by a policy which enables him to get a suit of clothes a little cheaper and at the same time decreases the price of everything which he has to sell.

And the same principle can be applied to the laborer. What consolation is it to him that he can obtain his meat, his flour, and his clothing somewhat cheaper if thereby he is turned out of employment? Give back to the laboring men of the country the wages of 1892, and they will gladly pay the farmer a fair price for the products of the farm. Give the laborer the good wages and steady employment which he had under the system of protective tariff, and he will take care of the surplus products of the farm, consume 25 per cent more flour, twice as much meat, butter, and cheese, and thus restore the prices of 1892. Give the American people labor where with they can earn the old wages, relieve them from this four years of lenten season of fasting under Democratic rule, and they will settle the question of overproduction in short order.

During the campaign of 1896 the Popocratic orators went through the country and preached to the farmers and to the laboring men generally that the way to make them rich was to call 50 cents' worth of silver a dollar, and thus double the price of everything which the farmer had to sell and also the price of a day's wages. It always seemed to me that if that was the way to make men rich, it was very foolish to stop at making a dollar out of 50 cents' worth of silver; that it would be just as easy to go further and make a dollar out of 25 cents' worth of silver, and by that means quadruple the price of everything which the farmer had to sell and relatively increase the price of a day's wages. We might go still further and call an old-fashioned copper cent a dollar, and in that way enable the farmer to get \$100 a bushel for his wheat and the laborer \$100 a day wages. But the people of this country were not deceived by any such logic as this. They were never convinced that they could be made rich by debasing the currency or by calling an inch a foot or a pound a ton. The farmer knows that in 1892 his dollar was as good as it is now, in this country or in any other market of the world, and that it contained 100 cents in value then just as it contains 100 cents in value now; and by looking over his old market report he sees that he sold his farm products five years ago for just about twice as much as he is able to sell them for to-day, and that he received his pay in the good, old-fashioned dollar, which was worth 100 cents. The same may be said of the laboring man. He looks back five years and remembers that he received at that time almost twice as much for his day's wages; that he had plenty to do, and that when he received his pay Saturday night he received it in dollars which were worth 100 cents. Then I take it for granted that the farmers and laboring men of this country have not been convinced that they are going to be benefited by the debasing of our currency, but the experience of the past has taught them that they can be benefited by a return to that same policy which made them so prosperous for the generation before 1892.

In the last election the American people spoke with one voice, and spoke so loudly that this Congress ought to hear them; and they said that they wanted to get out of the barren wilderness of free trade and into the good old fertile fields of protective tariff. Let us get there, and get there quickly.

#### The Tariff.

#### SPEECH

OF

HON. JOHN A. McDOWELL,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 24, 1897.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States—

Mr. McDOWELL said:

Mr. CHAIRMAN: I must admit that I am greatly surprised at the provisions of the tariff bill under consideration. I supposed that our Republican friends had learned from their experience with the tariff act of 1890 that the American people will not approve of high protective-tariff schedules, made especially to favor manufacturers, trusts, and combinations at the expense of the producers. It has been quite generally published in the papers all over our country that the tariff bill which would be passed in this extra session would be a moderate one, and that any other kind would not do. But here we have one presented whose rates are higher than the McKinley Act. This is not what the people of this country expect nor want. They say, "Give us a moderate tariff bill, one that will raise sufficient revenue to carry on the Government,

economically administered; one that will not discriminate in favor of any class against another class."

Mr. Chairman, this bill is so obnoxious in its provisions that a number of Republicans are condemning it severely in this House. It is evident, if an opportunity was given to members outside of the committee to amend the bill, that it would be greatly changed for the better before it would leave this House. The majority of the Ways and Means Committee have not only prepared a bill of their liking, but they are determined that it shall be railroaded through this legislative body under arbitrary rules that preclude any just amendments.

The chairman of the committee [Mr. DINGLEY] says the object of this bill is to raise more revenue than we are getting and to encourage the industries of the United States. How inconsistent these claims are! This bill has been modeled upon the McKinley bill, and one of the objects of that bill was to reduce the revenue, for it was admitted that we were piling up a surplus in the Treasury that was not only unnecessary but dangerous. The McKinley bill did reduce the revenue. Hence the logical conclusion must be that this bill (the Dingley bill) will not increase the revenue. The effect of a high protective tariff is to shut out imports, and hence to reduce revenue.

However, Mr. DINGLEY says it is estimated that the pending bill enacted into law would yield an increase of about \$113,000,000. Granting this to be true, Mr. Chairman, will it not be difficult to get the plain, hard-thinking people to see the necessity for withdrawing from the business channels of this country \$113,000,000 more of circulation when there is at present more than \$218,000,000 in the Treasury? With greater economy in public expenditures, there will be no need for additional revenue. The farmers of this nation and the laboring men of various occupations have, by stern necessity, been compelled to practice economy. They are demanding economy in governmental affairs. What think you they would have said had they witnessed the awful example of reckless extravagance here a few days ago, when four great appropriation bills, aggregating \$78,000,000, were rushed through this House by the majority, without giving 148 new members of this body an opportunity to examine the bills? Do you call this legislating for the interests of the people? The chairman of the Appropriations Committee [Mr. CANNON] admitted that \$5,000,000 or more might be stricken from one of these bills if time should be given for consideration of the bill; yet he was unwilling to allow more than forty minutes to the discussion of the bill. It looks very bad indeed when one of these appropriation bills carries with it an appropriation for a public building in the chairman's own town. [Applause.]

Now, Mr. Chairman, the Democratic members of this House have had applied to them by the venerable members of this assembly all sorts of uncomplimentary epithets, such as fools, ignoramuses, and monkeys. It is an old custom that when persons are beaten in argument, or can not justify their actions, they resort to calling names. That was true last fall. The advocates of the gold standard could not meet the arguments of their opponents, so they resorted to the practice of calling them anarchists, revolutionists, and repudiationists. They seem to think that because they won last fall, the same kind of tactics will carry this iniquitous tariff bill through Congress.

In the debate on this bill we have heard that oft-repeated and false statement that Democrats are free traders. I challenge anyone to prove by Democratic legislation or platforms of the party that the Democratic party has ever advocated free trade. It is true that some Democrats believe in free trade. It is also true that some Republicans believe in free trade. I am not a free trader, but I am opposed to tariff schedules that will foster trusts, and that I thoroughly believe a high protective tariff will do.

The only kind of a tariff act that will stand in this country is one that will provide enough revenue to meet the expenses of the Government, including the public debt and interest thereon, and one that equitably distributes the protection given. The Wilson bill is a protective measure. With a few changes in it I believe it would be one of the most just revenue bills ever enacted. With wool on the dutiable list and a few other changes, the Wilson bill would prove quite satisfactory to the farmers of Ohio.

While the Dingley bill places wool on the dutiable list, it has not the schedules asked by the woolgrowers. In this the committee has favored the woolen manufacturers.

Some of the advocates of this pending bill have talked much about doing something to benefit the farmers. To one who knows something of the farmers' interests, what they have to sell and what they have to buy, it is plain that these would-be friends of the farmers either do not know what they are talking about or do not mean what they say. How can you benefit the farmer by making him pay more for everything he has to buy and not increasing the price of the products he has for sale? This bill will increase the price of articles he must buy. You try to deceive him by placing a duty on wheat, corn, and other products, the prices of which are not affected by tariff legislation.

If some of our Republican friends are really desirous of helping the farmer, let them join hands with us—Democrats, Silverites, and Populists—and give the country some wholesome financial legislation. The farmers of this country will not be prosperous as long as we continue under the suicidal policy of the single gold standard. If the question were submitted to-day to the farmers and laborers of America whether we need tariff legislation or financial legislation to bring good times, their answer would be for the latter.

Why do not the advocates of this bill be honest and frank in stating the purposes of the measure? Why do they not say it is to enable the trusts and great corporations to get back the millions they contributed to the last Presidential campaign? This is the view the people take of this bill.

I again state that for the purpose of raising the necessary revenue and giving the protection required by our industries a few modifications of the Wilson-Gorman Act would meet the requirements. This work could be done in a short time by the House, and by so doing we would send a bill to the Senate which I believe would meet its approbation. It is the height of political folly to attempt to reenact the McKinley bill, or, what is worse, a bill that carries higher rates than the McKinley Act. I say this kind of legislation will not bring prosperity to the country, but it will bring agitation and ruination. [Applause.]

### The Tariff.

### SPEECH

OF

HON. W. W. KITCHIN,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 30, 1897,

On the bill (H. R. 370) to provide revenue for the Government and to encourage the industries of the United States.

Mr. KITCHIN said:

Mr. CHAIRMAN: In the limited time (five minutes) permissible to me in this debate, I shall not undertake to discuss the question or to state the many reasons which impel me to vote against the unjust and oppressive bill now pending. The rates imposed upon some articles meet my approval, but in my opinion the main provisions of the bill are against the people and in favor of the trusts and plunderers. A tariff for revenue, with its necessary incidental protection, is right; but a tariff for protection, with its necessary incidental revenue, is based upon a false, corrupt, and trust-serving principle, and is wrong. The financial question is the great issue before the people, and this effort of the Republicans to bring the tariff to the front will fail. The people, irrespective of parties, will continue to agitate the financial question until relief is had and an era of prosperity begins. I shall, with a solemn sense of duty, vote against this Dingley bill.

I ask unanimous consent to have printed, in connection with my remarks, an article which I received a few days ago from a gentleman in my State who has given much study to the tariff. I do not approve of all that is in this article, but do approve its general tendency, and desire its publication on account of the clearness and vigor with which many fundamental principles are set forth in it.

It is as follows:

#### PROTECTIVE TARIFF NOT THE REMEDY.

The pretended protection extended to American labor is one of the most unrighteous impositions and frauds ever inflicted upon a people. If protection were right in itself, and morally and politically no invasion of the inalienable rights of a people, yet as advocated and practiced in this country it is a great moral and political wrong. The idea of keeping foreign goods out of this country to protect American labor, and at the same time allow the importation of foreign labor to compete with American labor, on equal terms, is a novel way of protecting American labor, a fraud upon honesty and fair dealing, and a sad commentary on patriotism.

It is impossible to frame a protective-tariff law that will not favor monopolies, trusts, and money combines, because any tax on a foreign article will raise the price of the same home article to the extent of the tax, either directly or indirectly. The home producers will combine and not sell for more than a fraction less than the foreigner could sell for, and this combination of home manufacturers at once becomes a trust.

But one serious question confronts the Administration. It must restore the parity between national expenditures and national receipts. Any tax that does not bring in revenues sufficient to meet the current expenses is a failure. For the last four years the receipts of the Government have continually decreased, while the expenditures of the Government have increased yearly, and the deficiency has been supplied by the sale of bonds for more than \$250,000,000. This shortage of revenue and the sale of bonds aided in the defeat of the Democratic party. The same causes will utterly destroy the ruling party if not removed and the deficit supplied. There are two ways to meet the present deplorable financial condition of the Government that will be tolerated by the people, and only two ways.

The first and most natural and equitable way is to reduce expenditures to a parity or equilibrium with the incoming revenues. This could and ought to be done. The expenses of the Government are at least \$100,000,000 more

than they ought to be, and this amount could easily be lopped off, greatly to the advantage of the people and to the honesty, morality, and stability of the Government. But the history of the Republican party is not such as to encourage the hope of such a reasonable, just, right, and patriotic course. They have universally, when in power, increased expenses and raised taxation and made the burdens of the people heavier. But this time their advent to power is surrounded with difficulties never before in this country confronting any party. The very means proposed by the incoming Administration to relieve the situation brought the Government into its present financial troubles. The time has been in our history when an increase in the tariff rates would increase the revenues, but that time is behind us. The rates of tariff taxation have been so often increased until these rates under so-called Democratic law are so high and exorbitant that they discourage instead of encouraging importation of foreign goods. And any increase of tariff rates on foreign goods the like of which is made in this country will prohibit importation of these goods and cut off or greatly lessen the revenues instead of increasing them. But this is the remedy demanded by manufacturers, boards of trade, chambers of commerce, syndicates, trusts, and so-called business men, and it is exactly what Mark Hanna and McKinley have promised, and the very bed rock and foundation of their elevation to power. The Republican party is pledged to the single gold standard and to a higher protective-tariff measure than the Wilson law.

Now, there is nothing more clear to the mind of an honest, thinking, political economist or an honest, patriotic statesman than the fact that the single gold standard and the McKinley law and the Wilson law are responsible for the deficit in the Treasury, the stagnation and demoralization of business, the low prices of labor and commodities and agricultural products, and the general bankruptcy and ruin abroad in the land. And yet the only remedy proposed for these evils, and the only relief for the people, is the existing gold standard and the existing Wilson law, with an increase of the burdens of both. An increase of the tariff will probably decrease the revenues from that source. A tariff so high as to prevent importation will, of course, cut off revenues. If no goods are imported from foreign countries into this country, of course no taxes will be paid at our ports. The lower the rate of duties the more goods that will be imported. The higher the rate of duties the less the amount of goods that will be imported. The more goods imported under a tariff for revenue the greater the amount of revenue received. The fewer goods imported the less the revenue received.

A protective tariff discourages importation, and, as a rule, the less the importation the less the revenue. A prohibitory tariff stops revenue entirely. If no goods come in, no revenue will come in.

No tariff tax at all would invite foreign importation and bring in no revenue. This, the protective-tariff advocates claim, would destroy American manufacturing industries, because, they say, our people can not compete in manufacturing industries with France, Germany, England, and other nations. This may be so, and I reckon so. But the reason it is so is because we have protected our manufacturers from competition with the outside world at the expense of the consumers until our manufacturers, like a hothouse plant, can not grow outside of a hothouse or a hot climate. They have been protected and fostered by the Government until they rely upon legislation for profits, life, and existence.

They are like unto a spoiled child, who has been petted, humored, and cared for by his parents so long and faithfully that when thrown upon his own resources he goes to the dogs and charges his own worthlessness and misfortune to his parents.

These people have been protected, at the expense of the people, for near one hundred years, and if they can not compete now with the outside world, they ought to go out of business. One hundred years is long enough to learn any trade.

But we are compelled to have revenue to run the Government. It is a necessary and indispensable evil. It is the price we all must pay for the wing and arm of the Government and the law, which guarantee to us our life, liberty, and property. But this burden ought to be made as light and as easy to bear as possible and consistent with the safety of the Government and the good of the whole. In levying these taxes and locating these burdens, they ought to be so levied and located as to bear upon all alike. No class ought to be exempt from its proportionate part of the burdens; and no individual or class ought to be permitted to levy tribute or contributions upon any other individual or class. Now, if this be true, the principles of protection are wrong per se.

It is admitted that in the beginning it was expedient and good policy to aid in some way, by law, enterprising citizens who would risk their capital in experimenting and starting new industries. But this aid and protection ought to be limited for a period of years, until the new enterprise should get under headway or on its feet, and not extend forever. But in this age and generation, when our manufacturers are competing in all the markets of the world with all nations, any protection for protection's sake is downright robbery in open daylight; and yet the present Administration is pledged to foster this principle.

As we said in the beginning of this article, the questions presented by McKinleyism and Clevelandism are serious in their effects and solutions.

If McKinley and his people were wise, they would take any more risk on raising the tariff, but would lay a new tariff on things not produced in this country. Such a tariff would be purely a tariff for revenue. A small tariff or tax on coffee and tea and the spices, and on other things not grown or produced in the United States, would relieve the Treasury at once. But this is not Republican doctrine, nor is it in accord with their platform, their promises, pledges, or their traditions; nor would such a tariff be accepted by the trusts, syndicates, and combines who elected Mr. HANNA and Mr. McKinley.

A higher tax on imported goods must be levied, not to raise revenue, but to decrease the revenues of the Government and to increase the revenues of the home manufacturers, combines, syndicates, and trusts. The idea of revenue to the Government does not enter into the idea of protection per se.

Protection means keeping out of foreign goods and the raising prices of homemade goods. And this means less revenue to the Government and more revenue to the maker of American goods; and this means that the consumers of homemade goods will pay two prices for their goods, not one to the Government and the other to the maker of the American goods, but both prices to the American manufacturer. Now, there is a medium between protection and free trade. Neither protection nor free trade means revenue. There is a line between the two; if followed, will mean revenue.

Protection that keeps out foreign goods will not raise revenue. Free trade that admits goods without a duty will not raise revenue. But a duty or tax not so high as to exclude goods nor so low as to fall short of revenue would be a tax for revenue.

A tariff that would admit foreign goods in fair competition with American goods in American markets would raise the largest amount of revenue, and at the same time would not destroy our home industries nor give them an undue advantage over other citizens. They would, however, still have an advantage over all other citizens, equal or about equal to the amount of the tariff duty levied. But under our system of government, as practiced, this seems unavoidable. A tariff so arranged and adjusted, and placed on all articles of every kind sufficiently low to allow the easy importation of goods, would be a revenue tariff. If such a tariff would produce \$250,000,000 of

revenue, it would be equal to \$250,000,000 of protection to American manufacturers. And this \$250,000,000 would be added to the price of the imported goods, and the consumers of these goods would have it to pay. But this is not half the story. If we used only imported goods, this burden would fall on all consumers alike.

But the truth is we use in the United States more than ten times as many American-made goods as we do of foreign-made goods; therefore we would pay ten times two hundred and fifty millions as tribute to American manufacturers in addition to the two hundred and fifty millions paid the Government.

This is accomplished by whipping the devil around the stump.

The amount of tax put on each article imported into this country and paid over to the Government is placed by the home manufacturers as an additional value of their goods, and the consumers of their goods pay this additional value placed on them by vicious legislation. And this is what is called protection, and this is what protection means. It means to rob the millions, by and under cover of law, for the thousands. Protection means to add to the wealth of the wealthy and to take from the poor and needy that which they have. And this is what McKinleyism and Clevelandism are pledged to do.

To accomplish this McKinley was elected. But suppose we are right in our theory that a high tariff will not bring in revenue, and McKinleyism is substituted for Wilsonism, and the revenues should continue to fall off, as they certainly will? The revenues fell off under the McKinley law, they fell off under the Wilson law, and they will fall short under any law as protective as the Wilson law. What a predicament McKinley and his people will be in! Like Cleveland, they will be forced to sell bonds, and, like Cleveland, they will be driven into outer darkness. Nothing but a revenue tariff and the restoration of silver will ever permanently replenish the Treasury and restore prosperity to the country. Four years of Clevelandism under protectionism and goldbugism ought to have convinced the American people of this truth. But it did not, and it was predetermined that they should have four years more of protection and goldbugism to bring them to their senses. Now we assert that no tariff laid on the importation of foreign goods the like of which is made in this country, can produce revenue enough to defray the current expenses of this Government, which has for its purpose the protection of American-made goods.

We lay down another proposition, the truth of which can not be successfully denied. We assert that no tariff law can be so framed (levying a duty on foreign-made goods) as to furnish a sufficient amount of revenue to pay the current expenses of this Government without flooding this country with foreign-made goods; and if this be true, the theory of protection must break down of its own inherent dead weight. As soon as the floodgates are opened, as they must be sooner or later, the protectionists must be swamped in a gulf of darkness and despair. We must have revenue. The Supreme Court has decided it can not be collected from property or the income on property; the Congress have exempted all or nearly all bonds from taxes. So the bulk of the taxes must come from duties on tariff on foreign importations, and these duties or taxes must be so low as to invite and encourage foreign importation. Now, if the importation of foreign goods is invited and encouraged, what will become of these hothouse plants located in this country around which a stone wall has stood for near one hundred years, and for whose defense and protection the people have been taxed hundreds of millions of dollars?

The storms are gathering. The clouds are thickening. The elements are darkening. The winds and rains will soon descend upon the heads of the rulers of this and all other lands. They have about run their course. The day of retribution is fast approaching. Babylon, with all her glory, pride, beauty, and power, is locked up in the archives of time. Greece, Athens, Carthage, with their wealth, learning, science, splendid manhood, and invincible courage and chivalry on the field of battle, are numbered among the dead and forgotten. Rome, with her legions and eagles, the conqueror of the world, the mistress of the seas, the master of the earth, the heavy tread of whose legions made the earth tremble, totter, and fall, with all her magnificent wealth, splendor, and power, with her eighteen hundred millions of gold and silver, with her Pompeys and Cæsars, is catalogued and archived among the things that were, have been, are not, and will be no more. The same causes that sapped the foundations, corrupted the public morals, overthrew and wrecked these once powerful and almost invincible kingdoms and inscribed on their hecatombs "Mene, mene, tekel, upharsin," and spread the sheet of oblivion over their moldering, crumbling remains are to-day sapping and ruining the foundations of this mighty Republic, and gnawing with hyena and ghoulish greed at its very vitals. And unless there is a reformation, a reversal of the order of things, a regeneration and redemption of the public morals, public honesty, public virtue, and the patriotism that moves and controls the officials in the executive, legislative, and judicial departments of this Republic, it must and will follow in the footsteps of its predecessors and go the way they went, and be numbered among the dead and dying.

But you will pardon me. I have wandered from the subject in hand, and will return to it at once. Wisdom, statesmanship, and patriotism would suggest that the quickest, speediest, and most honest and patriotic way to relieve the Treasury and aid the cause of reform and help the toiling millions would be to curtail expenses. Fifteen millions of dollars could be saved to the taxpayers annually by lopping off that amount from the river and harbor bill, or rather from the river and harbor steal. At least that amount could be saved to the taxpayers annually for the next ten years in the item of public buildings alone. Ten millions could be lopped off annually from the Army, Navy, and coast defenses, and the service be better by such lopping. From ten to twenty millions of dollars could be saved in the Pension Department, if it were not for the effort made by Congressmen to have themselves reelected by pandering to the old-soldier element of the country.

We are more than thirty years away from the war, and yet the pension list is larger than it was ten years ago. Judging from the pension list, soldiers never die; or if they do, two new pensioners appear on the list for every old one that dies. There is something wrong, miserably wrong, rotten in the Pension Department, and it seems that no political party has ever had the manhood, the moral courage, and patriotism to tackle the wrong. There could be more than ten millions in the various departments of the Government without detriment to the service. Ten per cent lopping off all along the lines, up one side and down the other, would more than supply the annual deficiency without interfering with specified subjects above named. The Government, like a prudent individual or housekeeper, ought to live within the limits of its income, and there is but one of two ways to do this. The first and most honorable way is to curtail expenses. The second is to increase the income, and if this can not be done, the expenses ought to be shortened. But instead of practicing rigid economy in times of great distress, with both the people and the Government, it seems our lawmakers become more extravagant. An effort was made a short time ago in Congress to increase the public debt more than \$100,000,000, and put the same in the pockets of a set of public plunderers who, together with their ancestors, have already cheated, defrauded, and wronged the Government out of more than \$100,000,000.

The Government can not pay its debts, if called on in the next five years. The Government to-day owes more than \$800,000,000 of interest-bearing outstanding bonds. It has \$500,000,000 of outstanding noninterest-bearing greenbacks, and \$120,000,000 outstanding noninterest-bearing Treasury notes or

Sherman notes. Now, in addition to these \$1,270,000,000 outstanding obligations, we have \$500,000,000 outstanding noninterest-bearing obligations in the shape of silver certificates and silver coins, every dollar of which the Republican party say is redeemable in gold coins, at the pleasure and option of the holders, making in all \$1,800,000,000 of outstanding obligations against the Treasury of the Government, and to meet and pay this enormous and stupendous debt we have the pitiful and small sum of \$150,000,000 of gold in the vaults of the Government. And with these undeposited facts staring the American people in the face, our lawmakers are appropriating and expending about \$500,000,000 annually, and are collecting the same from a down-trodden, oppressed, and helpless people. Under the circumstances, it is remarkable that no serious move or effort has been or is being made in Congress by either of the three parties, or any faction of either, to curtail or reduce the expenses of the Government within the limits of its revenues.

It will require caution, discretion, wisdom, patriotism, and the highest order of statesmanship and generalship to lead the Government out of the wilderness and the people out of their distressing surroundings.

And we do not believe it is possible of accomplishment without greatly increasing the number of real dollars in existence and greatly depreciating their purchasing power and appreciating the purchasing power of labor and commodities, so that a dollar of labor or commodities will go further in paying expenses, salaries, fixed incomes, annuities, and debts.

But we are not a prophet nor the son of a prophet, nor are we wise above other men of equal information. Therefore we may be mistaken in our views, and we hope and trust we are; because, if we are not, there is no light ahead—nothing but darkness, as far as our understanding can penetrate.

Without consumers able to consume there will be no markets, and without markets mills will not and can not run. Neither a higher nor lower tariff will better the financial condition of the people or Government now. The disease is of too long duration and is too radical and deep-seated to be affected by so simple a remedy.

It will require a more drastic treatment, a more powerful and far-reaching remedy, to restore the patient to full health and vigor.

If Mr. McKinley really means to do all in his power to relieve both the people and the Government from this nightmare of stagnation, this cloud of darkness that hangs over all Europe and America, let him diligently and earnestly seek the cause (for he has not yet discovered it), and then bend all his energies to the removal of that cause. Then, and not till then, will prosperity return to this people and the mills start their joyful humming. Mills can not run on full time and full wages unless their owners can sell the output. They can not sell their output unless the people are able to buy and consume.

If the farmers and laborers can not sell what they produce for more than the cost of production, how can they buy the products of the mills? And if our mills run on full time and full pay, they can produce more goods than our people can consume under the gold standard, and if this is so, where are the purchasers and consumers to come from to buy and consume the imported goods upon which McKinley proposes to levy and collect his revenues for the Government?

One thing is as certain as day and night—our people can not consume the products of our home mills if run on full time, and in addition thereto buy and consume enough foreign-made goods to raise revenues enough to run the Government.

This is certain, and the McKinley fellows had as well realize the truth and seek revenues from some other source. All taxes over and above 20 per cent ought to be taken off of imported goods and raise the balance of the revenues from the wealth of the country.

Every man in all the land ought to pay taxes on all he owns to both State and nation. It is right. Not to do it is wrong. And if the Constitution will not permit property to be taxed to support the Government it ought to be amended at once. If the Constitution will permit it, then the Supreme Court ought to be reorganized at as early a day as possible so that the Constitution can be upheld. When a nation produces and is capable of producing more than it can consume, it is impossible for that nation to collect revenues sufficient to pay the expenses of the Government on the importation of articles the like of which is abundantly made in this country and at the same time keep its own mills at work.

Either our mills must stop or we must stop importing the same kind of goods made at home. If you want revenue, goods must come in. If you want to run home mills on full time, then you must stop the importation of foreign goods. If we only made half enough to supply the demand (as we did twenty and forty years ago), then we could import the other half. But our mills can more than supply the demand, except in woollens, and in two years more we will supply the demand in woollens. A tax for revenue will (we admit) raise enough money to run the Government. But that tax must be laid on goods and commodities not produced in the United States.

How does it benefit us to pay 1 to 50 cents more per yard for cloth, according to quality, because of the tariff? It might benefit the mill owner, and might enable him to give his laborers a few cents more per day; but if for the purpose of increasing the mill owner's profits the consumers of these goods are thereby compelled to pay higher prices for them, we would be greatly obliged to some protectionist to explain how these consumers of these protected goods are benefited by paying more money for them.

All this agitation and distressing lamentation about protecting American labor and industries is nonsense, hypocritical, and misleading from our standpoint.

It is a shrewd scheme adopted by the mill owners and capitalists to deceive, cheat, and defraud the people. It is a plot and conspiracy injected into the Constitution by construction and interpretation, that the people may be robbed under the cover of law, and under the flimsy pretext of taking care of the "general welfare" of the people. The common sense of every intelligent, honest man revolts at the idea or suggestion of protecting one individual at the expense of another, one class at the expense of another, one community at the expense of another, one section at the expense of another, or one State at the expense of another State.

To prevent protection to individuals, classes, or States, in contradistinction to others, was the leading thought and the substantive idea, uppermost in the minds of our forefathers when they framed the Constitution.

To prevent taxation without representation or compensation inspired our ancestors to formulate and promulgate the Declaration of Independence.

To abolish favoritism, primogeniture, special privileges, class legislation, and to break down all barriers and to remove all obstructions from the avenues of business and political equality, and from the road to individual success and national independence, induced our Revolutionary ancestors to take up arms against the mother country.

Now, to suppose that we desire to return, or that the framers of the Constitution and builders of this Republic ever intended that we should return, to such conditions as existed in the beginning, to get rid of which our ancestors waged a seven-years war, is too unreasonable, absurd, and inconsistent to attract the attention of a rational creature. As soon as agitation and education and the low prices of labor and agricultural products open the eyes of the people to the real condition of the masses, and to the rapid strides being made toward centralization, consolidation, and despotism, they will not be long in imitating the examples set by our Revolutionary fathers. And the

sooner the protectionists, goldbugs, and their leaders discover or learn this truth and mend their ways the better it will be for them, their wealth, and the country.

The American people are very conservative, long-suffering, and forbearing, but when patience ceases to be a virtue, and patriotism loses its magnetic charm, and despotism becomes the order of the day, and they become aroused, they will assert their rights and maintain them at any hazard, even at the risk of their lives, fortunes, and reputations.

England's conduct toward the colonies was not half so oppressive and intolerable as the doings of Congress, the Executive, and the Supreme Court are to the people of the United States. Her revenue laws were lenient and merciful in comparison to the revenue laws of the United States. The burdens she placed upon the people of the colonies for national expenses were light and easily borne in comparison to the taxes and burdens placed upon the people of the States by Congress. English taxes and duties on the colonies were direct, pointed, and affected each individual, corporation, and State alike. There was no favoritism or classism in collecting revenues. She laid her hand upon the rich as well as upon the poor. She treated all alike and discriminated against none when she needed revenues. And to-day she collects more than half of her revenues from the incomes of her wealthy subjects. Not so with us. Our revenues are collected principally from what we eat, drink, and wear, either directly or indirectly. Every railroad, steamboat, banker, bondholder, commission, wholesale, and retail merchant; every dealer in any kind of commodities, and every middleman between the manufacturer and the consumer is a tax collector for the manufacturer as well as the Government.

The last man who buys and consumes the hat, the shoes, the yard of cloth, the dress, or the suit of clothes, pays the tariff levied by the Government on foreign goods, as well as a premium on the goods manufactured in this country equal or nearly equal to the tariff duties paid to the Government on foreign-made goods imported. And the only reason the people have submitted so long to this national wrong and outrage is because they can not fully comprehend how the revenues of the Government can be mixed up and mingled in the price of the commodities they buy and consume; nor can they fully understand how the merchant and middleman can be the agent of both the Government and the mill men, collecting revenues for the one and premium or plunder for the other.

As soon as they are fully educated on the subject of taxation, and how and from whom it is gathered, these wrongs and outrages will cease, and not until then. To prove the truth of the assertions above, we will select a hat, a pair of shoes, and a suit of clothes. We will say the hat is worth in Liverpool \$1, the shoes \$1, the suit of woolen clothes \$5. Now, if the Government of the United States will permit the importer to bring these goods in this country without paying a duty on them—that is, admit them free of tax or duty—our retail merchants could sell these articles to the consumers for cash, say, the hat for \$1.35, the shoes for \$1.35, and the suit of clothes for \$6.75.

This would be a profit of 35 per cent for the importer and the merchant. Now, take the same articles and place upon them a tariff duty of 43 per cent, which is the present average rates on imported goods. That would make the hat cost the consumer, allowing the same profits to the importer and the merchant as before, \$1.93; the shoes, \$1.93, and the suit of clothes, \$9.63. Without any tariff the three articles would cost the consumer \$6.45; with the tariff they would cost \$13.57; with no tariff, the consumer saves on the three articles \$4.06; with the tariff duties on, he loses \$4.06. Now, this is the meaning of protection. It means that the home-made goods will sell for exactly the same price as the imported goods, because the importer and the home dealer will agree to sell for the same price. If not, the home-made goods would soon, by competition, drive out and keep out all foreign goods. But they pool their issues, and the importer makes 10 per cent clear profit and the maker of home-made goods makes 53 per cent profit, provided it cost the same to make a hat, a pair of shoes, and a suit of clothes in England as here.

Now, we have the raw materials, with few exceptions, at home. We have the finest, the latest improved, and best machinery in the world. We have the finest mechanics, artisans, and skilled scientific workmen in the world. We have more water power and the finest water power on the top side of God's footstool, amply sufficient to turn every machine in all Asia, Africa, Europe, and all of both North and South America. We are now making and selling agricultural implements, woolen and cotton fabrics of all kinds, and every kind of machinery from a sewing machine to a 100,000-horsepower engine, in competition with all the world. We have a climate unsurpassed for business, pleasure, health, and cheap living, it being neither too cold nor too hot—a climate and country subject to neither droughts, famines, pestilence, epidemics, nor earthquakes. We neither have nor need a large standing army, as other nations of the earth, eating out their vitals. We are blessed as no other nation of the earth is blessed, and surrounded as no other people of the world is surrounded, with more of God's natural and physical gifts. With all these manifold blessings, natural advantages and defenses, natural and inexhaustible resources, with vacant lands enough to raise sheep enough to clothe and cattle enough to feed all America, and with a cotton-producing capacity ample and sufficient to produce cotton enough to clothe the entire world, we can compete with all the civilized nations of the earth. And if we can not, with our hundred years of experience and boasted greatness, we ought to retire from the contest. We ought not to follow any business in which a hundred years of experience and competition and protection have not placed us in the front ranks.

Under all the circumstances surrounding the United States we ask, and we ask in all seriousness, why should any industry in this age and generation be protected over and above any other industry? Why should any special privileges, advantages, or peculiar rights and benefits be granted by legislation to any calling, profession, business, or avocation? Why should the laws discriminate against one business or class and in favor of another business or class? If all could be protected exactly alike and to the same extent, no one would be benefited and no one would be damaged, and if no one in contradistinction to anyone else was either benefited or damaged by protection or non-protection, no one would want either protection or nonprotection. But the very meaning of the phrase "tariff for protection" means and intends to give one man, or class, or section, or business, or industry an advantage and benefit over other men, classes, sections, businesses, and industries. If this is not so, why ask for protection, why demand or desire a thing which is of no service or benefit? Protection is a gentle, gentlemanly way of taking a man's labor or property without compensation. Protection is a decent mode, devised by the cunning, crafty, and greedy, to pluck the money out of one man's pocket and transfer it to the pockets of others without detection or prosecution. Protection is the constitutional and legal *modus operandi* whereby robbery is authorized, Christianized, civilized, and legalized.

Now, in order to understand the magnitude of the wrongs inflicted upon the people by the infamous protective system, as we understand it, let us return for a moment to our hat, shoes, and suit of clothes. We have seen that they cost the consumer \$4 more under the protective system than under the free-trade system.

Our population is about 80,000,000 in the United States. Assume that both male and female, white and black, little and big, rich and poor, all consume just one hat, one pair of shoes, one dress or suit of clothes every twelve

months, the \$4 extra cost to each individual because of the tariff would be \$4, and to the whole people it would be \$20,000,000. Now, multiplying this amount by five, because our calculation did not include one-third or one-fifth of the goods consumed annually by the people, and you have the sum of \$1,000,000,000, one hundred and sixty millions of which found its way into the Treasury, and the other \$1,400,000,000 found its way into the pockets of the home manufacturers by the increased price of the products of their mills through the protective-tariff system. Suppose the average consumption of the people outside of meat and bread is \$30. Thirty times eighty millions are twenty-four hundred millions of dollars; one-third of this amount is the increase, because of the tariff, which is \$800,000,000 clear steal from the hard earnings of the people, or, to put it in a more genteel phraseology, clear legislative profits to the mill owners of the United States. I could write a month on this subject and not exhaust the arguments and reasons against it, nor retail half its wrongs, oppressions, and outrages. But I have said enough to give my convictions against this national, local, and individual crime known by the euphonious name, "protective tariff," which has deceived and wronged, and will deceive and wrong, more people than the phrase "honest money."

### The Tariff.

### SPEECH

OF

HON. PHILIP B. LOW,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 31, 1897,

On the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. LOW said:

Mr. CHAIRMAN: There is no subject of national legislation that has been thrashed as much, both in and out of Congress, as tariff. Statistics have been exhausted to sponsor arguments for and against tariff measures, and to speak on this great question means to repeat what has often been said in this historic Chamber. It is not my purpose to hew along the line of Government statistics, but to touch upon conditions that have existed in the past, and which now confront us, as affecting the industrial interests of our common country.

We have a fair land abundant in resources, rich in everything, and capable of placing all its citizens above want. Yet on every side we have discontent and growing poverty, which indicates that something is wrong with our existing economic laws. With the experience of the past as a guide, it did seem more than passing strange that a majority was found in 1892 who were willing to follow the lead of tariff reformers under the promise of better times. The people who made that majority had to meet the blackest disappointment and four years of the hardest struggle ever experienced in the business history of these United States, and the only grain of satisfaction that protectionists could extract from the situation was that those who supported the "tariff-reform ticket" had to suffer with the rest of us. They wanted a change and got it, and ever since 1892 the people have been thinking and reasoning to some purpose, as results have shown.

We all know that during the past four years the industrial interests of this country have been floundering in the Democratic morass of hard times. Business men saw their accumulations of years melt away; the toiler and wage earner became enforced idlers, and were obliged to live upon their small but precious savings, until they drew their last dollar from the savings bank. Then they, with their families in a hungry and scantily clad condition, were evicted for nonpayment of rent. Why, in New York City alone, during the year 1896, there were 53,000 dispossess warrants issued, which means over 240,000 human beings turned into the streets during that year. To use an expression made by my distinguished friend from Iowa [Mr. HEPBURN], "What lullaby did the free traders sing" to soothe the anguish and smooth the harrowed feelings of those unfortunate and indigent beings? After such a period of depression, caused largely by existing economic conditions, the majority of the people of these United States, without regard to former political affiliation, came together and in solid phalanx fought during the last Presidential campaign for principles that would open up the avenues of prosperity.

Their triumph last November was a victory never to be forgotten. When the verdict was flashed over the wires the day after election, people gathered on exchanges, in halls and club rooms, and at country crossroads to rejoice. They sang "The Star-Spangled Banner," "My country, 'tis of thee," and after engaging in other appropriate ceremonies, closed by singing the grand old doxology, "Praise God, from whom all blessings flow." Such demonstrations were proper, because the cloud of despair which had hung over our land for four years was lifted, and under its corrugated edges these inspiring words were visible: "Prosperity is near at hand." New hope filled the American heart. Inside of forty-eight hours after the election, capital, which had been lying idle in the vaults, manifested signs of uneasiness and seemed ready to burst the doors of confinement. Enterprises requiring the employment of labor were outlined, and the iron jaws of depression

commenced to relax their hold and recuperation was visible all along the line. Despite all the losses and trials the people have had to endure, the country is still left to us. Thank God, we have the plant safe, which plucky American hearts stand ready to put in operation when the opportunity arrives.

The favorite cry of free traders is that tariff taxes the poor man. When I hear such utterances I want to say to them, "Hold up your right hand and swear that you will tell the whole truth and nothing but the truth."

My esteemed colleague from Alabama [Mr. WHEELER] said that we wanted to tax the poor man's blanket. Let me say to the gentleman, "Tell the whole truth." If we do tax the poor man's blanket, we put money into his pocket not only to pay that tax but to support his family and have a little something left for him to put into the savings bank. When free traders take the tax off the poor man, they also turn his pocket inside out, and he could not buy a pair of blankets if they were selling at \$1 a bale.

Taxing the poor man! Did there ever exist a heavier or a more unjust and heartrending tax than enforced idleness and an empty stomach, which conditions burden the toilers of our country through the workings of free-trade laws? Tell the whole truth and nothing but the truth. Protection to American industries and loyalty to the condition that permits a man to earn his own living in his own country, free from foreign competition, is not an invention; it is a patriotic principle that was adopted by our Government in 1789, during Washington's Administration. The country at that time was deeply in debt, business at its lowest ebb, and not one dollar of revenue coming into the nation's Treasury. The first act passed by Congress was a tariff levying duties upon foreign merchandise. In the preamble it stated, "for the encouragement and protection of American manufactures." James G. Blaine said that "the first act of Congress was a second declaration of independence, and by coincidence was approved by George Washington July 4, 1789. The principle of protecting manufactures and encouraging the maritime interests of America has been distinctly proclaimed—the first law enacted by the new Government. It was the corner stone of the republican edifice the patriots of the Revolution were aiming to construct." James G. Blaine was right. Our forefathers were right. They builded better than they knew, and every time the laws have been changed leaving our industries unprotected financial disaster has followed.

On the other hand, every time a protective tariff has been enforced, prosperity has blossomed throughout the land and employment confronted every citizen, creating a demand and supply in every line of trade. The people understand this, and this is the people's Congress, a protective Congress, and to it the masses look for remedial legislation.

This bill has been carefully formulated to meet the absolute requirements of the nation and is before us to be tempered by hammering it upon the anvil of American interests. The Republican party never enacted a law not in line with American principles. It never passed a law that was an advance agent for starting up English furnaces, at the same time hauling the fires of our own. It never issued bonds to meet the necessary expenses of our Government in times of peace. On the contrary, it always had an earned balance in the Treasury.

Break the lines of free trade by passing this bill, and make this land of ours, under the sunshine of protection, God's country, the land of our fathers once more.

### The Tariff.

### SPEECH

OF

HON. ISRAEL F. FISCHER,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 23, 1897,

On the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. FISCHER said:

Mr. CHAIRMAN: Believing most sincerely that the country determined in the recent election that it no longer desired to continue under the Wilson-Gorman tariff or under any legislation founded on free-trade ideas, and that the Republican party was returned to power to not only vouchsafe the stability of our currency, but to enact new legislation on the lines of a protective policy, I favor the passage of this bill. It may be true that it is not perfect; that here and there some discrepancies have crept in, and that it might be improved in some slight particular, but on the whole I believe it to be the very best measure that could be framed for the purpose intended and so clearly and succinctly set out in the title.

I have wondered at times while listening to the remarks of some of our Democratic friends in their arguments against the

bill whether they were honest in that opposition or whether they simply opposed because the Republican party proposed. I could not for myself believe that they honestly entertained the idea so oft expressed, that the passage of the bill would work great hardships to the people, and that the next few years would see the downfall of the Republican party as the result, for the reason that if they really believed that to be the outcome they would be highly pleased at the opportunity afforded, and in order to insure our defeat facilitate the passage of the measure.

Truly our friends occupy a most peculiar position. In the midst of heated denunciation there frequently occurs confession of virtue in protection, for you will observe in the remarks of the gentleman from South Carolina that while he condemns protection to manufacturers he calls for protection for the raw materials of his State, as does also the gentleman from Georgia. The former went even further; he claimed that the system of protection instituted by the Republican party was responsible for the great wealth of the East, and that the South and West were impoverished because it did not cover them. Surely this was a most remarkable statement and confession, so far as it went—that is, that protection did protect, and that it did build up prosperity, and that the reverse condition existed in sections which were not covered. The gentleman from South Carolina would have shown himself much more alive to the needs of his people, and would have proven himself a true guardian of their interests, had he sought to include any industry within his State in the bill rather than to oppose its passage.

I do not speak upon the question because I believe that I could say anything or add anything that would strengthen the position of the Republican party upon this class of legislation, and I am forced to say that all of the arguments that have been submitted are likened unto old straw rethashed. The American people have gotten to that stage where the question of protective tariff is no longer a theory, but is a most decided condition. It has been demonstrated to them during the last four years that a removal of protective legislation works great hardship and injury, and they no longer theorize, but demand a reenactment of such protective legislation.

Since the advent of the Democratic party at the time of the election of the Fifty-second Congress we have seen only ruin in our commercial affairs, and where shops prior thereto were busy with the hum of enterprise we have seen nothing since except idleness. And while men were then sought for by the employer, and we enjoyed the fruits of prosperity, we have since then seen the employees seeking the employers, with results only too well known to all of us.

Our Democratic friends seem to lay great stress upon remarks so often made by them during the course of the debate relative to protection fostering trusts. It is not necessary to spend any amount of time answering the charges, for I consider it only necessary to remind them that trusts were never more numerous or their acts so prolific of beneficial results to their promoters as they have been during the past four years, and that their attention need simply be called to the fact that throughout the entire Union in the legislatures of nearly every State during the past two years there have been loud demands for legislation against these trusts. The workingman of this country has learned by ample demonstration made by Democratic tariff legislation that the oft-repeated cry that free trade was beneficial to him and made trusts impossible is false, and has concluded and did decide in the elections of 1894 and 1896 that he wished a return to Republican policy in order that he might once more earn a livelihood, which, as a matter of right, he was entitled to.

There are a few provisions in the bill in which I am particularly interested, inasmuch as many of my constituents are engaged in the industry provided for. I will address myself first to the duty on gold and silver leaf. By reason of the beneficent provisions of the McKinley bill manufacturers of this article were enabled to find a market in this country for their goods at a fair profit, and men and girls employed by them earned a decent livelihood. In the Twenty-sixth Ward of Brooklyn, in which I live, many men and girls were thus employed, but since the advent of the Wilson bill these articles have been purchased from Europe, and our shops in consequence were closed most of the time, and when open only provided scanty wages for our people. It seems that under the McKinley bill good mechanics averaged about \$18 per week, whereas under the Wilson bill they averaged about \$5 per week, and German manufacturers were able to lay down goods in this market at a price equal to that formerly paid to our mechanics for their workmanship alone, not taking into consideration cost of material and rent and profit of the employer. This section will once more permit our workingmen to earn wages formerly received by them, and will restore to prosperity in this ward alone at least 300 families who have been suffering untold hardships during the past four years. I had hoped for a little higher duty on Dutch metal leaf, but it seems that I must content myself with the rate offered.

Another industry included in my district and provided for by

the bill is the braid and straw dyeing, for which a duty of 10 per cent is provided. By actual figures, the foreigner could dye and deliver these goods in our markets for at least 10 or 12 per cent less than we could produce them at home, and the result during the past four years has been that our dyers were receiving no work, except little odds and ends turned over to them by hat manufacturers here, who had concluded to alter the colors on straw braids which they had in stock. The conditions under which the dyers labored were peculiar, inasmuch as they were compelled to pay a duty on dyestuffs and pay decent wages to apply them to the article for which they were intended, while European dyers could apply them to the articles, paying European wages for work, and then land the finished article here free of duty. This was surely legislation seemingly enacted to injure American manufacturing in the interest of the foreigner, but this will now be changed, and the duty levied by this bill will so even up conditions that hereafter this unfair competition will cease.

This bill also spreads its protection to another industry located in the city which I have the honor in part to represent, and which affects many of the workmen therein engaged, who reside in my district. I refer to the tin industry. When the McKinley bill provided a tariff to cover tin, there sprang up in the city of Brooklyn one of the largest tin factories in the country, and its proprietors, who had formerly been staunch Democrats, recognizing that the party to which they were formerly allied was not benefiting them by their course, have since supported the Republican party, and have never lost an opportunity to praise its policy. That industry gave employment to a large number of men, and has added to the material wealth of our citizens, but since the passage of the Wilson law, all has been changed, and this bill will again restore it.

The workings of the Wilson bill have proved disastrous even to importers, for while it is true that the arrangements enabled them to bring goods into our market at lower prices than they could under a protective tariff, yet the misery which it brought to American homes and the panic it caused in our commercial affairs have left our people without money wherewith to purchase at any price, and one importer whom I know personally has confessed to me that he would rather pay \$5 more on every \$100 worth of goods under conditions existing under a protective policy (knowing he could bring them into this country and dispose of them amongst a prosperous people) than to save that impost and bring them into a poverty-stricken country where there is no market, as was the case during the existence of the Wilson tariff law.

The Democratic party, at the time of the adoption of the Wilson bill, promised much to the farmers of our country, and predicted that its enactment would insure the success of the Democratic party, which meant prosperity to them. They were to have the markets of the world thrown open to them under the beneficent workings of free trade. Let us observe its workings:

In 1892 we sold to the world 2,800,075 bushels of barley for \$1,751,445, while in 1895 we sold only 1,563,754 bushels for \$767,218, a falling off of 236,321 bushels and a loss of \$984,227.

In 1892 we sold to the world 637,972 bushels of beans and peas for \$945,767, while in 1895 we sold only 242,682 bushels for \$429,006, a falling off of 395,290 bushels and a loss of \$516,761.

To show you how farmers captured the markets of the world, I wish to call your attention to a few more figures. In 1892 foreign farmers sold to us 874,050 bushels of beans and peas of the value of \$937,824, while in 1894, under the Wilson-Gorman tariff, they sold us 1,535,913 bushels for \$1,548,749. Thus the American farmer on this one class of product suffered the loss represented by this difference, amounting to \$590,925.

In 1892 we sold in the markets of the world cattle of the value of \$35,099,095, while in 1895 we sold only \$30,603,796, a loss of nearly \$5,000,000. On the other hand, "the world" sold to us in 1892 \$47,466 of cattle, while in 1895 "the world" sold to us \$765,853, a gain for the foreign dealer of over \$718,000.

In 1892 we raised 70,626,658 acres of corn, amounting to 1,628,464,000 bushels, of the value of \$642,146,630, while in 1895 we raised 82,075,830 acres of corn, amounting to 2,151,138,580 bushels, of the value of \$567,509,106. Over 11,000,000 more acres of corn, producing over 500,000,000 bushels more in 1895 than in 1892, yet the smaller crop of 1892 was worth \$75,000,000 more than the larger crop of 1895.

In 1892 we exported flour of the value of \$785,404,928, while in 1895 we exported only \$751,651,928, a falling off of about \$23,000,000.

In 1892 we raised 150,000,000 bushels of potatoes on 2,411,500 acres, worth \$100,950,000, while in 1895 we raised 297,237,470 bushels on 2,954,952 acres, worth only \$78,984,901—nearly twice as many bushels, yet worth only about \$21,000,000 less than the smaller crop.

In 1892 we had 44,938,365 head of sheep, worth \$116,131,370. In 1896 we have only 38,298,783, worth only \$65,167,735, only a little over half.

In 1892 we sold to the world wheat to the value of \$161,399,132, while in 1895 we sold the same commodity to the value of \$43,805,663, a loss of over \$117,000,000.

The Democratic Secretary of Agriculture, in his report of 1893, page 48, says:

The question then comes up whether some, perhaps much, of this great total of annual agricultural imports, aggregating in value some \$350,000,000, ought not to be produced upon our own soil, in proximity to those of our own markets, where this immense demand exists; and the truth is, it could and should be so grown.

I desire to read here a table collated by Mr. Nathaniel McKay, under date of August, 1896, showing wages paid in the United States compared with those paid in Great Britain.

Mr. McKay is a gentleman who had devoted much time and energy to the investigation of matters of this character, and from my knowledge of the man, I have no hesitancy in declaring my belief in the absolute truthfulness of the statement:

In the United States a blacksmith receives 102 per cent more than in England.	
In the United States a bricklayer receives 125 per cent more than in England.	
In the United States a carpenter receives 165 per cent more than in England.	
In the United States a calker receives 120 per cent more than in England.	
In the United States a conductor (express) receives 349 per cent more than in England.	
In the United States a car driver receives 38 per cent more than in England.	
In the United States an engineer (locomotive) receives 191 per cent more than in England.	
In the United States a fireman receives 186 per cent more than in England.	
In the United States a machinist receives 136 per cent more than in England.	
In the United States a plasterer receives 111 per cent more than in England.	
In the United States a plumber receives 143 per cent more than in England.	
In the United States a telegraph operator receives 103 to 154 per cent more than in England.	
In the United States a train dispatcher receives 315 per cent more than in England.	
Laboring men in London.....	1,912,000
Trades union societies, 519.....	1,000,000
Average pay of English workmen.....	\$1.80
Average pay of American workmen.....	\$3.88

#### The Tariff.

#### REMARKS

OF

HON. WILLIAM V. SULLIVAN,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 31, 1897,

On the bill (H. R. 907) to provide revenue for the Government and to encourage the industries of the United States.

Mr. SULLIVAN said:

Mr. CHAIRMAN: The question now pending for consideration has been so thoroughly discussed by stump speakers during the last canvass, and here by each member on the floor, that one can scarcely expect to contribute anything new on the subject; and if he expected to do so, that expectation would evidently be doomed to disappointment.

There is, however, one thought in this controversy that suggests itself—not one vote will be changed by all the discussions that may be indulged in here upon this measure, because the Democrats and their Populist friends and others have been elected by their respective constituencies upon definite different lines from those written in the bill.

The line of demarkation between the two great parties is not shrouded in mist, or doubt, or difficulty; it is clear, it is deep, and suggests the destruction that must follow the passage of this bill.

Taxation and confiscation are twin brothers. Taxation is only tolerable upon the theory of absolute necessity to raise revenue to meet the actual requirements of the Government.

It has never been, by any disinterested, fair-minded statesman, contended that it was allowable to protect one class at the expense of another, no matter under what disguise the evil effects may have been concealed.

Protection means a partnership between private individuals and the Government as controlled by the dominant party, in the interest of the favored class, the class protected to the injury of all other classes.

History uniformly demonstrates the fact that the agricultural and laboring classes suffer always from protective legislation. The investments of the rich are enhanced and the poverty of the middle and lower classes intensified. Protection is dishonest in theory and in fact. It would be as honest from a moral standpoint to hold one up on the highway and take from him his purse and give it to another as to levy a tax upon one class to build up and enrich another.

Can it be anywhere written in the Constitution of this Govern-

ment, as discovered by fair interpretation (even between the lines), that there is authority to levy a tax one of the avowed objects of which is to protect one class at the expense of another?

This bill by its very title shows that it is not for revenue only, but for protection, with that latter word written in capital letters. A mere casual examination of this bill will show that the protection which is provided by it is protection alone for the strong, not for the weak; for the rich, not the poor; for the manufacturer, not the masses.

From the far Southland I come, and I have listened carefully, eagerly watching and waiting to find in this measure one word, one line, one thought, written to advance the interests of the South or of my State. It is not there written; it can not be found: and yet we are asked to support this bill.

It taxes everything that the farmers and laborers have to buy and makes the necessities of life dearer to them.

The true theory is, and must inevitably be, in levying any duty upon importations, to levy such duty only as is necessary to defray the expenses of the Government, properly and economically administered, and this should be so distributed as to bear alike upon every person in proportion to his rank, property, and position in life.

One cent more levied is legislative robbery; one cent levied to protect an industry, whether falsely called an infant industry or not, is to that extent a legislative theft. Yet it is with astounding effrontery confessed by the advocates of this bill that it is intended to protect the favored classes. Not only so, but in this Hall this day the gentleman from New York [Mr. RAY] had the temerity to say that the Republican majority ought to pay no attention to anything that the other side of the House might say on the subject of the tariff, but should pass the law at once. In other words, it is fair to infer that the Republican majority propose and will pass this bill in defiance of the will of those people who happen to be represented by other than Republicans, and that without proper amendment, fair discussion, or deliberation.

Reasonable time for the examination, comparison, and discussion of the various provisions of the bill has been denied to our side of the Chamber. The Republicans have taken three months, cloistered with representatives of the combines and trusts, in the preparation of this bill. On Monday the Republican majority passed the resolution which requires the summary and prompt passage of this act without reasonable, fair, and legitimate discussion; and when we complain of this we are told that the last election, having returned a Republican majority, settled the question; that we have no right even to be heard by way of protest as to anything they may say or do. They must deliver the goods to the manufacturers and trusts that they pledged when they received the money to buy the last Presidency!

The cotton farmer of the South under this bill will have to pay an advanced price for every cotton gin he buys to gin his cotton with; will have to pay an increased price for every tie that goes around that cotton; an increased price for every yard of bagging that covers the cotton, and also an increased price for every plow, every hoe, every shovel, every implement, in fact, that necessity requires him to use in making his hard-earned living, in order to add to the wealth of the manufacturers and the representatives of the combines and trusts.

A Republican some days since stated from his seat here that he was willing to vote for protection on cotton. It may be some are sincere in their desire to distribute this tax burden fairly; but if that side of the Chamber, when it was preparing this bill, had desired to do that which is right and fair, acting from principle, is it not passing strange that no protection was offered to cotton, either the long or the short staple? Is it not strange that every article which we of our section have to buy is to be increased in value?

It is not surprising, when these facts are known, that the Republicans should deny the privilege of discussion, consideration, and debate upon this matter; its provisions would not bear the light of day; yet I say to you their effects will be felt, and they will speak to the American people, within the next two years, more eloquently than all the tongues that any party can put upon the stump.

The rules governing and limiting this debate passed by the Republican majority are unjust, and especially so to the new members of Congress, who have had no opportunity to be heard. It is an outrage upon the people whom the Republicans pretend to represent, but really misrepresent. I protest, therefore, against the passage of this bill, because its purpose is not for levying revenue to economically administer the Government, but for the protection of the favorites of the Republican party who furnished the corruption fund with which to carry the last election and once again to thwart the will of the great mass of the people of the United States; its purpose was not in accordance with the genius of our institutions, the Constitution of our land, nor common honesty between man and man.

It is sectional in spirit, it is vicious in principle, and oppressive to every class that needs the protection and not the destruction of the iron hand of the law.

## The Tariff.

## REMARKS

OF

HON. WILLIAM T. ZENOR,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 25, 1897,

On the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. ZENOR said:

Mr. CHAIRMAN: The short time allotted to me under the order of this discussion precludes any attempt on my part to enter into any extended remarks upon the bill under consideration. But I would feel, Mr. Chairman, that I would be derelict in the discharge of my duty if I did not avail myself of the opportunity to enter my protest against the passage of the pending measure—a measure, Mr. Chairman, that would, in my judgment, should it pass this Congress and be enacted into law, be fruitful of all the evils that have ever been the inseparable concomitants of excessive, unjust, and oppressive taxation; a measure that is fraught with hardships and indefensible discriminations too numerous to be mentioned, much less pointed out and discussed in detail by any member upon either side of this Chamber in the limited time assigned for such discussion.

I am, Mr. Chairman, like many of my colleagues on the floor of this House, a new member—for the first time assuming the responsibilities and duties devolving upon a Representative and member of this body. Naturally enough, I approach the discharge of those duties with that care and caution which, I trust, is not unbecoming to want of experience and lack of familiarity with its manner and methods of business, a knowledge of which can only be acquired by time and service. But in the presence of what I conceive to be an emergency for action—wherein no gentleman, standing here as the representative of more than 170,000 people, the equals of any like number in any other section of this Union in all of the essential elements of the highest order of citizenship, can have any excuse for not solemnly protesting on the floor of this House in the name of common justice, and the menaced rights of the great mass of the people, against the outrage and nameless crime threatened to be perpetrated upon the American people through the passage of this proposed measure of legislation; a measure gotten up by its framers, advocates, and defenders for the avowed purpose of protecting the manufacturers of the United States, which must, in my humble judgment, if it succeeds, exact new tribute at the expense of the farmer, the laborer, and all other legitimate vocations; that must inevitably entail upon the consumers of the country, if it shall result in the accomplishment of its avowed purpose, higher prices for the manufactured goods, and foster and build up the trusts and combines that have at all times been the legitimate offsprings of such a system of taxation. It will not do for the friends of this monstrous combination of schedules and high and prohibitive rates of duty proposed to be levied upon all the necessities and comforts of life of the already oppressed and overburdened taxpayers to deal in general proclamation of the national necessity of raising more revenues with which to meet the expenditures and outlays of the Government; nor will it suffice for them to indulge in the oft-repeated campaign stock-in-trade argument that for the last three years, under the operation of the Wilson bill, the revenues derived thereunder were insufficient to meet the demands upon the public Treasury; for the report of the majority of the Ways and Means Committee, accompanying the report of this bill, bears upon its face conclusive evidence of the falsity of these claims.

In the first place, Mr. Chairman, this report shows that under the provisions of the pending bill it will raise \$118,000,000 in excess of the amount of revenues derived from the same source under the present existing law, known as the Wilson bill. In the same report it is admitted that the receipt of customs duties under the Wilson bill last year—1896—only fell short of meeting the expenditures of that year in the sum of \$25,000,000, thereby showing that, conceding all that is charged to the defects of the Wilson bill, and admitting still further the truth of the claim that under the Wilson bill a deficit was created in the Treasury in the sum of \$25,000,000—that it lacked this much of producing sufficient revenue to meet the expenditures (all of which is due to the Supreme Court decision in striking down the income-tax clause)—yet the stern and stubborn fact remains, in fact stands as openly confessed in this majority report, that the Republican party propose, and this under the inspiration of the urgent insistence of the President in both his inaugural address and in his message convening this Congress in extraordinary session, to levy further additional tribute and tax to what they already pay upon every man, woman, and child throughout the length and breadth of the land—the sum of \$118,000,000, which, according to their own showing, is in

excess of any deficiency that arises under the present law of \$90,000,000.

For what purpose, Mr. Chairman, is it claimed that this immense tribute should be exacted from the people of this country? No explanation is made; none is attempted by the able and astute gentlemen upon the other side of this Chamber, and I assume that none can be made satisfactory to the people of this country, who have the same to pay. And we challenge and are ready to meet the issue made by such reckless and extortionate legislation. Can anyone conceive of any possible excuse upon any legitimate grounds for such an iniquitous measure? Can anything be said by the distinguished champions of high protection in excuse or even in mitigation of such a drastic measure in times like these, when the people are protesting against the evils of vicious class legislation? I apprehend that under the present existing condition of things, with money scarce and prices of property ruling low, with a constant and ceaseless tendency to still further depreciation confronting them, that it will be very difficult, if not entirely impossible, for the members of this House who dare to vote and fasten upon the people this great burden, in the absence of some high and imperious necessity, ever to be able to explain away their action here. Their voice and votes in defense of this policy will, in my judgment, as it should, relieve them from the cares and anxieties of state.

But I have not time to dwell; I must hasten on. I come now, Mr. Chairman, to the consideration of a proposition made by the distinguished gentleman from Illinois [Mr. HOPKINS], in the course of his speech upon this floor the other day. This gentleman took great pains and laid a great deal of stress upon the fact, as he stated it, that under the McKinley tariff bill and other high tariff measures of his party, and the general policy of high protection advocated and enforced by the Republican party, the country had grown immensely wealthy, and the people had always been prosperous, happy, and contented under their rule; that labor was employed at high and remunerative prices; that under the last Republican Administration all the favorable conditions existed to which he claimed was due all the evidences of prosperity of which he spoke.

He further alluded to the increased number of farm animals—horses, cattle, sheep, hogs, and other animals reared upon the farms—then in the United States, and the rapid decline in the number of these various kinds of animals under the policy of the Democratic Administration just retired from power, with what he chose to denominate its free-trade fallacies, and then proceeded to cite statistics to show the truth of his assertions, as well as the further fact, as he insisted, that under President Harrison's Administration and the operation of the McKinley bill the revenues were at all times adequate to meet the public expenditures. But I observed, Mr. Chairman, that during the entire speech of the distinguished gentleman, as well as others that followed on this line, he studiously avoided any reference to the important fact that during the entire period covered by Mr. Harrison's Administration, under the operation of the paralyzing policy of the McKinley law and the financial policy with which that law was supplemented by President Harrison, there was a constant and steady decline in the prices and value of all kinds of animals, as well as all other species of property, which unfortunately has never been arrested, to the great and irretrievable loss of the American farmers.

Now, Mr. Chairman, I desire briefly to address myself to the consideration of a few of these propositions of the gentleman from Illinois and others on that side of the Chamber who followed in his wake on this line, and to show, if possible, by the citation of a few statistics taken from the Government reports, that the whole of the claim made and urged in argument upon this floor (by the gentlemen upon the other side of this Chamber) in behalf of the policy of high protection as benefiting the farmers of this country in the respects to which they have referred is not only not tenable, but is absolutely without merit and contrary to the actual facts.

Before I proceed to do this, Mr. Chairman, I desire, in the first place, merely to incidentally refer to some general principles that must control in the formation of all tariff schedules.

Under the Constitution of the United States the principal revenue of the Government must be derived from the tariff. There are two principles upon which tariff schedules are adjusted, revenue and protection. The tariff for revenue rests equally upon the 70,000,000 of people of the United States, and, so far as the incidental protection afforded is concerned, it affects favorably the 9,000,000 engaged in agriculture and 4,000,000 engaged in manufactures. All producers profit alike; all consumers pay alike. The rates of prices as between the manufactured and farm products rest upon the basis of value. Under the protective tariff, the 9,000,000 producers of farm products stand all of the burdens and the 4,000,000 producers theoretically reap all of the benefits; in fact, the few thousand men who employ those 4,000,000 reap all the benefits. A revenue tariff is scarcely felt by reason of its equality; a protective tariff makes millionaires of the few and paupers of the many.

I do not intend to discuss the theory of tariff. I want to briefly and dispassionately call attention to the figures compiled entirely from Government reports, showing absolutely beyond controversy that what I have said is true as a matter of fact, not of theory.

The general revision of the tariff since the civil war that comes nearest being for revenue purely was that of 1872. The most distinctively protective law during the past thirty years is the act of 1890, known as the McKinley law. The operation of these two laws can be the more accurately compared, as both were passed at periods when reckless speculation had brought about financial depression. The law of 1872 was followed by a panic in 1873; the law of 1890 was not a month old when a panic came. Admittedly the panic of 1873 was more violent than that of 1890. Hence, without charging either law with causing the depression, I will compare their operations during like periods of financial depression, taking the four years of the McKinley law as compared with the first four years of the act of 1872. This latter law was by no means a perfect one, but it is the best for comparison. The Wilson law, which was so amended by the Senate that its sponsor, President Cleveland, refused to recognize it, is little less protective than the McKinley law, and I will therefore, in connection with the comparison of the operations of the laws of 1872 and 1890, give the results under the Wilson law.

In 1872 the United States was unfortunately engaged in a policy of contracting the currency. In 1872 there was \$18.10 per capita in circulation; in 1873 there was \$18.04; in 1874, \$18.13; in 1875, \$17.16; in 1876, \$16.12. When the McKinley law was passed, a more fortunate condition prevailed, and the policy of the Government was to expand the circulating medium. In 1890 there was \$22.82 per capita in circulation; in 1891 there was \$23.41; in 1892, \$24.44; in 1893, \$23.85; in 1894, \$24.28, or 50 per cent more money in circulation than in 1876. But times were much harder, as shown by the fact that in 1894, the close of the four years of the McKinley law, there was a total amount of money of \$35.39 per capita, or \$11.11 per capita that could not be circulated, while in 1874 there was but 70 cents per capita not in circulation. Hence the financial conditions were more favorable for the success of the McKinley law than for the act of 1872. The receipts for 1872 were \$9.22 per capita; 1873, \$8.01 per capita; 1874, \$7.13 per capita; 1875, \$6.55 per capita. The receipts from 1890 to 1894 were: 1890, \$6.44 per capita; 1891, \$6.14 per capita; 1892, \$5.43; 1893, \$5.77; in 1894, \$4.36. During the panic of 1873 and the operation of the McKinley law are the only times in the history of the United States when the receipts did not equal the expenses. The law of 1872 brought \$1.64 per capita more than the expenditures the first year. It lacked 34 cents per capita in 1873, 64 cents in 1874, 36 cents in 1875, and produced a surplus every year thereafter. The first year the McKinley law lacked 2 cents per capita of producing expenses; the next year, \$2.04 per capita, and the last year of its operation, \$2.43 per capita. Not a single year did it produce enough revenue to defray the expenses of the Government. The revenue on customs per capita was, in 1872, \$5.23; 1873, \$4.43; 1874, \$3.74; 1875, \$3.51; in 1890, \$3.62; from which it fell to \$3.39, \$2.66, and \$2.97. The average percentage of free merchandise under the act of 1872 was 26.90; under the McKinley law, 56.30. The average rate of duty on all goods imported free and dutiable under the act of 1872 was from 26.68 to 30.19; under the McKinley law, from 21.26 to 25.25.

I am now comparing the operations of the two laws under like periods of financial depression, in order to do no injustice to the protection theory.

The average prices of corn during the four years of the law of 1872 was 47 cents a bushel; under the McKinley law, 40 cents a bushel. The average price of wheat during the first four years of the law of 1872 was \$1.03 a bushel; under the McKinley law the average was 63 cents a bushel. Rye showed 76 cents, as compared with 51 cents; oats, 52 cents, as compared with 29.54; barley, 91 cents, as compared with 41 cents; buckwheat, 80 cents, as compared with 55 cents.

The friends of the bill now under consideration have referred to the increase in farm animals (especially the distinguished gentleman from Illinois, Mr. HOPKINS) under protection. I am not prepared to dispute the proposition that the McKinley law brought fecundity to mares and cows, but it was disastrous as to the value of those animals. The Department of Agriculture reports that in 1872 there were but 8,990,900 horses, while there were 15,893,318 at the close of the operation of the McKinley law in 1895, but the 8,000,000 were valued at \$659,707.916 in 1872, and the 15,000,000 were only worth \$576,730,580 in 1895. It is true that, covering the same period of which I speak, mules increased from 1,276,300 under the law of 1872 to 2,333,108 under the McKinley law, but they decreased in value from \$121,027,316 for the 1,276,300 in 1872 to \$110,927,834 for 2,333,108 in 1895. It is true milch cows increased in numbers from 10,303,500 under the law of 1872 to 16,137,596 last year, but they have steadily decreased in value from \$329,408,983 in 1872 for the 10,303,500, the number at that time, to \$263,955,545 last year for the whole number, 16,137,596, in 1895. Under a revenue tariff they increased in value; under a protective

tariff they steadily decreased. The farmers did not lose less than a thousand millions of dollars under the McKinley law by reason of the decline in prices and values. The manufacturing sections of the country increased their per capita wealth to four times that of the agricultural sections, and yet thousands of people were destitute and out of employment in those favored localities. It was a creator of millionaires and paupers; a thousand paupers to each millionaire. The urban population in the North Atlantic States constituted 49.31 per capita of the total; in the South Atlantic States, 7.76 per cent; in the North Central States, 31.69; in the Western States, 4.97 per cent. These people are the only ones who can be benefited by protection, and at least one-half of them will be directly injured. Shall we legislate in favor of this very small minority and against the great majority, or if discrimination shall be indulged, should the rule not be reversed?

What do we need so great a revenue for? During the years that this country was recovering from the effects of the civil war the expenses, which had never exceeded \$2 per capita before the war, rose, and were in 1877, including pensions, \$5.83 per capita; in 1878, \$5.54; in 1879, \$6.15; in 1890, \$6.48; in 1881, \$6.05; and strong speeches were made in Congress against that terrible extravagance. They were \$7.40 in 1891; \$7.44 in 1892, and \$8.10 in 1893. What extraordinary expenses were there during the Republican Administration of President Harrison that justified such tremendous outlay of the people's money?

One of the methods of disposing of surplus funds that arise under the tariff laws can be seen by a reference to the figures of expense involved in collecting duties in certain ports. The figures for the year 1893, the last full year of the McKinley law, are given as one item, among many others which I have not time to mention, tending to illustrate the useless and inexcusable extravagance in public expenditures:

Port.	Duty.	Expenses.
Alaska	\$7,351.01	\$18,265.63
Humboldt	489.93	3,453.35
New London	3,507.14	3,752.34

La Crosse	0	282.50
Total	75,011.68	297,765.84

Making \$192,754.16 of excess of expenses over receipts.

No port has been given in this list where the receipts equal the expenses. Many of them have not had a pound of merchandise for twenty years. They are kept up seemingly by reason of political influence, and not for the public good. That all ports must be watched is true; but that they should be so expensive when they transact no business does not look right; nor that there should be so many interior ports kept up, at a loss to the Government.

Again, Mr. Chairman, there is one other item in this bill to which I want to call attention, in Schedule F—leaf tobacco. The increased rate of tax or duty levied upon the item of leaf tobacco, which includes the Sumatra wrapper for cigars, suitable for cigar wrappers, will drive out of business a large number, if not all, of the small dealers engaged in the manufacture of cigars throughout the country. The pending bill proposes to increase the rate of duty on this item from \$1 per pound—levied under the Wilson bill—to \$2 per pound, thus doubling the tax upon this article.

Now, Mr. Chairman, can anyone fail to see that this proposed increase of taxation is directly in the interest of the large and prejudicial to the small manufacturers, all of whom use this article in the manufacture of cigars? What motive do you suppose could have induced the majority of the Committee on Ways and Means to double this tax, except to accommodate the wishes of those interested in the large cigar manufactories, who were able to appear before that committee, either in person or through employed and paid agents and representatives, to persuade that committee of the wisdom of their action in thus increasing the tax on an article in which they were so vitally interested, while the small dealer was unable to make his pilgrimage to the sittings of this committee and explain to them the injustice and inexcusable outrage resulting to that class of dealers by yielding to the demands of the men who take the advantage of this species of favoritism to form trusts and combinations through which to control prices and force up profits?

Mr. Chairman, in my part of the State which I have the honor in part to represent reside a number of these small cigar dealers, some of whom have written me personal letters protesting against the injustice of this change, and saying that if the proposed bill passes they will necessarily have to retire from business. The law as it now stands operates seriously against this class of dealers. It requires of all dealers engaged in this manufacture, in order to utilize the scraps and cuttings of this business (which constitute quite an important item in the business of cigar manufacturers), to procure a separate building and give bond of \$2,000. The law permits these dealers to manufacture and convert into smoking tobacco these scraps and cuttings, and sell and dispose of them as such, and thereby to realize a fair and remunerative price for this waste; but before the dealer can do this, under the law, he must provide a separate building from that in which he carries on his main occupation, in which to put up such smoking tobacco, and, in addition, he is required to file bond in the sum of \$2,000. Up to within a few years ago this class of dealers was allowed to put up such smoking tobacco in the same place in which they manufactured the cigars and without bond; but later, through the procurement of the smoking-tobacco factories, aided by the large cigar factories, they secured the adoption of the law to which I have referred, to the great injury of the small cigar manufacturer, and under this law he is compelled to sell his scraps and cuttings to the larger dealers at about 6 cents per pound, whereas, prior to that time, he could realize from 25 to 28 cents per pound; and, Mr. Chairman, the increased price of the Sumatra wrapper by the increase of the tax, together with the other difficulties of which I have before spoken, must, as has been suggested in the letters to which I have referred, inevitably drive out of business or so cripple the small dealers that the future prosecution of their business will be attended with a constant menace of loss.

Now, Mr. Chairman, having briefly called attention to this one item, of the numerous items included in this bill, and this, too, largely to emphasize the protest being made against it by the small dealers to whom I have alluded, I proceed to my conclusion.

In all essential respects the bill under consideration presents all the evils of the McKinley law—the unfortunate act which bankrupted thousands, reduced the farmers almost to penury, resulted in overproduction and consequent closing down of mills and factories, throwing workmen out of employment, and filling the country with men tramping along the railroads and the public highways. It has the features which caused the leading industries of the country to be controlled by trusts. A few men will make millions of dollars out of it, but it offers no hope to the already overburdened producer. He must pay more for what he buys, and sell what he raises for whatever the millionaires please to allow him, or what he can obtain in the open markets of the world without protection. It is a dark prospect for the masses. No ray of light, no good words of cheer are shed or reflected throughout all the carefully prepared pages of this modern monstrosity of inequalities and

injustice, falsely entitled "A bill to provide revenue for the Government and to encourage the industries of the United States," from which a long-suffering, patient, and forbearing people can hope to realize the fond and pleasing anticipations with which they were induced to look forward to the triumph of the party upon whose assurances of returning prosperity and better times they were led to turn the tide of battle in a doubtful campaign.

In the light of our past history and the lesson taught by the experimental tests and practical operation of the two methods and systems of tariff taxation to which I have only briefly, very briefly, called attention, it does seem to me that the highest duty of the hour, the gravest considerations of the public interest, as well as the most imperious demands of the situation with which the country is confronted call upon us to return to those fundamental maxims of government promulgated by that matchless statesman and patriot, the immortal Jefferson, who, in his inaugural address, stated, among the fifteen propositions laid down as constituting the bright constellation of principles that underlie the American Republic, that guided and protected us through all the years of revolution and our past development, equal and exact justice to all men; economy of public expenses that labor may be lightly burdened. Let us again incarnate and emblazon on the banner of our faith and creed, in letters of living light, where all men may read, that we, the followers and disciples of the immortal Jefferson, the author of our Declaration of Independence, and the founder of that party which has always professed to believe in and practice the virtues of the great truths to which he gave utterance, as essential to the perpetuity, power, and glory of the free institutions erected thereon—let us reaffirm our allegiance to the principles of Jeffersonian Democracy by reasserting the sentiment expressed by that great leader at the close of his eventful life—that we do not believe that the mass of mankind was born with saddles on their backs, nor a favored few booted and spurred to ride them legitimately, either by the grace of God or the American Democracy, and which was illustrated by that immortal hero, General Jackson, when he declared his fidelity to that policy in the administration of public affairs that guaranteed to its citizens equal and exact justice to all and special privileges to none.

Such a government and policy, as was said by General Jackson, would, if administered in accordance with the spirit in which they were conceived by the fathers, shed its blessings like the gentle dews of heaven, unseen and unfelt, save in the freshness and vigor which they contribute to produce.

### The Tariff.

### SPEECH OF

HON. LEONIDAS F. LIVINGSTON,  
OF GEORGIA.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 24, 1897.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States—

Mr. LIVINGSTON said:

Mr. CHAIRMAN: In discussing the pending bill, I am reminded of the fact that, as a member of the minority, nothing that I can say, and perhaps nothing that has been said or will be said on this side of the House, will have any influence in determining whether this bill shall be passed as it came from the committee or not. I wish to suggest, however, to my friends on the other side of the House—and it is a mere suggestion—that the last campaign settled but little. There is no margin for boasting when a few hundred thousand votes, properly scattered, would have cast the die in the other direction. Bryan would have been President to-night with a very few votes changed. I want to suggest to my Republican friends that they have not margin enough now in this country to put before this House and before this country an unsavory tariff bill or an impracticable tariff bill. If you do, gentlemen, it will come back to worry you; and therefore I suggest again that under the five-minute rule, when we reach it, when a practical amendment is suggested, whether from this side or the other, I hope that it will be adopted.

Before I say a word about the bill, I wish to say that I have the greatest respect for the chairman of the committee who brought this bill into the House. I served with him for four years on another committee, and I learned to respect him. His ability and his honesty I do not question at any time or anywhere. I believe that in his speech a few days ago he stated his honest convictions

that this bill would not only bring a sufficient revenue to meet the wants of the Government, but that it would afford perhaps ample protection in compliance with pledges made by that party to the country in the St. Louis platform.

I want to say that I shall welcome prosperity, too. I hope that there is no Democrat on this side of the House, nor in this broad land, who will not be glad to see prosperity come, whether it is under the banner of the Republican party or of the Democratic party. The people are interested in this question, and they are greatly interested; more than we can possibly be as partisans. They want prosperity, and they are entitled to a better condition of things. I want to suggest that I have a clause here, taken from Chairman DINGLEY's speech, that sounds very singular, coming from a Republican. If some Populist, or some Alliance man, or some silver Democrat had made this statement in a speech on this floor, I should not have been at all surprised. It only confirms this one old adage that—

Truth crushed to earth shall rise again.

When a man is as honest as DINGLEY is, you can not keep him off of the truth; and I want to commend one sentence in his speech to the Republican side of this House and to the country to-night, as containing the essence, the quintessence, of success. Gentlemen, it is not in your tariff bill, it is not in any tariff bill, and can not be, that mortal man or angel can frame, and Mr. DINGLEY admits it in his opening speech. He said:

No economic policy will prove a success unless it in some manner contributes to opening up employment to the masses of the people at good wages. When this shall be accomplished, and thus the purchasing power of the masses restored, then and not till then, prices will cease to feel the depressing effect of underconsumption, and the prosperity of our people will rise to the standard of 1892.

This sounds strange coming from a single-gold-standard, high-protection Republican.

This is solid Alliance doctrine, good Democratic doctrine:

No economic policy will prove a success unless it shall in some manner contribute to opening up employment to the masses of the people at good wages.

Not to the East, the North, and the West, but to the masses of the people, and not the classes or manufacturers, but to all the people. And, again, he says, "and thus the purchasing power of the masses restored." Who took from the masses their purchasing power? And, again, he says:

Not until then will the masses cease to feel the depressing effect of underconsumption, and not overproduction.

Whoever would have supposed that ex-Governor DINGLEY, the chairman of the Committee on Ways and Means on the Republican side of the House, with all his ability and sagacity, would have thought to take this old Alliance-Democratic doctrine and bring it into this House and put it into his great speech in favor of this bill?

Mr. BELL. It is good doctrine.

Mr. LIVINGSTON. It is good doctrine; that is true. I repeat that no tariff that ever has been framed or ever can be framed can bring prosperity. It must be a financial bill. It must settle the financial question. Mr. DINGLEY is right. The purchasing power of the masses must be restored. You may open the mills; as President McKinley says, "Better the mills than the mint." A great mistake for a wise man to have made. You may open your mills, if you please, and pile your goods mountain high, but you will sell them under the sheriff's hammer at a sacrifice unless the people are able to buy them. [Applause on the Democratic side.]

I have heard some good Republicans in the last few days make the unpardonable mistake in their statements that taxation helps a man to purchase, that taxing a man will give him more money, that taxing a man will make the country more prosperous. Why, that can not be. If a man has \$7 in his pocket and you take \$5 out for taxes, he has only \$2 remaining; but if you take \$2 and leave him \$5, you have done him the greatest favor you could have done him, because by reducing the taxation you have left the remainder of the money in his pocket to accumulate its interest and its profit by service. They intended, evidently, to say that taxing the people South and West would enrich the East; that is the practice. Now, I intend this language of Mr. DINGLEY to go into the RECORD emphasized, and I hope that every Republican in the United States will read it. Mr. DINGLEY is right, and he struck the keynote to prosperity, and the sooner we give this country such economic legislation as he recites the better. But I do not mean to say that a tariff law properly framed will seriously hurt any class or industry in this country. Such a tariff would be helpful and beneficial to all classes and all sections.

A tariff for revenue, ample, with such protection as it would necessarily carry, evenly distributed to all classes and all industries. Then the burden so long borne by the producing classes would be insignificant. Now, let us see if the pending bill is just such as it should be, and I am not here to say ugly things about the Republican party or Republican measures. The short time taken by the committee to construct this bill is in itself notice to

this House that it should be scrutinized closely, and especially to Southern members, for the reason that Democratic members of the committee had no part in forming it, and consequently Southern industries have had no champions in its construction.

The title of the bill is misleading. I wish to join my friend from Iowa [Mr. DOLLIVER] and say that I am proud that for the first time in the history of a revenue bill the title is a departure, made by the Republican party. It is a departure, in that you have heretofore claimed it was a bill for raising revenue when it was a bill for protection and revenue, but here is the title: "To provide revenue for the Government and to encourage the industries of the United States." I do not know to what industries protection is intended. I am satisfied that those relating to agriculture are not included. If it had read thus: "A bill to provide revenue for the Government and to encourage Eastern industries in the United States," it would have been less misleading. Some one stated on the floor yesterday that if the South and West wanted their industries encouraged we must vote the Republican ticket, and thus, I suppose, the word "industries" means Republican industries. The departure, however, is a bold and open declaration that this tariff bill has a double purpose—raising revenues and encouraging industries—but, unfortunately for agricultural industries South and North, this bill brings no relief, but, instead, increases burdens. Now, I should like to know, in the next place—and I am sorry Mr. McKinley is not here [laughter]—

Several MEMBERS. Mr. DINGLEY.

Mr. LIVINGSTON. Yes; sorry that the President is not here. But I would like to know from the gentleman from Maine [Mr. DINGLEY] where he and his committee get authority to put this into the title of the bill: "To encourage the industries of the United States." Where does Congress get the right to levy taxes, specially for such a purpose? Not in the Constitution, not in any grant of power ever given to this House anywhere, at any time. We have no authority for constructing a bill or passing a bill encouraging industries. That was the old contention between the Whigs and Democrats, the right to levy taxes for such purposes. "Specific and local improvements," said the Whig; "No paternalism," said the Democrat.

Article I, section 7, of the Constitution reads this way:

All bills for raising revenue shall originate in the House of Representatives.

The words "and to encourage the industries of the United States" do not appear in the Constitution. What industries are encouraged by this bill? Not industries owned and controlled by the Government, but individual and corporate. Section 8 of the same article reads:

The Congress shall have power to lay and collect taxes, duties, imposts, and excises, to pay the debts—

Not political debts [laughter and applause]—

and provide for the common defense and general welfare of the United States.

To raise revenue for specific industries in particular localities is not provided for in these sections, but the power to legislate for the general welfare is. Does this bill measure up to the requirement? Nay.

I commend the committee for going to the country with a bill that at least in its title admits the fact that they are going outside of either expressed or implied authority to raise revenue and to encourage industries.

Mr. STRAIT. I would suggest that they have perhaps consulted the Supreme Court.

Mr. LIVINGSTON. Well, there is no telling what the Supreme Court would not do, if an emergency came along [Laughter.]

The bill should be amended, Mr. Chairman, and I think I will propose it in all good faith, by adding after the word "industries" these words, "at the expense of the masses," so as to read: "and to encourage the industries of the United States at the expense of the masses."

Then the bill will not be so misleading as now, and those who labor and pay taxes, with no protection to either labor or labor's products, would understand what they should expect.

The whole bill has been termed preposterous, iniquitous, and a monstrosity. I take it for granted that this language is extravagant. I might find something to commend if I had the time to-night. [Laughter.]

Mr. LACEY. We will give you time.

Mr. LIVINGSTON. Thank you. The right of Congress to lay taxes and provide revenue and the duty of every citizen to pay his share of the taxes is unquestioned, and it is unpatriotic and dishonest for any citizen or corporation to evade or seek to evade just taxes when levied. The constant effort, and I must confess often successful attempt, on the part of wealth, both individual and corporate, to evade the payment of a just share of taxes is demoralizing and contemptible. Now, taking it for granted that all good men, all conservative men, concede the power of Congress to lay taxes and that it is their duty to pay those taxes when laid, without murmuring, we conclude that any system of providing revenue by Congress that would furnish, first, ample revenue and would operate fairly and impartially upon all taxpayers—and God grant the

day when the Congress of the United States can frame and pass a bill on that line. [Applause.] We have got to come to it, gentlemen of the House. The country will force us to it. This partisan strife for the purpose of building up and tearing down political parties at the expense of the common people will not be tolerated always.

Does this bill meet this demand? If not, then you may look for a scramble from taxpayers to skip taxes; to murmur and complain; a shifting from the Republican party at the next general election; a large use of money to hold the party in power; a corrupting and demoralizing campaign.

The question is, Does this bill meet the demands?

Mr. ALLEN. I do not believe it does. [Laughter.]

Mr. LIVINGSTON. I do not either, and if it does not I say to our Republican friends that I will help you make it such a bill and will vote for it, and you can have the honor and the credit of making it so. Can a bill for protection provide ample revenue and at the same time distribute the taxes impartially upon the whole people? You can settle that question in this bill.

You can not return home and fool the people at the next election with promised prosperity. You can do it sometimes when there is a great flush of excitement over the country and when partisan spirit and partisan feeling run high, but the time will come when the taxpayers will ask and you will have to answer the question: Can you couple protection with a revenue bill without injustice to certain classes—put the two together and make this Government safe and sound as to its expenditures at all times and under all circumstances? This question to-night concerns 70,000,000 people, not merely a few Congressmen or a few politicians of either or both parties. There are 70,000,000 people in this great country of ours wondering if this can be done. They have even gone so far as to suggest a commission for this purpose. They have absolutely lost faith in the power of Congress to do it, and the business world, with a large support from the press, is demanding of Congress a tariff commission. For what purpose? To have it settled upon the very lines I have suggested, believing that we have entirely lost the power to deal with it in that spirit of impartiality and justice to both the Government and taxpayers.

Mr. BARLOW. May I ask the gentleman if that is not the only way that this question will ever be settled justly and equitably and without partisan spirit?

Mr. LIVINGSTON. No, sir. I never will concede that such a vital question to all classes and all sections shall be transferred to a commission. The Constitution gives this power and duty to Congress, and there it must remain. When you concede this question to a commission, with the financial one, you concede everything in this Government that constitutes it a representative one.

Put those two things in the hands of a commission, to be run by combines and trusts, and the voice of the people will never be heard again while the flag floats over us.

Mr. BARLOW. Will combines and trusts have more to do with it then than they have under this bill?

Mr. LIVINGSTON. Yes, sir. They will then have it under their absolute control. To-day they have Mr. DINGLEY to fight, with his committee; they have 300 men on this floor to deal with when the bill comes to its passage, and the Senate at the other end of the Capitol. They have the press of the country confronting them. But if these matters were submitted to a commission, that commission would be appointed in the interest of the trusts and combines, and your money system and your revenue system would pass out of your hands as the representatives of the people, and, consequently, out of the control of the people.

What is necessary to get the most revenue out of a tariff bill? Revenue means public money, the result of taxes. First, the schedules of duties must be just as high as they can be put without imposing a serious check upon imports, but not one bit higher. Let me repeat, if you are after revenue, put your import duties just as high as they can be put without checking in the least possible way the influx or inflow of foreign goods. Then you have the best possible revenue bill that can be constructed.

A prohibitory tariff will not bring revenue; and only a tariff that is prohibitory can protect to any appreciable extent. I do not deny that a protective tariff may bring revenue to some extent; but I assert that a protective tariff to the extent that it is protective is nonrevenue producing. If it goes to the extent of making the protection complete, then it does not bring revenue. This proposition can not be successfully denied. Again, the best tariff for revenue is one that does not repress imports; but such a tariff—one that puts no check upon the inflow of foreign goods—will produce no effect as to protection.

It seems to me that this bill is framed for the purpose of cutting between tariff for revenue on the one side and protection on the other.

Now, gentlemen, I am going to put to you this proposition: The man does not live, unless he is a clown, who can ride two horses at once. You have got to give up one of these purposes or the other.

In every schedule which you make protective you have got to sacrifice revenue, and in the schedule by which you produce revenue you must give up protection, save incidental, which is not considered protection in the light of your pledges. In other words, you can not protect manufactures without checking the importation of the same class of goods. Consequently this bill, in my opinion, is an exceedingly interesting document. I confess that with the short time I have had to examine it I can not tell whether the protection predominates or revenue. It is badly mixed. Every schedule save one is higher than the McKinley bill, and I trust before we come to consider it by paragraphs under the five-minute rule you will on the other side of the House see the necessity of radical changes in many of the schedules. You should lower the rate in every instance to a revenue basis, for the reason, if for no other, that the masses of the taxpayers in this country are sorely pressed for the means to pay debts, whether public or private.

Let these wealthy syndicates, combines, and monopolies take care of themselves until the people are in better condition. The producing classes have not pressed their claims before the Committee of Ways and Means, and never do; but you will hear from them at the next general election, if this bill passes into law. But I am going to show you samples of what this bill does. Let me say to my Republican friends, and to my friends on this side of the House, that the conditions which now confront us are very different from those which existed when the McKinley bill was framed and adopted. I have no doubt that many of our Republican friends are to-night sleeping over the political precipice. They are consoling themselves with the thought that it is just as easy now to frame and put in operation a McKinley bill like the one of 1890 as it was then. It does not occur to them for a moment that the conditions are just as opposite now as they can be. Then we had a surplus. Nothing in the world (save redeeming unmatured bonds) but a protective tariff bill would take that surplus out of the Treasury. A protective tariff will always do that. The McKinley bill did that well. And when Mr. Cleveland first went into power he absolutely had to buy unmatured bonds to get rid of the money which had been brought in, not by the McKinley bill—but by no means—but by a revenue tariff bill.

It was very easy to stop the inflow of revenue by a bill framed on the lines of the McKinley bill of 1890. You had a surplus; you did not want the revenue; and the more protection you put into your tariff bill, the better fitted for the circumstances and conditions was that bill.

Now, what are the facts? Just the reverse of what they were prior to the passage of the McKinley bill. You now have a deficit in revenue; you must raise it. You have your platform and your platform promises behind you. You have promised to give the country protection; and I avow now, in my place, that you can not give protection and bring in revenue in one and the same bill.

Let us look at this bill for a few moments. Let us refer to a few articles on these lists. Here are cotton ties at eight-tenths of 1 cent per pound, which it is estimated will bring \$500,000. Cotton goods of every class and variety are taxed; so is cotton bagging—one-half of 1 cent per square yard, with 15 per cent ad valorem added. Jute and jute butts, from which bagging is manufactured, are on the free list. Now let us see further how the cotton producer is treated in this bill. In the first place, cotton is imported into this country, grown by the cheapest labor on earth, and comes into competition with our cotton, which is now sold without a margin for profit over cost of production.

From 1892 to 1896, inclusive, there were imported into this country 40,884,042 pounds annually and sold for \$4,440,559. The United Kingdom sent in for the five years named 10,813,405 pounds; Peru, 1,857,348 pounds; China, 50,982 pounds; French Oceania, 344,683 pounds; Egypt, 27,346,124 pounds; other countries, 471,501 pounds; total average per annum, 40,884,042 pounds. A tax of 1 cent per pound on the amount of cotton imported—and that would be a light tax—would produce \$408,840, and would not check the importation. Yet the cotton planter in this country is left to compete with this cotton grown at a much less cost than our cotton, and with the Government badly in need of revenue, \$408,840 is discarded or refused. And why? Thus cotton manufacturers are protected with raw cotton and a high duty on their manufactured goods.

Take the cotton-bagging manufacturer in this bill and see the partiality shown him. There has been shipped into this country for the last five years, annually, jute and jute butts, from which cotton bagging is manufactured, to the value of \$2,391,894. A duty of 10 per cent ad valorem would raise on this amount the sum of \$239,189. This is clearly in the interest of the manufacturer as well as the one-half cent per yard with 15 per cent ad valorem added, and both a tax on the cotton producer.

While the Republican party is agonizing over the problem how to raise money to replete the bankrupt Treasury, gentlemen on the other side, why not be fair to the cotton producers and consistent with your professions to protect the industries of the United States?

This is protection to the cotton industries with a vengeance—the

manufacturer doubly protected, while the cotton producer is taxed on his purchase of cotton goods, cotton bagging, cotton ties, every implement used, articles used or consumed in the production of cotton, even to his salt that seasons his bread and the sugar that sweetens his coffee.

Let us take another sample of how this bill stands between the manufacturer and the producer. There has been imported into this country for the last five years annually \$10,848,920 in goatskins. A tax of 10 per cent ad valorem upon this article would provide \$1,084,492 annually. There has been imported during the last five years hides and skins other than goatskins, annually, \$14,103,995. A duty of 10 per cent ad valorem upon these skins would produce annually \$1,410,399. Now, the uninitiated would say, "What of this?" The answer is a simple one. The boot and shoe manufacturers demand free hides for their use, and so the \$2,572,147 of revenue that should be collected, not for protection to the cattle raisers simply, but for revenue, is thrown overboard and the cattle producers of this country must sell their hides at prices fixed in Mexico and Central America.

We take another illustration to show favoritism in this bill—pure, simple favoritism—at the expense of the people. The McKinley bill levied a duty on seed of 20 per cent ad valorem; the Wilson bill, 10 per cent. This bill levies a duty of 40 per cent ad valorem. Why is this? There are a few seed growers in the East that demand it, and so the multitudes who buy seed must pay to protect this seed industry in the East, and not one dollar of revenue will come from this duty. Why should the agriculturist of this country be discriminated against in this bill, when for five years ending June 30, 1897, the excess of agricultural exports over agricultural imports was \$1,226,354,922? Cotton exports in 1892 were \$258,461,241; in 1893, \$189,771,445; in 1894, \$210,860,289; in 1895, \$204,900,990; in 1896, \$190,056,460. Total for five years, \$1,053,059,425. Of all exports for the last five years agriculture has furnished, in 1892, 78.76 per cent; in 1893, 74.43 per cent; in 1894, 72.51 per cent; in 1895, 69.92 per cent; in 1896, 66.25 per cent. Upon this showing certainly the House should be willing, and cheerfully so, to do far better by the agriculturist than is now provided for in this bill.

To enable the Republican side of this House to see the absurdity of this bill, take salt. In 1884, under a protective tariff, the output in this country was 814,307 tons. In 1895, with salt free, the output was 1,708,706 tons. This bill levies a duty of \$1.60 per ton. The present price of salt in Michigan is \$1.50 per ton, and in New York \$2 per ton. What can be the motive to levy a duty of \$1.60 per ton, which doubles the price of salt to the consumer? Nothing but to prevent importation, and thus give a monopoly to a few capitalists engaged in the business in this country. Thus we have a salt combine.

Take another example, the cutlery schedule. From 1860 to 1890 the duty was 50 per cent ad valorem. The McKinley tariff averaged 91 per cent; the Wilson tariff averaged 51 per cent. This bill will average, based on the importations of 1896, 142½ per cent ad valorem. On two-blade jackknives that retail at 25 cents the McKinley rate was 112 per cent; Wilson rate, 56 per cent; this bill, 145 per cent. On two-blade pearl ladies' knives that retail at 25 cents in this bill the rate is 195 per cent, while the Wilson bill rate was 56 per cent. On four-blade penknives, pearl or shell, that retail at 50 cents, the McKinley rate was 83 per cent; Wilson rate, 51 per cent; this bill, 204 per cent—four times greater than the present rate. Why is this? Not to raise revenue, for the rate of duty will prohibit this class of cutlery from being imported. The answer is simply to give the manufacturers in this country a monopoly and double and quadruple the cost of such cutlery to the common people.

Take another example. Under the law of 1890 the rate on unstemmed wrapper tobacco was \$2, and for the fiscal year 1893 the Government derived a revenue of \$4,725,032.57; for 1894, \$4,701,579.30; total for the two years, \$10,426,611.87. Under the Wilson bill, law of 1894, the rate was, for the same wrapper tobacco, \$1.50, and for the fiscal year ending June 30, 1895, the revenue derived was \$5,638,431.50, and for the year 1896, \$6,286,523.09; total, \$11,924,954.59. Here we have \$1,498,312.72 more revenue in two years with a \$1.50 rate than we derived in 1893 and 1894 with a \$2 rate, notwithstanding the business depression for the past three years. The immediate result of the increase in this bill of 90 per cent over the present law on unstemmed fillers will be to crush the small manufacturers out of business, for the reason that more fortunate competitors, syndicates, and trusts have supplies for from one to two years at the 35-cent rate they obtained previous to the famous Weyer edict, now in bond, and which they will withdraw, and thus be able to crush all small enterprises; and in whose interest is this schedule constructed? not the Government's, but the trust's. Take the sugar, wool, and cattle schedules, and they are after the same pattern.

Now let us look at the free list. Gold bullion and silver bullion are on the free list. If there is anybody under God's heaven who is able to pay a duty on imports, it is the man who is trading in gold and silver bullion, and shipping it backward and forward

from Europe to New York. Yet gold and silver bullion are on the free list. Coal is on the free list. I wonder who is interested in Nova Scotia coal mines? Coffee is on the free list. There is no competition in this country with producers of coffee, consequently you could not help the producer in this country by levying a tax on coffee. You put it on the free list to satisfy Arbuttle and the other combines that hold and control the bulk of it. Cotton is on the free list. When I said to Mr. DINGLEY, "Why did you not put a small tax on cotton, if you intend the title of the bill not to be misleading?" he said, "Because there is no cotton from Egypt that competes with your Southern cotton." "Well," I said, "that is not the question. Do they not use it in lieu of Southern cotton?" He said not. "Then," I said, "why not put a tax on it for the sake of revenue?" It was a good place to put on a tax for revenue. If it did not compete with our Southern cotton and did not interfere with our prices, it was a very good thing to put a tax on to get revenue, for it would hurt nobody. Ah, gentlemen, if I had the time I could tell you a story which is behind that cotton business.

Diamonds and precious stones, rough, are on the free list. That will not do. Gentlemen, you can not go back home to the horny-handed sons of toil in your districts, to the women who spin and cook, with free diamonds and free precious stones in this tax bill, with the story that this bill is in the interest of the people, when you tax the very last thing that poor people wear. [Applause on the Democratic side.]

You can not do it. Fur and fur skins are on the free list. How many of the common people wear furs and buy robes made of furs? You give them free to the rich and to the wealthy, but you tax the shoes and the necktie and the buttons on the shirt of every man in that gallery. [Prolonged applause.] Is that fair? Can you stand before the country with such a bill as that? You put hides on the free list. Well, poor Texas, Colorado, and Kansas, and all that Western country, could do an immense business in cattle raising; but you absolutely open the gates to all Central and South America with free hides. Why? Because the boot and shoe manufacturers demand it. In 1890, as I remember it, Mr. McKinley got into a predicament before this House by absolutely stating that there was a duty on hides, but when the bill came in there was no duty on hides. [Applause on the Democratic side.]

All articles used in dyeing or tanning are on the free list. This is in the interest solely of the manufacturers. Shotgun barrels, forged, rough bored, ready for the manufacturer in this country, are on the free list. Raw silk, or reeled from the cocoon, not twisted, or advanced in manufacture in any way, is on the free list, so as to give the manufacturer of silk goods a double protection—raw material and a duty on the manufactured goods. Turpentine, spirits of, is on the free list; that being a Southern industry, of course no protection for that. Now, my Republican friends, you see from this short and hasty exposé of the bill that it does not and can not be acceptable to the masses of the taxpayers in this country. I am satisfied, Mr. Speaker, that the system of raising revenue by laying duties on imports and by internal-revenue duties so long in vogue will not be changed soon. Therefore all contentions here or elsewhere in favor of free trade is free nonsense. And I undertake to say that it is the duty of this Congress to deliberately and impartially adopt a tariff measure that will in the first place insure ample revenue, and in the second place put the burden of supporting the Government evenly upon all classes and all industries in all sections of this country. To this end there should not be an excessive or prohibitory duty levied on any import and there should not be a single article on the free list.

What is a free list but favoritism? Under our form of government who is entitled to special favors? Are we to repeat in this country what history shows to have been the downfall of several of the greatest nations that ever existed—legislation for favored classes? As long as we hold that this is a Government from the people, by the people, and for the people, how dare you in this Representative Hall, as Representatives of the people, inaugurate such an unequal, partial, and sectional revenue bill? I am not in favor of obstruction now, but I am utterly opposed to this hasty, unmaturing legislation. It will necessitate the Senate spending months in revising and altering the bill, and I predict that the Ways and Means Committee will not be able to recognize the bill when it returns from the Senate. Owing to the haste in framing the bill, I am informed that the majority of the schedules are as suggested by interested parties—manufacturers, monopolists, and trusts.

And now in the short time allowed under the rule for consideration and the determination of the leaders on the other side of the House to force the bill to its passage as it came from the committee, we can not hope to do more than point out some of the most flagrant and objectionable features of the measure. "Make haste slowly" should have been the motto of the other side, and they would have been better satisfied with the bill when through with it, and the taxpayers saved many an honest, hard-earned penny. Trusting to a conservative, sensible, honest, and interested people,

who will have a chance at those who are responsible for this measure in 1898, and believing firmly that the verdict rendered then will be, "Not well done, unfaithful servants; retire, and give place to those who will ever care for and legislate for the whole people, without regard to party or section."

This side of the House must submit to the inevitable now. [Prolonged applause on the Democratic side.]

### The Tariff.

### SPEECH

OF

HON. CLAUDE A. SWANSON,

OF VIRGINIA.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 23, 1897.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States—

Mr. SWANSON said:

Mr. CHAIRMAN: We have listened to the preceding speech with much interest. It was one of unusual eloquence and force. My friend from Iowa [Mr. DOLLIVER] has surpassed himself this afternoon, as he usually surpasses others. I know no more accomplished orator than he. He has indulged in much rejoicing at the great victory won last year by his party. It would be well for him to remember that forcible expression of Mirabeau, the great French orator: "It is but a step from the capitol to the Tarpeian rocks." His exultation might be restrained some if he would recall the political changes of recent years. For the last twelve years every revolution of the political wheel has resulted in whirling from power those just elevated and returning to trust and confidence those but yesterday overturned. In 1884 Republicanism was repudiated and Grover Cleveland and Democracy given position and power. In 1888 this verdict was reversed, Democracy was rejected, and Republicanism was restored. In 1892, disappointed with the Republican party, disgusted with its measures of relief, the country recalled Grover Cleveland and Democracy. The election just over presents a striking fact. The present President, William McKinley, the author of the measure which brought defeat to his party, who is called the Napoleon of protection, was recalled and enthroned in authority at the Capitol from which he had been driven in banishment, and he is now enjoying the glory of a reign, as I believe, to be brief and to be terminated by a Waterloo disastrous and final.

These continual changes do not bespeak fickleness on the part of the people, but indicate rather a people groping through the wilderness, frequently changing their route, but all the while striving to reach the land of plenty and prosperity so often promised, but not yet in sight. Each of these recurring years has brought times harder than the one preceding; each brought greater business depression, greater fall in prices, greater poverty. Increasing debt and distress have come along with increased industry and frugality. The people's woes have grown despite the largest agricultural crops ever produced—crops which, under natural and normal conditions, would have brought to the people untold wealth, but have only brought to them increased wretchedness. Many measures of relief have been proposed, tried, and afterwards discarded in disgust and in disappointment. In less than four years, in time of profound peace, with bountiful crops and harvests, two extraordinary sessions of Congress have been called to furnish measures of relief to a suffering people. President Cleveland, elected to reform and correct the vast taxing power of this Government, which had been perverted from the purposes of providing revenue into a vast system for the aggrandizement and enrichment of the few at the expense of the many, ignored the pledge of his election and called an extra session, not to reform the tariff, but to fasten upon the country the single-gold standard. This mistake was fatal to his Administration.

This Administration was elected upon the financial issues, and not the tariff. Yet it calls an extraordinary session of Congress, not to reform the finances, but to impose additional tariff taxes. It makes the same mistake that its predecessors made. The result will be equally as disastrous. The President, as did Cleveland, precipitates, at the inception of his Administration, a division among those who elevated him to power. Already can be heard the great mutterings and discontent of those Democrats who aided this Administration in the last election, and without whose aid it would have met disastrous defeat. They are indignant that no financial relief is proposed or promised, but that after their indispensable assistance you gentlemen on the other side of this Chamber inflict them with odious tariff taxes and commercial restrictions which they have spent their lives in antagonizing.

They will desert you in the future. Deserted by his allies, your leader waits the fearful fate of Napoleon. [Applause.]

Mr. Chairman, we are summoned here as a relief Congress. We have been called in session because that great prosperity promised immediately on the defeat of Bryan has not materialized. We are here because the faith doctors, who promised to cure our ills with "confidence," have been discredited and new remedies must be applied. We are here to aid the advance agent of prosperity to bring before the impatient public his long-advertised but much-delayed performance. The President in his message has indicated the means by which he expects to attain all of this. To accomplish his purpose the pending bill has been introduced and is now sought to be made a law. This bill embodies the relief measures which the President and his party propose for the existing conditions. This bill offers no relief which has not been previously tried, for this bill, with the exception of the sugar schedule and a few others, is substantially the McKinley Act of 1890. Thus we have the act of 1890, passed to cure the evils of that year, reintroduced to remedy the evils of 1897, exactly the reverse of those supposed to exist at that time. In 1890 the Treasury had a surplus revenue of \$85,000,000. The McKinley bill was introduced to get rid of that surplus. The title of the bill was, "A bill to reduce the revenue and equalize duties on imports, and for other purposes."

In 1897 the Treasury is confronted with a deficiency which last year amounted to \$25,203,246, and yet we witness the remarkable fact that substantially the same bill is introduced to increase the revenue. This bill is introduced under the title, "A bill to provide revenue for the Government and to encourage the industries of the United States." This McKinley bill seems to possess the remarkable attribute of being equally good, whether to diminish a redundant revenue or to increase a deficient one. Its friends use it either to empty or to fill the Treasury. This McKinley bill seems to be a patented medicine of the Republican party, furnished either to increase flesh or to reduce flesh, according to the desires of a confiding public. [Laughter.] As it was applied in 1890 to reduce a plethoric Treasury and is now sought to fill a supposed deficient one, it might be well to examine its effects when last administered, so as to determine whether it is now suited to our supposed disease. It found the Treasury with a surplus of about \$85,000,000 above the gold reserve of \$100,000,000, and during the last year of its existence produced a deficiency of \$69,803,260.58.

But, Mr. Chairman, discarding the experience of the past and assenting to the doubtful proposition that the bill will accomplish all claimed for it by its friends, let us examine and see whether its purpose meets with the needs of the present hour. The President in his message claims that the present lamentable conditions result from two causes, one an insufficiency of revenue for the Government and the other an inadequacy of protection to our industries, resulting from the present Wilson bill. The gentleman who preceded me makes the same claim. So this bill, by its very title, is designed to meet these two evils. It states by its title that its purpose is "to provide revenue for the Government and to encourage the industries of the United States." Now, do low prices, stagnant business, paralyzed commerce, and the dreadful depression which overshadows the country result from a lack of revenue to our Government?

First, let us consider whether there is any necessity for the enactment of any law providing for additional revenue. I claim that the present Wilson bill will provide ample revenue for the Government if the expenditures are reduced to what they were under the last Democratic Congress. I challenge denial of this proposition from gentlemen on the other side. The last Republican Congress, the Fifty-fourth, appropriated \$1,043,437,018.53. The preceding Democratic Congress, the Fifty-third, appropriated \$989,239,205.00. Thus the last Republican Congress exceeded the preceding Democratic Congress in its expenditures \$54,197,812.53, making an excess for each of the two years of \$27,098,906.41. The deficiency last year only amounted to \$25,203,246. Thus, if the Republicans had not increased the appropriations last year \$27,098,906.41 over the amount appropriated by the Democrats, instead of being any deficiency there would have been a surplus of \$1,895,660.41 in the Treasury. Thus it is plain, and I challenge denial, that all that is needed to make receipts and expenditures meet is to reduce the appropriations of public money precisely to what they were under the last Democratic Congress. When this is done, the present Wilson bill will yield ample revenue.

You gentlemen on the other side have only to practice the economy that characterized the Democracy and the present revenues of the Government are sufficient for all of its purposes. Thus the President, instead of calling Congress into extraordinary session to impose additional taxes and burdens upon an already impoverished and overburdened people in order to continue the wanton and wasteful extravagance of the last Congress, should have waited and required his party to practice Democratic economy. If he had done this, as I have previously shown, the present law would furnish all the revenue needed. In times of distress and depression, like these, this is the relief that the President should have followed.

But, Mr. Chairman, I contend that even if expenditures are to be kept up to the present enormous and unnecessary proportions, there exists no necessity for the imposition of additional taxes, nor could our present distress arise from an inadequacy of revenue.

The object of revenue is to put money in the Treasury to meet and discharge all obligations which might arise against the United States. Is there ample revenue in the Treasury at this time for that purpose? On the 22d of March, from the Treasury statement, there was in the Treasury \$218,050,908.78. Thus, to-day we have about \$118,000,000 in the Treasury above the usual gold reserve requirements. This, with present revenue, is ample to meet all demands which will be made for the next four years, even if present appropriations continue. It is immaterial how the amount was procured, whether by revenue receipts or by bond sales; it is there to discharge all obligations which shall come against the Treasury. When Harrison turned the Government over to Cleveland, the amount in the Treasury, exclusive of the gold reserve, was only \$24,128,087. To-day there is in the Treasury nearly five times as much money as there then was to meet all claims against the Government, and yet we are told that our present difficulties arise from an insufficiency of money in the Treasury. Such a proposition is preposterous. There was no necessity for calling Congress in extraordinary session and invoking the taxing power of this Government if money in the Treasury was all that was needed. This vast sum of money locked up in the Treasury can only be gotten out and put into circulation by being used to pay the debts and expenses of the Government. If the claims of the friends of this bill are true and this bill is enacted, this vast surplus will be added to and the money in circulation greatly reduced.

We believe that this will further lower prices and add to the present distress. It can not be claimed that our present revenue receipts are such that confidence has been impaired in our Government's finance and credit, for never before have the bonds of the Government been so eagerly sought and at such low rates of interest. Every bond sale has shown that instead of the credit of the Government being impaired, it is higher and better than ever before in its history. The test of a government's credit, like that of an individual, is its facility for borrowing money at a low rate of interest. Thus clearly we are not suffering from an impaired credit or an insufficiency of money in the Treasury to meet all demands. Thus the first cause assigned for our present distress can not be sustained. We will next examine the second reason given. This is that the reduced tariff taxes of the Wilson bill have failed to give adequate protection to home industries and that this has brought ruin and disaster. The substance of this assertion is that under the Wilson bill reducing duties there has been an increased importation of foreign goods and products, which have been purchased by consumers to the exclusion of home goods and products.

To make this claim even plausible there must have been, under the Wilson bill, an increased importation of foreign goods and products, which reduced the sale of those made at home. Unless such a condition existed, the position is wholly untenable. When we examine the statistics, we ascertain that instead of there being an increased importation of foreign goods under the Wilson bill there was a decreased importation. To show that our present distress does not arise from foreign competition we have only to compare the importations of 1893 to 1896 under Cleveland with those of 1889 to 1893 under Harrison. We find that the total importations under Harrison aggregate \$3,206,760,719, and under Cleveland \$3,083,090,183, or, in other words, there were imported under Harrison's Administration \$163,670,536 more of foreign goods than under Cleveland's last Administration.

Compare the year 1891, which was entirely under a high protective tariff and not affected by political complications, with the year 1896, and what do we find? We find that the aggregate importation of foreign goods in 1891 amounted to \$844,916,196 and in 1896 it amounted to only \$779,724,674, making the importation of foreign goods in 1891 \$85,191,522 more than in 1896. Thus the impression sought to be produced in this House and country by the gentleman preceding me, that the present ills arise from the markets being flooded with foreign goods to the exclusion of home goods, is totally without foundation. With increasing population, and thus increasing means of consumption, we should have each year bought more foreign goods, yet our people have bought, on the aggregate, millions of dollars less of foreign goods than ever before. These facts make it evident beyond dispute that our distress does not arise from importation of foreign goods; and as the only effect of the tariff upon home industries is to prevent the importation of goods from foreign countries, it is plain that the Wilson bill, with decreased importations of these, could not have caused the present deplorable conditions. Our evils lie deeper, and arise from other causes.

The manufacturers have suffered not because their customers have purchased foreign goods, but because the price that their customers receive for their products has been so low that they

have been unable to purchase goods from anyone. The manufacturer has lost the market for his goods not because the foreigner has taken it, but because his customer is bankrupt, which has been occasioned by the low price of his products. You may build Chinese walls around this country until they reach to high heaven and exclude all foreign goods, but the manufacturer will never find a market for his goods or customers able to purchase them until the price of wheat, corn, oats, cotton, tobacco, and all other products of labor advance. We on this side of the House believe that the same cause which has brought calamity to the farmer has brought it to the manufacturer, the merchant, and all people engaged in productive enterprises. We believe that this has been chiefly occasioned by a fall in prices. We believe that this fall in prices is artificial, being occasioned, not by any change in the supply and demand of the articles, for increased demand has kept pace with increased supply, but has been caused by the appreciation of the money unit of value. We believe that if we keep up our present financial system there will be a further appreciation of money and a consequent depreciation of property. We believe that the only way that the appreciation of money can be averted is to lessen the demand for gold. We believe that the only safe way we can lessen the demand for gold is to give silver by law equal rights as money, as a standard of value, as a legal tender, as is possessed by gold. [Applause.] We believe that this will stop the present artificial fall in prices, and that prices will return to what they formerly were. We believe that money affects prices, that prices affect production and trade, and that these make either prosperity or adversity. Thus I believe that the paramount question is the money question. I believe that the proper remedy for existing evils is the remonetization of silver, and that when this is done there will be a great revival in business, and great prosperity and progress will again come.

Thus the President and his party have wholly misapprehended our disease and consequently misapplied the remedy. The Wilson bill has not surrendered our markets to foreigners, as the eloquent gentleman preceding me has sought to make you believe, for the evidence is incontrovertible that we have had less foreign competition than we have ever had before. But the fact is that the home market has been destroyed by the existence of the gold standard, which has reduced the wages of labor and the prices of all products. The Wilson bill has been a benefit, and not a detriment. The curse of the country has been the gold standard, and not reduced tariff taxes. [Applause.] The present evils would have been greatly intensified if the McKinley bill had been in force instead of the Wilson bill. The results under the Wilson bill have clearly vindicated every position taken by the advocates of a revenue tariff. Those believing in tariff reform always maintained that under a reduced tariff there would be a great increase in exportation of manufactured goods. We asserted that under a low tariff our export of manufactured goods would so greatly increase that before long American ingenuity, enterprise, and thrift would control the markets of the world. What do we find? I have here an estimate of all the exports of manufactured goods from 1889 down to and including seven months of the fiscal year 1897. It shows that the greatest export of manufactured goods under the McKinley law was in 1894, which amounted to \$183,728,808. In 1896 the export of manufactured goods under the Wilson law amounted to \$228,571,178, exceeding that of the greatest year under the McKinley Act by about \$45,000,000. If the exportation of manufactured goods continues for the next twelve months of this fiscal year as it has for the past seven months, it will exceed any year under the McKinley Act by over \$80,000,000. It should be noted that this greatly increased exportation of manufactured goods has occurred in times of business depression, and there can be no question but that if the Wilson bill should be continued and we should adopt a financial system which would revive business, our export of manufactured goods would soon double or treble what it was under the McKinley bill.

This clearly demonstrates the truth of the position always maintained on this side of the Chamber, that a removal of prohibitory tariff taxes and commercial restrictions would give the markets of the world to American enterprise and ingenuity. With this bright prospect opening up before us and just becoming a realization, we are called upon to reverse this policy, which has for us untold wealth, and to build around ourselves Chinese walls and consume our energy and enterprise in trafficking among ourselves and trying to overreach each other. The passage of this bill means to destroy this vast trade, which is fast increasing each year. It means an abandonment by the United States of the markets of the world. It means on our part a policy of isolation instead of one of progress and enterprise. It means a confinement of the sale and purchase of commodities by our citizens to the limits of their own country, to be fleeced by the favored few who are the recipients of the bounties and privileges of this bill. [Applause.]

The decreased importation of foreign goods under the Wilson bill also shows that the manufacturer under a low revenue tariff is better able to control the home market. Being able to manufacture cheaper, he is able to sell much cheaper, and thus successfully meet, anywhere, foreign competition. With decreased foreign importations and increased foreign exportations of manufactured goods, the condition of a majority of the manufacturers under the present Wilson law has been infinitely better than it would have been under the McKinley bill.

The manufacturer is suffering as everybody else has suffered, not from lower tariff taxes, for this has been beneficial, but on account of falling prices resulting from the appreciation of money which the existence of the gold standard has produced.

Gentlemen upon the other side, and especially my friend who has just preceded me, have talked so poetically and fancifully about "kindling furnace fires" by the passage of this bill that it would be well and instructive to look and ascertain the condition of the iron industry since the passage of the Wilson bill. One would imagine from the remarks of these gentlemen that since the Wilson bill became a law the production of iron and steel had practically ceased in this country; yet since the passage of the Wilson bill the home production of iron and steel, instead of decreasing, has wonderfully increased. In the last year under the McKinley Act there was produced in this country 6,657,388 tons of pig iron. The first year under the Wilson Act there was produced 9,446,308 tons of pig iron. In the last year under the McKinley Act there was produced 1,921,772 tons of iron and steel railroad bars, while under the first year of the Wilson Act there was produced 1,806,185 tons of iron and steel railroad bars. Thus under the Wilson law there was an increased production of about 50 per cent in pig iron and of about 25 per cent in iron and steel railroad bars. It should also be noted that the export of pig iron increased over 25 per cent, while the export of iron and steel railroad bars more than doubled. Thus, instead of the Wilson bill putting out furnace fires, it rekindled them; instead of turning out industrious laborers to idleness and want, it increased the number of those engaged in the production of iron and steel. Thus, if the iron and steel industries are languishing, it does not arise from any decreased production since the passage of the Wilson bill. Neither can it arise from foreign competition occasioned by importation of foreign product, for under the Wilson Act not one ton out of every hundred of pig iron used in this country is of foreign production; not one ton out of every twelve hundred of iron and steel railroad bars used here is of foreign production.

In 1891 we imported of iron and steel manufactures \$53,544,372, and in 1896 only \$25,328,102—a decrease in importation of over \$28,000,000. Thus if the iron and steel industries are unprosperous, it does not result from foreign importations and competition; it arises from the same cause that makes farming and all other enterprises unprofitable. It is because the price of the products of the furnace and the mill has fallen just as has the price of the products of the farm. There can be no return of prosperity to the furnaces and mills, as there can be none to the farmers, until there is a restoration of prices. Prices, instead of rising, will continue to fall unless the appreciation of gold is stopped. Its appreciation will only cease when we lessen the demand. The demand can only be lessened by creating a demand for silver equal with gold, which will occur when we give silver equal rights as money. When this is done, then the price of the products of the farm, of the furnace, of the mill, and the wages of labor will return to what they were formerly; and then and not until then will the restoration of prosperity and good times come. This is our view on this side of the Chamber, and no other view which has been promulgated will bear the test of examination. [Applause.]

Now, let us examine another industry, so often alluded to in this discussion, and ascertain the cause of its depression. I refer to the wool industry. My eloquent friend who just preceded me described so pathetically how, under the Wilson law, the sheep had been carried to the slaughter pen and sacrificed that my heart was touched. These vivid descriptions would be very pathetic indeed if they were true, but they become really ludicrous when confronted with stern facts. It is an unpleasant task to dissipate the sad and beautiful pictures created in the imaginations of the gentlemen on the other side of this question, but it must be done in the interest of truth. One would imagine from the speeches on the other side that the wool industry of this country has been practically paralyzed and destroyed since the passage of the Wilson bill. But what are the facts? I have here the Statistical Abstract for 1896, prepared under the direction of the Secretary of the Treasury, and what does it show? It shows that our production of wool in 1895, the last year of which the statistics have been compiled, amounted to 309,748,000 pounds, being about 6,500,000 pounds more than ever produced before in this country. Thus, under the Wilson law the production of wool has increased and not decreased. It is also shown that under the Wilson law our export of domestic wool has been eight times greater than exports of it ever heretofore made. The people engaged in the wool indus-

try have been equally if not more prosperous than those engaged in other agricultural pursuits. Its increased production evinces that the raising of wool at present is more profitable than raising corn, wheat, oats, cotton, or tobacco. The woolgrower has suffered, like all others, from the low price of his product. This low price is caused by the adoption here of the gold standard, and will not be removed so long as this continues.

The assertion has also been made here that our woolen factories have been closed and hundreds of laborers thrown out of employment. It has been sought to produce the impression that since the passage of the Wilson bill the woolen manufactories of this country have been practically annihilated. Again, the facts prove exactly the reverse of this, for in 1895 we consumed of raw wool in this country 509,159,716 pounds, being 25 per cent more of the raw material used by the manufacturers than ever before in the history of the country.

Mr. TAWNEY. Where did that come from?

Mr. SWANSON. Over 300,000,000 of it was of domestic production, being over 6,500,000 more than ever furnished before in this country. The rest of it came from abroad. Now, what does this show? It proves that since the Wilson bill was passed the woolen mills of this country have used 25 per cent more raw material in manufactures than they ever used before. It proves that the mills have made 25 per cent more of woollen cloth and thus given employment to 25 per cent more laborers than ever before, and thus the often-repeated declaration that the mills were closed by the Wilson law is mere nonsense and falsehood and is clearly disproven by facts. This industry, like all others, is suffering not from the Wilson law, but from the great fall in price brought upon us by the last Administration fastening upon us the gold standard, and which this Administration has pledged itself to continue.

Thus, Mr. Chairman, if I had time, I could go through this entire bill and show that all of the lawful and legitimate industries pretended to be affected by it have suffered, not by the Wilson bill, but by other and deeper causes. I could show and prove, if time were given, that with the exception of trusts and combines, enriched by this bill, every other interest has been benefited and not injured by the Wilson law. Sir, the present distress is almost world wide and must arise from a cause coextensive. It exists in Germany, with her high prohibitory tariffs, and it abounds in free-trade England.

The curse of productive enterprises is falling prices. When prices continue to fall, everyone who produces, everyone who purchases, and everyone who owns property loses and has his wealth reduced. Thus the productive energies of a people are retarded; trade, commerce, business become paralyzed. These are the conditions which to-day confront all gold-standard countries. This artificial fall in prices must be arrested before relief can come. What has produced this fall in prices of all products and of all property? Before answering this, let us ascertain what is price. Price is simply the ratio at which property exchanges for money. It is dependent upon two things—the supply and demand of the article, coupled with the supply and demand of money. Thus take wheat. The price of wheat is dependent upon two things—the supply and demand of the wheat and the supply and demand of money. If the supply and demand of money should remain the same, then the price of wheat would be affected alone by the supply and demand of wheat. If the supply and demand of wheat should remain the same, then the price of wheat would be affected alone by the supply and demand of money. With the increased population statistics show that the average increased demand for wheat has far exceeded its increased supply, and hence, if the supply and demand of wheat alone fixed the price, wheat ought to be much higher to-day than it was years ago when it sold for \$1.50 per bushel. Thus its present price, reduced to half what it once was, not being affected by the supply and demand of wheat, must be caused by the other element which makes price, i. e., the supply and demand of money. We find that, while the demand for money has more than doubled, yet the supply as a unit of value to fix prices has been reduced half since silver was demonetized. Thus the argument is irresistible that the low price of wheat, in comparison to what it formerly was, is occasioned by demonetizing silver and destroying it as one of the units of value. [Applause.] I could take almost the whole range of products and property and show increased demand has been greater than increased supply, and hence the low prices could be produced only by destroying silver as one of the units of value in fixing prices. Thus the reform needed is financial reform, and not tariff reform. This bill, so far as it affects our finance, will aggravate existing evils.

In the report of the majority accompanying this bill it is estimated that this bill will increase the revenue of the Government \$113,479,793 each year. With the wanton extravagance of the Republican party last year, there was only a deficiency of \$25,203,246. Even if economy is discarded and the present enormous expenses kept up, if the claims of the friends of the bill are realized, there will be an annual surplus accumulated in the Treasury of

about \$78,000,000. In less than four years, unless expenditures were greatly increased, this surplus, added to the \$118,000,000 of surplus now in the Treasury, would amount to about \$430,000,000 piled up in the Treasury and out of circulation. Thus, if the hopes of the bill are consummated, it means a taking from circulation and a contraction of our currency to that vast amount. It means a reduction of nearly one-third of our present circulation. This would inevitably precipitate a further fall in price of all products and property. This fall would add to the present depression and bring increased calamities to the commercial and producing classes. The only way that this disastrous contraction could be prevented, if the estimates of the friends of this bill are true, is to greatly increase the already fearful extravagance of this Government. This increase should not be tolerated. If the bill fails to put the amount estimated in the Treasury, it will then transfer that vast amount into the pockets of the few favored by this bill, because the amount can only fail to get into the Treasury on account of the duties imposed being so high as to prevent the present importation of foreign goods, and the foreign goods not coming in, the home goods, at the increased price equal to their duty, would be used in their stead. The increased price of the home goods would go, not into the Treasury, but into the pockets of the beneficiaries of this bill. Thus, from whatever standpoint viewed, this bill can bring only detriment to the vast producing and consuming masses. [Applause.]

But, Mr. Chairman, not only is this bill a mistake as remedial legislation, but it is the most pernicious tariff bill ever sought to be enacted. It surpasses the iniquity of the McKinley Act, which, immediately after its passage, encountered universal execration. The average of the McKinley Act on importations of last year would have been about 50 per cent, while the average under this bill will be about 57 per cent. Thus this bill piles tariff taxes higher than was ever done before. It has no predecessor to equal it in its exactions upon the people, none to approach it in its gratuities and gifts to the trusts and combines which have arisen under the tariff system. The curse of our age is the immense trusts and combines which flourish, crushing out all individual enterprise and producing an industrial slavery that is fearful to contemplate. This bill will strengthen every trust and give increased profits to every combine.

The most iniquitous trust in the United States is the sugar trust. This trust absolutely controls the price of sugar to every consumer in the United States. The officers of this trust have repeatedly admitted this in the legislative investigations which have been made of its affairs. By its monopoly of the market of all sugar that goes into consumption, it has, during all this business depression, declared a 12 per cent dividend upon its stock, watered for more than double its value. This bill, if enacted, will give the American market over absolutely and entirely to the sugar trust. This trust will have no competition, but the consuming public will be at its mercy.

The amount of sugar consumed in the United States is about 2,000,000 tons yearly. The trust, under the present law, furnishes all but about 65,000 tons. Thus under the present law the trust has competition for only 1 pound in 30. If this bill passes, this little competition will be destroyed. Under the present law the trust has a differential in its favor of one-eighth of a cent a pound, with an addition of one-tenth of a cent a pound disguised under the 40 per cent ad valorem. This bill will make the differential duty in favor of the trust vary from one-fourth of a cent a pound to seven-eighths of a cent a pound. This great benefit is disguised under the "pretended scientific schedule." Besides, it imposes an additional duty equal to the export bounty paid by foreign countries. The small quantity of refined sugar imported here comes mostly from Germany. Germany has been able to make this small importation because the Government there pays a bounty of about 38 cents on every hundred pounds of refined sugar exported. This bill, imposing an additional duty equal to the bounty, will prevent all importations from there in the future. It means a complete surrender of our markets to the exactions of the sugar trust. It means that less revenue from this source shall go into the Treasury of the United States, but more and increased profits into the treasury of the sugar trust. It means higher sugar to the people, higher profits to the trust, and less revenue to the Government.

I ask this House to destroy these benefits to this greedy and overrich trust.

Let us carry our examination further and see how this bill protects the next most despicable trust which has depredated upon the American people. I allude to the steel-rail trust or pool. Nothing more completely establishes the correctness of the Democratic position upon the tariff than the history of the steel-rail pool. This side has always maintained that a prohibitory tariff enabled the home manufacturers to combine and put up the product above the natural and reasonable price equal to the import duty; and, second, we claimed that this increased price paid for the product went into the pockets of the protected manufacturer.

The history of the steel-rail pool establishes without contradiction the truth of these contentions. The duty upon steel rails is about \$8 a ton. All the manufacturers of steel rails formed a trust or pool and put the price at about \$25 a ton. A few weeks ago the members of this pool or trust became angry with each other, dissolved, and immediately the price of steel rails fell to \$15 a ton. Since the price was first reduced I see in the papers that they are now selling them at \$13 a ton. Mr. Carnegie, the greatest manufacturer of steel rails in this country, states that he makes a profit of \$2 a ton at that price and that he can easily keep up the warfare with his competitors. Steel rails are now being exported to Europe for sale. Thus we see that by this prohibitory duty imposed, as claimed by the Democrats, the manufacturers, being freed from all foreign competition, were able to form a pool and put the price even higher than the import duty.

Now, where did this increased price of about \$12 per ton, paid by the consumers, go? Into the Treasury of the United States? No. We find that the Treasury received last year as duty on steel rails only \$754,03. Now, how much did the increased price that the consumers paid last year amount to? We consumed last year over 1,300,000 tons, which at the increased price of \$12 per ton would amount to over \$15,000,000 a year. Thus it can not be disputed that last year, on account of the prohibitory tariff upon steel rails, the pool, by the increased price it was able to sell at, put over \$15,000,000 in the pockets of its stockholders. This is a fair illustration of the workings of the so-called "protective tariff," which, divested of its glittering generalities and examined in its practical workings, means to exercise the taking power of the Government, not to provide revenue, but to make this Government stretch forth its hands and gather in the earnings of the masses to enrich the favored classes. It means protection to the few and poverty to the many. [Applause.]

Mr. BLAND. Will the gentleman allow me a question right here?

Mr. SWANSON. Yes, sir.

Mr. BLAND. Is it not further shown that this tariff and this pool prevented the building of railroads and the repairing of railroads and in that way prevented the prosperity of the country?

Mr. SWANSON. The distinguished gentleman from Missouri is entirely correct. The increased price of steel rails has prevented the building of many railroads in sections where they are badly needed, and the repairing of others so as to give efficient service. Besides, on those built it greatly increased the cost of construction, and thus made necessary the perpetual maintenance of higher rates for passengers and freight. I have here a statement of the steel rails used in the country from 1871 to 1882, and a comparison of prices paid in America and in England, which shows that the increased cost for that time in this country over England amounted to \$159,312,126. From 1882 to the present time, the difference in cost for these years would far exceed that amount. Thus, to enrich Carnegie and his associates in this pool, this high duty was imposed. It puts no money in the Treasury, and, while it has enriched these few favorites, it has put a higher burden upon the transportation of all passengers and freight for years in this country. These unjust and enormous exactions are paid yearly by the merchants and farmers when they ship their wheat, corn, cotton, tobacco, cattle, and goods over the railroads at high rates.

This bill continues this high prohibitory duty upon steel rails, and its passage will witness the formation of another pool, levying again its great and iniquitous exactions upon all the trade, commerce, business, and products of the country. We must put steel rails upon the free list and have foreign competition at a reasonable price. I defy any gentleman who is listening to me to give any reason why they should not be put upon the free list. We are now exporting them to Europe. There can be no excuse to continue the present high duty, except to enable the formation of another pool to rob the American people. I appeal to every Representative who desires cheap freights for the products of his constituents to vote against this iniquity in this bill. I appeal to every Representative who has constituents who need the construction of railroads to develop their sections to vote against this provision and make possible the building of these railroads.

Mr. Chairman, I regret that I have not time to go through this bill and expose the hundreds of trusts and combines that will be benefited and enriched by its passage. I have shown how the two largest and most notorious trusts are the recipients of great gifts and bounties in this bill. These two but constitute samples of the many which are provided for. Concealed in the smooth phrases of this bill, lurking in its intricate and complicated schedules, are benefits to trusts and combines greater than ever before bestowed by any act of legislation. It is constructed upon purely Republican lines. The Republican idea is to make a few vastly rich by special privileges, and to trust that they will permit some prosperity to leak out on those beneath. This pernicious principle glares out in its enormity in every line, in every schedule of this bill. Submission to this doctrine has made this bill but the handiwork of the protected industries, a reflex of their greedy desires.

Until I was appointed upon the Ways and Means Committee I had formed the impression that it was a difficult undertaking to construct a tariff bill. I was unable to understand how my Republican friends were able, so easily and so quickly, to prepare this bill. I remembered that they had prepared it in less than half the time required by the Democratic committee for the Wilson bill. It is needless to say that I was amazed at the ability, learning, and facility for work exhibited by these gentlemen. I felt dazzled at the thoroughness and rapidity with which they had mastered the entire industrial interests of the United States. But when I began to read the hearings and to compare the requests filed by the protected interests with the sections of the bill, these pleasant illusions were rapidly dispelled. I readily perceived that this bill was but an aggregation of the wishes of the protected industries clamoring for the right to enrich themselves by taxing the people. I found that the chief credit, if any, to which my colleagues on the other side on this committee were entitled to was the perfect docility they exhibited in yielding to the desires of these interests.

Mr. Chairman, let us take the bill and see the influences which presided at its preparation. The first schedule we reach is the chemical schedule. We find from page 9 to 18 of the hearings that Mr. Thomas Harrison, in behalf of the Manufacturing Chemists' Association, filed a schedule containing the wishes of this association, and it reappears substantially as thus filed in the bill. Where his recommendations are not followed, an examination will show that others more particularly interested in that item were listened to. On page 170 of the hearings H. B. Newton, president of the National Association of Fire Brick Manufacturers, asks for a duty of \$1.25 per ton on brick, and this request is granted in section 83 of this bill. We find that section 95 of the bill, imposing a duty upon green and colored bottles, demijohns, etc., is literally that submitted by the manufacturers of these on page 234 of the hearings. Section 99 of the bill, increasing the duty on window glass, is literally the same asked for by Mr. Burns and the manufacturers of window glass in pages 252 and 253 of the hearings. Sections 106, 107, and 108 of the bill, imposing duties upon spectacles, eyeglasses, lenses, opera glasses, and field pieces, voices precisely the wishes of the manufacturers of these, as expressed on pages 272 and 273 of the hearings. The Cotton Spinners' Association filed a schedule for cotton yarns, on page 1151 of the hearings, and it appears word for word as section 303 of this bill. The manufacturers of spool cotton thread, on page 1158 of the hearings, made their desires known, and they are completely granted in section 304 of this bill. The cotton manufacturers of New England, through Mr. Chase, on page 1167 of the hearings, asked for a change of law and filed a proposed schedule, which appears word for word as section 310 of this bill.

The sugar schedule in section 208, upon which it is proposed to collect over \$51,000,000 of revenue, with the difference of one-eighth differential on refined sugar, is the schedule filed on page 599 of the hearings by Mr. Farr in behalf of the "sugar trade." Let us see how the great woolen schedule was prepared. I have here the Quarterly Magazine, issued by the National Association of Wool Manufacturers of this country. It contains the annual report of its secretary. In detailing the work of the special committee appointed to go to Washington to formulate recommendations to the Ways and Means Committee for the woolen schedule, this report says:

The special committee met at the Arlington Hotel in Washington on the evening of January 6, all the members being present. It adjourned for a conference with Chairman DINGLEY and other members of the Ways and Means Committee, at which a complete understanding was arrived at as to the general principles which are to prevail in the reconstruction of the woolen schedule.

[Laughter.]

We may judge how satisfactory these "general principles" and this "complete understanding" were to the woolen manufacturers when we reflect that the bill proposes to impose a tax of over \$67,000,000 upon the woolen clothing of the people of this country for the benefit of these manufacturers.

Thus, Mr. Chairman, the bill could be taken section by section, schedule by schedule, and shown to contain only the greedy desires of the protected industries calling upon the Government to tax the masses of the people to enrich them. My Republican colleagues upon the committee are not to be blamed for this. In doing this they have been executing an acknowledged Republican policy. The policy of this party is to make these few immensely rich and hope that they will share it with others. As the acknowledged purpose of this bill is to make the manufacturer rich by permitting him to tax all others, the consistent and most effective way to accomplish this is to allow him to fix the rate of tax he shall impose. Who knows better than he how high this tax should be in order to make him rich? [Laughter.] Hence the gentlemen on the other side are thoroughly consistent with the doctrines of their party and the purposes of the bill when they permit the protected industries to write out the rates and schedules of this bill. The masses of the people, the great consuming public, are out-

side of the purposes of this bill or of the legislative aid of the Republican party. The people will never consent to surrender the sovereign power of taxation over to the greed and avarice of a few, as this bill does. This bill, surpassing the McKinley Act in iniquity, will receive at the hands of the people more execration than was administered to that odious measure.

The CHAIRMAN. The time of the gentleman from Virginia has expired.

Mr. SWANSON. I would like to be allowed to conclude my remarks. I will not occupy much time.

The CHAIRMAN. The gentleman from Virginia asks unanimous consent that he be allowed to finish his remarks. Is there objection?

There was no objection.

Mr. SWANSON. I am indeed grateful to the committee for its kindness, and I promise not to detain it long.

Mr. Chairman, in olden times, in the feudal days, if a man wanted to appropriate his neighbor's property, he went forth with his armed retainers and took by force whatever he desired to possess. This was bold and manly robbery, and many feudal barons thus became great and rich by their depredations. In the course of time the feudal system was overthrown, government was organized, and persons were restrained from appropriating by force the labor of others. When organized government prohibited the taking of the fruits of the labor of others by force, then the special classes commenced to acquire, under forms of law, what heretofore they had taken by force. The two most frequent and efficient means by which the products of the labor of one citizen have been transferred to another citizen have been by exercising the power of taxation and trifling with the currency. The abuses of these two great powers of government are the sources of the present unjust and unequal distribution of wealth. When the history of taxation and currency is written by a hand with the power and genius of a Buckle, it will exhibit a system of legalized iniquity, injustice, and oppression surpassing the exercise of any other powers. [Applause.]

My eloquent friend from Iowa has taunted this side of the House for a supposed inconsistency in advocating at the same time tariff reform and financial reform. To a thoughtful and patriotic mind the advocacy of one necessarily impels the advocacy of the other. The tariff taxes are used artificially to enhance the prices of goods to the consumer with a view of transferring a portion of his wealth into the pockets of the manufacturer. The gold standard is used to artificially depress the price of products of the producer, so as to transfer a portion of his wealth to the banking or moneyed classes. The purpose in each case is, by artificially affecting prices, to transfer the wealth of the masses to special classes. The results in each case are similar. The only difference is in the method of accomplishment. We believe that prices should be normal and stable, controlled by the great law of supply and demand, neither artificially enhanced by tariff restrictions preventing competition nor artificially depressed by the radical change in destroying silver as one of the units of value in fixing prices. Thus the Democratic party is consistent in its opposition to both high tariff and gold monometallism. It places itself as the firm advocate of natural, stable prices. It believes that the greatest prosperity comes to a nation, the productive energies of a people are the greatest, when prices are stable. A prohibitory tariff is but the bestowal of special privileges on the manufacturer. Gold monometallism is but the bestowal of special privileges on the moneyed classes. We are opposed to both.

In the hour of fierce conflict for the betterment of an oppressed and impoverished country, the Democratic party adopts as its fundamental principle that famous utterance of the great Mirabeau, amid the storms and struggles of the French Revolution:

Privilege must have an end, but the people are eternal.

[Prolonged applause.]

#### The Dingley Bill.

#### SPEECH

OF

HON. MARION DE VRIES,

OF CALIFORNIA.

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 29, 1897.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States—

Mr. DE VRIES said:

Mr. CHAIRMAN: I am opposed to the amendment now under consideration. It proposes to increase the duty already recommended in the bill upon asphaltum and bitumen. I am opposed to any duty upon these articles and submit that they should be placed

upon the free list. The effect of laying a duty upon such articles will be to enhance the price of the same in my State to the people of that State to the extent of the duty levied. The gentleman from Ohio [Mr. GROSVENOR] is correct in the statement that in the State of California there are inexhaustible supplies of these materials. These are articles found in great quantities in southern California. We consume vast quantities of the same in the construction of sidewalks and streets in our cities everywhere and the effect of this amendment will be to increase the cost of that material for such purposes, and that increase of cost will fall largely upon the poor. [Applause on the Democratic side.]

In our State this will be more keenly felt by the poor, for under our system of street improvement the citizen and resident are compelled to improve at the will of the municipal council, which does not always respect the financial ability of the citizen. I desire to say to gentlemen on the other side of this Chamber that if they desire to cheapen the price of asphaltum and bitumen to the people of the East, in order to meet and disarm the foreign syndicate controlling the same, the way to consummate that purpose is not to enable a higher price to be charged for bitumen at the mine as is done by the proposed tariff, but to take hold of the Pacific railroads question in the proper manner and adjust that question so that the railroad corporations which now charge exorbitant freight rates for transportation of all products from California to the East may be compelled to do justice to the people of the East as well as to the people of that State. [Renewed applause.]

If, Mr. Chairman, the question is determined in such manner that relief in freight charges will be effected, the people of the East as well as of California will have an inexhaustible supply of superior bitumen and asphaltum at their doors, and it can be commanded at a reasonable price. This can easily be and should be accomplished by a Federal adjustment of railroad freights and fares. The United States courts have held this power to be constitutionally vested in Congress, and it should be exercised. While I am on the floor let me say that gentlemen on the other side have continually protested that this bill treats every section of the country uniformly; that it is a bill for the benefit of the West as well as the East, the South as well as the North; that it benefits every class upon whom it lays tribute, and returns that tribute by protecting him in some way; and they have professed to be particularly solicitous about the welfare of the agricultural and farming communities.

I want to call the attention of the Ways and Means Committee particularly, and of the majority upon the other side of the House, to the fact that there is a large class of people in my State who produce the greatest product of that State, to wit, wheat, who add 28,000,000 bushels of wheat per annum to the channels of trade to aid in turning the balance of trade in favor of this country, who are not protected one iota under this bill; but, on the contrary, by the terms thereof it is proposed to levy upon them what is equivalent to a direct tax of more than \$500,000. What protection does the wheat-growing farmer of California and the Pacific Coast receive under this bill? He has to buy a great number of commodities that he requires which are protected—in fact, nearly every article he buys is protected—and in return he is offered protection on wheat, which is of no benefit to him, as gentlemen must, in all honesty and fairness, concede. You have given the Western farmer sop, molasses to catch his vote, and offered insult to his intelligence in the shape of a tariff of 25 cents per bushel on wheat. You and every sane man in the country know the effect of that duty is a burden rather than a benefit to the farmer. He sells his wheat in Liverpool, the markets of which regulate the price of wheat the world over. The wheat affected by this duty is the wheat imported into this country by our farmers for seed, and upon that this bill compels the farmer to pay a duty of 25 cents per bushel, so that the duty on wheat is the farmers' enemy masquerading as his friend.

On the other hand, what tax is levied upon the California grain-growing farmer by this bill? In our State every bushel of the grain product must be sacked in jute bags, of which we consume about 40,000,000 per year, and upon these it is proposed by this bill to levy a duty of 1½ cents per pound. The result of that will inevitably be that there will thereby be assessed upon the farmer of the Sacramento and San Joaquin valleys alone in the State of California a tribute of almost \$250,000. This is a direct tax, because there is no substantial local competition in the grain-bag market on the Coast. To consider this question politically for a moment, I want to say to you gentlemen that these were the very people, the grain-growing farmers of California, who delivered to you the electoral vote of the State of California at the last election, and now, in return for the aid which they gave you and your party in that election—

[Here the hammer fell.]

Mr. DEVRIES. I would like a few minutes more, Mr. Chairman. The CHAIRMAN. Is there objection to the request of the gentleman from California that he be given a few minutes more? There was no objection.

Mr. DE VRIES. I was proceeding to state, Mr. Chairman, the effect of this bill, politically, upon the farmers of my State, they having cast their votes for Mr. McKinley. They then had free grain bags. In return for their votes you now propose to assess them about 1½ cents for every grain bag they buy, aggregating over half a million dollars in my State alone. Whether or not this course will be approved only the farmer can say, and he will speak thereupon at the next Congressional election. I wish to say another thing to you gentlemen upon the other side of the House. There are manufactories in the State of California, as well as in the East. In my district there are several factories of agricultural implements. These are in Sacramento, Stockton, Marysville, Chico, and other cities. You do not give them one iota of protection in this bill, because there are no agricultural implements imported which come into our market in competition with the high-grade implements which these manufacturers make. For example, the combined harvester is almost, if not quite, a California machine. These shops employ thousands of laborers. Besides, we have many large houses dealing in such implements, all paying heavy duties on their materials and stock by this bill.

Now, if you want to protect them and give our labor employment, the best way to do it is to take the duty from grain bags in this bill and thereby leave in the pockets of the California farmers about \$500,000 extra, with which they can buy these high-grade manufacturing implements. Having that much more money left in their pockets, the farmer can go to the factories and buy these implements, which privilege they will be denied if you continue this assessment on their grain bags. Having equipped themselves thus with improved machinery, kept our shops open and laborers employed, they will with such machinery save more in developing and harvesting their crop, and thereby have left some money with which to buy your Eastern goods. But we can never buy your Eastern products, we can never enter your markets, unless you leave us some small change with which to buy. The same reasoning applies to other consumers of jute bags in our State. The State of California, for the single purpose of cheapening grain bags to its farmers, has expended approximately half a million dollars in erecting a jute-bag factory at San Quentin, and they are running that factory extra time now. For what purpose? Simply for the purpose of cheapening to the farmers of that State the price of grain bags. Yet here, now, after the State of California has made that great outlay for this commendable purpose, it is proposed in this bill to put a duty upon grain bags and thereby, so far as the interest of the farmers of California are concerned, defeat the efforts of the people of that State in the expenditure of this great amount of money. The effect of the duty may well be understood from a dispatch I clipped from the San Francisco Examiner this morning, which I here read:

JUTE BAGS IN DEMAND—ORDERS COME IN AT SAN QUENTIN—DIRECTORS PREPARE TO RUN THE MILL ON LONGER HOURS.

SAN QUENTIN, March 22.

The demand for jute bags remains active. The price, \$5.40 a hundred, although the maximum that can be charged by the board of directors, seems to be no hindrance to orders. The orders are being filled and will be filled as rapidly as the output will permit. The market quotations for Calcutta stock are now \$5.25 a hundred, with the tariff risk assumed by the purchaser. It is the intention of the board of directors to run the jute mills half an hour longer each day after April 1 and during the half day on Saturday that has usually been reserved as a holiday.

Thus we find our farmers preferring to pay \$5.40 for grain bags now rather than \$5.25 and assume the prospective tariff burden. You may preach to us as much as you please upon the floor of this House that a tariff does not increase prices, but, as the above dispatch indicates, when it comes to actual business, the commercial world transacts business upon the basis that a tariff does increase prices. And we further have presented the remarkable spectacle of a State being engaged in a desperate struggle to cheapen a particular commodity to a deserving and oppressed consumer while this House is proceeding to nullify all the efforts of that State by increasing the price of these same articles to such consumers. In behalf of these grain-growing farmers of the Pacific Coast and all consumers of jute bags, I submit this duty is an outrage. I do so not in the spirit of criticism, but of a petitioner, that the outrage be not perpetrated. Both in the general debate and in this running-fire discussion of the past two days every advocate of this bill has emphasized its alleged virtues as a moderate, uniform tariff measure, claiming for it, as I have said, that it affected all sections and classes alike, and particularly vaunted its tender regard for the agricultural classes. If I believed this bill was as thus claimed, I should be very much constrained to vote for it, particularly in view of the present exigencies, political and commercial. But even the limited time allowed the minority for deliberation and examination reveals that it is far from what it is claimed by its ardent friends.

I for one do not believe in free trade. I am not a free trader. I do not believe in a high protective tariff. I believe the power vested in Congress by the Constitution in the words, "The Congress shall have power to lay and collect taxes, duties, imposts,

and excises to pay the debts and provide for the common defense and general welfare of the United States; but all duties, imposts, and excises shall be uniform throughout the United States," clearly authorizes, and wisely, the raising of a portion of our national revenues by a tariff, and that this can always be done justly and advantageously. I believe that language justifies a tariff for revenue, carrying with it whatsoever of necessary incidental protection it may, and that the constitutional inhibition to be emphasized is the one emphasized by the makers of our Constitution by dignifying the enactment in a special proviso that these duties "shall be uniform throughout the United States." That a portion of our revenues shall be so raised is a doctrine which has grown up with and become a part of the constitutional history of this country, and no considerable portion of our people deny it, though some whose opinions are entitled to great respect do. In the confusion of political campaigns and in the strife for office the real contention upon this question has been obscured. The objections held by the majority of the objectors to past tariffs and the present do not level their objections at the tariff system as a system, but at the inequalities of the particular schedules which have from time to time constituted the revenue laws of this commonwealth, and which have done great violence to that portion of the constitutional proviso quoted, in that the schedules of such do not and have not rested the burdens of taxation "uniformly throughout the United States," as required by the Constitution.

The American people are a busy people, much occupied in their respective vocations, and have never given heed to the effect of their laws until the resulting conditions therefrom forced upon their attention the sober realization that something was wrong. While I do not wholly or even principally attribute present conditions to the inequalities of the tariff, nevertheless any economic factor which constantly rests the burden of taxation unequally, and further casts upon those bearing the greater portion of this burden the additional task of paying tribute to their more favored brethren, becomes a factor in at once enriching one portion of the nation and impoverishing the other. The logic of conditions has finally drawn the attention of the American people away from their vocations, and they are examining their laws and taking account of stock, so to speak, of their labors. They find the course of wealth and accumulation has been eastward, where dwell the protected manufacturers and the Wall street gold manipulators, while those who have ever toiled and exhausted the virgin strength of Western fields and riches of Western mines have nothing but debts set opposite their investment of nature, industry, capacity, and frugality. When we equalize, therefore, so far as can be practically done the benefits and the burdens of a tariff, I believe we approach to a satisfactory tariff, for such would give equal rights to all and special privileges to none, so far as the particular subject is concerned. It goes without saying, the revenue to be raised must be such as the necessary expenditures of the Government, economically administered, require. I believe, therefore, in a tariff for a portion of the nation's revenues to meet the needs of the National Government, economically administered, so levied that the necessary incidental benefits thereof, as well as the burdens thereof, shall benefit and burden all classes and all sections alike. A tariff for such a revenue, being uniform in both its benefits and its burdens, and affecting all classes and sections the same, approximates justice. Certainly, whenever declared constitutional, an income tax should be early adopted as the greatest vehicle to uniform taxation. Other commendable methods are available whereby the burdens of national taxation may be equally adjusted. The course of wealth is and for decades has been toward New England. Compare five Western with five New England States, taking the official records of property returned for taxation in 1893 and 1894.

State.	1893.	1894.	Increase.	Decrease.
California.....	\$1,216,700,000	\$1,305,012,000	.....	\$88,312,000
Oregon.....	166,089,085	180,380,383	.....	14,291,298
Washington.....	335,694,248	338,358,572	.....	2,664,324
Idaho.....	33,000,000	33,000,000	.....	.....
Nevada.....	26,178,080	33,683,790	.....	7,505,710
Montana.....	127,548,173	118,659,892	.....	8,888,281
Ohio.....	1,732,900,990	1,742,682,115	.....	9,781,125
Indiana.....	1,302,004,689	1,275,435,377	.....	26,569,312
Iowa.....	545,857,790	556,412,768	.....	10,554,978
Kansas.....	356,621,818	337,501,722	.....	19,120,096
Nebraska.....	194,733,124	183,717,498	.....	11,015,626
Maine.....	270,812,788	272,319,370	\$1,506,582	.....
Massachusetts.....	2,791,582,144	2,815,883,621	24,301,477	.....
New York.....	4,038,058,949	4,273,942,431	235,883,482	.....
Pennsylvania.....	3,115,320,549	3,162,114,251	46,793,702	.....
New Jersey.....	788,295,274	774,389,332	6,105,942	.....

These States are not selected for the purpose of the argument. Only two Southern and Middle States of all the States show any

increase. And the total net decrease for all that territory in the time mentioned is approximately \$320,000,000; while only two New England and Atlantic States show a decrease, and the net increase of those States is \$312,110,000. I am indebted to Mr. McLaurin for the figures, as I am also for the following statement and tables, to the same point:

The capital invested in the manufacturing industries increased 121 per cent from 1890 to 1900, while during that same period farm values shrunk from 20 per cent of the total wealth of the country to 20 per cent of the same.

I will print a table showing the losses in farm values from 1850 to 1890:

	Total values.	Farm values.	Other values.
1850.....	\$7,135,780,228	\$3,271,575,426	\$3,864,204,802
1860.....	16,150,616,088	6,645,045,007	9,505,571,081
1870.....	30,068,518,507	9,282,808,881	20,785,709,626
1880.....	43,642,000,000	10,197,008,776	33,444,991,224
1890.....	65,087,091,197	13,279,232,649	51,807,858,548

These figures show a constant and increasing drift of the wealth of the country away from the agricultural communities and toward the manufacturing centers. It is idle to cumulate statistics to the same point. The savings-bank accounts and all bank accounts point in the same direction. The wealth of the country is rapidly passing to the highly protected States and away from the West and South, and reliable statistics show this to have been the uninterrupted course for the past quarter of a century. This feature becomes the more alarming by reason of the fact that the wealth of the country is not only traveling to the northeastern portion thereof, but is being collected into the hands of a few. It would be idle to cite authority to this admitted fact.

The same spirit of inequality and want of uniformity pervades this bill that has characterized every tariff bill passed by Congress for several decades. The passage of this bill as it now stands, with no changes in the coinage laws of the nation, will aggravate rather than alleviate the abnormal conditions stated, and will not turn the tide of wealth in this country. We will, I believe, in the near future, view spasmodic evidences of prosperity for a limited time, for the reasons that we have just emerged from the ever-recurring decennial depression of business of the country, and by reason of the further and more potent cause that the greedy money mongers of the East, being appeased by unequal legislation, will, for political if no other purpose, unlock their money coffers and permit the country a slight increase in the circulating medium, while they cry: "Behold the coming of prosperity!"—simply let out their ropes for another haul to the money centers of another installment of the labor and property of others by later on contracting the currency medium of the country, soon to be temporarily expanded. I shall advocate and vote in Committee of the Whole for the agricultural schedules of this bill, because they, I believe, tend to better the bill and are in the interests of my constituents, and in the committee every vote will be effectual: Upon the vote on the bill as a whole my vote will not be effective, either for or against it, and I shall vote against the bill for several reasons:

First. It is full of inequalities and not in the least uniform. Even the agricultural duties protect chiefly, if not solely, the New England farmer on the Canadian border, and this will not correct, or tend to correct, existing inequalities.

Second. The bill is not a revenue measure prepared by the House of Representatives. It is a revenue measure prepared by the majority of the Ways and Means Committee, which the members of the House have had no adequate opportunity to amend or offer amendments to, much less have such voted upon by the House. There are measures in this bill which would fail if put to a vote of the House.

Third. The alleged necessity for revenue is admittedly only about \$60,000,000. This bill purports to raise over \$65,000,000 more than necessary, and even that necessity is figured upon the basis of enormously extravagant appropriations far in excess of an economically administered governmental necessity. It therefore lays a much heavier tax upon the people than necessary.

Fourth. This is an extreme protective measure. The McKinley bill was moderate in rates when compared to this bill. I here give the relative rates of this bill and the McKinley bill by schedules:

SCHEDULE A.—CHEMICALS, OILS, AND PAINTS.		Per cent.
McKinley bill.....	.....	31.07
Dingley bill.....	.....	31.33
SCHEDULE B.—EARTHES, EARTHENWARE, AND GLASSWARE.		
McKinley bill.....	.....	51.20
Dingley bill.....	.....	52.62
SCHEDULE C.—METALS, AND MANUFACTURES OF.		
McKinley bill.....	.....	57.21
Dingley bill.....	.....	46.54

## SCHEDULE D.—WOOD, AND MANUFACTURES OF.

	Per cent.	Amount.
McKinley bill.....	14.00	\$1,857,802.90
Dingley bill.....	16.58	2,206,568.98

## SCHEDULE E.—SUGAR.

	Per cent.
McKinley bill.....	14.55
Dingley bill.....	71.10

## SCHEDULE F.—TOBACCO, AND MANUFACTURES OF.

McKinley bill.....	117.82
Dingley bill.....	164.05

## SCHEDULE G.—AGRICULTURAL PRODUCTS AND PROVISIONS.

McKinley bill.....	33.17
Dingley bill.....	39.94

## SCHEDULE H.—SPIRITS, WINES, AND OTHER BEVERAGES.

McKinley bill.....	69.78
Dingley bill.....	77.01

## SCHEDULE I.—COTTON MANUFACTURES.

McKinley bill.....	55.25
Dingley bill.....	54.14

## SCHEDULE J.—FLAX, HEMP, AND JUTE, AND MANUFACTURES OF.

McKinley bill.....	43.68
Dingley bill.....	49.52

## SCHEDULE K.—WOOL, AND MANUFACTURES OF.

McKinley bill.....	80.50
Dingley bill.....	81.57

## SCHEDULE L.—SILK AND SILK GOODS.

McKinley bill.....	53.56
Dingley bill.....	53.89

## SCHEDULE M.—PULP, PAPER, AND BOOKS.

McKinley bill.....	23.85
Dingley bill.....	29.82

## SCHEDULE N.—SUNDRIES.

McKinley bill.....	26.06
Dingley bill.....	30.57

The McKinley bill was condemned by an overwhelming vote of the country. The McKinley bill raised less revenue per annum than the Wilson bill with the income-tax clause eliminated therefrom.

Fifth. I will vote for no bill as a whole which puts a direct tax of nearly 1½ cents on every jute bag used by the farmers of my district, knowing that it taxes them alone quite \$250,000 on this one item. That there is a necessity for a revision of the revenue laws of the country I not only admit but assert, and this particularly with a view to securing such an adjustment of the schedules as will make more uniform the benefits as well as the burdens of this method of taxation. The increase in the agricultural schedules in this bill is a commendable step; but while a care has been given the farmer, especially the Eastern farmer, scrupulous and assiduous attention has been given the manufacturers of the East, and that while the manufacturers of my district and dealers in agricultural implements have not been given a thought. Where the fruit grower has been given \$1 he is taxed \$5 by the same measure, a very unequal bargain. The law which enables the Eastern manufacturer to collect protection-inflated prices for his goods from the Western farmer, while it denies the latter the reciprocal privilege, is measurably, though not totally, responsible for the present condition of the farmer, and the condition demonstrates the presence of the evil and want of uniformity of the law in its operation. The Western farmer craves reciprocity, not so much with his foreign friends as with his Eastern brother. He desires them to reciprocate with him by paying to him as well as receiving from him prices an element of which is due to the revenue policy of the General Government, if any prices are to be so inflated.

Until you make uniform these benefits of the revenue laws and also give the farmer more money by increasing the circulating medium of the country, a protection wall as high as Bartholdi's statue will be a dead letter on the statute books, so far as prosperity is concerned. You must stay the tide aided by an unjustly arranged revenue system. You can never enrich the mortgaged West and South by taxing them more. The people of the West can never effectively demand your protected goods until you put more money in circulation for which they can exchange their produce and with which they can then buy your goods. Leons may run and the factory doors open, but the product will rot at your doors for want of purchasers. You can not tax a poor man into prosperity. Prosperity, stable and permanent, abounds only where money plentifully circulates. Prosperity is commerce, an abundance of exchanges which can not be had without an abundance of the medium of exchange—money. Until you give the farmer better prices—more money—he has nothing to exchange but the mortgage on his farm. So, while I believe the adjustment of the revenue laws is a factor for or against the prosperity of sec-

tions of our country, it is not the controlling factor of its general prosperity. What we of the whole nation need mostly now is a greater amount of circulating medium and a law making all trusts and combines organized to affect prices a felony.

What we of the West need mostly now is, first, our share of the benefits of our system of revenue laws; second, an increased circulating medium, and both these will be ineffectual to us unless you give us an opportunity to transport our products of the West to the markets of the East at reasonable freight rates, serving the purpose of extending our markets and cheapening our products to the East. This latter can be easily effected by the proper adjustment of the Pacific railroads question—a solution made in the interest of the people, instead of the railroads, which idea opposes any and all schemes for refunding that indebtedness. The people of California may sow and reap in abundance, and sell in markets of scarcity at fabulous prices; you may build around us a protection wall as high as the Sierras, but so long as the Southern Pacific Railroad Company holds California in its monopolistic embrace, and stands a toll gatherer between us and the markets of the East, these advantages only further fill the fat stomach of that greedy corporation, while our people remain the unwilling slaves to that insatiably rapacious parasite of the West.

## The Depression in Agriculture—Its Cause and Remedy.

## SPEECH

OF

HON. WINFIELD S. KERR,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 31, 1897.

On the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. KERR said:

Mr. CHAIRMAN: The farmer seems to be the objective point of the modern Democratic statesman. The glowing promise of his rejuvenation is the only light that shoots through the somber fabric of Democratic discourse.

That the farmer has suffered in the last four years is past all disputing, but he will not walk out of his troubles by walking into the camp which caused his discomfiture. He will not increase prices of agricultural products by embracing the principles and the party which lowered these prices.

The farmer is an intelligent man, and he should proceed intelligently to find the cause of his present distress, and then set about remedying it like an intelligent man. If he is deceived as to the cause, he will miss the remedy.

This Hall has rung for two weeks with Democratic philippics against trusts and combines; yet the Democratic party is not yet a month away from its control of the Government. If the people are bound captives to the wheels of monopoly, why did you not release them during your four years of power? What legislation did you enact? What executive action did your President take to break these chains which you say bind the American people? Nothing—absolutely nothing.

You are raising a false clamor; you are heating the passions in order that you may deceive the judgment.

Why have you not relieved the distress of the farmer in the four years you held power? Every year of these four has seen the farmer sink lower and lower; every year has seen his distress aggravated; every year his business less remunerative. What excuse have you for not coming to the rescue of this dear friend of yours? None. But you are still fertile in promises. You want the offices four years more, and if you can get them, you promise to make another onslaught on the windmills.

Whether the centralization or combination of wealth is an evil or not depends upon how it is used. If a great enterprise, like the building of a railroad, the erection of a great factory, or the floating of a line of steamships, takes more money than one man can furnish, and ten go together and do it, they do not become public enemies, but in a sense public benefactors. If Democratic philosophy had prevailed during the last half a century, this Republic, instead of covering the continent with its magnificent growth and leading all the nations in material progress, would be sending wagon trains from the Missouri to the valley of the San Francisco, and foreign lords would be hunting buffalo on the plains of Kansas.

The first thing the farmer wants to know, or ought to know and know accurately, is the cause of his trouble. So far as the parties are concerned, the issue between them is clearly made. The Democratic party and its allies say that the silver act of 1873

is the sole and only cause. The Republican party says that the serious decline in agricultural prices began with the Wilson tariff law and should be ascribed to it. Where does the truth lie?

In making my comparisons, I take the year 1891 and compare it with 1895. I select the former year because it was the last year of Republican Administration, when there were no exceptional circumstances. Part of 1892 was influenced abnormally by the Presidential election, and part was after the election of Cleveland. I take 1895 because the Democratic Administration was then at its best and should show the best results.

If the act of 1873 had any effect in reducing prices it should have got in its work before 1893. If we find that farm products were sustained in price and many of them advanced in price for twenty years after 1873 and then began to decline, the cause should be searched for somewhere near the time the decline began. This is logic, and in a campaign of education ought to have force.

I make the broad proposition that every Northern farm product, in the aggregate, brought the farmers more money in 1891-92 than they did in 1873.

I make another statement, namely: That the substantial shrinkage in prices and values of Northern farm products has occurred since 1892 and 1893.

From these facts I infer the reasonable conclusion that the free-trade law of 1894 caused the decline, and not the act of 1873.

I take first the three great staples, wheat, corn, and oats. I open the Statistical Abstract at pages 293 and 294, and find that in 1891 they brought the farmers of the United States the following amounts of money:

Wheat .....	\$513,472,000
Corn .....	836,439,000
Oats .....	232,321,000
Total .....	1,582,232,000

In 1895 the same products brought the farmer the following amounts of money:

Wheat .....	\$237,938,000
Corn .....	567,930,000
Oats .....	163,655,000
Total .....	969,523,000

That is, in 1891, under the operation of the act of 1873 and the McKinley tariff, the farmers of the United States realized from their corn, wheat, and oats

And in 1895, under the Democratic free-trade law, they only realized

612,709,000

That means, under the same money laws, but under a different tariff law, the farmers lost \$612,709,000 in the value of three articles between the Republican year 1891 and the Democratic year 1895.

That the increase in value from 1873 to 1891-92 may be seen, I insert the value of these crops in 1873: Wheat, \$323,594,000; corn, \$447,183,000; oats, \$101,175,000.

Not only cereals, but farm animals increased in like proportion in value from 1873 to 1893, and then plunged downward:

Hogs.—The farmers' hogs January 1, 1893, were of the value of .....	\$295,425,000
January 1, 1896, they were worth only .....	186,529,000
	108,896,000

A decrease from 1893 to 1896 of more than \$100,000,000.

Sheep.—On January 1, 1893, the sheep of the country were worth .....	\$125,000,264
January 1, 1896, they were worth .....	65,167,735
	60,742,529

A decrease of the value of sheep from January 1, 1893, to January 1, 1896, of over \$60,000,000.

Horses.—In 1893 the horses of the United States were valued at .....	\$1,007,593,000
In 1896 they are valued at .....	500,140,000
	507,453,000

From 1873 to 1892 horses increased in value from \$659,707,000 to \$1,007,593,000. This was under the act of 1873 and a Republican tariff.

From 1893 to 1896, under the act of 1873 and a Democratic tariff, they decreased from \$1,007,000,000 to \$500,140,000.

Even mules thrived under the Republican laws and went the way of everything else under the Democratic policy.

Mules.—In 1893 the mules of the country were worth \$174,882,000, and in 1896 only \$103,204,000.

Of course, horses have decreased considerably because of the recent use of electricity and bicycles, but a good deal of the shrinkage in value is due to the shortening and narrowing of every business and the reduction of expenses in living and business to the lowest point caused by the Democratic tariff law.

Of course, the area of farming has increased since 1873, and to some extent the increase in the value of products may be traced to that, but the same area has existed since 1892, and the values should have at least been maintained since then.

These figures show conclusively that the falling off in the value of farm products did not begin in 1873, but in 1893.

What is the cause? Three things mainly. First, increased buying abroad; second, decreased consumption at home; and a third factor is the loss of foreign markets for farm products by the repeal of reciprocity arrangements.

Only a few items can be given, but they are sufficient to prove the whole case. Every dollar of goods bought abroad is a dollar less spent at home.

During the last eight months of the McKinley law we bought from abroad \$16,800,000 of woolen goods, at the rate of \$20,000,000 a year. In 1895, under the Wilson law, we bought \$57,559,000, an increase of thirty millions a year.

In the last full year under the McKinley law (1893) we bought from abroad 111,000,000 pounds of wool and paid for it \$13,000,000. In 1895, under the Wilson law, we bought 248,989,000 pounds, and paid for it \$33,000,000. In the one item of wool the farmer lost a market of \$20,000,000 in wool.

In the last year of the McKinley law we imported 229,000 pounds of shoddy.

In 1895, under the Wilson law, we imported 20,000,000 pounds of shoddy, every pound of which took the place of a pound of American wool.

Besides buying increased quantities of goods from abroad, we have been deprived of large markets for our agricultural products. What we need particularly is a foreign market for our flour, and thus be enabled to get rid of our surplus wheat. In Liverpool we meet the wheat of the world, and we can no longer rely upon favorable markets for raw wheat.

Under the reciprocity of the McKinley law we built up a very important trade for American flour. In Cuba in three years we increased our sales of flour from 150,000 barrels to 662,000 barrels, thus getting rid of 3,300,000 bushels of wheat on one island.

In the West Indies and Bermuda we built up a trade for 400,000 barrels of flour, or 2,000,000 bushels of wheat; in Brazil a trade for 200,000 barrels, or 1,000,000 bushels of wheat.

In Germany, under the reciprocity, our trade in flour went from 8,000 barrels to 286,000 barrels. All this has been destroyed by the Wilson bill and the farmers compelled to compete at Liverpool with the cheap wheat of the world.

The two items just mentioned are serious enough, but the next one is much more damaging to the farmer, namely, the falling off in home consumption. He has lost a large part of his best market—the home market.

A few facts will show the extent which this has shrunk. In the year 1895-96 the consumption of wheat per capita was 4 bushels; that of 1891-92, 5.7 bushels per capita. In 1891-92 the nonagricultural population each was able to pay the farmer for his wheat \$4.27; wheat was 83 cents a bushel. In 1895-96 each one paid the farmer \$2.16; wheat was then 54 cents a bushel.

What does this show?

It shows that of the forty or forty-five millions of people who buy their bread each has paid the farmer \$2.11 less for wheat than in 1891-92.

This alone reduces his home market immensely.

A still greater decrease in the consumption of corn is shown.

In 1892 the per capita consumption of corn was 30 bushels, in 1895 it was only 16 bushels.

All this simply means that a large number of people have been out of work or working fewer hours in the last year, and that they have reduced the cost of living.

The following summary as to the thirteen principal agricultural products will show what the farmers have lost by a change in the tariff laws:

In 1891 the following articles, namely, wheat, corn, rye, oats, cotton, hay, potatoes, wool, barley, buckwheat, tobacco, hogs, and sheep brought the farmers of the United States, or were valued at, \$2,957,000,000. In 1895 these same articles brought them \$2,061,000,000. Nine hundred millions less received by the farmer under the Wilson law than under the McKinley law, and both years were under the same money laws. What caused the loss? Free trade, of course.

Another test may be applied. If we find that all the principal farm products were higher in price in 1891 than they were in 1873, it will show that the law of 1873 did not hurt the farmer any. This is true of every important product except wheat and cotton, calculating the gold value of the money paid. The farm price of

wheat was from 7 to 10 cents less in 1871 than in 1873, and the farm price of oats was substantially the same.

In 1873 corn was worth in New York 48 cents per bushel, and in 1891 it was worth 80½ cents per bushel. Something seems to have inspired corn between the crime of 1873 and 1891.

In the winter of 1873 hogs sold for \$3.40 per hundred; in the winter of 1892 and 1893 they sold for \$6.24 per hundred. The act of 1873 seemed not to have hurt hogs any.

Since 1891, and since the Democratic victory of 1892, prices have gone downward at a rate unparalleled.

Oats have gone from 32 to 15 cents.

Corn has gone from 40 to 20 cents.

Rye has gone from 55 to 44 cents.

Hogs have gone from \$6.50 to \$3.

Wheat has gone from 83 to 45 to 50 cents in 1895.

Wool has gone from 28 to 19 cents.

If the farmers could go back to the prosperity of 1891, they would be happy. If you could send out among them in glittering streams the nine hundred millions lost, the shadows which now fall athwart their farms would be lifted. It can be brought back, my farmer friends, by a restoration of a proper protective tariff, but not by embarking upon an era of depreciated money.

Last year the Democratic campaign was an attempt to allure the Republican farmer from his political principles and party allegiance. He was invited to dethrone Lincoln, Garfield, and McKinley, and enthroned Bryan, BLAND, and Altgeld. But he stood fast to the faith of his fathers. The victory won by the Republican party can not, in a day, lift the country from its prostrate condition; it can not commute gloom into sunshine before Congress has time to enact a single measure, but within a reasonable time this great measure, supplemented by a wise and economical administration of our national affairs, will bring relief. God speed the day.

#### The Tariff.

#### SPEECH

OF

HON. EDWARD SAUERHERING,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 31, 1897,

On the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. SAUERHERING said:

Mr. CHAIRMAN: Whenever the economic condition of this country is one of chaos to such a degree as to require the convening of Congress in extraordinary session by the Chief Executive, the time has come for action and not for words.

The conditions being such as they are, I should not feel justified in going into an exhaustive discussion or detailed explanation at this time of so vast a proposition as a protective tariff. I simply desire to express my approval of this bill and this kind of legislation, because it is preeminently American, because it secures to Americans those blessings which are peculiar to America. I am not expected to make an elaborate speech in favor of the proposed measure, but the eyes of my constituents are upon me, and they desire not only that my vote be recorded in favor of a bill which will restore to the farmer and the manufacturer of this country the market he had under Republican rule prior to 1892—they desire, I say, not only that my vote be recorded in favor of such a measure, but that it be recorded with emphasis. It is a source of no little pleasure to me to comply with this desire, and I furthermore am proud to know that on Wednesday next the entire ten votes to which Wisconsin is entitled in this House will be cast solidly in favor of this bill.

The district which I have the honor to represent is a purely agricultural district, and has always been known in Wisconsin politics as the "Gibraltar of Democracy." Prior to the Fifty-fourth Congress it was never represented on this floor by a Republican, and even in the election of 1892 gave its old-time, unswerving Democratic vote, electing a Democratic member of Congress by a majority over all of 6,300. However, when the Fifty-third Congress convened in regular session and began to prepare its guns for a general onslaught on American prosperity, the voters of the Second Wisconsin district regretted the policy they had indorsed and petitioned their Representative in Congress to vote for a tariff on wool and agricultural products, but without effect. But by a wise provision in our Federal Constitution, that the people shall have a right every two years to speak their approval or disapproval of those chosen to represent them in mak-

ing laws for their own government, our farmers again had an opportunity to speak by the ballot in 1894, and at that time declared for a tariff by changing the Democratic majority of 6,300 to a Republican majority of 295. And again in 1896 the farmers of the Second Wisconsin district indorsed their action of 1894 by giving a majority of 6,477 votes to the greatest living exponent of protection—William McKinley. This is certainly a strong indorsement by the people of a policy which is purely and only Republican.

Every man, woman, and child conversant with the history of our country during that quarter of a century immediately preceding 1892 knows that during that period the United States developed and prospered more than this or any other country on the face of the earth ever did during a like period of time. A little more than four years ago a prosperity was ours the like of which had never been known in the history of nations. The national debt was being decreased daily, we had a sufficient income to meet all current expenses of the Government, our people were engaged in remunerative employment, the wheels of industry were in constant motion, and both our farmers and our manufacturers found a ready market for all they could produce.

At that time soup houses were unknown to our cities, and Coxey armies and "hobos" were yet to make their "debut" before the American people. It was then that the free trader, taking advantage of our condition of happiness, prosperity, and contentment, preached to our people a theory by which he promised to maintain all these ideal conditions without labor or effort on our part. He declared that all taxes for the support of our Government are "legalized robbery" and should no longer be tolerated. While listening to the seductive eloquence of these spellbinding orators, dazzled for the moment by the splendor of finely strung, artfully devised theories, the American people forgot themselves, became infatuated with the idea of wealth and happiness without labor, embraced the policy of free trade, elected Grover Cleveland President, and invested the Democratic party with complete control of all three departments of our Government.

The completeness of the victory appalled the Democrats themselves. Having won complete control, they had no excuse for not practicing what they preached, and yet they well knew that annihilation stared them in the face if they dared to attempt it. However, being elected on principles so definitely laid down, the policy of free trade was partially inaugurated by the passage of the Wilson bill, which was a little of everything and much of nothing. Its passage was only made possible by an adjunct known as the "income tax," a veritable "vermiform appendix," which later brought on a severe attack of appendicitis, making necessary an operation which resulted in the death of the patient. There never was an act of legislation more directly calculated to rob the agricultural classes of our country than this income tax, a tax on honesty and a premium on perjury. Happily it was declared unconstitutional by the highest tribunal of justice before it did much damage.

Now, what were the fruits of this Democratic policy inaugurated in 1892. One of the first results was the issuing of bonds to meet the current expenses of the Government in times of peace. This was speedily followed by the breaking of banks, ruin of business and industries, and a general condition of panic and chaos. The people embraced the first opportunity offered them to repudiate this foolish policy by electing a Republican Congress in 1894; and in 1896, in order to give the party under whose control the American people have always thrived an opportunity to restore this country to its former position and standing, elected a Republican President and a Republican House of Representatives. The combination of Democracy, Populism, and all other "isms," asking the people to give them one more opportunity to draw them out of the mire of free trade by the free coinage of silver at a ratio of 16 to 1, could not again obtain the ear of the American people.

Our friends on the other side of the House tell us that low tariff or free trade will increase our trade with foreign countries. Now, what do the facts show? They show exactly the reverse to be the truth, strange as it may seem. And why, you ask, should not free trade increase our trade with foreign countries? I will tell you. You have reduced the American people to a state approaching beggary, and they have small capacity to buy; hence trade decreases. This is proven by statistics and can not be denied. In the first year under the McKinley law our foreign trade increased \$92,000,000, or 5.8 per cent. During the second year, 1892, it increased 12.8 per cent over that of 1890, or over \$210,000,000.

In 1893, under the threat of your Wilson bill, that \$210,000,000 shrank to less than \$87,000,000, and if the cause had continued all year, the figures would have gone below those of 1890. Your free-trade legislation decreased our surplus foreign trade of 1893 more than two-thirds, more than 68.1 per cent. Under your Wilson bill our foreign trade, our total imports and exports, fell off from the figures of 1890 \$100,000,000, or 6.1 per cent. In the next year it fell off \$107,000,000, and in 1896, when, by the growth of the

population, it ought to have increased \$66,000,000, it had only got \$15,000,000 above that of 1890.

Now, let us glance for a moment at our national finances. The late civil war left this country encumbered with a national debt so large that figures fail to convey an adequate conception of its magnitude. It seemed impossible that this country could ever fully recover from this awful burden, or do much more than get started on the road to recovery during the next century. However, a start was made soon after the war, and every year a portion of the public debt was discharged, so that in 1892 we found we had already disposed of more than two-thirds of this enormous debt, thus again demonstrating the wonderful native resources of our land and our people. The report of the Treasurer shows that the revenue receipts from all sources for 1892, the last year of the Harrison Administration, amounted to \$425,868,260.22, and the expenditures for the same period amounted to \$415,953,806.56, leaving an excess of receipts over expenditures of \$9,914,453.66. During this year \$40,570,467.98 had been paid on the public debt, which had been reduced since March 1, 1889, by \$259,076,990, and the annual interest decreased by \$11,684,576.60.

Beginning with the first fiscal year of the Cleveland Administration, July 1, 1893, the daily balance sheets of the United States Treasury almost invariably shows an excess of expenditures over receipts. Every annual report of the United States Treasurer since that day shows a large deficit, as follows:

For fiscal year ending June 30—

1894	999,803,280.58
1895	42,805,223.18
1896	25,203,245.70

Which means that during the three years of Democratic low-tariff administration the receipts of the Government were insufficient to meet the current expenditures, to say nothing about the public debt, by \$187,811,729.46.

Nor were there any signs that this condition of things would stop as long as Cleveland and free trade remained in power. For the first half of the present fiscal year the receipts of the Government were less than the expenditures by \$37,902,396.46. For the month of January of this year the deficit was \$5,952,395.24, and for the month of February \$4,395,059.28. In other words, during a period of three years and eight months of Democratic Administration the Treasury showed a deficit of \$186,061,580.44, and the interest charge on our public debt has been increased from \$22,893,883.20 in 1892 to \$34,387,297.00 in 1896. And, more than this, for the first time in our history we presented the unique spectacle of issuing bonds in times of peace to maintain our credit, increasing our public debt about \$50,000,000 a year, instead of reducing it that much.

And yet, after all this practical demonstration of the absolute failure of the Wilson bill, after all our suffering and privation because a fine theory has proven a snare and a delusion in actual practice, gentlemen on the other side of this House wax eloquent in support of this same theory, using the same stock arguments that have been used in this House time and again for the last sixty years, and will not profit by the experience of the past. But let me tell you, my friends, you forget that the American people are the most intelligent people on the face of the earth. You may fool them once, or you may possibly fool them twice, but the people know very well that when an ignorant or deceptive guide has led them from the true path into the Dismal Swamp, the only sensible thing to do is to turn squarely around and return to where they started on the wrong road, instead of following the same foolhardy leader any farther, who may possibly suggest a new path out or try and make them believe that sticking in the mud up to your ears is really the only true and ideal condition of man. You are not satisfied to know that you have brought wreck and ruin to the American people, but you are anxious to continue them in that state. You are not satisfied to know that you have increased our national debt, destroyed our credit, brought chaos to our finances, wrecked our manufactories, crippled our farmers in such a way that they may never get back to their former condition. I say you are not satisfied to know that you have brought about a condition of suffering, heartbreaking, and desolation among our people, but you are now straining every nerve to prevent the Republican party from taking them back to where they were in 1892. Your free-trade policy has not only crippled the American farmer for the time being, but by crippling him you have developed the agricultural resources of other countries, which now supply the market our farmers once had, which they may never again be able to regain.

Mr. Chairman, I particularly like this bill for the reason that it pays more attention to the real producer, the farmer, than has any previous tariff measure. The farmer is always at a disadvantage in the matter of legislation, because, as a rule, our farmers are not so well organized as most all other branches of labor, and hence he is not in position to send his representatives to the seat of government to press his claims before legislative bodies. Yet there

is no one entitled to more consideration in legislation of this kind than our agricultural classes. Large growers of specific products usually manage to get due consideration, but I now refer to the real farmers of our country, the raisers of the great staples and the small truck, the farmers of the Western fields and Southern plantations.

Since equality and equity are the foundation on which our Government rests, it is simply fair to protect our farmer as well as our manufacturer and miner. The farmer stands at the fountain head of all industry. We know he feeds us all; that his prosperity means busy hours for the manufacturers and miners of America; that happiness and plenty around the log fire in the old homestead not only means wealth for the manufacturer and work for the wage earner, but it means peace, plenty, and prosperity for our country. But so long as the farmer raises his crops at a loss per acre, so long as the sheriff's red flag floats over the mortgaged homes of the settlers on the prairies of the West or the fertile valleys and sandy slopes of the South, so long will prosperity refuse to come again; so long as hard times hang around the farmer's cabin door, so long will its reflection be seen and felt in the homes of the workmen of the nation. Under such conditions it becomes the duty of every patriotic representative of the people to carefully consider how best to promote the farmer's welfare, how best to make his, the foundation industry, pay. Enormous as is the output of our factories and our mines, yet statistics show that of the eight hundred millions export over 70 per cent come directly from the farmer.

During the discussion of this bill in this House I have noticed that our Democratic friends endeavor to pose as the friends of the farmer, claiming that the kind of legislation they advocate is certainly in the interests of the farmer, and claiming at the same time that the legislation we propose is calculated to oppress him. But luckily we are not groping in the dark on this subject. In the first place, history flatly contradicts all of their assertions on this point. In the next place, careful records have been kept of the workings of the Wilson law and of the McKinley law which preceded it, and these records deny the claims of our friends.

The value of the agricultural products imported into this country during the last year of the McKinley law was \$51,414,884. How was this affected by the Wilson law? During the first year that law was in operation there were imported into this country agricultural products valued at \$107,342,522. What does this mean? It means that during the very first year of the Wilson law the farmers of this country were robbed of \$55,927,678, because that law permitted the farmers of "cheap" countries to bring their goods upon our market free of duty. But this is not all. During the same year our exportation of agricultural products fell off \$70,000,000, making a net loss to our farmers of \$125,927,678 during one year of Wilson bill Democratic friendship. Besides these enormous losses to our farmers because of the Wilson bill there was at the same time a large falling off in our home consumption, which, however, is very difficult to express in figures. The hard times that have thrown so many hundreds of thousands of people out of employment have caused them to consume less of the farm products; and while our foreign markets for these products have been lessened, and in many places closed, the home markets have been much inferior to what they were during the period of Republican administration and protective laws.

The estimates of experts agree that the per capita consumption of wheat in this country in 1892 was 5.91 bushels, and of corn 30.33 bushels. In 1896 the per capita consumption of wheat in this country was 4.78 bushels; of corn, 14.73 bushels. In other words, in 1896 there was consumed 1.13 bushels less of wheat by every man, woman, and child in the United States than in 1892. Multiply this by 70,000,000, the number of people in this country, and you have, in round numbers, the stupendous amount of 80,000,000 bushels less of wheat consumed in the United States in 1896 than in 1892. The difference is very much greater in the case of corn, and certainly equally as great in most everything raised on the farm. And, further than this, a large number of laboring men who were once consumers, being thrown out of employment, went and took up land and became producers, thus becoming competitors with our farmers in the rapidly contracting market.

We are told by those who oppose this measure that protection does not protect the farmer. No statement is more untrue than this. Take, for example, barley. Under the McKinley bill there was a specific duty of 30 cents per bushel on barley. This was changed to 30 per cent ad valorem in the Wilson bill, which at the present price of barley means about 7 cents per bushel. Now, what was the result? Go ask the barley-raising farmer, and he will tell you that up to 1894 he never sold barley for less than 40 cents per bushel, and that 50 cents per bushel was the average price. No sooner was the Wilson bill passed, when down went prices exactly the amount of the difference between the McKinley and Wilson tariffs, or from 15 to 25 cents per bushel. Every barley-raising farmer knows that this is true, and I leave it to them to

bear me out in this statement. And right here I wish to call attention to the deception and injustice of an ad valorem tariff duty as against a specific duty, and then you will see why our Democratic friends are always in favor of ad valorem duties.

A tariff on barley of 30 cents per bushel is a specific duty, which is always the same, whether prices are high or low. This is the duty we propose in this bill. Now, a tariff of 30 per cent ad valorem is a tariff of 30 per cent of the value of a bushel of barley; hence when prices are high the tariff is higher, and when prices are low the tariff is lower. Suppose barley is worth 50 cents per bushel. Thirty per cent of 50 cents is 15 cents, and the tariff would be 15 cents. But suppose barley is worth only 20 cents a bushel. Thirty per cent of 20 cents is 6 cents, and the tariff would be 6 cents per bushel. You see that way the tariff is always lowest when you need it most. Now, I find that the maltsters along our Great Lakes are here protesting against the restoration of the tariff on barley, because they say that it would greatly injure their business—would practically shut out Canadian barley, which they can now buy at 20 cents a bushel. I say that is just why we want a tariff on barley. If these gentlemen wish to malt Canadian barley, let them take their malt houses to Canada and do it there. We want American maltsters to malt American barley at American prices. Our farmers have suffered enough during the last four years, and I insist a tariff of 30 cents per bushel is not too much, and our farmers can not compete with the Canadian and Russian farmer in the open market without this protection. I will say right here and now that no tariff bill shall ever have my vote or support which does not adequately protect the farmers of my State and district.

For the same reason I favor a restoration of the tariff on tobacco. Under the protective legislation of the Republican party the tobacco industry has been developed and fostered, so that in 1892 it was one of the most important agricultural products of this country. To-day our tobacco growers are in a deplorable condition. The last tobacco crop in this country was from one-half to one-third as large as that of 1893 and previous years, not because tobacco did not grow as well last year as in previous years, but because low prices have forced many farmers to stop raising tobacco, and others planted much less than in former years. The tobacco growers have, in years gone by, spent fabulous amounts of money in warehouses, sorting rooms, tools, and appliances for carrying on this branch of agriculture, and for years, until Sumatra tobacco gained a foothold in this country, they were reasonably prosperous, and farming lands in tobacco-growing districts paid a fair per cent on the investment. Many of our tobacco growers who purchased farms for \$100 and \$125 per acre when their yield in growing tobacco and current prices warranted them in doing so, and built their appliances at enormous cost, enhancing the value of the farm, are to-day compelled to sell them for enough to satisfy incumbrances which they had originally given to secure a part of the purchase price.

This condition of affairs exists, I am told, in every tobacco-growing section of our country. I am in favor of bringing relief to these people as against the Holland syndicate, which employs nothing but coolie labor at an expense of from 10 to 12 cents a day. We can not afford to let so prosperous and magnificent a business as growing leaf tobacco in America be annihilated by this Holland syndicate. The claim is made that we can not grow tobacco suitable for wrappers in this country. This has been successfully contradicted by the experience of years, and the tobacco industry of this country was never more prosperous than when the domestic leaf tobacco was used exclusively for cigar wrappers. We now propose to give the American tobacco grower and the American cigar that protection which is due them, and forever foster this great industry on our soil.

Now, just a few words concerning the tariff on wool. No one any longer questions the necessity of a tariff on wool. The experiment of free wool, as given us in the Wilson bill, has convinced everybody who has given the subject any attention that wool can not be grown in this country in competition with foreign countries. It has brought destruction to a large proportion of our flocks. It has not brought any appreciable benefits to anyone, and has brought bankruptcy to many. In this case, again, we find that the price of wool fell exactly the amount of the tariff on wool in the McKinley law when that law was repealed and wool placed on the free list. But that was not all our farmers lost by free wool. Up to the time of the Wilson law, which placed wool on the free list, a very large proportion of our farming lands was devoted to raising sheep and wool. A great many farmers devoted all of their lands to this purpose. But when wool was put on the free list, and it fell from 10 to 15 cents per pound, our wool-growing farmers gradually cut down their flocks, devoted part of their lands to raising grain for market, and gradually shifted from woolgrowers to general farmers. This change could not help but work great injury to those already engaged in that kind of farming, and it stands to reason that they will receive great benefits

from the proposed tariff on wool, which will again establish our wool industry and take a large part of our present farming lands out of active competition in the production of grains, corn, milk, butter, cheese, etc. A tariff on wool is what this Administration owes to the American farmer, and we hasten to do what justice demands.

Mr. Chairman, our friends on the other side of this House object to this measure because they say that tariff is a tax. Now, I would like to ask these gentlemen, how in the world do you propose to run this Government without taxation? Does not the experience of the last four years show that we need taxes, and need them badly? Was not this extraordinary session of Congress called for the specific purpose of devising means for raising money wherewith to pay our legitimate expenses? We propose to levy a tax, and we propose to do it in a way which is least burdensome to our people. Every American feels proud of this great nation, feels proud of our splendid and successful form of government, proud of our magnificent system of public institutions, unparalleled in the history of nations. We have achieved great things in the past, and, God willing, our history in the future shall be more brilliant than it has been in the past. But we all understand that such a government as ours can not be run without money. Uncle Sam's expenses for twelve months amount to the enormous sum of almost \$500,000,000. It requires nearly one and one-half millions of dollars to keep the wheels of this Government running from sunrise to sunset. Now, who is to be held responsible for this daily bill of Uncle Sam's?

In the first place, most naturally, Uncle Sam's own children, the people of this country; and no American would ever be mean enough to object to paying his proper share. We believe it is the duty of a government to make taxes rest as easily as possible on its people. With that object in view, the wisest statesmen in this land have spent much time and study, and the consensus of their opinions, from Washington and Hamilton down, is that a protective tariff is the best means of raising our taxes, because that way we give our own people all the advantages of our superior resources and make the foreigner pay a license if he wishes to share our superior markets.

Some of our friends on the other side of this House, while discussing this measure, have told us that we will offend European countries by the high protection we propose. Well, what if we do? Mr. Chairman, I would like to ask these gentlemen, What are we here for? Did the American people send us here for the purpose of enacting legislation which will provide for the development of factories in England, mills in France, or industrial operations in Germany? Thank fortune, the legislative policy of the United States is controlled at this critical time by a party which stands for America as against all the rest of the world.

We stand for a policy which is American in its highest and best sense; a policy which stands for the independence of the United States from all the rest of the world; which stands for the development of all the natural resources of the country; which stands for the founding of cities, for the building of railroads, for the extension of telegraph lines, for the digging of canals, for the growth of internal commerce, for the employment of our own people in our own country. It stands for the production within our own borders of all the necessities and all the possible luxuries which our people require. It stands for the American farm, the American factory, the American mine, the American laborer, at American wages. This policy, during the years it was in control, advanced the United States to the head of nations in accumulated wealth, in the miles of its railways, for the transportation of the property of the people, in the output of its factories, and the product of its mines.

This policy reached its highest point of development, the culmination of everything which goes to make the greatness of a nation and of a people, during the Administration of the last Republican President, Benjamin Harrison. Then every mine was working, every factory was running on full time, no matter what its product, every loom was humming, every spindle buzzing, while every furnace chimney belched forth dark clouds of smoke toward heaven. Every man and every woman who wanted employment had it, and wages had reached the highest point ever known in this or any other country, while the purchasing power of a dollar was greater than it had ever been before. Every line and branch of industry was taxed to its highest capacity, and the houses and homes of the land sheltered families which were happy in their prosperity and their prospects.

Mr. Chairman, I deem it the grandest opportunity of my life, in the discharge of my duty to country and fellow-citizens, to be able to speak and vote for a measure which will, in time, bring back to us the conditions of happiness and prosperity which were ours in days gone by. I am proud to stand here as the representative of a party which has always striven to increase the luster and maintain the honor of the Stars and Stripes, and which again will come to the rescue of the nation in this its hour of need.

## The Tariff on Wool—Schedule K and the Dingley Bill.

This mighty agricultural industry, destroyed by the Wilson bill and the hostility of the Cleveland Administration, must be restored to prosperity.

## SPEECH

OF

HON. CHARLES H. GROSVENOR,  
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 29, 1897,

On the bill (H. R. 379) to provide revenue for the Government, and to encourage the industries of the United States.

Mr. GROSVENOR said:

Mr. CHAIRMAN: I very much regret that a gentleman representing in so large a part the industrial interests of New England should have seen fit to assail with any word of criticism or condemnation Schedule K of this bill, and I propose at this time to speak only briefly, and then to place in the RECORD, under the rule, what I trust will be a successful answer to his attack.

If there is one article raised, manufactured, or produced in New England that will not receive tariff protection in this bill far above any ad valorem rates of duty on American wool, I do not know what that article is.

Mr. McCALL. Will the gentleman permit me? I did not criticize simply the duty on wool, but what I said was in respect to the wool schedule.

Mr. GROSVENOR. But the trouble with the gentleman is that he takes one feature of it and then attacks both sides of it. The duty on manufactured goods is a compensatory duty for the duty upon wool.

I wish to say to the gentleman that if he will take the trouble to look into the statistics and the manufactures, he will find that during the period of the existence of the McKinley law the woolen industry thrived beyond any other period of its long and wonderfully prosperous history. There was not an idle spindle; there was not an unremunerated dollar; there was not an idle operative. What more does the gentleman want? Under that act the sheep industry of the country prospered as it never had prospered before, and the vast fields and plains in the West were sending their products to New England in exchange for the products of New England looms, and both sides of the controversy were prosperous.

The Committee on Ways and Means has refused to put any industry claiming protection in a condition where it will starve to death, and the report of the committee, in the form of Schedule K, is simply, in all respects and every practical respect, the McKinley duties over again—the McKinley classification on first and second class wools, the McKinley rates of duty, and the McKinley protection to the wool industries of the United States. That is all there is of it, and he who makes war upon this schedule makes war upon the best period of the Republican party upon this particular industry.

Mr. Chairman, time is valuable, and under the order of the House I shall place in the RECORD, as soon as I can prepare it, a complete illustration, and, I trust, a complete defense. We have been in a battle in the United States for four years upon this wool question, with the McKinley law as the watchword of the Republican party on the one hand, with its wool tariff, its wool schedule, and the Wilson law on the other; and the Republican party coming into power has come to do exactly what the St. Louis platform said. Here is the language of that platform:

To all our products—to those of the mine and the field, as well as to those of the shop and the factory; to hemp and wool, the product of the great industry, sheep husbandry, as well to the foundry as to the mill, we promise the most ample protection.

It was one of the peculiarities of that convention that it made a specific promise on the part of the party to protect the woolen industry and to restore to wool an adequate degree of protection; and no Republican can make a wholesale attack upon it unless he can show that the protection of the woolen industry is more than adequate. I will try to show that it is not more than a fair and just duty; I will try to show that under the existence of the McKinley rates we had not only prosperity but fair prices.

STATEMENT MADE BY MR. THEODORE JUSTICE, OF PHILADELPHIA, PA.

WEDNESDAY, January 6, 1897.

Mr. JUSTICE said: Mr. Chairman and gentlemen of the committee, I am neither a woolgrower nor a manufacturer, but as I have been both, I am possibly somewhat qualified to speak of the interests of both; but still I do not appear here to-day in the interest of either the woolgrower or the manufacturer—that is, in the interest of one more than the other. I particularly desire to be heard in the interest of the man who has not yet appeared before your committee—that is the consumer. There are 70,000,000 of them.

The subjects which I have arranged to speak upon here are arranged in

order. The matter is printed. I shall not attempt to read it. It is prepared for your committee. But I thought it would facilitate your arrival at just conclusions if I call your attention to some of the facts which you, not being experts, possibly might find of value.

The wool question is a difficult one for most men to understand, and an object lesson, a sort of kindergarten, will perhaps make it more plain than an elaborate article read from manuscript.

I propose to discuss the consumer, and to show how he has been injured by free wool, owing to the removal of the McKinley duties in one schedule alone. I propose to show that while the consumer has received the benefit of 90 cents per capita in cheaper clothing by reason of the removal of the duty on wool, he has been crippled in his purchasing power nearly \$9 per capita, in order that he may save 33 cents.

I desire to show how woolgrowing has been destroyed by the Wilson law and how the destruction of the industry has been checked by Mr. McKinley's election. I wish to discuss the importance of domestic wool as a munition of war.

Schedule K of the McKinley tariff was misunderstood. The erroneous impression has prevailed in the public mind that the McKinley law was too high. It was not a Chinese wall. It was not a prohibitory tariff. Under it the American people reached the highest point of prosperity. We had under it a higher degree of prosperity than any other nation in the world. I wish to show our experience under four different tariff laws during sixteen years. I will show the effect upon sheep husbandry during these periods of adequate and inadequate protection. In making a new law you will have the benefit of the experience of the past four laws. There were two periods under the last four tariff laws when we had adequate protection. If you will examine them you will see where the line should now be drawn between adequate and inadequate protection.

I will allude to the world's supply and its effect upon prices. I wish to show how American protection raised American prices and lowered foreign prices at the same time for wools of the same kind and quality; and also to show, in opposition to that, how free trade lowered American prices and advanced the foreign prices of wool of the same kind and quality.

I wish to speak of carpet wool, and of compensatory duties on woollens especially. These samples are arranged to illustrate the relation of compensatory duties to raw wool, a subject most difficult for laymen to comprehend. I desire to speak on the subject of shoddy.

Mr. EVANS. Would it be any trouble to speak on that subject first, compensatory duties?

Mr. JUSTICE. No, sir; only that it might confuse the systematic arrangement of my papers.

Mr. EVANS. You may not have time to speak fully on that when you get to it in the regular order.

Mr. JUSTICE. Anything I fail to have time to fully discuss you will have access to later on in my printed argument.

The matter of shoddy is one which, possibly, I can now pass over, because it eloquently tells its own story in the papers submitted, and requires no samples with which to illustrate it.

I also wish to show how the McKinley law was framed by a convention of both growers and manufacturers, every one of whom was an expert in his line. I wish to show how, with the exception only of Judge Lawrence, they agreed on that law unanimously. There has never been a more perfect schedule than Schedule K of the law of 1890, and, with all due respect to this committee, I do not hesitate to say there will never be a better one; barring a few changes in rates to suit present conditions, there should, in my opinion, be no other changes. No other tariff schedule has ever been framed by men so many of whom were experts. Major McKinley stated to the convention which framed Schedule K that if they would agree upon it unanimously it should go into the bill.

I propose to conclude my remarks with a draft or suggestion of a new tariff law that is adjusted to the altered conditions of the times, and that will represent McKinleyism. McKinleyism, as I understand it, means the recovery of lost industries. It means to the American producer enough duty upon imports to put him on equal terms, and no more, with his foreign competitor.

There is an impression that the equivalent of the duties imposed upon the imported manufactures of wool go into the pockets of the domestic manufacturers. I propose to show that with wages 50 per cent lower in England than in America and 60 per cent lower in Germany than in America (which of course means that wages are 100 per cent higher here than in England and 150 per cent higher than in Germany) 50 per cent ad valorem duty, only one-third of which is collected, is inadequate to protect our mills to-day. That is one of the causes of their present idleness. Another cause is the decreased purchasing power of the people. If you will permit me to briefly allude to these subjects, I will dispose of them as rapidly as I possibly can.

## LOSS TO THE NATION IN PURCHASING POWER.

The first subject to which I wish to call your attention is the loss in one year's purchasing power of the American people by the changes in Schedule K alone, which resulted in a loss in purchasing power to this nation of \$426,250,000 on the lowest estimate of statisticians. On an estimate of others it is \$1,000,000,000—the cost of our civil war. I adopt the lowest estimate, the estimate of the late General Walker, of Massachusetts. I have arranged this in debit and credit form so you will understand it.

In 1892 (before the McKinley law was enacted with repeal, and before its influence was discounted and it became a dead letter) the American people produced 145,000,000 pounds of clean scoured wool, and the average value was 55 cents (including the finest and the coarsest). In the year just closed, 1896, America produced 115,000,000 pounds of scoured wool, the average value of which to-day is 30 cents per pound. The removal of the wool duty has lessened the value of scoured wool 25 cents a pound. The 55 cents a pound on the clip of 1892 brought the American woolgrower \$79,750,000. The clip of the present year brought him \$34,500,000. The decline in the amount of money which the American woolgrower received for his wool in 1896 as compared with 1892 was \$45,250,000.

The CHAIRMAN. If you will pardon me right there for making an interruption, I would like to ask was that decline confined to the United States alone?

Mr. JUSTICE. Yes, sir.

The CHAIRMAN. There was no decline in the foreign wool-producing countries, taking, for instance, the London market?

Mr. JUSTICE. I am speaking of the loss to the American woolgrower.

The CHAIRMAN. The question was as to whether there were other causes for the decline aside from the removal of the duty.

Mr. JUSTICE. No, sir; the foreign markets advanced; and if they had not, the loss here would have been much greater. Prices for Port Phillip wool in London have advanced 30 per cent since Mr. Cleveland issued his second-term inaugural message.

I was approaching the loss to mill hands in the year 1896. The census of 1890 showed that the people working in woolen mills earned annually about \$80,000,000. The mills in 1896 were running less than half time, and, therefore, there was less than \$40,000,000 actually earned. Manufacturers will testify that the consumption of wool in 1896 was less than half of the consumption of raw wool in a normal McKinley year. Therefore, there was a decrease of

over \$40,000,000 in the wages of the mill operatives, and a decrease of \$45,250,000, as stated before, in the value of the wool to the grower. That makes \$85,250,000 that was lost to two classes of labor, viz, the woolgrower and the woolen-factory laborer. It has been stated that wages earned by laboring men circulate ten times during a year, and that money earned by farmers from the proceeds of farm products circulates five times during the year. I am willing to assume that wages earned by mill hands circulate no more during the year than those of the farmers, and therefore we will multiply by five this \$85,250,000 loss in purchasing power by two classes of people alone to show what has been the loss in the purchasing power of the American nation from the reduction in the wool schedule alone. It reaches the enormous sum of \$426,250,000. This is partly the cause of the depression existing everywhere to-day. Everybody has suffered from this decreased purchasing power of the nation. If you distribute this \$426,250,000 among 70,000,000 people, it amounts to a decrease of purchasing power of about \$6 per capita.

Of course, they are entitled to a credit arising from cheaper clothing through the placing of wool on the free list. If you take what has been saved by the reduction of the cost of scoured wool, amounting to 25 cents a pound, you have saved \$35,000,000 in the cost of clothing and have lost \$426,250,000 in purchasing power. The 70,000,000 people which I stand here to represent have saved 35 cents each, but have lost about \$6 each.

In 1895 the consumption of domestic wool was 21 per cent less than the average of four previous years.

In 1895 the American clip was 10½ per cent smaller than average of previous four years.

LOSS IN ONE YEAR'S PURCHASING POWER OF \$426,250,000 TO CONSUMERS BY REMOVAL OF MCKINLEY'S WOOL DUTIES.

Dr.

Domestic production of scoured wool:	
145,000,000 pounds, at 55 cents*	\$79,750,000
115,000,000 pounds, at 30 cents†	34,500,000
Decline in price, 25 cents	45,250,000
Loss to mill hands‡	40,000,000
	85,250,000

Each \$1 earned in wages circulates five times during the year. Loss to consumers in one year's purchasing power by change in Schedule K, \$426,250,000, or a per capita loss for 70,000,000 people of \$6.09.

Cr.

Domestic consumption of raw wool, including that contained in imported woolsens:	
650,000,000 pounds yielding 260,000,000 pounds scoured wool;	
260,000,000 pounds, at 25 cents, \$65,000,000, or a per capita gain for 70,000,000 people of	.93

Net loss in purchasing power to each consumer..... 5.16

I have thus far dealt with the question only as it affects the per capita consumer. I now wish to treat it as it affects the woolgrower alone. The loss to the average woolgrower in the State of New York between the McKinley price for his wool and his sheep and the free-trade price to-day is \$430 to each woolgrower. He is entitled to a credit for what he saves on his clothing. I will allow him eight suits of clothing annually for his family, each suit containing 3 pounds of scoured wool, or 24 pounds of scoured wool, at 60 cents, the McKinley price for wool above the average quality. The cost for 24 pounds at the Wilson-law price is 30 cents. He has saved by free wool \$7.20. The net average loss, therefore, by free wool is \$422.80 for every grower. This is how free wool affects these consumers, and to a lesser degree all other consumers.

March, 1893, and previous, 600 pounds of scoured wool, at McKinley price, 60 cents.....	\$360.00
October, 1895, and previous, 600 pounds of scoured wool, at Wilson-law price, 30 cents.....	180.00
Loss on wool.....	180.00
March, 1893, and previous, 200 sheep, at \$4.....	800.00
October, 1895, and previous, 200 sheep, at \$2.75.....	550.00
Loss on sheep.....	250.00
Total loss on wool and sheep.....	430.00

Clothing, eight suits, at 3 pounds on each suit, 24 pounds, McKinley price, 60 cents.....	14.40
Clothing, eight suits, at 3 pounds on each suit, 24 pounds, Wilson-law price, 30 cents.....	7.20

Saving on eight suits of clothing by free wool..... 7.20

Net loss to each grower by free trade in wool..... 422.80

EFFECTS OF FREE WOOL—IMPORTATION OF WOOLEN TEXTILES INCREASED 53 PER CENT—A LOSS OF \$100,000,000 IN THE PURCHASING POWER OF THE AMERICAN NATION CAUSED BY THE WILSON-GORMAN LAW.

I have an additional evidence of loss to consumers in a letter which I will come to further on—a woolgrower in Texas, who writes that in 1891 he received 21 cents in Texas for his wool, and the year before last, 1895, only 4½ cents, and last year, 1896, less than 4 cents. He has furnished me with his accounts of sales, to produce, if desired. His wool was sold in St. Louis. He states that all the woolgrowers in his part of Texas had decided not to breed their ewes, but to fatten all their sheep and sell them to the slaughterhouses. Since McKinley's election, and under the promise in the St. Louis platform of "the most ample protection" to sheep husbandry, they are again breeding their ewes and preparing to increase their flocks.

MCKINLEY'S ELECTION CHECKED THE SLAUGHTER OF SHEEP—DECLINE IN WOOL IN TEXAS FROM 21 CENTS IN 1891 TO LESS THAN 4 CENTS IN 1896.

SEYMOUR, TEX., December 1, 1896.

DEAR SIR: In reply to your many circulars and letters received of late would say all flock owners appreciate the interest you have manifested in their welfare, and in the election of William McKinley for President by the help of the literature you have put out. We know he is the rock upon which we have to build our hopes. At the distance at which we are apart you can not realize the condition to which we who are engaged in sheep raising have been brought in the past four years. In October, 1891, my clip was sold at 20½ cents per pound net, while my 1894 clip netted me about 5½ cents, my 1895 clip

netted me 4½ cents, and 1896 less than 4 cents. I have the accounts of sales to substantiate what I say if anyone doubts it. The cost of raising sheep has increased instead of decreased, as we have to pay for all the range we use. It costs me \$900 per year to range 2,000 sheep, \$35 per month for labor, about \$10 per month for board, a wagon and team, a camp outfit, salt, and many incidental expenses not enumerated, which make the cost to us nearly 50 cents a head to run our sheep, and besides we have wolves to kill the sheep.

This year's clip of this section of Texas was all shipped out by the 1st of July and has been sold in St. Louis at 6 cents, netting the growers less than 4 cents. There is no fall shearing done in this part of the State to amount to anything of late years. So far as I could learn, all sheep owners had made up their minds to fatten and ship out their entire flocks if McKinley had not been elected, not breeding any at all, but with his election almost all are breeding their flocks, hoping to regain a part of what they lost during the past four years.

I remain, yours, respectfully,

W. B. OGDEN.

JUSTICE, BATEMAN & CO.,  
Philadelphia, Pa.

#### WOOL AS A MUNITION OF WAR.

I would speak of wool as a munition of war. Imagine our condition if we destroy our flocks, and so become dependent upon British colonies for our wool supply. Having no mercantile marine, our wools from Australia are being carried to-day under the British flag. In case of trouble with England, what would be our predicament? We would be without wool, which is as important to us as a munition of war as it is to our personal comfort. Possibly it would bring the importance of the matter more plainly before you if I allude to the difficulty which the Southern Confederacy had from that cause; but that was a small matter in comparison with what happened to General Washington's army. There had been no pretense of uniforming his troops. The only regiment that was uniformed at all at that time was the red feather militia regiment from Philadelphia, wearing imported cloth. Previous to the Revolution there was not a wool factory in America. Clothing was made from yarn spun in the household. The women spun the yarn and the itinerant weavers from Yorkshire did the weaving on handlooms. The only mills in the country were fulling mills, where goods were sent to be finished. When Washington crossed the Delaware in the ice in a snowstorm and fought the Hessians at Trenton, his troops were in threadbare and ragged clothing. They were wearing what they had started with from their homes when they enlisted. At Valley Forge 4,000 of Washington's soldiers were relieved from outdoor duty because they were practically naked. At the time Washington doubtless reflected on the importance of woollen factories as a home industry necessary to provide munitions of war. This thought must have been present with him ever after, as his first official act after becoming President was the signing of a protective-tariff law.

#### MCKINLEY LAW WAS NOT TOO HIGH.

Now, I wish to speak of the McKinley law, which has been regarded by many who were not well informed as "a great, high Chinese wall—a prohibitory tariff." The uninformed public had that impression. It was not true of Schedule K. Under the first three years of the McKinley law (and I consider it was practically repealed after March 4, 1893, when Mr. Cleveland issued his message) we imported wool and woolsens to the annual average value of \$50,000,000, upon which the duties were over \$42,000,000. Could it have been a Chinese wall? Could it have been a prohibitory tariff if all these goods were imported in spite of it? What was the result of the so-called "prohibitory tariff" to the American people? In one year after the McKinley law was passed the average value of clothing was cheaper than ever before, and so was wool. I now come to the question of the experience with four different tariff laws, to which I would like to call your attention as the most important portion of my paper. Upon you rests the responsibility of forming a tariff law that will last for many years. All parties are willing to concede something for a settlement that will endure for some years. Mr. Cleveland, I believe, said, among the many other catchwords which have been good things to say, that "the tariff will never be settled until it is settled right." It will never be settled right so long as any clause in it permits the destruction of an important American industry. In making the suggestions which I propose for your assistance in this grave matter I have in view the fact that a large number of our 70,000,000 people are not generally informed on the subject of the tariff question. It is impossible to enlighten them, and therefore I would ask for the very least increase in duties that is necessary to check the destruction of important industries that are being rapidly annihilated by Schedule K of the Wilson law.

I ask for the very least that will start our mills; the very least that will give back to the American people this \$6 per capita, or \$412,500,000, lost to consumers in purchasing power through this one Schedule K, upon which you are to act through the information you will receive from the gentlemen appearing here to-day and to-morrow. This diagram (page 738) which I hold in my hand you will see is divided into four periods. The first period comprises the latter part of the tariff law of 1867, when the duty upon wool was 19 cents a pound plus 11 per cent ad valorem on wool costing 32 cents per pound and under, and 12 cents per pound and 10 per cent ad valorem on wool costing over 32 cents per pound. The amount of duty collected on wool of the first class under this law of 1867 was 12½ cents per pound and upward. Under that law our flocks increased with strides and bounds. In the last four years of that law we increased our flocks 25 per cent. In sixteen years more of that law, undisturbed, with 12½ cents per pound duty on unwashed skirted wool of the first class, we would have doubled our clip. If that law had been permitted to continue and the increase had kept on at that rate, by 1895, or soon thereafter, the American woolgrower would have produced 650,000,000 pounds of wool, which is all that is consumed by the American people, including that used in all of our imported woollen goods.

What happened then under similar conditions can happen again. I don't want to cause a shiver by proposing 12½ cents per pound duty now, when the McKinley law imposed only 11 cents. Conditions have changed since the McKinley law was passed. I think that a little lower duty now would produce the same results that that duty produced at that time. I am sure that 12½ cents per pound would return our flocks to where they were in 1891 inside of eight years.

The second division of this diagram covers the operation of the tariff law of 1883, which was, I presume, the worst tariff law in modern times, as far as Schedule K is concerned, ever had up to the passage of the Wilson law. Under it all the finest productions of woolsens that the science and improvements of machinery could produce were admitted at a lower duty than was collected upon the cheapest shoddy goods, because the courts decided that the commercial name of such superfine cloths was not woolsens, but "worsted." The loss of employment by the American factories under such conditions closed our mills and narrowed the market for wool. Even 10 cents per pound on wool failed to be adequate protection under these conditions. We were without a good home market for our wool. The duty had been reduced from 12½ to 10 cents, but the industry languished not so much because 10 cents was inadequate as because of the loosely drawn schedules. The custom-house was heated in a thousand ways. The article, "wool top," [exhibiting sample] was not named in that law of 1883. It should have paid a

## APPENDIX TO THE CONGRESSIONAL RECORD.

EXPERIENCE WITH FOUR DIFFERENT TARIFF LAWS.  
SCHEDULE F.

\*From the Bulletin of the National Association of Wool Manufacturers.  
Sept 1896

duty of 60 cents per pound—30 cents as scoured wool, and double duty because it was changed from the usual and ordinary condition of scoured wool. There was such a schedule that made tops (which had heretofore been unknown commercially except to a limited extent) pay a duty of 60 cents per

pound. "Tops" are the result of the first process after carding and combing clean, scoured wool.

Mr. GROSVENOR. It has been said that tops are made out of waste—something that is equivalent to waste—a mere by-product.

Diagram showing that at the rate of increase from 1873 to 1894 under the protective influence of the tariff law of 1867, if continued at the same ratio until 1895, the wool clip of the United States would then have reached 650,000,000 pounds, which, including the wool contained in imported goods, is all that is annually consumed by the American people at the present time.

Diagram showing that at the rate of increase from 1891 to 1893 under the McKinley law, if continued at the same rate until 1915, the wool clip of United States would then have reached 650,000,000 pounds, which, including the wool in imported goods, is all that is annually consumed by the American people at the present time.

Mr. JUSTICE. I was just coming to that. This is the same article. It is top broken up in pieces and commercially named "waste." It was imported as "waste" under the law of 1883. It was broken up by machinery made for the purpose of cheating our Government and in order that its commercial name might become "waste." The courts have decided that imported articles should pay the duties at the custom-house according to their commercial designation. Silks suitable for many clothing purposes under the tariff of 1883 came in under the commercial name of "hat trimmings," and the Government had a suit about that, involving millions of dollars. This "broken top" came in then under the commercial name of "waste," and hundreds of thousands of pounds of these so-called wastes, but really highly purified and the most valuable form of pure, scoured wool, came in at 50 cents per pound less than their proper duty. To-day this merino scoured wool [showing sample] is worth 30 to 35 cents in London, while this [showing sample] so-called "waste" is worth 37 to 40 cents in London, worth nearly as much as this top [indicating], a partial manufacture of wool. The McKinley Schedule K was so worded as to stop this abuse. "Waste" cases were tried in our courts. The Government claimed a duty of 60 cents per pound and the importers only 10 cents. The manufacturers interested in importing it at 80 per cent less than its proper duty brought in droves of people from the mills to testify that it was commercially known as "waste." They were shown samples and were asked, "Are you familiar with this?" "Yes." "What do you call it?" They would answer, "Oh, it is waste." A hundred men from the mills were run through the witness stand in almost as many minutes and a few brief questions asked. The testimony was always the same. It was "waste." The testimony of the few who knew that it was top broken up to cheat the Government had no influence, and so the judge decided that as the weight of the evidence was that it was "waste," the verdict went against the Government, and it was admitted as "waste" at a duty of 10 cents per pound. That was one of the abuses of the law of 1883 that caused the wool industry to decline when the duty on unwashed was 10 cents per pound. There could be no satisfactory sale for American wool when you could bring in that valuable article [indicating sample of broken top] at 10 cents a pound duty, instead of 60 cents per pound. It paid only the duty of shoddy, while it was worth 900 per cent more than shoddy. Those were some of the reasons why 10 cents per pound was then inadequate and our wool producers were injured.

The CHAIRMAN. That fraud on the revenue was cured by the act of 1890. Mr. JUSTICE. It was, but the Government loss in revenue had been 50 cents a pound. The decline in the number of sheep under the tariff law of 1883 began to show by 1884, and by 1888 there had been a decrease of 17 per cent in their number. In 1888, when General Harrison was elected, the decline was checked, because the platform upon which he was elected had in it a clause which declared for protection for wool. That clause, I consider, caused him to be elected. Two years before the McKinley law was passed, but under the promise of the McKinley law, with only 10 cents per pound duty on unwashed skirted wool of the first class, the flocks increased. This 10 cents seemed to be adequate then; therefore I differ with Judge Lawrence when he states that 10 cents a pound was never adequate. I say 10 cents when our mills are busy and when there is a good market for American wool is adequate. But when the Judge undertakes to say that the McKinley law was not a measure of adequate protection for wool, I also differ with him and can show beyond any possibility of doubt that both wool and woolsens were amply protected under that law. So far as Schedule K goes, I would be glad to see it reenacted almost without the crossing of a "t" or the dotting of an "i," and if reenacted I believe both manufacturers and growers in less than one year would again prosper as they did before.

I hope to be able to demonstrate that, while the McKinley law was a measure of adequate protection, it was not a "Chinese wall" nor a prohibitory tariff.

The next or third period of my diagram begins in 1888, when Mr. Harrison was elected, and continues from that time up to President Cleveland's second inaugural message. Under the adequate protection of the third period the clips increased 13 per cent, and if that rate of increase had continued until 1905, according to commercial estimates, and until 1915, on the estimates of the Department of Agriculture, America would have produced 650,000,000 pounds of wool, which is the entire quantity we consume.

Now, I come to the last period, the period of free trade, in which cries of despair come from every quarter of the land.

When President Cleveland made it known in his inaugural that he meant to continue his assault upon the wool industry, the farmers, knowing that he had both branches of Congress with him, realized that their fate was sealed; and while the price of sheep was high, they were butchered in countless numbers. This diagram in the fourth part shows that the destruction of the flocks began immediately. From March, 1893, to March, 1896, 23 per cent of the sheep had disappeared. This in the short space of less than four years. This is only the estimate of the Department of Agriculture; others, with more accurate means of knowing, make the destruction much larger.

Judge Lawrence has alluded to the estimate of Mr. Snow, who was assistant statistician of the Agricultural Department. This gentleman has access to all of the means for acquiring information possessed by the Government. He made a canvass recently on his own responsibility, and he declares the number of sheep to-day to be only 32,000,000, which is less than I show in this diagram. I adopt for the diagram the official figures, but I believe the commercial figures, based on Mr. Snow's estimate, to be the more accurate. Under the latter we have fewer sheep in the United States to-day than we had in 1865, at the close of the war. (See table following giving number of sheep since 1860.)

Number of sheep on hand each year from 1860 to 1897.

January 1—	Number.	January 1—	Number.	January 1—	Number.
1860	22,471,275	1873	33,002,400	1886	48,322,331
1861	23,471,275	1874	33,938,200	1887	44,759,314
1862	24,971,275	1875	33,783,600	1888	43,544,755
1863	26,971,275	1876	35,935,300	1889	42,599,079
1864	29,471,275	1877	35,804,200	1890	44,336,072
1865	32,471,275	1878	35,740,500	1891	44,431,136
1866	35,971,275	1879	38,123,800	1892	44,938,305
1867	39,385,396	1880	40,765,900	1893	47,273,553
1868	38,991,912	1881	43,576,899	1894	45,048,017

1871	31,851,000	1884	50,626,026	Apr. 1, 1896	36,464,465
1872	31,679,300	1885	50,360,243	Jan. 1, 1897	32,000,000

a Estimate of National Association Woolen Manufacturers.  
b Estimate of W. B. Snow, formerly Statistician of Agricultural Department.

This enormous increase, the result of the law of 1867, reached the highest point at the beginning of January, 1884. We then had over 50,500,000 sheep. To-day there are, on Mr. Snow's estimate, which I believe to be correct, only 32,000,000 sheep, a decline of 36 per cent. Under free trade one of the greatest agricultural industries is literally being annihilated. If the destructive influence of free wool is not checked at once, we will soon be without wool. In this connection I ask you to again let your thoughts revert to the condition of that patriotic band at Valley Forge. I beg of you to consider what may befall this proud nation under similar circumstances in case of a war with Great Britain. Do not let the lesson learned at Valley Forge be in vain.

Some questions were asked Judge Lawrence, I forget by whom, as to how many years, with adequate protection, it will take before we will be able to restore our flocks to where they were in 1884. The top line in this diagram (page 740) shows the increase in Australia from 1873 to 1884, when our destruction began, to have been from 280,000,000 pounds of wool in 1873 to 400,000,000 pounds in 1884, an increase of 64 per cent. In Argentina this line [indicating] represents the increase during the same period to have been 35 per cent. In the Cape of Good Hope the increase was 60 per cent. Great Britain, the only country in the Northern Hemisphere which I take for comparison which has climatic conditions like ours, sustained a decline of 19 per cent in her wool clip. In the Southern Hemisphere they have pasture all the year round, and no winter feeding is required. In Great Britain the sheep are fed in winter, as they are in the United States. They are fed crops, and crops are labor. It costs nothing for the sheep to grow crops. The labor of tilling the soil and of harvesting the crops is 80 per cent of the cost of the crops. Allowing 10 per cent for interest and taxes, the other 90 per cent is the labor. Therefore the sheep in the United States and Great Britain during the winter months are fed labor, so to speak. What was the result? England on a free-wool basis could not compete with her own colonies, and there was a decline in her production of wool, as stated before, of 19 per cent. Now, what took place in the United States at the same time? At that time we had the tariff law of 1867, with duties of upward of 12½ cents per pound on unwashed wool of the first class.

It was under this period the last four years of which our wool clip increased 25 per cent. During the years here selected for comparison, which end with the tariff law of 1867, the United States increased its whole clip from 170,000,000 to 340,000,000 pounds. We increased 100 per cent. We beat the world; and what has been done once, under similar conditions, can be done again. The duty of over 12½ cents of the law of 1867 shows what adequate protection will do. If 70,000,000 people could be informed of these facts, if we could have access to their patriotism and their good common sense, if they would only read one-half of what has been ably written, they would quickly restore that portion of the sheep industry that inadequate duties have destroyed. This other diagram is the same, except that it goes further, and with the reduction of the tariff to 10 cents in 1883, coupled with those evasions of the tariff before alluded to (which deprived the woolgrower of his home market and resulted in the closing of our mills, when superfine worsted cloths came in at lower duties than the commonest shoddy goods), the effect upon the American woolgrowing industry was quickly shown. It was like the barometer before a storm; we let foreign manufacturers make for us the goods that had heretofore been made here. Every other nation then increased its wool crop. Even Great Britain, whose flocks had previously been declining, as has already been shown in the previous diagram, as soon as her manufacturers captured our markets increased her flocks to supply wool for goods to go to America. Perhaps the only woolgrowing country in the Northern Hemisphere where the conditions are at all parallel to ours is England. But their winters are more favorable than ours for sheep raising, for there so soon as the snow melts the flocks can be turned out to pasture. Here our sheep, in the Northern States east of the Missouri at least, have to be fed crops almost all of the winter. Our pastures are frozen dry.

#### FREE WOOL AND PROTECTION PRICES COMPARED.

We next come to the comparison of prices for wool between London and America, from 1868, the year after the tariff law of 1867 was passed, up to 1891. This is an old paper, which I used before the Ways and Means Committee of a former Congress when Mr. Springer was its chairman.

Table of comparison between protected American wool and similar wool in free-trade London.

Year.	Ohio medium fleece, Shrinkage 40 per cent.	Australasian medium fleece, No scoured, No shoddy, No grease, Shrinkage 40 per cent.	American scoured medium.	Australasian scoured medium.	Percentage of cost of free wool below protected wool.
1868	43	21½	\$0.71½	35½	50
1869	50	21½	.83½	36½	56½
1870	46	20½	.70½	34½	55
1871	46	27	.76½	45	41½
1872	72	31½	.88	53	40
1873	68	29½	1.13½	47½	58
1874	54	24½	.90	41½	54
1875	56	25	.96½	41½	55½
1876	52	23½	.86½	39½	54
1877	43	22½	.71½	37	50
1878	45	21	.75	35	40
1879	35	21	.58½	35	47
1880	35	23½	.91½	39	57
1881	49	20½	.81	34	58
1882	44	18½	.704	31	59½
1883	43	15½	.71½	26	63½
1884	40	16½	.66½	27	59
1885	33	17½	.55	29	47
1886	36	18½	.60	21	48
1887	36	19	.63½	22½	48½
1888	35	18½	.58½	31	47
1889	38	19½	.63½	33	48
1890	37	20½	.61½	33½	45
1891	37	20½	.61½	34	44½
Average					51

Average percentage of cost of free wool in London below protected wool in the United States between 1868 and 1877 on currency basis, 50.95 per cent.

Average percentage of cost of free wool in London below protected wool in the United States between 1878 and 1891 on gold basis, 51.30 per cent.

Under the adequate protection of the tariff law of 1867 (when the duty on wool of the first class was 12½ cents per pound and upward) the clip of the United States increased faster than that of any other nation in the world. During this period wool in London of the same kind and quality averaged more than 60 per cent below the prices in the United States.

We call attention to the fact that the American quotations from 1868 to 1877 were in currency, while the English quotations for the same period were in gold; that medium wool of the same grade, quality, and condition in free-trade London was more than 50 per cent below the value of the same kind of wool under protection in the United States. We also call attention to the fact that the quotations for American and English wool between 1878 and 1891 were both in gold, and during this period wool of the same diameter of fiber and in the same condition averaged 51 per cent lower in free-trade London than under protection in the United States.

I reproduce it because it is pertinent to this question. We take a fine medium fleece of half-blood merino quality and compare it with the New Zealand crossbred of the same kind, quality, and shrinkage. We compare the price in America from 1868 to 1891 with the price in London of wool of the same quality, during all of which period the duty was 10 cents per pound or over, and we find the American price was more than double the London price. In other words, the London price during that period averaged 51 per cent below the American price.

Now, it will be stated that we had a premium on gold during part of that time. That does not appear to have made any difference in this average price, because the period I have taken—from 1868 to 1877, when there was a premium upon gold—shows that the London price was 50.95 per cent lower than the

American price; and from 1878 to 1891, the London price, when we were on a gold basis, was 51.32 per cent lower than the American price. The two periods, figured together, show the London average to have been 51 per cent below the American average. I wish to call your attention to that particularly, because in making the new law the question of percentages may be presented by the ingenious free-trade gentlemen on the other side in such a way as to alarm you into a state of semipanic.

The tariff question presented in this way seems to give protectionists a sort of chill. I wish to impress upon you the fact that the price of wool in London for this long period of years was less than half the American price, 51 per cent less; or, in other words, the American price was 102 per cent higher than the foreign price. No wonder the flocks increase! Major McKinley is President-elect of the United States to-day because, through good and ill repute, he had the courage to stand up for protection that would protect, be it 50 per cent or 100 per cent. Any duty that falls short of covering the difference between the American and foreign wage or cost of production is only a revenue duty and is not in any sense protection.

The framing of any tariff law that will be permanent must deal with the rapid increase in the world's supply of wool, which, in all probability, will continue at the same rate for ten or twenty years to come.

This table is partly the copy of a chart furnished by Messrs. John L. Bowes

### The Production of Wool in Countries named during the last 24 years 1873-1896.

The quantities are stated in Millions Pounds Clean Scoured Wool.

& Bro., of Liverpool. In it the wools of the Southern Hemisphere are reduced to the scoured condition, because some of them in scouring shrink 75 and some 80 per cent, and others only 40 and 45 per cent, from the grease condition as sold by the grower, and a comparison of the grease condition would be misleading. This condition (displaying a sample of scoured) always determines the price of wool in the grease. The grease price is based upon the yield of scoured wool like this sample (displaying).

The wool clip of Australia alone, since 1873, notwithstanding a recent temporary decline on account of a severe drought, shows a steady increase from 110,000,000 pounds of scoured wool in that year to 310,000,000 pounds in 1896, an increase of 200,000,000 pounds of clean-scoured wool, equal to 182 per cent. You see there was a decline of the River Plate for several years, yet an increase from 80,000,000 pounds in 1873 to 150,000,000 pounds in 1896, or 87½ per cent increase in that time. (The diagram contains 72 per cent increase; it should read 87½ per cent.) The Cape of Good Hope increased 43 per cent during the same period. The increase in the world's wool supply decreased the world's wool price. This is indicated here by the inclining line downward (indicating on chart), showing the decrease in price as the result of the enormous increase in supply. In consequence of this, prices for scoured wool fell from 55 to 35 cents. Prices fluctuated, and if each separate year were indicated it would require a zigzag line; but the incline, with brief interruptions, is always

steadily downward. That enormous increase in the supply is therefore the cause, and the fall in price is the effect. This is the price of wool in 1873 on the left of the chart (indicating); this is the increase in the supply on the right. Ohio XX wool in 1891, one year after the McKinley law was passed (although the price was lower than in the previous year), cost 73 cents scoured clean.

In March, 1895, when we began to buy foreign wool freely in London, Ohio XX scoured had fallen to 35 cents in the United States. This was also about the value of wool of the same kind and quality in markets of the world. The same class of wool in London in 1891 was worth under 40 cents, while it was worth 73 cents in the United States; but by February, 1895, after the free-wool bill induced our manufacturers to buy wool in Europe, the price immediately began to go up over there. So you see the increase in the world's supply depressed the foreign price until wool was put upon the free list and foreigners had secured the American market. Skirted Australian wools were then much cheaper landed here than the best American wools. The American woolgrower, unaccustomed as he was to the low foreign prices, refused to sell on the London basis, and our manufacturers turned their backs on him and supplied themselves abroad. Free-trade members of the Committee on Ways and Means (who were in the majority at that time) told the domestic grower that wool prices would be higher under free trade than

before, and they were not prepared to take half price. They held their wool; many of them have it yet. The mills are closed, and the moths are eating it, because there is now no home market for it. Enormous quantities of foreign wool have been bought by the United States, and the effect on the London price was to put it up. It was then thought that the Dingley bill was going to pass; even people outside of the wool trade began to speculate in wool, and manufacturers also purchased in advance of their needs. Of course, the effect was shown in the slight rise in price, but many of those who bought their wools in that period of speculative excitement still have it for sale, and it is a question whether moths will destroy it before you can make a new Dingley bill for 1897.

Mr. DOLLIVER. It lies between the moths and the Senate, it seems.

Mr. JUSTICE. It is a race, with the moths at present a good ways ahead.

This diagram shows that the average price of the best bred Port Phillip wool in London, in ten years ending 1894, was 21.70 cents; American XX Ohio (which is not so valuable) for the same ten years averaged 31.22 cents. American wool was worth 9 cents more in Boston, New York, and Philadelphia than the best Port Phillip wool was in London. That was under a fair tariff. The price to-day of American XX Ohio wool, instead of being 31.22 cents, as it was for the ten years ending August, 1894, is worth 18 cents. (See Chart D.)

CHART D.

	Average price 1885 to 1894.	Under protection—American—higher than foreign.	Price April 1, 1896, as compared with average of ten years.	Price April 1, 1896.	Under free trade—American—lower than foreign.
American—Ohio XX washed, in Philadelphia and Boston.	31.22 cents.	9 cents.	42.34 per cent less.	19 cents.	6 cents.
Australian—Port Phillip unwashed superior, in London.	21.70 cents.	-----	10.59 per cent more.	24 cents.	-----
American in Philadelphia and Boston, Ohio XX washed.	Average price 1885 to 1894. Cent 31.22	Price, April 1 1896. Cents 18	In America 13.22 cents lower, or 42.34 per cent.		
Australian in London, Port Phillip unwashed superior.	Average price 1885 to 1894. Cent 21.70	Price April 1, 1896. Cents 24	If the London price had remained 21.70 cents, as it was under the McKinley period, the American decline would have been over 51 per cent.		
			10.59 per cent higher in London.		

Mr. TURNER. Where?

Mr. JUSTICE. In Boston, New York, or Philadelphia; 18 cents under free trade, instead of an average of over 31 cents under ten years of protection, but on the 1st of April, 1896, this Port Phillip wool (indicating) had advanced in London from 21.70 cents to 24 cents, so that while Ohio XX, washed, under ten years of protection was 9 cents higher in America than the best Port Phillip was in London, it was 6 cents lower in New York than Port Phillip was in London with free trade in wool in this country.

I repeat, that it may be impressed upon you, that instead of American XX Ohio being worth 31.22 cents, as it averaged during the ten years which ended with 1894, it had fallen on April 1, 1896, to 18 cents, and the best unwashed Port Phillip, which had averaged in London only 21.70 cents during the ten years ending 1894, on April 1, 1896, was worth 24 cents in London. So that, under protection XX Ohio wool (less valuable than the best Port Phillip) averaged 9 cents higher under protection in America than the better wool averaged in London; after eighteen months, or about that, of free trade, the position was reversed and the Ohio wool was worth 6 cents less under free trade in New York, Boston, and Philadelphia instead of 9 cents more, as it was under the McKinley law.

Mr. TURNER. Can you tell us the price of Australian wool fleece at this time?

Mr. JUSTICE. Yes, sir; 23 cents for Port Phillip superior greasy. It is now worth 2 cents less than in April, 1896.

Mr. TURNER. Where?

Mr. JUSTICE. In London and all over the world. The freight from London to New York is only one-fourth cent per pound.

Mr. TURNER. What would it be in Australia?

Mr. JUSTICE. The freights are about one-half or three-fourths of a cent by sailing vessels; it might not be over one-half to three-fourths of a cent without counting any insurance.

Mr. TURNER. You do not believe what Judge Lawrence tells us, that it is worth 9 cents?

Mr. JUSTICE. I prefer not to discuss what he said. He was not alluding, as I was, to the most valuable quality in Australia.

Mr. TURNER. Tell us what you think it would be—22 cents less the freight of one-half or three-fourths of a cent for whole fleece?

Mr. JUSTICE. Yes, sir; the difference in freight, not counting insurance, would be the only difference. This Port Phillip wool in London to-day is worth 22 instead of 24 cents, as on the 1st of April, and it would be safe to say that the difference in freight and insurance would be the only difference in price between London and Australia at the same time. There is quick communication by cable, and what takes place in London in the morning is known in Australia before business begins on the same day.

Mr. TURNER. If wool of that kind, whole fleece, is worth 9 cents in Melbourne, it would be worth 9 cents in Boston?

Mr. JUSTICE. Yes, sir.

## SKIRTED FLEECES.

The CHAIRMAN. What is the difference in value between the skirted and unskirted—in other words, how much does the simple skirting of that wool increase its value, measured in percentage?

Mr. JUSTICE. It increases it in this way: The skirts are stained wool. They are around the extremities known by various commercial names which it is not necessary to mention; and while they make as good goods as the other, they never can be made white, and other things being equal their use is limited to manufacturers who have to dye their goods dark colors. If you limit the number of buyers, you lessen the price. That is, the price becomes lower, because while men who use dark-colored wools would be just as will-

ing to have the skirts, men who use light colors are barred from using them. Further than that I can not answer the question, because I am not familiar with the value of the skirts alone. There are gentlemen in this room who know all about it, and I do not care to trespass on their ground. I shall take up enough time to tire your patience in discussing subjects with which I am acquainted; but I do not think the difference is much. Are there any gentlemen here who would volunteer the information?

Mr. MOSES. The skirts are not only stained and discolored, but are coarser. The increase in value of top wool is 5 per cent.

Mr. JUSTICE. I should also say that the manufacturer who would use the top of the fleece to make a fine quality of goods would have to resell the skirts when they were coarse. If he bought American wool, he would have to take into consideration the fact that he would have to resell the coarser skirts to somebody who used a coarser grade of wool.

The result of free wool has been that the decline below the average price for the ten years ending in 1894 was 42.34 per cent in American wool, and the advance in London during the same period was 10.59 per cent (see Chart D annexed), and if the London market for the Port Phillip had remained at 21.70 cents, as it was at the end of the McKinley period, and if it had not advanced over 10 per cent, Ohio XX wool, which fell from 31.22 cents prior to 1894 to 18 cents in 1896, would have fallen below 15 cents instead of only to 18 cents. The advance in the London market is all that kept it from going down below 15 cents, which was the London value of Ohio XX washed during the ten years ending with the McKinley period. In other words, Ohio XX washed would have been worth no more than 15 cents in Boston, if Port Phillip had remained at 21.70 in London, as it would if the removal of the McKinley wool duties had not made it an inducement for American manufacturers to discontinue the use of domestic wool and to use foreign in its place because the latter was the cheapest.

The CHAIRMAN. Ohio has a heavier shrinkage than the Port Phillip? Mr. JUSTICE. Yes; it is more desirable when skirted and scoured clean, because it is a stronger wool, but its commercial value in the condition when sold by the farmer is less than skirted Port Phillip, because of the skirts which the Ohio fleece contains.

I want to say one word here of the practice which has grown up among American farmers, which is a great disadvantage to the reputation of their fleeces, and which has given American wools a bad name in Europe and here. It is customary with them to tie the fleece up with six strings or sometimes with binding twine or small cord, with a big knot on each string. The manufacturer in determining the price of the wool has to make an allowance for the twine, which is of no value, but which he pays for at the wool price. Australian wool has little or no twine; but that is not the worst. The American woolgrower thinks he is entitled to wrap up inside of the fleece everything that is on the sheep when shorn. When the sheep is washed it takes a week or ten days for the fleece to dry before it can be clipped, and parts of the fleece become soiled and particles of dung adhere to the breech locks. The farmer sometimes rolls that dung up inside the fleece. When a buyer comes into a wool store to look at it, he cuts the strings on the fleece to see if there is any filth inside of it.

The practice of skirting wool avoids this and has grown in obedience to the demand of the manufacturers, not of the United States alone, but of the manufacturers of the world, and the practice is increasing and will in time be universal. The percentage of skirted wools in the world's supply is already so large that if a penalty were placed on skirted wools and a lower duty on wools not skirted, nearly all that is imported would come in at the lower duty. For instance, at a duty of 10 cents on unskirted and 12 cents on the skirted, all or nearly all would come in at 10 cents as unskirted. Appraisers at the custom-houses could not always tell which was which.

Mr. McMILLIN. Mr. Moses stated that skirting only amounts to 5 per cent; and yet by this proposed rate of duty, 10 and 12, you make a larger difference.

Mr. JUSTICE. I only state this difference to illustrate that such a law could not be administered. The man who was honest and fair, and who fairly entered his skirted wool as skirted, knowing it to be such, would be at a disadvantage with an unscrupulous competitor. A few people in the world, unfortunately, still exist in importing commercial circles who are willing to swear to false invoices.

Mr. Turner has asked about the number of sheep east of the Mississippi River, which question has a bearing on the mutton-sheep industry producing coarse wools. In 1870, 74 per cent of the sheep of the United States were located east of the Mississippi River and only 26 per cent were west of that river.

Previous to that time millions of buffaloes ranged over the plains and the savage Indian there held sway. When the Indians were being gradually placed on reservations, Uncle Sam, who is a great shepherd, had many pastures, one of which was called Illinois, another Michigan, and another Ohio, and other States represented his pasture fields. He had enterprising sons, some of whom, at the risk of losing their scalps, went into the wilderness to develop other and new pastures. That son from Michigan drove his flocks out from that old pasture on the prairie and found his way into what is now Wyoming or Montana, which to-day is our largest woolgrowing State. Some went from the other older States to other new sections. While Uncle Sam's flocks were rapidly increasing and multiplying as a whole, their location was shifting. Those from the old pastures east of the Mississippi were transferred to the new pastures west of the Missouri. It has been claimed by free traders that because the flocks had been moved from the old pastures east of the Mississippi that I have referred to to the new pastures that they had ceased to exist; that under protection sheep were decreasing, when, in point of fact, those flocks had not only been moved, but had increased at the rate of 25 per cent in four years. Those who advanced those views (and they were the favorite arguments of free-wool advocates) closed their eyes to the steady increase in the entire flocks under protection and pointed only to the old and empty pastures as conclusive evidence that protection did not protect. They were jubilant over a supposed important discovery. In point of fact, the United States, under adequate protection, were then increasing their flocks faster than any other nation in the world.

To-day only 33 per cent of our sheep are east of the Mississippi, and 67 per cent are west of the Mississippi. There is a cause for this. The Merino sheep can be herded in large flocks; 2,000 or more can be cared for by one man. The big mutton sheep of English blood can not be so well herded as the Merino; they straggle and become a prey to wild beasts. Their instincts and habits are entirely different. Therefore the only sheep that can thrive and multiply in large bands in the Territories is sheep of Merino blood, immediate or remote, such as can be driven over the range and bunched in herds of 2,000. That leaves the fenced pastures east of the Mississippi mostly free for the mutton sheep of English blood, or blooded sheep bred for pedigree to improve the prairie flocks.

## LOCATION OF SHEEP IN THE UNITED STATES, 1870 AND 1895.

[From official reports of United States Census.]

West of the Mississippi River.	East of the Mississippi River.
7,418,000 sheep.	21,030,000 sheep.
25 per cent.	74 per cent.
28,478,000 sheep.	
100,102,367 pounds wool.	

[From estimates of National Association of Woolen Manufacturers.]

West.	East.
94,273,181 sheep.	12,191,274 sheep.
67 per cent.	33 per cent.
1896	
36,464,405 sheep.	
272,474,708 pounds wool.	

## CARPET WOOLS USED FOR CLOTHING.

Owing to the improvement in machinery, carpet wools are now being so largely used for clothing purposes that I make the statement, without fear of contradiction, that some of such carpet wools as were imported under the McKinley period, supposed to cost then over 13 cents, to-day do not cost over 10 or 11 cents. I allude to wools that would average 13 or 14 cents, such as Bagdad. When Judge Lawrence said the price of third-class wool was below 10 cents, he should have said the "average price" was under 10 cents. You can see how the average could be under 10 cents if the bulk of it was worth 7 or 8 cents, and a minority of it 13 or 14 cents. But wools that cost over 10 cents also enter into the manufacture of the finer carpets, such as Wilton and Brussels. They are the only kinds at this time so used.

The CHAIRMAN. How much ingrain carpet is made of combed wools? We are speaking now of the range of so-called carpet wools from 10 to 15 cents.

Mr. JUSTICE. The name carpet wool ought to be abandoned. The third-class wools, which we are in the habit of naming carpet wools, costing over 10 cents, are very largely used for clothing purposes, and the name carpet wool for them is a misnomer. Their use for clothing purposes is increasing, and they will be still more largely used for clothing purposes in the future than in the past; therefore I will quote from the best-informed importer of these third-class or carpet wools that I know—a man who disapproves of the duty on third-class wool. He tells me that the dividing line made in the classifications and descriptions in the McKinley law between the so-called carpet wools used for clothing purposes and those used exclusively for carpets and low blankets could not have been more scientifically made. That classification made third-class wool into two distinct classes. He did not know whether the convention of growers that classified these wools arrived at it by accident or by a really scientific knowledge of what was required, but the result was successful. To use his expression, "the wools of to-day coming in Europe and Asia 10 cents and under must come to America (which country makes more carpets than all of the balance of the world combined)." There is no other market for all of them. If the McKinley dividing line was lowered from 13 cents to even 9 cents, the price on the other side would fall until the real carpet wools could be sold under the lowest carpet duty admitting them to the American market. In other words, if the duty was so adjusted that they would have to come in at a valuation of not over 9 cents, it would only be a question of a short time—possibly one year—before the foreign owner would have to take 9 cents from his American buyer. This is a case where the foreign shipper must pay the duty as the price of the American market.

But to go back to the subject of the location of our sheep. The decrease of the sheep in the sections east of the Mississippi River was because the large-carcase sheep (the mutton sheep), which produce coarse wool, can not be raised on a free-trade basis at a price that will enable them to be raised for wool at the present price and mutton at the present price. Cheap imported carpet wools, costing 10 cents, make that unprofitable. That is why those flocks have been so rapidly decreasing in Uncle Sam's pastures east of the Mississippi. The question of adequate protection for mutton sheep is involved in the carpet wool or third-class wool costing over 10 cents, and in my judgment that is a matter that needs the careful consideration of your committee. The mutton-sheep industry has been destroyed in the sections east of the Mississippi more rapidly than in any other, and needs your care.

The reason why the McKinley dividing line on carpet wools may be reduced from 13 to 10 cents is because wools of the third class, costing over 13 cents in 1890, to-day will average nearly 3 cents a pound less than they did when the McKinley law passed. These finer carpet wools have been from 1 to 24 cents below present prices. (See right-hand column of table "Lowest and highest wool prices compared," from circular of Messrs. J. L. Bowes & Bro.) The dividing line to-day of 10 cents would be fair to all interests.

The CHAIRMAN. That is, you advocate changing the dividing line of carpet wools from the limit under the act of 1890 from 13 to 10 cents, and you do it on the ground that there has been a decline in the price of carpet wools nearly to that extent?

Mr. JUSTICE. Yes, sir, I do. There is ample proof to back up the statement in the following quotations from the Liverpool circulars of Messrs. J. L. Bowes & Bro., of October, 1890, and of January, 1897:

Decline of 2.35 cents per pound from October, 1890, to January, 1897, on the forty-nine qualities of carpet wool, all of which were worth over 13 cents in October, 1890.

[From the Liverpool circular of Messrs. J. L. Bowes & Bro., first-class authority on third-class wools.]

[Grades marked C. and C. are used both for clothing and carpet purposes. Grades marked K are used almost entirely for clothing purposes. Grades not marked are used mostly for carpets.]

a Higher.

Average decline in price since 1890, 2.35 cents.

The CHAIRMAN. And those wools, you say, valued above 10 cents, which are now valued at about 13 or 14 cents, are used largely for clothing purposes and not for carpets?

Mr. JUSTICE. I believe the finest of them, such as Bagdad wools, enter into some form of clothing or blankets, and a minority, only a very decided minority, enter into the construction of carpets; but, as I have said before, the manufacturers of the higher grades of carpets, such as wiltons, etc., can use nothing inferior. Their wools may all cost over 10 cents.

The CHAIRMAN. How about carpet wools valued at less than 10 cents? Is there any portion of it of any material amount that could be used for clothing purposes?

Mr. JUSTICE. I do not think they are available to any important extent for any purpose except ingrain carpets or low-grade blankets. An exceedingly cheap garment may be made to sell, but not to wear; but without some better wool to hold it together it would not be serviceable. The hair in a cow's tail is more like the wools now costing very considerably under 10 cents. I have in mind some Kalmuck wool which I once handled. It was much like the tuft at the end of a cow's tail. There is nothing in any portion of an American fleece that is so coarse as that. Hip locks and tags, and such portions as Judge Lawrence has described, which were formerly used in carpets and largely so used, are too good for anything to-day but the higher grades of carpets, and with this exception they enter now into clothing more largely than into carpets.

Mr. DOLLIVER. The law of 1890 sought to depart from the specific rate on this third-class wool, and substituted the ad valorem rate.

Mr. JUSTICE. Would you like to know why that was done?

Mr. DOLLIVER. Yes.

Mr. JUSTICE. The convention of woolgrowers and carpet manufacturers that framed the McKinley law consisted of experts. They agreed unanimously (with the exception of Judge Lawrence) to a specific schedule on all wools, which Major McKinley agreed to accept on condition that this commission should agree to it unanimously. I think before it went to the Senate the carpet manufacturers, after having agreed to specific rates, objected to this agreement, and the convention was reassembled to adjust that one feature, and as a matter of compromise the woolgrowers decided to agree to the change from specific to ad valorem rates on third-class wools only, in order that that bill could go through, for without that unanimous agreement, Schedule K, so excellent in other respects, would have failed. It was a matter of necessary compromise. Therefore, on wools costing 13 cents and under a duty of 38 per cent was agreed upon, and 91 per cent was imposed on wools above that. If you take the altered conditions of to-day and make the duties specific, I claim that 21, or 3, or 4 cents, or whatever you collect from carpet wools which cost less than 9 or 10 cents, will be purely a revenue duty, and it does not affect the question of protection in any way. We do not now and probably never will produce cow-tail wool. It becomes, therefore, only a question of revenue. The American woolgrower would not be injured in the least on wools of the third class only, costing under 9 cents, if there was no duty at all. This proposition for free wool does not apply to wool of the first class, much of which sells at 8 cents.

The CHAIRMAN. Why do you say that the carpet wools costing less than 9 or 10 cents are not likely to be grown in the United States?

Mr. JUSTICE. It would not be profitable to raise them here. They are raised in barbaric countries by nomads who live in tents; Asiatic tribes principally. Some in China. They know nothing of the theory of improving the wool by breeding sheep, and anything they can get for their rough wool they are glad to take. As I said before, if you will make the dividing line 9 cents instead of 13 cents, as under the McKinley law, these cow-tail wools will accumulate abroad until the very weight of their accumulation will break the price to 9 or 10 cents, when they will come to the United States subject to the rates imposed by the new law.

Mr. McMILLIN. You speak of a convention that considered Schedule K of the law of 1890. Who constituted that convention?

Mr. JUSTICE. That convention was composed of the most representative woolgrowers and manufacturers that could be named—the most representative in the United States.

Mr. McMILLIN. You say that Mr. McKinley agreed that if they would agree

unanimously among themselves that he would put into his bill the schedule they made?

Mr. JUSTICE. Yes, sir. It was made by experts who knew their business—the woolgrower who wanted of the manufacturer a high price for his wool and the manufacturer who wanted to buy that wool cheap. They sank their greed and framed Schedule K. If all laws were so framed, we would have a permanent tariff. Under its practice I wish to say both woolgrowers and manufacturers were prosperous and contented. The evidence of it is that the manufacturers used up the entire clip of American wool and also increased their imports of wool, and the cost of woollens to the consumer was lower than ever before.

Mr. McMILLIN. It would be strange if they would not prosper, if they framed their own schedule.

Mr. JUSTICE. While they were all prospering and increasing the use of wool, and making a better market for wool, as I said before, the cost of clothing was decreasing to the consumer. I contend that Schedule K of McKinley law was wisely drawn, was a good schedule; it oppressed nobody, and the fact that the American flocks increased enormously under it disproves the statement which my esteemed friend, Judge Lawrence, made, that it was not protective. The woolen manufacturers did not make excessive profits. The duties that were imposed by the McKinley law (which I will treat of when I come to compensatory duties) were so skillfully adjusted that manufacturers prospered under them. But when the compensatory duty fell with the removal of the duty on wool—the only specific duty of the McKinley law—and they were thus left with nothing but ad valorem duties of 50 per cent (only one-half or one-third of which could be collected and which was expected to protect American wages, which are over 100 per cent higher than in Europe), is it any wonder half the mills are closed?

Subsequent experience with the Wilson law shows the wisdom and the scientific arrangement of Schedule K of the McKinley law, because when the specific portion of it was removed American manufacturers were quickly flat on their backs. Their mills soon closed, and the American grower lost the only good market for his wool that he had ever had.

Mr. McMILLIN. As a matter of fact, the manufacturer got the benefit of a portion of the specific rate that was imposed for the alleged benefit of the woolgrower?

Mr. JUSTICE. He did, although he did not know it at the time; and I will make that plain when I come to the question of compensatory duties.

Mr. McMILLIN. Before we depart from that, or at whatever time suits your convenience, will you kindly give the committee the rate of the two kinds of wool that you have contrasted—the Ohio fleece and the Port Phillip wool? If you can, give it for 1870, 1875, 1880, 1885, 1890, and 1895, or 1896—the last complete year, I believe, is 1896.

Mr. JUSTICE. It will appear in what I submit in a number of different shapes.

Mr. McMILLIN. Very well.

Mr. JUSTICE. You will find that no matter how we try this, it always comes out the same way, viz, that the London price as near as may be for a series of years averaged less than half the American price, or, since the question of high percentages must be met, the American price was over 100 per cent higher through a period of years than the London price.

A VOICE. Until lately.

Mr. JUSTICE. Until the repeal of the McKinley law was discounted. Now, to recur to the diagram which showed the increase in the world's supply. I have a table which I will submit which gives the lowest price in the London market in the last ten years compared with to-day's price.

Lowest and highest wool prices compared.

Class.	London extremes during ten years prior to 1896. Highest (in cents).	London price Jan. 1, 1897 (in cents).	London difference between highest extremes and Jan. 1, 1897. (Cents lower.)	London extremes during ten years prior to 1896. Lowest (in cents).	London price Jan. 1, 1897 (in cents).	London difference between lowest extremes and Jan. 1, 1897. (Cents higher.)

It shows that the lowest price in the London market (for Port Phillip wool) was 5 cents a pound lower than the price in London to-day. It advanced 5 cents per pound in London inside of the first calendar year of free wool, and if you take this scoured wool (the same wool cleaned), this latter has advanced 20 per cent in London from the lowest point since the repeal of the McKinley law. The lowest point was reached in London, as I have just said, about the time the free-wool law was passed. We almost immediately began to permit foreigners to unload upon us their accumulation of years, and prices soon advanced from their lowest price on record, 5 cents per pound on the best grade of Australian grease wool.

Mr. DOLLIVER. Why do not our people send our wool over there?

Mr. JUSTICE. Americans have tried it at Bradford, England; Leipzig, Antwerp, on the Continent, and in London. American wools that averaged 5¢ to 10 cents in America, to American manufacturers, sold at the same time over there at 4 pence, or 8 cents of American money, and I have an extract here from a Bradford newspaper on the subject which I will submit with my tables and diagrams.

Mr. DOLLIVER. You mean after it was scoured?

Mr. JUSTICE. No. I mean in the grease, as the farmer sold it. In this shape (indicating) it brings here in America from 8¢ to 10 cents, and averages about 9 cents. Under the McKinley law it ranged from 17 to 21 cents. That class of wool in Leipzig, Bradford, Antwerp, and London, sells now at 4 pence, and it is hard work to sell it at that price. So you will all see after a trial of foreign markets that the American market is the only market of any value to him that the American woolgrower has, and when that is closed to him, as it is to-day—

Mr. DOLLIVER. You say 4 cents; don't you mean 4 pence?

Mr. JUSTICE. I mean 4 pence, English money, equal to 8 cents American money.

You will find in my printed papers herewith some exceedingly interesting criticisms from European papers on the American wools which have been sent there for sale, notably that from the Yorkshire Factory Times. They want to sell wool to us, and don't mean that we shall invade their market.

The Yorkshire Factory Times, under date of July 24, contains the following:

#### "AMERICAN WOOL ON THE ENGLISH MARKET.

"The Yankee, ever on the lookout for anything that benefits himself, has a weakness for screeching out when in fair fight he is beaten. It appears that Mr. Claude Meeker, the American consul, has reported to his Government that the stuff which the Yankee calls American wool is not meeting with that due appreciation which Brother Jonathan fondly imagined it would. Of course, it is not the material which is at fault; it is the stupid English wool sorter who does not know how to handle it. The fact that the stuff can scarcely be called hair, and yet may not be designated wool, and is thus not at all suitable for the purposes of the Bradford trade, is a secondary consideration. What the Yankee is annoyed at is that, notwithstanding the manufacturer in America does not see his way to pay the price asked for by growers, the English buyer is no less cute. There has been, we are told, several hundred thousand pounds of American wool upon the English market, which was sent back to the land of the Stars and Stripes because the prices asked could not be realized."

Mr. TURNER. Why is this Ohio wool, to which you refer us, put up in such dirty shape? Is it a necessity of the situation there?

Mr. JUSTICE. Not at all; it is the result of a slovenly practice here. I am glad to say that some growers put their wool up right and well, but they are not the majority of them. The American manufacturer wants American wool. There is a gentleman in this room that buys a certain quality of so-called XXX, which is now scarce. It is the best wool in the world for his purpose, and the wool dealers save it a fleece at a time until they accumulate a quantity large enough to ship. It is the kind raised by Hon. John McDowell, of western Pennsylvania, and Mr. Clark. The latter has just addressed you. Millions of pounds of it was sold under the tariff laws of 1867 and 1883. We call it "picklock" wool; it grows on sheep of the Saxony breed. The home of such wool was in the valley that is drained by the Ohio River. That is to say, West Virginia, western Pennsylvania, and southern Ohio, the homes of these gentlemen.

#### SHODDY, ETC.

The subject of shoddy comes next in order. During the McKinley period the annual import of shoddy, mungo, waste, rags, and such wool adulterants, averaged annually less than a quarter of a million pounds. The Wilson law went into operation on raw material in August, 1894, and although shoddy, waste, etc., were classified as "manufactures of wool," and these schedules could not legally go into operation until the following January, the Secretary of the Treasury arbitrarily ruled that the McKinley prohibitive duty on shoddy, rags, waste, etc., should cease with the duty on raw wool.

During the first four months of the Wilson law and between September 1, 1894, and the 31st of December over 4,000,000 pounds of these wool adulterants were imported. This 4,000,000 pounds of shoddy and waste took the place of three times that amount of American wool. Shoddy is made of rags and other adulterants, which once having been cleaned, does not require re-scouring. It is put through machinery which dusts it and partially cleans it. It is then practically clean wool. A pound of rags is almost equivalent to a pound of some kinds of scoured wool.

In the first full calendar year of the Wilson-Gorman law we imported 20,718,110 pounds of shoddy, rags, waste, etc., an increase of 8,235 per cent over the average of the McKinley period. This 20,000,000 pounds or more of shoddy would be equal to 60,000,000 pounds of unwashed Montana or Texas wool. It would take the sheep in the State of Montana (which is now our largest wool-growing State) three years to produce enough fleece to make the quantity of clean-scoured wool displaced by this 20,000,000 pounds of shoddy and waste which came in during the first calendar year after the Wilson law was passed.

It was stated by the statesmen who advocated the repeal of the McKinley law that free wool would mean such cheap wool that there would be a decreased use of shoddy. Have these predictions been fulfilled? Previous to the repeal of the McKinley law there was very little shoddy imported. The shoddy then used in America was made from American rags, and there were less than 250,000 pounds of shoddy, etc., imported in an average year. The Wilson-Gorman law went into effect four months before the close of 1894, and during the last four months of that year the imports of shoddy had increased to over 4,000,000 pounds, and during the first full year of the present law over 20,500,000 pounds of shoddy, waste, rags, and other such wool adulterants were imported.

The increase over the whole McKinley period was over 20,000,000 pounds, an increase of over 8,235 per cent, and instead of using less shoddy American manufacturers are now using more than ever before. And why? Because of the loss of the home market for woollen textiles, our manufacturers were compelled to lower their prices for their woollen product, and in no other way could they do this except by the use of shoddy; and although the price of pure scoured wool had fallen nearly one-half, or from 65 cents to 35 cents, the foreign competition was so keen that nothing but a tremendous use of shoddy would enable them to run their mills at all; and, notwithstanding this enforced adulteration of their goods by the use of shoddy, they

still lost the best portion of their home market, as shown in Schedule B. Some idea of the proportion of the imports of shoddy in 1895 compared with the McKinley period will be seen by examining the parallel black lines in Schedule C:

Imports of manufactures of wool in shoddy, waste, rags, etc.

	Pounds.	
1891	215,714	
1892	321,586	
1893	229,853	
1894	142,040	
1895	4,028,901	
	30,718,110	
		Average, 247,063 pounds. McKinley law.
		8 months McKinley law.
		4 months Wilson-Gorman law.
		Wilson-Gorman law.
		Increase in shoddy, etc., imports in 1895 over average of 3½ years of McKinley law, 20,470,447 pounds, or 8,206 per cent.

The CHAIRMAN. How do you explain the increase in shoddy after wool was on the free list? The old theory was that shoddy would be imported when wool could not be so easily imported. But it seems that with free wool there was a large increase in the use of shoddy.

Mr. JUSTICE. It is very simple. The duty on shoddy was about the only one that was prohibitive in Schedule K. Under the McKinley period the high duty kept it out, and then only about 247,000 pounds annually came in, and we used no other shoddy in America except such shoddy as was made from American rags—cleaner rags than any imported rags. There never was a period in the history of this country, or history of any manufacturing country, when such a large proportion of pure wool was used in America as during the McKinley period.

Mr. TURNER. I understand that there is a factory in Cleveland using shoddy that ran every day under the operation of the McKinley Act, and that this same factory under the Wilson bill has not run more than one day a week.

Mr. JUSTICE. I know nothing at all about that factory.

I wish you [addressing Mr. Turner] to pay particular attention to this matter, because I was before the Ways and Means Committee when you assisted in framing the Wilson law, which has so greatly stimulated the use of shoddy. I want to repeat the statement that there never was a woolen manufacturing nation in the world that used so little shoddy as the American nation during the McKinley period. And the proof of it is in the fact that we used then only a quarter of a million pounds of imported rags, shoddy, waste, and such adulterants, as against over 20,000,000 pounds in the first full calendar year of the Wilson law.

Mr. McMILLIN. Do you mean imported shoddy?

Mr. JUSTICE. This 20,000,000 pounds was all imported.

Mr. GROSVENOR. I would like to add that it is within my knowledge that the owners of the Cleveland mill referred to are very anxious that there shall be no tariff put upon shoddy at this time. This reached me to-day officially.

Mr. JUSTICE. The chairman asked me about this enormous increase in shoddy. Under the McKinley law a woolen-mill hand had steady employment and earned \$10 a week, and could buy an all-wool suit containing no shoddy for \$10, with the proceeds of one week's labor. Owing to the closing of the mills (the result of the Wilson law), which did not average half time in 1895, notwithstanding the advantage of free wool, he earned only \$5 a week. The fixed charges for fuel and provisions for his table and rent, which go on nights and Sundays, absorbed all of the \$5 which he has earned, and he has had no money left with which to buy clothing, not even shoddy clothing. And men who made ten-dollar all-wool suits out of 55-cent scoured wool, under protection, could not sell them even with 30-cent scoured free wool.

Shoddy goods came in from abroad as never before, and five-dollar shoddy suits made of cheap imported goods were in the stores. Our manufacturers had to make five-dollar suits to compete. They could not make them out of pure wool, even cheap free wool; they had to use shoddy, and the result was that there was a good, brisk, keen market for foreign shoddy and a narrowed market for pure wool. Free wool, which was to "widen our market," narrowed our market so that half of the mills closed, and many of those which did run used shoddy where under the McKinley law they used only pure wool.

Mr. McMILLIN. Have the sales of the better grades of wool or the price increased or decreased under the operation of the Wilson bill?

Mr. JUSTICE. This diagram shows the decrease in price [indicating]. As to sales, I deal mainly in domestic wool. My sales of American wool for the first year of the Wilson law were reduced one-third, and my sales for the second year of free wool were reduced one-half below the average of the McKinley period. The McKinley law made it an inducement for our manufacturers to use domestic wool. The Wilson law gave our home market to the foreign woolgrower.

Mr. McMILLIN. What I am asking is the effect upon the value or price of goods—woolen goods—whether such goods diminished or increased in price by the operation of the Wilson bill.

Mr. JUSTICE. Of course they decreased in price to the extent of 25 cents per pound on the scoured wool, and they were also further lowered in price by a greater use of shoddy. They were thus nominally cheapened by the use of shoddy, but in reality they were dearer to the wearer in so far as they relate to shoddy.

Mr. McMILLIN. To what extent?

Mr. JUSTICE. Such a suit as I have on contains about 3 pounds of pure scoured wool—no shoddy. It is impossible to use shoddy in worsted yarn. The difference in the cost of such a suit is about 75 cents below the McKinley price. That is the difference made between the use of 30-cent free wool scoured and 55-cent protected scoured wool.

Mr. DOLLIVER. Do you mean the price of the cloth at the factory or the price of the suit of clothes to the purchaser?

Mr. JUSTICE. This is a cheviot suit made of coarse combed or worsted wool. It is coarser than this merino sample [illustrating]. It is about such wool as grows on Shropshire sheep. Around the Mediterranean there are carpet wools from which wool has been imported to make cheviot suits. You know that on the ribs of the sheep there is found a finer fiber of wool than on other parts of the carcass. Measured under a microscope the diameter of the fiber would be less than the diameter of fibers of wool grown on the hips or back or neck or on other parts. The law of 1893 was most loosely constructed with regard to Schedule K. Its faults were admirably corrected by the joint convention that arranged the wording and classifications and divisions of Schedule K of the McKinley law. Under the law of 1893 third-class or Mediterranean carpet wools were sorted in Europe and the finer portion of the fleeces, such as sorts from the ribs, were brought in and it entered into the manufacture of knitting yarns and of chevots. So you can thus see how carpet wools can make less difference in the cost of clothing than where only merino wool is used. The difference is 75 cents between the McKinley price and the present price in the cost of the clothing I have on, the duplicate of

which in wear and appearance may be made of such so-called third-class wool or carpet wool as I speak of—that is, of the finer sorts off of the ribs of some Mediterranean fleeces classified as third-class or carpet wool.

Mr. McMILLIN. Seventy-five cents in the cost of cloth?

Mr. JUSTICE. In the wool now in the cloth of this suit.

Mr. McMILLIN. For the entire suit?

Mr. JUSTICE. Yes; the entire suit, exclusive of trimmings.

Mr. McMILLIN. Then the reduction under the Wilson bill has only been 75 cents for such a suit?

Mr. JUSTICE. Yes; that is all in such goods as I now wear. They are not heavy goods, but are such as a workingman would wear.

Mr. McMILLIN. Then that law has not been so destructive to clothing manufacturers as has been made out?

Mr. JUSTICE. The removal of the wool duty decreased the price 75 cents on the wool contained in such a suit.

Mr. DOLLIVER. Has that found any expression in the retail prices of the clothing a man buys?

Mr. JUSTICE. Yes; of course. There is a difference, as I have already pointed out, of 93 cents per capita. Free wool saved the nation 93 cents per capita, but it lost the nation over \$400,000,000 in purchasing power, as I have shown before. In this particular goods it is 75 cents, or 18 cents less than 93 cents, the per capita rate, because this is made of coarse wool. The per capita saving of 93 cents is for wool of all kinds, coarse and fine. There is none of this fine or merino wool [indicating] in this suit of clothes.

Mr. McMILLIN. My inquiry was as to the difference in price of the finished product, and that was your answer, I suppose?

Mr. JUSTICE. I thought some question of this kind might come up, and so I had the cloth in this suit weighed by the tailor before he made it up. It weighed 3 pounds and a few ounces. It is not the heaviest goods. It is suitable for this weather and is the kind made up and sold to men in moderate circumstances—not fine goods.

Mr. McMILLIN. And your answer had reference to the finished article?

Mr. JUSTICE. To the difference between the price of McKinley wool and the Wilson-Gorman or free wool in this cloth. It is only the difference between protection and free trade on the raw material.

Mr. McMILLIN. What I was getting at was the difference in value of the goods to the consumer of such a suit as you have on under the McKinley bill and under the Wilson bill.

Mr. JUSTICE. The difference in favor of the consumer in such a suit as this is about 75 cents. That is less than the average annual per capita saving to the consumer, which figures, viz, 93 cents, I have previously given to the committee.

Mr. DOLLIVER. Do the tailors give you the benefit of that difference?

Mr. JUSTICE. No. This suit, when made by a wholesale clothing manufacturer, retails at \$10. I understand from the manufacturer who made the cloth that the clothier sells suits of this cloth at wholesale at \$7.50.

There has of late been lack of profit to the manufacturer, a lack of profit to the middleman, and, in fact, nobody has made any money out of it. The merchant tailor that made this particular suit got \$20 for making and trimming it for me. I furnished the cloth, which was given to me by the manufacturer, but wholesale manufacturers sell suits made of this cloth for \$7.50, so I am told.

Mr. TURNER. If the gentleman will allow an interruption, I would like to know if the class of goods which you are wearing is not purchasable at about one-half what it was before the Wilson bill went into effect?

Mr. JUSTICE. No, sir; other things being equal, 75 cents would make the only difference in the cost before and the cost now, by reason of the difference in free or protected wool. If there is any other difference in the present cost it is made by a lessening of the profit or by actual loss to the manufacturer and of the cost of the labor element which enters into the construction of such goods. I know nothing about any other details in the cost of this suit except the difference between the McKinley cost and the Wilson-Gorman cost of the raw wool in it.

Mr. TURNER. You do not make any estimate of the effect of compensatory duties?

Mr. JUSTICE. I know nothing about that element in this case. I have figured up the difference between the protected and free-trade prices of the wool in it.

Mr. TURNER (continuing). I mean the compensatory duty put on for the manufacturer's benefit.

#### COMPENSATORY DUTIES.

The difficulty in placing high rates of duty upon wool comes from the objection which legislators have to the necessary corresponding increase in the compensatory duties upon finished cloth. It takes 4 pounds of wool of the first class (merino wool, shrinkage 60 per cent) to make 1 pound of finished cloth. Every increase of 1 cent per pound in the duty upon unwashed wool of the first class involves an increase of 4 cents per pound in the duty upon finished cloth, without which the mills would be closed and the wool market destroyed. Owing to this necessary provision, manufacturers are barred from the importation of wools shrinking over 60 per cent. (See diagram on page 746.)

Mr. JUSTICE. I am approaching that subject now, which will about conclude my remarks. In alluding to this suit of clothes something which I wish to explain is suggested. This cloth was made by a firm that were American manufacturers, under the law of 1867, and they discovered when that law was succeeded by the tariff of 1893 that they could import "worsted" at a lower duty than was paid on the cheapest shoddy goods. They went over to Bradford, England, and sent over a shipment of superfine goods, which was entered at the custom-house as "worsted." The appraisers classified them at first as woolen cloths. These goods were taken around to the wholesale dealers, and the unanimous opinion among the trade was that they were commercially known as "worsted." They took them out as worsteds, but paid the cloth duties under protest. The courts afterwards decided that, as the commercial name was "worsted," the framers of the tariff bill had meant that this class of all-pure wool cloth should come in as worsteds, which proved to be at a less duty than common shoddy goods. (It is impossible to put any shoddy in worsted yarn.) Finding their case strong and safe, they employed mills in Bradford, England, to produce worsteds, and sent their product to their Philadelphia selling house. When the McKinley law passed, the senior partner of the firm came to Washington to protest against higher duties. He had a suit of clothes with him by which he undertook to show how the price would be increased to the consumer if the McKinley bill passed. After the law of 1890 went into operation he found that he could not sell a single yard of his English cloth under the McKinley law. He was shut out of the American market. These goods could then be made here in America alone. He was compelled to move his machinery to America. He located about 16 miles from Philadelphia, where he established his American factory. As soon as he could get his mill in operation under the McKinley law, he issued a circular to his old customers stating that he would sell the same goods here, made of the same quality of wool, and at no higher price than that at which he sold them before in England under the lower duty of 1893.

Who pays the duty in such a case? This firm, having run their mill under

Table showing quantity of merino wool of various qualities required to make 1 pound of finished cloth.

free trade in England and under the McKinley law in the United States, are the best equipped persons that I know of to give an opinion as to the comparative merits of the productive capacity of the American and foreign factory operative. Some of their Bradford help followed them to America. They thus actually employed the same men on the same looms and on the same kind of goods. Their answer to the question so often asked about the comparative efficiency of such labor has been put into print. It is to the effect that the same men, with double the English pay in America, with better food and clothing, and better houses to live in here, are less efficient than they were in England. I said to the senior partner, "That is at variance with the general impression." He explained his statement in this way: On the other side, if a man leaves his loom before he weaves out his warp he can be put in jail for breach of contract. Here a man may shift his belt onto the loose pulley and stop his loom, leaving the shuttle in the warp, and clear out, and you have no redress. Here they become careless, are soon demoralized, and altogether a great deal more independent than in England. He has figured out just how much was the cost of labor abroad and here on weaving on the same goods, without regard to the material in it. I mean the same sort of weaving by the same men who had worked for him in Bradford under free trade and under the McKinley law here. In England they receive about £1 (or less than \$5) a week for weaving. The same men in Pennsylvania, under the McKinley law, received over \$10 a week for precisely the same work—an increase of 100 per cent in wages over those earned in England; that is, a difference of 100 per cent in favor of the American workman. A similar increase over English wages is the rule all through other branches of this business. If, with your permission, I may occupy any more of your time, as that which was allotted to me has already been used up, I will come to the question of the compensatory duty, which seems to be the most difficult question for those to understand who are not in the business.

This first sample (indicating) is a fine Montana wool of Merino blood. It shrinks 70 per cent. It yields 30 per cent of clean scoured wool like the sample (indicating). It takes 5 pounds 5½ ounces of such wool to make a pound of finished cloth, or 1 pound 5½ ounces more than the McKinley compensatory duties provided for. Western Australia produces similar wool in great abundance, with a shrinkage of 70 per cent. It does not come to America, because the manufacturers are not willing to pay the freight on the 70 per cent of dirt. The freight on wool from London to mills in Pennsylvania 15 miles by rail from the wharf where the European steamer lands is only one-fourth of a cent per pound. With no duty on wool to-day, manufacturers here do not import any of this kind of wool. I asked why. The answer was, "Because we can not pay freight on dirt." "But," I said, "the Montana woolgrower has the same amount of dirt in his wool and he pays eight times the all-rail freight from Montana to New York that you pay from London to your mill, and you can not pay one-fourth of a cent per pound against the American grower's 3 cents per pound freight on 70 per cent shrink wool across the continent. How is it you can not use that class of Australian wool when the freight is only one-fourth of a cent per pound?" He replied, "We do not want it. We want only light-shrink wool; but we do want an ad valorem duty on wool, so that the foreign manufacturer may have our competition and will not be able to buy them at his own price, as he now does, and make cheap goods that would compete with our goods." There is nothing in this argument, for at the last London sales and the majority of all of the previous sales these skirted Port Phillip wools suitable for America were 10 per cent higher, by reason of the competition of American buyers, while the 70 per cent shrink faulty wools were neglected and were unchanged or lower in price.

Now there is no tariff on wool; wools are free. No duty stands in the way of importing these faulty wools now. If our manufacturers want an ad valorem duty in order to have access to these faulty wools after a duty is on, why don't they take advantage of their privilege and import them now, when there is no duty? They have the freest access to these cheap, heavy

wools to-day, and they will not touch them. This disposes of the contention that ad valorem duties on wool are necessary to give our manufacturers access to all classes of inferior, cheap wools. As they do not import them when wool is free, they never will import them under any form of duty; and those who use this argument, if sincere, are deceiving themselves alone.

The next sample is XX Ohio unwashed. It shrinks 65 per cent. It is wool of the same breed as the other heavier sample from western Australia. One is grown in Ohio and one in western Australia, but if both were scoured they would look alike, and nobody could tell the difference. If the wool in western Australia was grown in Ohio, it would look like that sample of Ohio. [Mr. Justice illustrated this part of his statement with various samples.] Both will show under the microscope a diameter of two thousandths of an inch. The difference in the wools is only the difference in the characteristics of soil and climate of the different localities in which they were grown. If you would reverse the conditions, this (indicating) wool would look like that, and that wool would look like this (illustrating).

It takes about 4 pounds 9½ ounces of this Ohio fine unwashed to make a pound of finished cloth. If a manufacturer imports this same class of wool from western Australia (with the McKinley duty of 11 cents per pound on wool and the compensatory duty of 44 cents on every pound of imported cloth to compensate him for the duty paid to the Government on the wool used to make that cloth), it would take 4 pounds 9½ ounces of greasy Australian wool to make 1 pound of cloth. He would have to pay 50½ cents on the 4 pounds 9½ ounces, which is the quantity of wool required to make a pound of cloth out of such wool, which would involve him in an outlay of 6½ cents in duties more than the compensatory duty of 44 cents which the law allows on imported cloth. The result is he is barred from importing 65 per cent shrink wool, the duties therefore on such wool would be 6½ cents more than the compensatory duty on the cloth which it would make. This class of wool is not now imported to any extent even though the duty has been taken off. With freight on such heavy wool only one-fourth cent per pound from London to America, the manufacturer does not want it, therefore it is safe to conclude, as already stated, that if he will not have it when there are no duties, he will never want it under any sort of ad valorem duties. But the point is, that if he did import such inferior West Australian or similar wool he would be out of pocket 6½ cents below the compensatory duty on every pound of cloth manufactured from such wool.

Now, this is a sample of a lighter-shrink wool, and of course the compensatory duty required would be less. This sample corresponds to Buenos Ayres, Lower Australian, and Cape of Good Hope wool, although it is New York or Michigan heavy fine washed, shrinking 60 per cent and yielding 40 per cent of clean scoured. It takes 4 pounds to make a pound of finished cloth, and the importer would have to pay 44 cents duty on the wool. This is the heaviest class of wool that could be imported under the McKinley arrangement of compensatory duties.

This brings us to the wools which are skirted, which are the only kinds of merino wools now largely imported under free wool, and the only kind that ever will be largely imported. The compensatory duty on cloth, when less than the duty on the wool required to make such cloth, makes wool of 60 per cent shrinkage the dividing line, or in other words, wools yielding 40 per cent or more of clean scoured wool are the only ones that are used in America with a compensatory duty on cloth.

The next sample is still lighter. It is an Adelaide, and corresponds with Ohio XX fleece washed. This is a wool shrinking 55 per cent and yielding 45 per cent of clean scoured wool. Only the very best of the Adelaide wools shrink as low as 55 per cent; some of them run up to 70 per cent. This is skirted wool. The American wool of the same kind and quality is not skirted, and from this cause sells in the grease at a lower price. These American and foreign wools of the same grade practically enter into the same cloth. When a manufacturer imports enough of this class of Adelaide (55 per cent shrinkage) to make a pound of cloth he pays the Government 20.10 cents duty on 3

pounds 8½ ounces, which is the amount it takes to make a pound of cloth. He saves the small fraction of 4.90 cents out of the compensatory duty. This shows the inducement to import skirted light-shrink wools.

This sample (indicating) is Port Phillip greasy superior, which is the most valuable wool in the world. It also corresponds with the XX Ohio, although it is cleaner. Three pounds three and one-half ounces of this high class of Port Phillip skirted fine wool will make a pound of cloth. It is very clean. It is on account of its light shrinkage that it takes such a small quantity, as each pound yields 50 per cent of clean scoured wool. If a manufacturer wants to import only enough wool to make 1 pound of cloth he would import 3 pounds 3½ ounces and would pay the Government in duty 25.30 cents on the wool and thus save the small fraction of 8.90 cents out of the compensatory duty on a pound of finished cloth. This class of wool is limited. The treasurer of the Washington Mills in an open letter states that only 5 per cent of the product of Australia is as clean as that. His estimate is entirely too small, but whatever may be the quantity, there never was any difficulty in procuring an ample supply of it, and our manufacturers have never been compelled, even with free wool, to resort to the faulty wools that require more than 4 pounds of wool to make 1 pound of finished cloth, and I contend that they never will be required to, nor will they, in my opinion, desire to do so.

This last sample is the lightest wool that comes from Australia. The shrinkage is 45 per cent, and it yields 55 per cent of clean, scoured wool. While there is a limited amount of this wool, there never was too little for America. It takes only 2 pounds 14½ ounces of this kind to make a pound of finished cloth. The duty on this 2 pounds 14½ ounces would be only 22 cents, while the compensatory McKinley duty was 44 cents per pound on cloth, so that if all manufacturers could use this kind they would save 22 cents out of the compensatory duty on each pound of cloth made of such wool.

The McKinley Schedule K, which imposed a duty of 11 cents per pound upon wool, determined the compensatory duty of 44 cents per pound on the cloth by taking shrinkage wools yielding 40 per cent of scoured as the dividing line. The great bulk of the world's supply of wool (I suppose fully 75 per cent of it) is so shrinky that a compensatory duty of 44 cents per pound would involve a manufacturer in a loss by its use. But there is an ample supply of much less shrinky wool than 60 per cent. The lighter the shrinkage, you will observe, the greater is the amount of the compensatory duty which the manufacturer saves. It was not foreseen by the joint convention of woolgrowers and woolen manufacturers that formed Schedule K of the McKinley law that the manufacturer was to get any fraction of the compensatory duty, but the working of it for four years developed this fact, and its operation completely justified its inventors.

After the compensatory duty was removed and nothing was left but the 50 per cent ad valorem duty (which, through undervaluations and false invoices, is not all collected), the manufacturer began to be compelled to close his mills. It was found that a nominal ad valorem rate of duty of 50 per cent to cover a difference of over 100 per cent in wages between here and abroad would not do. By limiting his purchases to light shrinking wools the manufacturer could, under the McKinley law, save, as already explained, a small fraction of the compensatory duty, and if that had not been the case his mills would have been closed under the McKinley law, as they are closed today with the inadequate Wilson low rates.

The CHAIRMAN. Is there not another important fact, that the McKinley law made the duties part specific and part ad valorem, so that the ad valorem was the subordinate part of the duty? Under the act of 1894 the duty is exclusively ad valorem, and therefore our whole attention may be directed to undervaluation; and is it not true that there has been an incentive to undervaluation which has resulted, in practice, in there being a smaller proportion of the duty collected than there was under the other law?

Mr. JUSTICE. Yes, sir; that is a correct statement of the facts.

The CHAIRMAN. And is not that a fact that you have to take into consideration?

Mr. JUSTICE. Yes; it is a very grave matter, involving the opening or closing of our mills, upon which we depend for a market for domestic wool.

I will quote in this connection from a pamphlet which I shall hand in, marked Appendix A, to which I now allude, and which bears directly and forcibly on that point. It is entitled *Prophecy and Experience*, and is from the September number of the bulletin of the National Association of Woolen Manufacturers. It is a most comprehensive and clear statement of this part of the subject, and as well a most earnest plea for the woolgrower from the standpoint of the manufacturer, as well as for the factory operative, and for the man who employs him. For conciseness and clearness I have seen nothing like it, and for this reason I desire to have it included in my argument. On page 14 of Exhibit A you will find that the average importation of cloth under the first three years of the McKinley law was about 13,000,000 pounds, or a total of 41,700,000 for the whole period. The average value of these importations was about \$12,300,000 per year, or a total of \$37,019,000. Comparing the year 1896 with the whole period of the McKinley law, or rather the years 1891, 1892, and 1893 (for everyone admits that the law was a dead letter after March 1, 1893, and that the Wilson law was discounted after that date, and what happened between March 1 of that year and the time when the Wilson law went into effect is of no value for a basis for estimating its utility), we find that the importations amounted to over 60,000,000 pounds, with a custom-house value of about \$25,000,000, which was an increase of 350 per cent in pounds over the annual average of the first three years of the McKinley law, but the value is only doubled or increased 160 per cent.

The CHAIRMAN. And wools had not fallen abroad?

Mr. JUSTICE. No, sir. On the other hand, they had advanced in price abroad. As already shown, Port Phillip fine advanced in London 5 cents per pound between the first and the last of the year 1895, when the effects of the opening of our markets was fully felt abroad, as you will see by tables appended.

[Justice, Bateman & Co., circular, August 1, 1896.]

#### THE EFFECTS OF FREE WOOL.

In Table A is a schedule of twelve leading grades of American wool, with the prices in the markets of Philadelphia, Boston, and New York on August 1, 1892, during the second year of the McKinley law when that law was in full and undisturbed operation. In the next column are the prices in the same markets at this date, the second year of the Wilson-Gorman law. In the third column is the number of cents per pound decline caused by the removal of the McKinley duties. The average decline by the substitution of free trade for McKinley protection on wool has already been 42½ per cent, and prices are still falling. The average price of wool in London, for wool of the same kind and quality, from 1888 to 1894, was 51 per cent lower than in the protected markets of the United States during that time. This difference has now been overcome by the domestic decline and the foreign advance. The removal of protection, which caused American prices to fall, stimulated the London wool market, and the latter has been advancing during the period that American markets have been declining. The London prices for foreign wool of the same kind and quality as the domestic are

shown in Table B. If it was not the removal of the McKinley duties which caused this decline in American wools when the markets of the world were advancing, what was it?

TABLE A.—American wool, Philadelphia and Boston prices.

	Price Aug. 1, 1892, second year of McKinley law.	Price Aug. 1, 1896, second year of Wilson-Gorman law.	Amount per pound lower.

Fine Cape scoured.....	15	17½	2½

Average London advance in two years, 9 per cent.

The CHAIRMAN. Is not that fact a demonstration that under exclusively the ad valorem system there have been enormous undervaluations, to an extent unknown before?

Mr. JUSTICE. This fact alone would indicate an undervaluation of about 35 per cent, because here is evidence that the quantity has increased three times, or tripled, and the values have only doubled. That will be found on page 14 of Exhibit A, which I submit, and to which I again call your attention as most important, as showing where the Government is losing its revenue.

#### Imports of manufactures of wool and cloths.

[From the Commerce and Navigation Reports, United State Treasury Department.]

Year ending December 31—	Wool manufactures.	Cloths.	
		Pounds.	Value.

1895.....	60,319,301	40,070,148	25,281,668

There is just one more point about which I wish to speak, and then I will close, thanking the committee for its indulgence, and apologizing to it for having taken up so much more time than was originally assigned to me for the discussion of this subject. However, this is an important matter, and if it were printed only without any oral explanation, a good deal of its force would be lost.

In making a new tariff law there seems to be a general impression among the public that you must make a conservative bill, which means low taxation, but they lose sight of the fact that the increase in the national debt under President Cleveland's Administration will require higher taxation per capita than was necessary under the McKinley period. By the time the new revenue law goes into operation the increase in the national debt threatens to approach \$300,000,000. I arrive at these figures in this way: There were \$280,000,000 of bonds sold. The interest on those bonds up to the time they mature will be over \$240,000,000. This interest has to be paid out of taxes before the bonds are paid, which makes over \$50,000,000 increase in the national debt without adding the deficit. Now, at the rate of the increasing deficit which is going on (you know better than I how much a month) that deficit will bring the total debt up to near \$300,000,000 by the time the new law can be framed and passed. The people will therefore have to submit to a higher per capita taxation than under the McKinley law, whether they like it or not. That is the price they pay for the experiment of a tariff for revenue only and that kind of policy.

Mr. GOSWENON. If they have a luxury, they must pay for it.

The magnitude of this industry, Mr. Chairman, is something absolutely wonderful. Not only is it a munition of war, but it is

a money-raising, money-producing feature of American agriculture. In the documents which I shall add to my speech I shall put in abundant material for the student of this question, so that he can fully understand all that there is of it. I will show in these exhibits the rise, the progress, the fall, and the practical death of this industry, and will furnish information upon every possible issue that can be raised. In doing so I have been aided, as was the Committee on Ways and Means, at every step of the way by the invaluable suggestions of Mr. Theodore Justice, of Justice, Bateman & Co., of Philadelphia, Pa.; and it may be well here to state that that gentleman has more interest in the success of the American woolgrower than any one man in the United States, and has more knowledge of the whole subject, in my humble judgment, than has any other one man in the United States, and I heartily tender my thanks to him for his constant assistance.

Now, it will be seen by a study of the various arguments and contentions made upon the different sides of the wool question that one of the greatest difficulties that the woolgrower has had to contend with and one of the matters about which the woolgrower has made the most complaint is the article known as third-class or carpet wools. These wools came in under a tariff duty of 32 and 50 per cent ad valorem; and now let it be stated at once, and once for all, that we produce no carpet wool in the United States. Carpet wools therefore are proper and legitimate subjects for ad valorem duties. They are taxed for the mere purpose of raising revenue and to regulate their introduction into the United States. But heretofore, under the provisions of the McKinley law, it was claimed, and with much force, that a large quantity of clothing wools came into the United States under the guise and description of carpet wools, wools of the third class.

This was the sticking point with our woolgrowers, and the fierce orator, speaking once for the woolgrowers and twice for himself all over the country, claims vociferously that the McKinley bill was absolutely defective, absolutely valueless as a protective measure, because of these frauds. This bill reported by the Ways and Means Committee has cleared up that trouble and there is no longer just ground for complaint. Instead of permitting the importation at ad valorem rates of carpet wools by designation, this bill provides for classifying directly carpet wools, and inasmuch as it has been discovered, and easily discovered, through what medium the frauds were perpetrated in the importation of carpet wools, we have lifted out of the carpet-wool designation seven different brands of wool and have placed them in the dutiable list at specific duties as first-class wool. It is believed, and confidently believed, by the best and most intelligent friends of the woolgrower that under this new classification there will no longer be frauds upon the grower of legitimate clothing wool in this way.

It will be seen by an examination of the bill that the following wools, heretofore imported as carpet wools, have been thus transferred:

China lamb wool, Arabian Bagdad wool, Egyptian wool, Morocco wool, Castle Branco wool, and some of the finer qualities of Turkey wool, such as the finer Adrianople skin wools.

This is one of the mediums through which frauds were perpetrated, and these are now dutiable at specific rates.

I here produce a table showing the various kinds of wool and the effect that an all-around duty would have at 40 per cent ad valorem, and in this connection I desire to say that under the McKinley law there was imported into this country such a trifling amount of the higher grades of carpet wool costing over 13 cents that the average duty was only a trifle over the 33 per cent ad valorem. Hence it will be seen that carpet wools as now classified in the Dingley law will cease to be a source of trouble to the woolgrower, and justice and fair play will take place:

Third-class wool costing over 13 cents.

	Price in Liverpool January, 1897.	McKinley duty of 50 per cent.	Proposed duty of 40 per cent.	Lower than McKinley law.

East India, Marwar, very coarse gray and black	7	2.24	2.80	.56
Tartary, white touched with gray	6	1.92	2.40	.48

Average higher than McKinley law 0.76 cent on 8 grades.

Since the bill passed, an outbreak of complaint has been made against it in two directions, one by the semi-free traders of the East, anxious for special benefit to their own certain section, and the extravagant and unreasonable representatives of the woolgrowers' interest in the West. Between these two conditions the life of this schedule is threatened. My position is this: We defended the McKinley law before the country. The business of woolgrowing and wool manufacture prospered under the McKinley law. The prosperity was great and would have been permanent and increasing had it not been for the untimely interference of the Cleveland Administration. There is no reason why the woolgrower should complain of the McKinley law, for he has fought for it and criticised its repeal. There is no reason why the woolen manufacturer should complain, for he grew rich and prosperous under it and his industry was ruined by its repeal.

So, then, it is the plain duty of the woolgrower of the West and the manufacturer of the East to accept this schedule, and I have a few words to say in this immediate connection. The farmers of the West, more than 2,000,000 of them, will demand as the ultimatum this wool schedule. If there are defects in its details, it can be amended with the acquiescence of the farmer, but they have too long borne the burden of ever-increasing local taxation and ever-decreasing values of farm products to submit to an overthrow of this industry, and the American statesman may just as well understand that the trial is on and that the eyes of these millions who have supported the Government by their toil are scrutinizing the action of this House with more intelligence and more determination than has marked any other era of American politics. The people know what they were promised. The people know what is here offered. The people will know if this offer is withdrawn, and the people will know who withdrew it. The rates of duty in this schedule for the woolgrower are not so high in ad valorem results as are the duties in the cotton schedule and in a vast number of the smaller industries.

I append here the last circular of Justice, Bateman & Co., and commend it for its lucid and intelligent statement of conditions and surroundings:

#### Wool of the Market.

Wool is in improved demand. The sales would be larger if holders were willing to sell at current rates, which are only kept down to the level of the London market by the competition of the latter, which will only cease when the pending tariff is enacted into law. Quotations have been advanced. The bulk of the wool offered for sale at to-day's prices is the heavy shrink, fine territorial, which is still in ample supply.

#### Wool Supply for 1897.

The attention of the trade is now mainly occupied in forecasting the probable prices for wool for the coming season, which will be greatly influenced by the date when the Dingley bill shall become operative, as that alone will determine when the foreign wool now pouring into the country shall cease coming. The defeat of the Dingley bill last winter has given importers and manufacturers one year's supply of cheap free wool, which will greatly modify the advance in prices for a long time after the new duties are in operation. The supply for 1895 and 1896, with the domestic clip for 1897 together with the amount likely to be imported during this year, less the amount consumed in these periods, will give the probable surplus to be carried over into the year 1898, as shown in the following table:

Comparison of the supply and consumption for 1895 and 1896 with estimates for 1897.

	1895.	1896.
	Pounds.	Pounds.
Carried over from previous year*	190,530,000	231,724,651
American clip	294,290,729	272,474,788
Imports of wool	248,969,217	159,776,015
Imports of shoddy, noils, waste, etc.	30,918,106	17,011,149
Total supply	694,724,651	680,986,603
Consumption	463,000,000	232,000,000
Carried over into next year	231,724,651	448,986,603

Estimate of the Boston Commercial Bulletin. This computation dates from January 1, 1895, because the mills at that time, in anticipation of the Wilson law, had used up their supplies of wool. The probabilities are that not for many years had there been so little stock in the mills as on that date.

## ESTIMATED SUPPLY, CONSUMPTION, AND SURPLUS FOR 1897.

	Pounds.
Carried over from previous year	448,886,823
American clip of 1897 (estimated)	272,474,708
Imports of wool from January to July, 1897, estimated 50 per cent of the imports of 1896	70,888,007
Imports of shoddy, noils, waste, etc., from January to July, 1897 (estimated)	8,505,574
Total estimated supply for 1897	800,854,812
Estimated consumption for 1897	463,000,000
Carried over into 1898	364,854,812

The quantity carried over from December 31, 1896, appears to have been over 448,000,000 pounds. Add to this the clip of 1897 and the amount of foreign wool and shoddy likely to be imported before the Dingley bill is passed—say on July 1, 1897—and you have a total supply for the year 1897 of over 800,000,000 pounds. The domestic consumption of 1897 will probably be as great as the 463,000,000 pounds which was the annual average consumption of the McKinley period. This estimate is based on the assumption that our machinery will have normal employment, which now seems probable, as it is too late for foreign mills to make goods in time to fill American fall season orders in advance of Congressional action. There will therefore probably be carried over into 1898 only 364,000,000 pounds, which will be about 20 per cent less than that carried over into 1897. The quantity on hand, as exhibited by these figures, in the face of the dawn of an era of prosperity, is not excessive. But in view of a surplus at the end of the year of nearly 70 per cent of the consumption, and that as all of it except the domestic clip for this year (still on the sheep's back) was bought on the free-trade basis, it is not probable that prices during 1897 will advance to the full extent of the foreign price plus the duties.

## THE COST OF CLOTHING WILL NOT BE GREATLY INCREASED.

Most manufacturers have secured a liberal supply of cheap foreign wool, and can thus take orders for goods based on their ample supplies of cheap raw material, so that those who expect inordinate profits on their holdings of wool, or a greatly enhanced cost of clothing, are likely to be disappointed. There may not be a repetition of the experience which followed the passage of the McKinley law, when, within one year after that law was passed, both raw wool and clothing averaged lower than they had ever been before. But some light on the future of prices may be obtained from the experience with prices current in 1892, shown in the following table, especially as the new Dingley tariff bill will probably carry the old McKinley rates.

Table showing the amount of protection given by the McKinley law and the increase in the protected price over the free-trade price, caused by the McKinley duties, on sixteen leading grades of American wool.

[American wool, Philadelphia and Boston prices.]

	Price in August, 1892, second year of McKinley law.	Price in August, 1894, second year of Wilson-Gorman law.	The actual protection per pound on each grade under McKinley law.
	Cents.	Cents.	Cents.
Ohio XX washed	20	17	12
Ohio medium washed	23	19	13
Ohio coarse washed (one-fourth blood)	22	18	14
Ohio fine unwashed	20	12	8
Indiana and Missouri fine unwashed	19	11	8
Indiana and Missouri medium unwashed (one-half blood)	25	14	10
Indiana and Missouri coarse unwashed (one-fourth blood)	24	15	9
Texas, Utah, Oregon, and Montana fine, shrink 70 per cent	17	8	9
Texas, Utah, Oregon, and Montana fine medium, shrink 65 per cent	18	10	8
Texas, Utah, Oregon, and Montana low medium, shrink 60 per cent	20	11	9
XX Ohio scoured	43	35	28
Ohio medium scoured	55	33	22
Ohio one-fourth blood scoured	43	25	18
Texas, Utah, Oregon, and Montana fine scoured	57	30	27
Texas, Utah, Oregon, and Montana fine medium scoured	58	28	24
Texas, Utah, Oregon, and Montana low medium scoured	50	27	23

As there are no foreign wools that are exactly similar in condition and in price to American, no satisfactory comparison as to free trade and protected prices can be so well made as of the leading American grades under free trade with their value under protection. The above table has therefore been prepared for this purpose.

In column No. 1 of the above table are the prevailing prices of sixteen leading grades of American wool in August, 1892, two years after the passage of the McKinley law, when it was in full force, and was not menaced with repeal. In column No. 2 are the values for the same qualities when the same conditions surrounded the free-wool Wilson law, two years after its passage. In column No. 3 is the difference in values between the McKinley price in August, 1892, and the free-wool price in August, 1894, which is the actual amount of protection of the McKinley law with 11 cents duty on unwashed and 23 cents duty on scoured. Of course if there should be no change in foreign prices for the best Australian grades (which now average about as they were in the McKinley period), as soon as the enormous supply of free foreign wool now here and daily arriving is exhausted, this same increase in value must again occur. Like causes under similar conditions must produce a like effect. But conditions may prevail in 1897 of which we have not had any previous experience, such as a year's supply of cheap foreign wool, which must operate to greatly modify, for the best part of the year at least, the expected advance in prices from the reimposition of the McKinley wool duties. The support which America has given to foreign wool markets since the McKinley law was repealed will surely soon be withdrawn. The effect of this must be a decline abroad. It would not be unreasonable to again expect a drop to the lowest foreign prices shown in the diagram. If this should occur, it would involve a foreign decline of about 6 cents on the choicest skirting Australian, which must greatly modify the increased cost to the American consumer of

wool here even with the 11 cents per pound Dingley duty. If the American woolgrower should not again see wool prices on the farm as high as they were during the average of the McKinley period even with the same duties, he must bear in mind that conditions all over the world have changed, and that he always has the increase in price over his foreign competitors that the advantage of the duty of 11 cents per pound will give him, which happy condition he should compare with his experience with two years of free wool and one in anticipation of it.

## THE DINGLEY TARIFF BILL OF 1897.

The Committee on Ways and Means have introduced into the House of Representatives by far the most scientifically drawn tariff on wool and woolsens that has ever been presented to any American Congress. In framing this bill the country has had the benefit of the experience of a committee long familiar with legislation, assisted by skillful Treasury experts, some of whom have spent a quarter of a century in administering the last four tariff laws. There are more specific rates in this bill than in any of its predecessors, and there will therefore be fewer undervaluations and fewer frauds on the revenue than heretofore. This bill should be promptly enacted into law, because in it are the principles under which was developed the country's greatest prosperity and because it contains the elements of protection to American industries, from which have come the greatest gains to the people and the greatest comforts to the masses.

## THE WOOL SCHEDULE.

The wool schedule (which will prove of the most benefit to American consumers) will, of all others, be assailed with the most bitterness. There will be leveled against it the stock arguments of those who imagine that the nation can become rich and prosperous by buying woolen goods abroad instead of making them at home, and who believe in allowing American mills to lie idle, as they have under the Wilson law, and who, in order to buy cheap things, would be willing to see the American flocks destroyed. Those who know that the opposite doctrine is the best, as do all who are interested in the American wool industry, must be prepared to vigorously defend this excellent bill. It is better for the American woolgrower in many respects than any previous tariff law with the possible exception of that of 1867, and in view of the changed conditions produced in the thirty years since its passage, it is doubtful if it is not even better for them than that law would be now if reenacted.

The gains of most importance to the domestic woolgrower are those obtained by the transfer of a number of kinds of wools of the third or carpet-wool class to the first or clothing-wool class. These were formerly dutiable at 32 per cent ad valorem, the specific equivalent of which is only about 3 cents per pound. They will now be dutiable, if imported unwashed under the new bill, at 11 cents per pound. These are the finer grades of so-called carpet wools, but which are really largely used for men's wear. They are China lambs, Bagdad, Egyptian, and some other varieties of Mediterranean wools, which by their users are now called carpet wools, but which are really used for other purposes. They will not only be dutiable at 11 cents per pound instead of 32 cents when imported unwashed, but will bear double the unwashed duty if imported washed, and three times the unwashed duty if imported scoured, as against only 32 per cent ad valorem under the McKinley law, without regard to condition. This is an improvement over the law of 1890, as it removes a constant source of irritation to woolgrowers, which was one of their principal complaints against that measure.

At the late conference in Washington between manufacturers and woolgrowers, the former proposed the utmost that they felt they could join with the woolgrowers in recommending for adoption by Congress with a view to giving reasonable promise of permanency. The losses sustained by manufacturers in the change from protected to free wool were frightful, and are a warning for the future not to be lightly ignored. Their proposition of 20 per cent less than the McKinley rates on wool of the first and second classes was not from any feeling of hostility to the woolgrowers, for such is not their attitude. It was because they believed that higher rates would not be permanent, and because they believed that to return in a few years to free wool would injure the grower as much or more than the manufacturer. With free wool as a permanent policy some manufacturers could survive, but the woolgrowers, judging by nearly three years' experience with free wool, would mostly be destroyed.

## SKIRTED WOOLS.

The Ways and Means Committee have performed an act of justice by restoring the McKinley rate upon unwashed wools of the first class because of the increased practice of skirting wools, which is spreading all over the world. While skirting fleeces is an improvement in the system of marketing wool, Australian wools that are skirted are increased at least 5 per cent in value thereby, and South American wool much more than this. But there was no possibility of enforcing a law imposing a penalty upon skirted wools, as has been explained so frequently before. It is not practicable to have one duty for skirted wools and another for those which are not skirted, for most of the wools would be imported at the lower duty. Such an arrangement would be of no advantage to the woolgrower, and would be a fruitful source of fraud. The only way that Congress could overcome this was by making the duty high enough to satisfactorily cover skirted wools, which are about all that are likely to come to the American market after the duty is reimposed. This consideration may account for the 11 cents per pound protection on wools which the committee has given when manufacturers believed 8 cents per pound duty would be ample. Sheep husbandry has therefore received more protection than the maximum duties which were proposed at the conference by the manufacturers. While 11 cents per pound is nominally the same as the McKinley rate on unwashed wools of the first class, it is in point of fact a modification or lowering of the duties of that law. That is to say, 11 cents per pound will now be collected upon wools, nearly all of which are skirted, whereas under the law of 1890 that same duty was collected from wools many of which were not skirted. Those who believe that 11 cents per pound is too high, must not lose sight of that fact. In view of the practice of skirting wools, this duty is not too high, for 11 cents affords no more protection now than 20 cents furnished when the McKinley law was passed. Ample protection, which was promised in the St. Louis platform, requires duties high enough to restore the flocks which during the past four years have been so ruthlessly destroyed. Free trade has reduced them until there are fewer sheep in the United States to-day than at the close of the war in 1895.

## SILVER SENATORS WHO ARE PROTECTIONISTS.

The apparent restoration of the McKinley rates, and the transfer of such clothing wools as have been taken from the third to the first class will be seized upon as a means for defeating this bill, and the Senators from the Pacific Slope and those from the Rocky Mountain States especially should see that the amendments with which the wool schedule is likely to be assailed are not permitted to deprive the woolgrowers of the rates which the members of the Ways and Means Committee were convinced were both fair and just. The woolgrowers of the United States have been well cared for by Mr. Dingley's committee. Senators from the important woolgrowing States should see to it that no amendments which are likely to defeat the bill, or which are disguised with a view to lessen protection to American woolgrowers, shall be permitted in it. In view of the flood of foreign wool now pouring in, there should be no unnecessary delay in its passage.

## LONDON WOOL AUCTIONS.

The second series of colonial wool sales opened in London on the 9th ultimo with active competition, limited, however, mostly to Americans, whose spirited buying advanced prices from 5 to 10 percent upon the choice grades suitable for America. The heavy and faulty qualities, which Americans will not buy, were neglected and weak. If any further proof is needed that entirely disposes of the contention that ad valorem duties upon wools of the first or second class are necessary in order to give American manufacturers access to the cheap wools of Europe, it will be found in the utter neglect by America of the cheap, faulty wools, even though declining in price and free of duty as they are. If these heavy shrink wools are not imported under free trade, they will never be imported under any sort of an ad valorem duty, no matter how low it may be. Orders from America for manufactures of wool have fallen off, and the European woolen industry is in a depressed condition. Neither English nor Continental buyers, therefore, can follow the upward movement of wool prices which has been caused by the American competition. Foreign correspondents believe that the sales now in progress would have utterly collapsed but for American support. Europeans generally are holding off or buying only the faulty lots until the American competition ceases, confident later on of securing much cheaper wool. They look for a resumption of the downward inclination of prices shown by the diagram, which doubtless would have continued until the present time but for the passage of the free-wool Wilson law, which seems to have benefited all of the people in the universe except those of the United States.

The above diagram indicates the general European course of fine wool prices from January, 1890, to December, 1896, as revealed by the quotations for No. 60's Botany tops. These are made from merino wools, widely varying in their fleece condition and value, but when scoured, carded, and combed are brought into a uniform condition, commercially known as tops. During the period covered by this diagram, the above quality averaged nearly double the price of the best skirted, unwashed, Port Phillip fleeces.

The downward inclination, as shown in the diagram, from 1890 until arrested in 1895, was mainly the result of the increase in the world's supply of clothing wools during that period. This downward tendency was suddenly interrupted shortly after the passage of the Wilson law, which opened the American market for wools to the almost unrestricted competition of the world, and at once made it greatly to the interest of American manufacturers to buy foreign instead of domestic wool, to the neglect of the latter. Thus stimulated by the increased American demand, prices abroad rapidly advanced 35 per cent within a few weeks. The beginning of this upward movement is indicated by the star in the diagram, which marks the point when American purchases of foreign wool and foreign goods received their great impulse.

The purpose of this diagram is to show how American prices may be influenced. The downward inclination previous to 1895 from similar causes may again occur in foreign markets after American wool duties are restored. This expectation is evidently having some influence in restraining European manufacturers from competing with American buyers at the London wool auctions now in progress, as the absence of the latter for a long time after this sale is almost certain.

I here produce an able defense of the bill by the gentleman to whom I have already referred:

[From the Philadelphia Telegraph.]

## WOOL IN THE NEW TARIFF.

Mr. Theodore Justice, the Front street wool merchant, who returned from Washington last evening, after the completion by the Ways and Means Committee of the wool schedule, which has been such a cause of bitter contention by the woolgrowers, was seen this morning by a representative of the Telegraph.

Mr. Justice states that the decision arrived at by the committee is considered impartial and just to all interests. The bill is an improvement on the McKinley schedule, and while on its face it appears to be the reenactment of the McKinley law, in point of fact it is a modification of that measure.

Judge Lawrence, who represented the woolgrowers at the hearing before the Ways and Means Committee, insisted upon a penalty upon skirted wools. That is to say, he urged a higher duty upon Australian and South American wools in cases where the inferior portions are torn off of the fleece, a practice that is increasing all over the world in the method of marketing wool.

The McKinley law imposed a duty of 11 cents per pound upon unwashed wool of the first class, skirted or unskirted. Since wool has been put on the free list, the practice of tearing off the leg and belly wool and the tag locks has increased, and the inferior portions are not imported, so that only the best part of the fleece now comes to America. The reimposition of the McKinley rates, while apparently only the reenactment of the McKinley law, is in point of fact the reestablishment only of the McKinley rates upon wool that is now more valuable than it was at the time of the passage of the McKinley law, so that in reality the new schedule is a modification or a lowering of the McKinley law.

The reason why the contention of the woolgrower for a penalty upon wools that are skirted was not adopted was because a penalty upon skirted wool would be a premium to wrap up dung or taglocks and other inferior portions inside of fleeces; besides, if there were two duties, a low one upon wools that were unskirted and a higher one upon skirted wools, nearly all of the wool would come in at the lower or unskirted duty. The higher duty or penalty would never all be collected. It would not always be possible for the custom-house examiners to determine which was skirted and which was unskirted. It would involve the closest scrutiny and the opening of every bale. This feature of the law would be a dead letter and would be of no advantage to the woolgrower, but would be an incentive to fraud and undervaluation. It would discriminate against the honest importer and would work in the interests of such importers as would swear to false invoices.

The process of skirting foreign wools was not established with a view to the requirements of American manufacturers, nor was it done with a view to avoiding American tariff duties upon wool. After wool was made free of duty by the Wilson law, the practice of skirting spread with greater rapidity all over the woolgrowing world than at any other period when wools were dutiable. The practice is the result of the demands for skirted wool by the manufacturers of the whole world. It is in the march of progress, and while it deprives some wool sorters of employment, just as the sewing machines deprived sewing women of employment, yet it is an improvement in the method of marketing wool and benefits users of wool just as the sewing machine was a benefit to mankind. This skirting clause was a point of disagreement between manufacturers and woolgrowers at the late wool conference in Washington, which has thus been happily and justly settled by the Committee of Ways and Means in the only practical way that a reasonable settlement could be effected. The retention of the penalty for sorting wool, as claimed by Judge Lawrence, would have defeated the whole tariff bill, with the attendant evil consequences of the Government having to continue to sell bonds for lack of sufficient revenue.

The other point of disagreement at the conference between woolgrowers and manufacturers was with regard to third-class or so-called carpet wools. When the McKinley law was enacted, the duties upon some of the finer grades of carpet wools, such as are now being more largely used for men's wear than for carpets, was to have been 50 per cent ad valorem. This duty of 50 per cent was to have been collected from such as cost over 13 cents. The wools that cost under 13 cents, which were supposed to be strictly carpet wools and unsuitable for men's wear, were to be dutiable at only 32 per cent ad valorem. American carpet manufacturers refused to purchase any wools not available at the lowest duty of 32 per cent. The result was that most of those which had previously cost over 13 cents, and which were to have been dutiable at 50 per cent ad valorem, were left unsold in the European markets, where they accumulated until they fell enough in price to come in below the 13-cent dividing line. American carpet manufacturers were thus able to secure all the wool they required at the lower duty, and there was apparently nothing imported at the 50 per cent duty. This was a source of disappointment to the woolgrowers, which was expressed by Judge Lawrence in the words:

"The woolgrowers, under the McKinley law, were lured by the carpet manufacturers." This was not a fair charge, for the manufacturers themselves at the time of the passage of the McKinley law could have had no expectation that wool that was to be dutiable at the 50 per cent duty would fall enough in value to avoid this duty and come in at the 32 per cent duty.

Since wool has been on the free list many kinds of so-called carpet wools that were never imported under any tariff found their way to America in large quantities for use in the manufacture of clothing. Among them were China lamb wool, Arabian Bagdad wool, Egyptian wool, some of the Morocco wools, Castle Branco wools, and some of the finer qualities of Turkey wools, such as the finer Adrianople skin wools. Small American country mills were

using these to mix with American wool in order to cheapen the latter. When the farmers drove up with their wool for sale, the manufacturer confronted them with samples of these cheap so-called carpet wools, which in many cases could be secured clean at the price which the farmer wanted for his wool in the condition in which he marketed it. This led to an exaggerated estimate of the proportion of carpet wools used for clothing purposes. They had no knowledge of the fact that nearly 90 per cent of all of them went directly into the manufacture of carpets, an industry of which the output in monetary value is as great as the output of the woolgrowing industry in the United States, especially since the latter under Cleveland's Administration has been so largely destroyed that there are fewer sheep in the United States to-day than there were at the close of the war in 1865.

The Committee on Ways and Means have overcome this difficult question very wisely and equitably by transferring from the carpet or third class to the clothing or first class the finer grades of carpet wools not largely used for carpet purposes, but used very extensively for clothing manufactures. This has removed all just cause of complaint by woolgrowers, for the bulk of the wools that remain in the third class are so coarse and rough that the American woolgrower would never produce anything like them, nor are they very likely to enter very largely into the manufacture of clothing. This judicious action of the Committee on Ways and Means removes a fruitful source of irritation and conflict between carpet manufacturers and woolgrowers that placed the whole tariff measure in jeopardy.

The two points that were the main cause of contention and disagreement at the late conference between manufacturers and woolgrowers have thus been settled by the Ways and Means Committee in a way that could not possibly be accomplished by the convention, owing to the extreme positions taken by some of its influential members. On the whole, the bill, as now drawn, is a decided improvement over the McKinley law, and, if passed, as it will be, and permitted to endure, as we trust it will, will restore the flocks that have been destroyed by the present free-trade law. The Committee on Ways and Means are to be congratulated for having brought forth a measure that is divested of the features that were likely to be a cause of conflict and irritation between the population east of the Hudson, where the McKinley law was believed to be too high, and that west of the Hudson, where the McKinley law was either believed to be about right or else not high enough. In agricultural sections the latter view was largely prevalent.

The bill will go to the Senate in such shape as to receive the support of the free-silver Republican Senators of the Rocky Mountain region, whose constituents have no direct interest in the tariff beyond its relation to wool, lead, and hides.

The only feature of the bill that is not now satisfactory to the Philadelphia ingrain carpet industry is the collateral one of Japanese jute rugs. A specific duty of 10 cents per square yard is believed to be necessary in order to protect ingrain carpet manufacturers from the competition of Japanese and Chinese cheap labor in the production of jute rugs and matings now largely substituted for ingrain carpets. The duty upon wool will increase the cost of ingrain carpets to the extent of a few cents per yard; and in order that the gap between the cost of matings and ingrain carpets may not be widened thereby, it is necessary, as a measure of protection to this American industry, that there should be a specific duty from 6 to 10 cents a yard upon these oriental productions. As the Government needs revenue, it is fair that these oriental products should bear their share of producing the revenue of which the Government is in such need.

Let this Congress do justice by the woolgrower, and he will spring into activity and prosperity. Let this Congress fail to do so, and the business of producing wool in the United States is forever at an end, and the people of the United States will very shortly be in the hands of the foreigner, who will deal with him in this behalf in the same merciless manner that England deals with everybody, whether it be her commercial rivals or the Armenians of Turkey or the Christians of Crete. The civilization of England is the civilization of greed, of extortion, of oppression, and if she can destroy the wool-producing industry of the United States, as she will if the present Congress adjourns without doing justice to the woolgrower, then England will control the production and markets of the world as to wool, and we shall find ourselves in the hands of that interesting country, and in case of war we shall find ourselves unable to clothe our soldiers.

### The Tariff.

### SPEECH OF

**HON. PATRICK HENRY,**  
OF MISSISSIPPI.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 31, 1897.

On the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. HENRY of Mississippi said:

Mr. CHAIRMAN: This extraordinary session of Congress was called by the President, as he says in his message, "because of the condition of the revenues of the Government." Elected on the money issue, he convokes Congress to consider the tariff question; while Mr. Cleveland, in 1894, elected on the tariff issue, convoked Congress to consider the financial question—the repeal of the purchasing clause of the Sherman Act. This is rather an anomalous condition of things.

In his message, Mr. McKinley further says:

With unlimited means, we are presenting the remarkable spectacle of increasing our public debt by borrowing money to meet the ordinary outlays incident upon an economical and prudent administration of the Government.

Let us see how the revenues of the Government stand. Exclusive of the \$100,000,000 gold reserve, there is over that amount in the Treasury with which to meet the "ordinary outlays of the

Government," and it has been stated on this floor that when the Democrats tried to restrain the issuance of bonds the Republicans stood by Mr. Cleveland. It does not lie in their mouths now to complain.

Practically speaking, it is no matter now how the money got into the Treasury; it is there, and where was the necessity of subjecting the country to the expense of an extra session, thereby thrusting upon it this tariff legislation, which always unsettles business and adds to the general depression; and that, too, in the face of the declaration in the inaugural address of Mr. McKinley "that economy is demanded in every branch of government at all times, but especially in periods like the present, of depression in business and distress among the people?" With the revenues arising under the present tariff law largely increased during the present month, and the increased receipts from internal revenue, together with over \$100,000,000 in the Treasury, to say nothing of the gold reserve, it does seem that with economy the country could "pull through" till the regular session in December next.

This is an evidence of the severe economy practiced, as is also the indecent haste with which the four appropriation bills, carrying about \$73,000,000, were rushed through the House by the majority, without adequate time for debate. From such economy, "Good Lord, deliver us."

It is claimed that this bill will raise \$113,000,000 more than the Wilson bill. With the economy promised, why exact so much money? It is criminal to collect more than is needed at all times, but "especially in periods like the present, of depression in business and distress among the people." Surely there must have been other causes which prompted this call. A high protective tariff is the proposed remedy for the many existing ills; the people must be subjected to a higher tax—for tariff is a tax—to overcome the depression in business and general distress.

Mr. Chairman, the theory of protection carried to its logical conclusion would reduce instead of increase the revenues of the Government, for everyone knows "high tariff protection" means prohibition, and instead of putting money into the Treasury has the effect of keeping out foreign producers; of taking money out of the pockets of the people and putting it into the pockets of the protected industries.

There should be a tariff for revenue only, not for protection.

Since revenue has to be raised, there should be some rule or device whereby taxation will fall fairly and justly upon all. No section or industry should be oppressed that another section or industry should prosper. In this Republic there should be no privileged classes favored at the expense of the masses, nor should the tariff be so high as to prohibit importations. It should be laid on luxuries and not on the necessities of life. It should not be levied and collected for the purpose of encouraging industries. This is contrary to the spirit of our Government.

Manufacturers of the East are protected in this bill at the expense of the toiling masses. The protection they ask is largely prohibitory, and it is a fact that luxuries, such as are used only by the rich—diamonds, furs, etc.—are on the free list, while bagging and ties and farming implements, necessities to the people, are on the dutiable list. How was this bill framed, and who fixed the rates? We are told by the gentleman from Virginia [Mr. Swanson], at present a member of the Ways and Means Committee, that many of the rates fixed in the bill were those suggested by the manufacturers of the East representing certain protected industries. Is it right that men interested as these are, many of them members of combines and trusts, should shape legislation, taxing the goods of their competitors; to say how much tariff is necessary to keep foreign goods out of the country? Taxes should be levied only by Congress, and after mature and calm deliberation, not to protect industries, but to raise revenue.

The farmer was not in evidence in the "hearings" before the committee who framed this bill; no hand was lifted, no voice was raised in his behalf, in the "councils of the faithful." Representing a very large percentage of the population of this great country, the farmer, the man who comes in daily contact with the soil, and who delves from morning till night, was not consulted as to what protection he wanted. Yet it has been said on the other side of this Chamber that he had been "true to the faith and to the great apostle of protection." For his devotion he finds his corn, oats, wheat, straw, and vegetables on the dutiable list, when the fact is there is practically no competition from foreign producers of these articles. His corn is burned in the West for fuel and his straw rots in the field for want of a market; and should he seek a foreign market, he will incur the risk of retaliation for the iniquities of this bill. Horses, sheep, and cattle are also protected to help the farmer, when the truth is, horses are lower than ever known; sheep, on which there is a tariff of \$1.50, can be bought for \$1, while cattle hardly pay for feeding. And all of this is done to protect the farmer. How does it protect him? He can not now sell what he has at living rates. Despite all of his devotion to the "Grand Old Party," the farmer of the West and Middle States must be "encouraged" by taxation.

The Southern farmer, than whom there is no class truer or more

patriotic, is unjustly treated in this bill by a duty on cotton ties and bagging, both of which were on the free list under the Wilson bill. Of all farm products, cotton is the most uncertain, both in field and market, requiring nearly twelve months of work and handling, and from which is realized a bare living. It does seem that this great Government might raise its revenues without this additional burden to the already impoverished cotton farmer.

If, as the advocates of this bill contend, it will not raise the price of manufactured articles to the consumer, then how can it raise the wages of the laborer? The truth is it will increase prices of goods and will not raise wages. It will force the consumer to pay the tariff, not into the Treasury, but to the manufacturer. At last the burden falls on the consumer. It has been said on the other side of this Chamber that no section or industry is discriminated against; yet they put a tariff on that which almost every man and woman in the South has to buy—bagging, ties, and farming implements—and refuse to put a tax on the barons of the East. The much-abused Wilson bill would have produced ample revenue had the income tax been permitted to stand. Even after it was eliminated the shortage last year was only \$25,503,047.70, considerably less than the last year under the McKinley bill. If Republicans desire to be fair; if, as they assert, they desire to see every industry and calling bear its proportionate share of the burdens of the Government, let them put in this bill a graduated income tax. Then, indeed, would those who enjoy most the protecting care and blessings of this great Government help defray its expenses and the burdens of taxation fall, "like the dew of heaven," upon all equally. Let them not cloak themselves behind the specious plea of unconstitutionality, for some of the ablest expounders of the Constitution hold it does not violate that instrument.

That the income tax is just, none can deny; that the privileged classes should pay their just quota of taxation, none ought to question. This, however, is what they do not propose doing. They have too long enjoyed the protection of Government, undisturbed by the heavy hand of the taxgatherer, to now stand and deliver their pro rata like ordinary mortals.

Mr. Chairman, this inequality in taxation, this robbing of the poor under the form of law to build up industries, this immunity of the privileged class from support of the Government is wrong, and will in time be resented by a patient and long-suffering people. It was never intended by the founders of this Government that industries should be protected, or that one class should "ride, booted and spurred," over the rest of the people.

All men are equal before the law, and all should equally bear the burdens of taxation. There can be no more just and equitable way of bringing about this equality than through the medium of the income tax.

Our friends on the other side rather plume themselves on the unique features of the reciprocity part of this bill. The meaning conveyed by this word reciprocity, in its ordinary sense, differs from its practical meaning in this tariff bill. Here it is deceptive. However pleasing it may be for us that a foreign nation reciprocates our good will, it is quite another matter that, through reciprocal relations established by the President, the American pork packers are permitted to enter Germany free of duty, in consideration of which the best sugar of Germany is imported into the United States free of duty. This would be a very profitable arrangement for the pork packers of the West, by which their coffers would be filled, but would doubtless have rather a depressing effect on the sugar producer, who, imagining himself protected, would have to compete with the free beet sugar of Germany. Already the pork packer gets a rebate on all imported salt used by him to cure the meat he exports.

Much has been said about the deficit in the Treasury. In December, 1897, Mr. Cleveland, in his message to Congress, said that—

The amount of money annually exacted through the operation of present laws from the industries and necessities of the people largely exceeded the sum necessary to meet the expenses of the Government.

Think of it in the light of the present times. We had more money in the Treasury than was necessary; there was a surplus. It does not seem possible. At the expiration of Mr. Cleveland's first term, March 4, 1889, there was a surplus in the Treasury of \$83,827,190.20 and \$54,207,095.75 to the credit of the national banks; the national debt had been reduced \$250,000,000, and there was a gold reserve of \$100,000,000.

This surplus was turned over to President Harrison on his induction to office.

In 1890 the McKinley tariff bill was enacted. Under its operation Secretary Foster, on February 20, 1893, instructed the Bureau of Engraving and Printing to make preparations for a bond issue, saying that—

In view of pressing contingencies preparation of the designs and plates be hastened in every way possible.

In 1894 the expenditures exceeded the revenues \$69,803,260, and this under the McKinley tariff. The deficit was on before the close of Harrison's Administration and under the McKinley bill. The

question and concern should now be, How can the deficit be remedied? I do not believe relief will ever come to the country under this bill. The factories are now turning out more goods than they can sell. How can they expect to sell an increased output, with the tariff added, when the people can not now buy what they need? The country is overstocked with goods of all kinds awaiting anxiously the dawn of that promised prosperity on the incoming of the new President. It is not on schedule time.

The poor man will be the sufferer under this bill, with money as scarce and hard to get as it now is; but he can have the comfort of knowing, "The Lord loveth whom he chasteneth;" a consoling reflection. He can remember, too, that this bill puts "apatite" and "manna" on the free list. Should it become a law, he may have to resort to the "manna" to stay his appetite, as did the children of Israel, for he will find nearly all of the necessities of life protected, even "cabbage and beans," the latter, I presume, out of deference or reverence to the "Boston baked bean" or the famous "bile bean."

The committee in making this bill seemed to have the same idea I once heard expressed by a gentleman in my section, who said, when told that a new preacher had been sent to his church, "If the good Lord will keep him humble, we will keep him poor." If the Lord will keep the people humble, this bill will keep them poor.

I do not believe it will produce the necessary revenue, because of its prohibitory features.

In my opinion, the remedy for our condition, and what the country wants, is rest from tariff agitation, a return to the money of the Constitution, and an income tax.

#### The Tariff.

#### SPEECH

OR

HON. RUDOLPH KLEBERG,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 31, 1897,

On the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. KLEBERG said:

Mr. CHAIRMAN: I vote for this bill not because I approve all of its protective features, but because the Democratic district convention which nominated me last fall at Corpus Christi, Tex., declared for a tariff with the same degree of protection upon the raw materials of the South, and especially upon hides, wool, and live stock of my district, as was afforded the manufactured articles of the North, and because that convention further declared in favor of any and all tariff necessary for the economic administration of the Government.

The present law is admittedly inadequate to raise the necessary revenue of the Government and discriminates against the raw material of my district and the South and West generally, and the issue I must meet by my vote is whether I will suffer the present tariff law to remain as it is or vote for this bill which protects wool and live stock in the same degree that it protects manufactured articles, and under the said instructions I am compelled in good faith to that convention and my constituents to support this bill, although I would prefer to vote for a tariff bill formulated by a Democratic majority, and although I may differ with the views of the minority.

The national Democratic platform of 1896 declares for a tariff for revenue justly and fairly imposed throughout the country, without discrimination against classes or sections, and thereby condemns the present tariff law, which discriminates against free raw material, and there is nothing in the national platform which conflicts with my instructions of said district convention, or which prevents a Democrat from supporting this bill, and inasmuch as that the Democracy of my district has declared against free raw material, and especially against free hides, wool, and live stock, I feel it my duty at the first opportunity to vote for a tariff upon wool and live stock which affords the same protection to the producer that is afforded the manufacturer. It may be said that this bill will pass without my support, and that therefore I may vote against it, and thereby strengthen the position of the minority; but I feel that I would be dodging the issue and would be violating my district instructions as much so as if the fate of the bill depended upon my vote and I should vote against it. It is due the Democracy of my district, as well as my constituency, that I take a positive attitude toward this bill, and I mean to do it fearlessly and conscientiously, and in accordance with said instructions as I understand them and the people of my district understand them.

In voting for this bill, therefore, I chose it as a lesser evil than the present law, which is both inadequate to raise the necessary revenue for the economic administration of the Government and which discriminates against the raw material of my district and the South and West, and not because I believe that it will bring about prosperity, as is claimed by the other side of the House. The return of prosperity can only follow deeper reforms; reforms which are vouchsafed in the Chicago Democratic national platform of 1896; reforms which will be brought about alone in the realization of the planks of that platform; reforms which involve bimetallicism through the free and unlimited coinage of both gold and silver at the ratio of 16 to 1 by this nation alone; by a broader, direct, and more equitable system of taxation; by the destruction of trusts and monopolies and the regulation and control of corporations.

Theoretically I would advocate free trade, but practically I conceive it, under existing conditions, not only injurious and detrimental to the best interests of the country, but impossible. We must take conditions as they are and not as they should be, and as long as the tariff affords the only practical means of raising revenue and as long as it carries with it incidental protection, that protection must inure equally, as far as possible, to all classes and all sections. I have done all in my power and shall continue my efforts in securing a tariff on hides; but if I can not get a whole loaf, I must be satisfied with less and accept the bill with a tariff on wool and live stock.

The stockmen, farmers, and business men of my district believe that their interests have suffered under free trade and inadequate protection. They have so expressed their views in the convention which nominated me and the election which elected me as their Representative in Congress, and the highest duty and the utmost good faith alike demand that I prove true to my pledge and maintain the confidence which they have reposed in me. I can serve no higher purpose.

#### The Tariff.

#### SPEECH

OF

HON. ELIJAH B. LEWIS,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 30, 1897,

On the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. LEWIS of Georgia said:

Mr. CHAIRMAN: Being a new member of the House, and after hearing so many speeches on the tariff by the able members of both sides of the House who have discussed the subject so adroitly and so well, I doubt the practicability, as well as good judgment, in attempting to speak upon the bill under consideration. And I have very serious doubts that I will be able to interest the members who have listened so long to this well-worn subject. But when I think of the great injustice that this bill, when enacted into law, will do the great number of people of the United States, I feel that I would be recreant to the trust imposed in me by a confiding people if I did not enter my solemn protest against the passage of this measure which will further burden an already down-trodden people with greater taxes.

I am anxious to see prosperity in this country. The people are looking and praying for it. And speaking to-day as a Democrat, I can frankly say that if I thought the bill under consideration would bring permanent relief to the suffering, clamoring masses, I would throw to the winds my long-cherished political opinions and join hands with you gentlemen on the other side to pass this bill, and thereby alleviate the suffering of an oppressed people. But your tariff bill will not bring about general prosperity. It is true it will enlarge the profits and income of a part of the people on the one hand, and increase the burdens of the masses on the other hand. Please tell me how a high protective tariff will benefit the great agricultural interests of the South and West? And I am sure no class of people of the United States has been more depressed the last few years than the farmer and those dependent on him. They are not able to buy the necessities of life under the existing tariff and present prices. Then what will be the effect of this bill under consideration on the farmer? He will get no protection on what he produces, but will have to pay higher prices on all that he buys. You have raised the taxes on everything he consumes and wears. Let me take the cotton planter, the great industry of the South. He gets no protection on his cotton whatever; yet by this unjust bill you will make him pay a greater price for his sugar, and all he consumes which gives life; you increase

the cost of all the clothing, hats, and shoes that his wife and children wear; you tax and increase the cost of his trace chains, hames, back-bands, and plows, implements with which he produces the cotton.

But you do not even stop there with your iniquitous tax. You go further, and when his crop is made, and is in course of preparation for the market, you tax the cotton gin as well as the bagging and ties that go around it; the poor cotton farmer is taxed on everything in this world that he consumes, from the matches with which he kindles his fire in the morning, to the close of the day, when he takes his last cup of coffee with sugar in it. I have shown that the cotton farmer is taxed on every item that he buys or consumes, but gets no protection on his own productions. There is not a day in the year that he is not buying or consuming taxed products, while he goes a whole year without getting in return 1 cent from a tariff. At this time, when the farmer is pressed to support his family and keep his head above the water, a great many of them not able to have coffee and sugar every day in the week or to clothe their families as they should be at the present prices of goods and procure such food as they are compelled to buy, you are going to make their lot a harder one by placing a higher tax and making them pay higher prices on what they consume. You can not deny this. The people of the cotton States do not deserve this treatment. They ask no protection, but they do ask that you will not burden and oppress them.

What are the cotton States doing for the consumers of this country? Take last year as a basis, when we made decidedly the shortest crop for the last five or six years. We supplied this country with all the cotton used and exported to Europe \$190,056,460, amounting to one-fourth the exports of merchandise from this country for the fiscal year 1896, thus producing one-fourth of the exchange between this country and the balance of the world. Yet this great producing class is entirely ignored by your bill.

Now, let us see what you have done for the Western farmers, the largest producers of grain, hay, beef, and hog products in the world. You extend to them the empty appearance of a tariff. You do give them a tariff on their corn, oats, and hay products, but what benefit is it to them, when none of these products are imported to this country, but, on the contrary, the Western farmer exports these products to all parts of the world? Let us see what you do for the corn grower. You give him a tariff of 15 cents per bushel on his corn, when the revenue on corn last year was only \$595. This will increase the revenues to be divided out among the entire Western farmers \$189.51 all told. What a burlesque, such cheap and shallow ways to deceive the Western farmer! You make a duty of 25 per cent ad valorem on flour, when none is shipped here. You make a duty on foreign hay of \$4 per ton, when there is no danger of any being brought here. Also a duty of \$1.50 per ton on straw, when the Western farmer burns straw to get rid of it. You simply make your bill cover grain and the products of the Western farmer, which means nothing, senseless as a protection or promoter to his prosperity. When it can not benefit him, please tell us what you do it for? Is it to deceive him, to satisfy him? The Western farmer certainly has too much sense to be caught with any such chaff as this. However, you could benefit the Western farmer by putting a tariff on hides. We find the imports of hides to this country in 1896 were \$10,000,000, but you put them on the free list, permitting the world to ship their hides to this country in competition with the cattle raisers of this country without paying a duty.

I am frank to admit that I appreciate your opinion of the intelligence of the Southern cotton planter, whom I have the honor in part to represent, when you do not attempt to deceive him by placing a tax on cotton, which could not benefit him. But let me ask you why you do not place a tax on long-staple cotton, when you claim to be so anxious to protect every industry of the country, when it is a fact that Egyptian cotton is being imported to the United States in competition with our long-staple cotton? I find that considerable long-staple cotton was imported to this country in 1896; yet you offer no protection, but you do not neglect to protect every manufacturer in this country.

#### POPULATION ENGAGED IN AGRICULTURE.

We find there are engaged in agriculture alone in the United States 8,285,618 people. This does not include gardeners and stock raisers, but those engaged solely in legitimate agriculture. There are 5,091,293 people engaged in manufacturing and mechanics. Thus, we find nearly twice as many people engaged in the pursuits of agriculture as compared with those engaged in manufacturing. But this great number of agricultural people gets no protection, but must contribute its share to protect a smaller number engaged in manufacturing. All tariff legislation is a tax on the farmer, while the farmer does more to maintain the nation than any other class of people in it. They are the great producers of the raw material of the country. Credit is due them not alone for feeding this nation of people, but let me show you what they are exporting each year, thereby creating exchange, or, in return, bringing foreign money back into this country.

## Exports of agricultural products to foreign lands for 1896.

Article.	Value.	Article.	Value.
Cotton .....	\$190,056,440	Provisions—Continued.	
Breadstuffs:		Other meat products.	\$1,889,877
Corn .....	97,336,862	Dairy products.....	6,290,570
Wheat .....	39,709,808	Livestock:	
Flour .....	62,029,217	Horses, cattle, sheep	41,840,969
Provisions:		Total .....	492,967,966
Beef products .....	90,969,306	While the entire exports	
Hog products .....	63,719,661	from United States were	863,200,487
Oleomargarine .....	8,670,174		

This table shows that the South and West furnished nearly three-fifths of the exports of this country.

The farmer furnishes the products that give business to and support the railroads. The farmer furnishes three-fifths of the commerce that is carried on the steamers and sailing vessels to foreign countries, thereby largely sustaining our merchant marine. The farmer creates from these exports three-fifths of the foreign exchange on commercial commodities. The farmer is the first relied on to stop or cure the ills of a panic. When their products go into the market money is immediately put into circulation. What would have become of this country the last few years, when Europe was selling our bonds back here and demanding our gold in return, when the speculator was buying up our gold and shipping it abroad for the profit in it, had not the farmer continued to send abroad exports at the rate of \$500,000,000 annually? Let me ask justice for the great producing class of this country, which can not be meted out to them under the bill that you propose to enact into law.

## WHO PAYS THE TAX?

The Republican party still holds to the old, worn-out theory that the foreigner pays it. This is absurd and without reason. Certainly the consumer pays it. Does not the user of whisky and tobacco pay the revenue tax on these commodities? Most assuredly he does. Then it is just as plain that the consumer pays the tariff duty on all the dutiable goods brought to this country.

In discussing the tariff of 1857, when further reductions were proposed in the tariff bill of 1846, Mr. Washburn, of Maine, said:

The bill would reduce the revenue and help the consumer and producer. It enables the home manufacturer, who uses many of these articles, to sell cheaper than before, and thus carry on a successful competition with foreign manufacturers. It encourages him to go to work, and by so doing tends to increase the production and reduce the price upon whatever he works, while he secures a fair profit to himself.

Senator Sherman, speaking in the same connection, in 1857, said:

All parties agree to the absolute necessity of reducing the revenue. The reduction can only be made in one of two modes, either by enlarging the free list or by reduction of the rates of duty.

## NO NECESSITY FOR INCREASE OF REVENUE.

Why increase the tariff? You tell us that you estimate that it will increase the revenue \$118,000,000 the first year. This is an additional tax on the people. I say to you that it is not necessary. The statement of the condition of the United States Treasury shows that we have to-day \$318,000,000 on hand. Our deficiency last year was only \$25,000,000. I mean to say that the Government paid out that much more money than we received. I believe, with an economical administration of this Government, under the Wilson tariff bill, and with average fairly prosperous times, sufficient revenue would be produced to run this Government. I have shown that, with the same economy as that practiced by the last Democratic Congress, the income under the Wilson tariff bill last year would have been equal to the disbursements. Then why this great hurry to place this additional tax on the people? We take your estimate:

Income from the bill, first year.....	\$113,000,000
Add to it the net cash surplus in the Treasury.....	118,000,000

Making total locked up in Treasury.....	231,000,000
over and above the \$100,000,000 gold reserve.	

What is the necessity of so much money lying idle? It is a wrong principle. It will encourage extravagance and waste.

## DISAPPOINTMENT PREDICTED FROM THE BILL.

But I predict disappointment from your bill. It will not increase the revenues that you expect. On investigation I find the imports of all merchandise from foreign countries to this country as follows, for the—

Year 1895 .....	\$601,673,307
Year 1896 .....	681,579,556

Or a falling off of.....	120,000,751
--------------------------	-------------

Then, if this great decrease occurred last year, both years under the provisions of the Wilson tariff bill, what, may I predict, will be the shortage for the first year under your Dingley bill? I now suggest the opinion that as a revenue earner it will prove, to an

extent, a failure; but, as a protection to the manufacturer and a hotbed for trusts and monopolies, it will prove an unbounded success. However, to the contrary, with the great majority of the people it will prove to be a great detriment. And I warn you that the day will surely come, and it is not far off, either, when your party, that perpetrates this undue burden on the people, will be turned down and cast out of office. The Democratic party entertains correct principles on this most important question, and will surely succeed by the will of the people. You place the responsibility of the past few years of panic and depression on our party. This is not true. The Treasury was running short under President Harrison's Administration, and through his Secretary of the Treasury, Mr. Foster, he had issued a letter calling on the Department to furnish a form of bond to be issued and sold, so as to replace money in our Treasury.

Then go back to the panics, the great number of railroad failures, nearly all the roads in the South going into receivers' hands. Then look back at the great number of strikes and the laborers thrown out of employment all over the North and West. What better evidence that depression and discontent existed all over this land of ours, and that the people were dissatisfied with the Republican party, when, in November, 1892, they elected a Democratic President and Congress by overwhelming majorities. It is true that President Cleveland, under his Administration, did not give the relief that we hoped for, but you must not charge it to the Wilson tariff bill. You must remember that Mr. Cleveland sold the first lot of \$50,000,000 of bonds before the tariff bill was enacted. I believe the continuation of the McKinley tariff bill, instead of the Wilson bill, would have made the last two years of our depression more deplorable. You gentlemen on the other side of the House, in this debate often censure us with President Cleveland's bond issues. This we repudiate. We tell you now for once and all time that his actions did not meet the approval of the Democratic party. While you at one time will taunt us with it, you afterwards applaud Mr. Cleveland and say he did the right thing.

## UNDER WISE PRINCIPLES THERE IS HOPE FOR THE NATION.

Mr. Chairman, under wise principles I have the utmost confidence and the brightest hope for this naturally great country of ours. The greatest opportunities now present themselves. Broad fields of new trade are now open to us. Countries in the past ignoring our great facilities, our great industries, our great intelligence and enterprise, have heretofore recognized only England and Europe as their markets, and have largely traveled the same old ruts for generations. But they are now looking this way for trade connections and exchange of commodities. There is Japan and China, splendid fields for us. Mexico has heretofore gone to Europe. Central and South America right at our door, all on the same continent, yet what proportion of their trade do we get, when this should be their real market? It looks as if Cuba will in time regain her freedom, and I trust the day is not far distant. What a desirable customer free Cuba would be to us! While naming the great territory surrounding us, I must not forget to mention the Hawaiian Islands. Let us seek a liberal share of this trade, thereby building up our shipping industry and our railroads. Then our manufacturing interests will grow without limit, and on a broad and permanent basis. However, this great progress can not be obtained under a high and protective tariff, but strictly on the lines of a low tariff, at all times as low as an economical administration of the Government will admit of.

This country, with 70,000,000 progressive people, with all of the natural facilities at our command, our gold and silver mines, iron and coal mines, our extensive and rich agricultural lands, our great manufacturing interests, has grown to be too great for us to follow protective tariff. That means stupidity. It will stunt the growth of our manufactures, for certainly they will make no effort for trade outside of this country, when they would have to compete with foreign trade, while here at home they are protected on all they sell within our borders. I say that it is perfectly natural, then, that they will limit their output to the demand and consumption in the United States alone, in which trade they are protected against competition. I tell you this will limit our greatness; it will dwarf our nation. Protection that forces all the consumers to patronize their home manufactures, virtually limiting the manufactures to sell only to our home consumers, reminds me of an old story of two snakes fighting. They began swallowing each other, and at the end of the fight only their heads were left unswallowed. It again reminds me of two gamblers locked in a room for a year to gamble with \$1,000 each. They had about the same success, and at the end of the year they were both poor, having had no outside returns. They were compelled to spend each one's share for living expenses.

Now, let this country be broader. Let us not adopt the silly rule of living on each other, but let us be broad, and by a reasonable tariff, equally levied and as nearly as possible just to all. Then let us encourage reciprocity. Let us solicit the trade of every land, and the result will surely be a great nation of manufacturers and producers—a great nation of people.

Fort Years of the Wilson-Gorman Tariff Bill, or Bankruptcy Made Easy by Democratic Legislation and Incompetency.

## SPEECH

OF

HON. WALTER P. BROWNLOW.

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 25, 1897.

On the bill (H. R. 370) to provide revenue for the Government and to encourage the industries of the United States.

Mr. BROWNLOW said:

Mr. CHAIRMAN: The harvest of free trade is the impairment of private and public credit, the laxity of private and public morals, suspension of manufactories, enforced idleness and vagabondage, low wages, general inability to meet obligations, increase of individual and public debts, decadence of educational interests, shrunken values, the balance of trade on the wrong side of the ledger, a depleted Treasury, universal distress, and widespread bankruptcy.

The harvest of protection is money—good and plenty—general obedience to law, constant employment, increasing demand for labor, high wages, low prices for family supplies, rich rewards of agriculture, strong educational development, diversified and multiplied industries, private and public credit, good values, natural conditions of trade and business, increase of national wealth, a full Treasury, balance of trade in our favor, and peace, contentment, happiness, and independence for the masses.

There is one fact unalterably fixed in American history. It admits of no successful denial. It is so patent that "he who runs may read, and the wayfaring man, though a fool, need not err therein." It is a principle of governmental science that is recognized to a greater or less extent in the polity of every prosperous and progressive nation of the earth. As wealth increases, civilization advances, and taste, refinement, and education enlarge the possibilities of human effort and man's capacities for enjoyment, this principle becomes more and more the *sine qua non* of good society and good government. Government is composed of integers, and it is a proposition evident to the common intelligence as well as the student, thinker, and economist, that whatever conduces to the comfort, happiness, and prosperity of a majority of these integers, or, to use the trite and felicitous phrase, "the greatest good to the greatest number," must redound to the grandeur, glory, strength, and permanency of the nation itself, and that measure or set of measures which secures these results must certainly be correct in theory and beneficent in practice. This is the crucial test of all suggestions of statesmanship enacted into law.

The principle to which I refer and shall attempt to elaborate is a

## TARIFF OF PROTECTION.

and its varied and countless blessings, permeating all conditions of society, constitute the dominant, unquestionable fact that it has been the chief factor in the marvelous development of this country.

Tariff taxation is the least offensive and burdensome of all schemes to raise revenue. Its machinery is concealed from the public eye. Its operation is as silent as the march of the stars and the distillation of the dew. It establishes no espionage over the private affairs of the people. It sends out no taxgatherer with a distress warrant in one hand and an auction hammer in the other. It imposes its burdens upon the rich, the class able to bear them. It is the only governmental feature that has the least sympathy for the unfortunate; for while the occupant of the cabin pinned to the hillside, hid in the mountain gorge, or flecking the solitude of the Western frontier, under our free institutions, is as potential a factor of our body politic as the iron king or the owner of a railroad system, he knows not what it is to pay tribute to the national exchequer. There is no exaction upon his simple tastes and habits save that of his local government. His freedom and citizenship are without a burden as far as regards Federal jurisdiction. A protective tariff is not like the water that turns the mill wheel, leaving never to return, but rather like the fruitful soil, restoring in bountiful harvests an hundred fold more than it exacts.

The bill under consideration, formulated after a prolonged, careful, nonpartisan, and nonpolitical investigation and study of our industrial conditions and the varied needs and demands of the whole country, is the crystallization of financial and economical wisdom and the very

## GENIUS OF EQUITABLE ADJUSTMENT.

It doubtless has some faults and imperfections; it may be tintured to some extent by a compromise between conflicting opinions and judgments; still, in its entirety, it is the substance, and not the mere shadow, of what the large majority of American voters demand and what the unequalled depression of every material in-

terest requires. It is a rift in the dense cloud of gloom that has hung for four years over nearly every American home. It is a sign of returning life to the dead body of American enterprise. It is a prophecy and promise of restored confidence and prosperity.

From the close of the war in 1865 to January 1, 1879—a period of nearly fourteen years—there were insurmountable obstacles to real, substantial progress and development. The clash of arms had ceased, but sectional passion and hate were no less bitter and vindictive. The moral laxity produced by the war carried its demoralizations far into this period. The stream of national life was covered with the drifting wrecks of old systems. It was the reign of fictitious values, and the country was cursed with reckless speculation and the uncomputed evils of a depreciated currency. The States that composed the fallen Confederacy were in ruins, their fortunes had been swept away in the effort to establish their quixotic schemes, their wealth producers had become freemen, and they had no stock and implements to cultivate their lands and no money with which to buy them. And still, with all these hindrances, no other fourteen consecutive years of the country's history prior to the great struggle witnessed such rapid accumulation and advancement. How could the country prosper under such a concurrence of misfortunes and serious conditions?

## PROTECTION TO AMERICAN INDUSTRIES

is the solution of the problem. Industrial enterprises of every kind were running on full time, and the opportunities for labor at remunerative wages were practically unlimited. Ironmasters and mill owners found ready sale for their wares, and farmers had a good market for all their products. Honest speculators had no reason to complain of their gains. The groundwork of the new era of industrial activity and material progress had been laid when the year 1879 arrived. It was solid achievement of the Republican policy of a protective tariff. The indebtedness of the Government, in the meantime, was constantly decreasing, and the times were "rotten ripe" for what did occur—the resumption of specie payment.

This was the sword that cut the Gordian knot in the harness which fettered the Republic, and in her new zeal and refreshed strength she bounded forward, "rejoicing as a strong man to run a race." Uncertainty and apprehension disappeared. With settled values, business rose to a Nile flood. A dollar was a dollar, worth 100 cents, no matter what the shape, size, or material of the token. Gold and silver came tumbling from their hiding places into the stream of the circulating medium. Money was abundant in all sections and for all purposes. The contented and prospering farmer, out of the steady inflow of his gains, improved his lands, bought the finest strains of stock, educated his children, purchased the best literature, and built larger barns and a more commodious residence, with all the appointments of modern taste and elegance. The thrifty housewife, though not a queen of a gilded drawing-room of fashion, whose laces of silk, embroideries of linen, and tapestries of silver and gold curtain a fairy's court, had a happy home to whose elegance, comfort, and luxury she in no small measure contributed with the product of her own industry. Young men, with the fire of ambition in their hearts and plenty of cash in their pockets, left the older States to buy cheap lands, build homes, and found new States in the empire of the West. The standard of the public school was elevated, its curriculum enlarged, and its field of usefulness broadened to meet the educational necessities of the common masses. Churches and educational institutions were built in every section of the country, universities and colleges were endowed with fabulous sums, and money was poured out without stint to found and sustain charitable, moral, and religious enterprises. Business organizations and combinations of capital fearlessly embarked in ventures whose magnitude and cost were appalling to those with conservative inclinations. It was an era of railroad construction, leaving no section of importance without transportation facilities, and the carrying of farm productions one way, merchandise the other, and millions of travelers both ways, rewarded these railroad investments with handsome dividends. It was unexampled, universal activity, and unexampled, universal prosperity. Idiocy or insanity would have been pronounced of any man who dreamed of a deficit in the Treasury or suggested the idea of a private or open bond deal to maintain the reserves and uphold the credit of the nation. The public debt was reduced to a mere fraction compared to its original size, and the end of it was in sight. The national wealth had increased from thirty-two billions to sixty-five billions. This is history. Such was the independence, glory, and promise of this nation when

## THE OCTOPUS OF FREE TRADE

threw its long and fatal tentacles around its resources and prosperity, paralyzing its energies, crushing its hopes, and changing the fruit of its peaceful victories into bitter ashes. Aside from the loss of life, the devastation was more complete than that wrought by the havoc of the civil war. The losses sustained directly and indirectly were greater than the cost of all the wars in

which this country has engaged. Fires out in the furnaces, closed mills, silent factories, cities and towns unable to feed and house the hungry and shelterless, women and children beggared and in helpless want, the highways crowded with tramps whose tatters covered armies of skilled and willing workers, billions hoarded in the vaults of the cities and no money in the pockets of the masses, the national debt constantly increasing, bond deals to meet current expenses, the country in the hands and at the mercy of money sharks, woe on every side, and wails from every quarter. Bank failures were an everyday occurrence, there was a general feeling of dread and insecurity in financial circles, and one man's paper was about as good as another's. Values slumped to almost nothing, and the accumulations of years disappeared in a day. Such was the sad and distressing conditions brought upon the people and the nation by the enactment of

#### THE WILSON LAW.

A strictly partisan measure, ostensibly passed to lighten the burdens of the people and at the same time to provide an ample revenue for an economical administration of the Government, it signally failed to accomplish its purpose, as "Cheap John" statesmen and economists had declared that it would. Coddled as a choice measure of reform by a party held together by the cohesive power of an inordinate greed for office, it proved a Pandora box of disasters unequalled and unutterable. And the four years these plagues were upon the land will be known in the annals of the future as the "black period of American history."

The Wilson law, conceived in sin, shapen in iniquity, brought forth in crime, its accoucheurs blind to the interests and manifest destiny of this great country, rocked in the cradle of fanaticism and nurtured upon the pabulum of party heresy and rancor, it was entirely within the natural order of things that it should become the prolific parent of immeasurable evils. It was an incendiary, applying the torch of destruction to the substance of the people. It was a robber, snatching clothing from the backs and food from the hands of the toiling masses. It was an evictor, driving men, women, and children into the woods and highways. It was a riot breeder, filling the streets with frenzied mobs yelling for work, bread, or blood. It was a monster, gorging itself upon the distresses and woes of a submerged people, in comparison with which the ancient Minotaur of Crete that fed on Athenian youths was a patron saint.

An inscrutable Providence permits nations to scourge themselves as well as each other, and this accounts for the blind infatuation that betrayed and misled the majority of American voters when they placed the Democratic party in charge of our national affairs in 1892. Intoxicated with the power so long withheld from them and in the insanity of their zeal to show themselves the masters of the situation, with precipitate fury and reckless abandon they addressed themselves to the task of obliterating every vestige of the Republican policy and legislation that had brought the country triumphantly through its most trying ordeals and added to that deliverance processes of recuperation and resources of wealth that secured incomparable prosperity and of substituting in their stead measures of reform and relief in consonance with Democratic maxims and the accepted standards of Democratic statesmanship.

#### THE REACTION WAS QUICK AND CRUSHING.

Industrial prostration, paralysis of business, financial distress, and private and open deals in bonds, representing \$262,000,000, to cover Treasury deficits and to keep the machinery of the Government in operation. There was no modification of these untoward conditions until the Democratic banner went down in ignominious defeat last November. The people repented of their folly in sackcloth and ashes, and prayed the God who emancipated ancient Israel for deliverance from a living death and the restoration of the possibilities and opportunities from which they had so blindly and perversely turned away. An answer to these fervid and persistent appeals came in the election of a Republican President and Congress.

With its return to power new, vast, and momentous responsibilities devolve upon the Republican party. It has to clear away the wreckage left as the monumental proof of either the incompetency or dishonesty of Democratic statesmen. It has to lay a restraining power on the cruel conditions that held the country in their destructive thrall for the last four years. It has to remove the cloud upon the public credit. It has to break the despotism of a syndicate of bond sharks who made fabulous fortunes out of our national calamities and through the devious processes of Democratic mismanagement. It has to renew the energies and rekindle the hopes and aspirations of a crushed and impoverished people. It has to recoup the losses of the past four years and repair the desolation wrought by the havoc of the free-trade heresy. It has to assure the brave defenders of the Republic that their service shall be substantially remembered, and that they shall have as a compensation for the increasing infirmities of advancing age the deserved bounty of a grateful Government. It has to cheer and brighten the home of the dead soldier's widow

and dependents by the guaranty that the affliction in the loss of their natural protector and breadwinner shall in some measure be modified. It has to protect the weak against the encroachments of the strong and the poor against the despotism of corporate power and organized greed. It has to provide opportunities for labor and possibilities for the aspiring and ambitious. It has to relight the fires in the dead furnaces, set the wheels to humming, the spindles to whirling, and the looms to beating time to the rhythm of industry's glad, new song. It has to revive trade and restore business confidence and the régime of the wise and prosperous years between 1879 and 1893. In all its declarations the Republican party stands pledged to achieve these possible results, and will not be deterred from their complete accomplishment by the Democratic

#### HUE AND CRY OF PATERNALISM.

The Republican party recognizes the conservation and promotion of the people's interests as the paramount function of government. It makes vigorous and aggressive war against all tendencies to party aggrandizement to the detriment of the public service. In the phenomenal emergency now upon the country, and directly produced by the blight and curse of Democratic maladministration, it is determined to reinstate that measure of tariff taxation whose wisdom and efficiency are attested in the happiness, affluence, and general advancement of the people.

Comparisons may be odious, but they perform a wholesome service in determining the relative merits and demerits of the matters compared. The Republican party courts a close and honest investigation of the results of protection in direct connection with those of its old antagonist.

Under protection financial, commercial, and industrial disturbances were rare, of short duration, and attended with no serious results affecting the general public. Under "tariff reform" disaster followed disaster in all departments of business, inflicting universal injury, and there was no day without a collapse and a panic. Failures, if they spread dismay, elicited no surprise and but a passing comment, and the general query was, "Who next, and what next?" Under protection there were no Treasury and bond deals. Under "tariff reform" Treasury deficits was the unchanging status and bond deals the regular order of business. Under the McKinley law, that "crowning iniquity" which was so offensive to our Democratic friends, and who exhausted their stock of curses in damning it to everlasting infamy, the revenue was sufficient to meet every Government demand, and until overthrown by a Democratic Administration it annually enlarged the volume of circulation with the comfortable sum of \$48,000,000. Under a "tariff for revenue only," its immediate successor, there was a deficit of \$181,801,914. The total Treasury receipts during the first thirty months of the McKinley law were \$916,621,050, and during the first thirty months of the Wilson-Gorman law they were \$763,438,751; loss in thirty months under the Democratic "tariff for revenue only," \$153,182,299. During the first thirty months of the McKinley law the customs receipts were \$487,959,564, and during the first thirty months of the Gorman-Wilson law they were \$381,731,978; loss under a Democratic "tariff for revenue only," \$106,227,586. During the first thirty months of the McKinley law the internal-revenue receipts were \$380,066,716, and under the Wilson-Gorman law \$336,728,475; loss under a "tariff for revenue only," \$43,338,241.

These cullings from the records of the Treasury are striking and eloquent. They compass the whole matter. They appeal to the sober sense and dispassionate judgment with the inexorable logic of actual facts, which are certainly more convincing than the current and cunning sophistries of "tariff-reform" advocates and free-trade economists. They should settle at once the fierce and prolonged contention between protection and a "tariff for revenue only." This brief excursion into the field of statistics discovers to us the cause of the

#### DEFICITS AND BOND DEALS

during the unfortunate Administration of President Cleveland and the addition of \$262,000,000 to our national debt, which would have been decreased by twice that amount under the skillful financial management which always characterized Republican administrations. We now discover the prolific source of the ills of our woes.

Protection means the utilization of idle forces, the full compass of natural advantages, solid progress, constant and sturdy growth, the selection of the fittest and most useful, better methods, an adequacy of sound currency, every convenience of exchange, a harmonious adjustment of all interests, increased opportunities for the safe and profitable investment of capital, the most liberal encouragement to labor, diversified industries, a free internal commerce, ascending planes of thought and purpose, higher ideals of patriotic consecration, broader conceptions of individual and collective responsibility, new fields for the explorations of science, a friendly and generous competition within our own borders and not with the enslaved pauper labor of the outside world, a nationality made strong and invulnerable by the courage, aspiration,

and intelligence of its citizenship, and a civilization constantly in quest of richer acquisitions. It means the subversion of barren idealities, mere makeshifts to tide over present emergencies, and the expedients resorted to by demagogues and place hunters to deceive and mislead the electorate, to gain the dubious honor of a party triumph, and to subserve selfish ends. It means the extirpation of sectional jealousies and prejudices and the imperishable integrity of a common country. It means the establishment of a merchant marine that shall cover the seas and be inferior to that of no power in equipment and capacity. It means that in all the elements of strength, greatness, and beneficence ours shall lead the way for the nations of the earth. It means that this land shall be the almoner of Heaven's most precious gifts to man and the final arbiter of the political destiny of the world.

The past is valuable only for the lessons it teaches and the treasures of wisdom it leaves to the future. It has reared along its course signals to warn us of snares, delusions, dangerous pitfalls, and fatal follies. It has graven on its monuments a full history of its successes and defeats. It has handed down to us a complete chart of the way that leads to national blessing and aggrandizement. If we take it as our guide and counselor, it will lead us through the present gloom and distress to the rich fruitions which have crowned the Republic in its best and brightest days.

#### PROTECTION HAS PASSED THE EXPERIMENTAL STAGE.

In my humble judgment full recovery and permanent immunity can only be achieved by following with unflagging zeal and unwavering fidelity distinctively Republican lines. The bill under consideration is a repetition of the McKinley tariff that went into operation the 6th of October, 1890, and by comparing its wholesome effects with the disastrous results of the free-trade law which the present bill seeks to repeal we shall have an earnest of the immeasurable good that will accrue if it is enacted into law.

I have already shown the relative effects of the McKinley and Wilson-Gorman laws as regards the public revenues, and now I propose to go into some details and show their relative influence upon the business interests of the country.

#### SUMMARY OF FARMERS' LOSSES FROM JANUARY 1, 1893, TO JANUARY 1, 1896.

I here submit a brief summary of the aggregate losses to farmers in the slump in the value of their leading crops and in their live stock during these four years:

##### Depreciation in annual farm values.

	Value.		Total values.	
	1891.	1895.	1891.	1895.
Corn.....per bushel..	40.6	36.4	\$236,439,228	\$567,500,106
Wheat.....do.....	83.9	80.9	513,472,711	237,908,908
Oats.....do.....	54.8	44	25,642,000	11,964,826
Rye.....do.....	81.5	76.9	222,312,267	163,553,068
Cotton.....per pound..	8.6	7.6	297,377,014	259,164,640
Hay.....per ton.....	8.30	8.35	411,110,000	368,185,615
Potatoes.....per bushel..	67.3	56.6	59,475,000	78,984,901
Wool.....per pound.....	17	9	52,258,256	20,486,705
Barley.....per bushel..	54	33.7	40,500,000	29,812,419
Buckwheat.....do.....	53.4	45.2	6,948,000	6,900,325
Tobacco.....per pound..	8.4	7.2	40,000,000	35,574,000
Total.....			2,539,434,476	1,610,712,597

Annual loss on crops in four years, \$728,721,879.

##### Depreciation in live-stock values.

	Value per head.		Total values.	
	Jan. 1, 1893.	Jan. 1, 1896.	Jan. 1, 1893.	Jan. 1, 1896.
Sheep.....	\$2.50	\$1.70	\$116,121,270	\$55,167,735
Swine.....	4.00	4.35	241,691,415	186,529,745
Milk cows.....	21.40	22.55	351,878,132	363,965,545
Other cattle.....	15.16	15.86	570,749,155	598,928,416
Horses.....	65.01	63.97	1,007,593,636	600,140,196
Mules.....	75.55	45.29	147,882,070	103,294,457
Total values.....			2,401,735,678	1,737,926,064

Annual loss on live stock in four years.....\$733,829,594

Annual loss on crops in four years.....728,721,879

Total annual loss to farmers.....1,462,551,473

And to be added to these appalling figures is a similar depreciation in the value of dairy products, eggs, fruits, poultry, nursery stock, the products of truck and seed farms, and the rice crop. At the same ratio, the losses of the farmers in the years 1893 and 1894 will swell the aggregate to a greater amount than the cost of the war. Is it any wonder that the stricken and helpless wealth producers, who saw their hard earnings melting away like snow in a summer's sun, reverted to the era of their marvelous prosperity under the protective tariff fathered by President McKinley, and earnestly worked and enthusiastically voted for its reinstatement?

Is it any marvel that they wanted their own products and all other products of American industry safeguarded against the blighting curse of the free-trade heresy?

#### WHOLESALE CUT IN BRIEF DETAIL.

In order to a clearer insight into the iniquitous workings of the Gorman law and the causes that have produced the impoverishment and oppression of the American farmers, I submit the following table of statistics, comparing the prices of farm products in 1892 and 1894. The report of these market prices was prepared by Bradstreet's, an authority whose trustworthiness is unquestioned in the business world:

	Prices January 1—		Loss under free trade.
	1892.	1893.	
BREADSTUFFS.			
Wheat, No. 2, red winter, in elevator... per bush..	\$1.05½	\$0.89	\$0.36½
Corn, No. 2, mixed, in elevator.....do.....	.52	.345	.17½
Oats, No. 2, mixed, in elevator.....do.....	.39½	.25½	.14
Barley, No. 2 (Milwaukee).....do.....	.57½	.325	.25
Rye, Western.....do.....	.86½	.45	.41½
Flour, straight winter.....per barrel..	4.50	3.20	1.30
LIVE STOCK.			
Beeves, best native steers (Chicago).....per 100 lbs..	6.00	4.75	1.25
Sheep, prime (Chicago).....do.....	5.40	3.50	.90
Hogs, prime (Chicago).....do.....	4.15	3.70	.45
Horses (Chicago).....per head..	150.00	70.00	80.00
PROVISIONS.			
Beef, carcasses (Chicago).....per pound..	.068	.055	.01½
Hogs, market pigs, carcasses (Chicago).....do.....	.06	.05	.01
Mutton, carcasses (Chicago).....do.....	.077	.055	.02½
Milk (New York).....per quart.....	.04	.038	.002
Eggs, State, fresh (New York).....per dozen.....	.29½	.24	.05½
Lard, Western steam.....per pound..	.06½	.056	.01
Butter, creamery, State, best.....do.....	.29	.23	.06
Cheese, choice East factory.....do.....	.11½	.10	.01½
Rice, domestic, good.....do.....	.05½	.04½	.01
Beans (New York), choice marrow.....per bush..	2.10	1.475	.62½
Peas, prime (New York).....do.....	1.22½	1.275	.05
Potatoes, Eastern.....per 100 pounds.....	1.12½	.70	.42½
Onions (Connecticut), red.....per barrel..	2.00	.85	1.15
Wool (Ohio and Pennsylvania).....per pound..	.28	.19	.10

\* The only advance.

These decreases of \$1.25 per 100 pounds in cattle, of 45 cents per 100 pounds in hogs, of 90 cents per 100 pounds in sheep, of 2½ cents a dozen in eggs, of 6 cents a pound in rice, of 62½ cents a bushel in beans, of 42½ cents a bushel in potatoes, of \$1.15 per barrel in onions, of \$1.30 per barrel in flour, of 41½ cents in rye, of 25 cents in barley, of 16½ cents in oats, of 17½ cents in corn, of 36½ cents in wheat, of 10 cents a pound in wool, and of \$90 per head in horses mean multiplied millions out of the pockets of the American farmers. They mean that they must forego the gratification of their intellectual tastes, give up luxuries and comforts, and live upon the stint of rigid economy.

Competition in a home market with the pauper labor products of foreign countries was the immediate cause of these ruinous decreases, bringing down our own products below the cost of their production. Do not these undeniable statistics explode the free-trade argument that the policy of protection affords no benefit and advantages to the farmers? A little reflection should convince a reasonable and intelligent man that shutting out foreign products will build up a better home market for our own supplies, which are always more than sufficient to meet the demand. Besides, this policy of prohibition keeps our own labor employed, maintaining constant activity at business and industrial centers, where good wages are paid and the operatives can afford to bountifully supply their tables. Here is the incontestable evidence that the royal welcome that our Democratic friends have extended to the foreign agriculturist has practically destroyed our home market in the reduction of the price of our home supplies, and affording no compensation for the loss. It is within the line of the present argument, and I will note it now at the risk of repetition, to refer to the Democratic contention that under a free-trade policy the United States can capture the markets of the world. In view of the terrible fact that she can not hold her own, the proposition strongly resembles idiocy or insanity. This claim has proved itself to be a delusion and a snare, the veriest rot; for in 1895, when the Wilson-Gorman law was in full operation, foreign nations bought a great deal less of American farm products than they did in 1892, when we had the protection of the McKinley law.

#### SOMETHING SWEET.

Sugar has become the prime necessity of every American home, as much so as salt. It requires immense quantities to supply the demand. The McKinley law, to put it within reach of the poorest by making it cheap and abundant, placed raw sugar on the free list, taxed the refined one-half cent a pound, and to encourage

its production in the United States gave a bounty of 1 cent per pound. January 1, 1892, the refined sugar was 4 cents a pound. The Gorman law taxed the raw sugar 40 per cent and the refined 40 per cent and one-eighth cent per pound. This raised the price of sugar to 5 cents per pound January 1, 1896. In 1892 a bushel of wheat bought 26½ pounds of sugar, and 13½ pounds in 1896. In 1892 a barrel of potatoes bought 28 pounds, and 14 pounds in 1896. In 1892 a bushel of corn bought 13 pounds, and 7 pounds in 1896. In 1892 a bushel of oats bought 10 pounds; in 1896 not quite 5 pounds. In 1892 a dozen eggs bought 6½ pounds; in 1896 not quite 5 pounds. In 1892 a bushel of beans bought 53½ pounds, and 25½ pounds in 1896. In 1892 a barrel of onions bought 60 pounds, and 17 pounds in 1896.

These should be intensely interesting figures to the farming class. They show how they were protected by the McKinley law and how they were fleeced by the Gorman iniquity.

The protection bounty of 1 cent per pound on sugar was attended by surprising results. In 1890 the crop of Louisiana was 180,000 tons. Under the protection of the McKinley Act the crop of that State in 1896 mounted up to 350,000 tons, almost double. In 1890 the product from beets was 3,000 tons, and 30,000 tons in 1894, a tenfold increase.

A more striking illustration of the benefits of protection and the ruin of the Democratic doctrine of free trade can not be found.

#### WOOL.

This country is specially adapted to sheep husbandry, and can raise enough of wool to clothe her own people and millions more. The tax levied by the McKinley Act gave the industry a wonderful impetus. The woolgrowers were greatly encouraged, they purchased the finest strains for the improvement and increase of their flocks, and at vast expense they prepared themselves to carry on the industry on a stupendous scale.

The American flock master had the upper hand of his foreign competitor in his home market. He could sell his crop to the American mills at a profitable figure, and his mutton was clear gain; the grade of the wool was superior, and the cloth into which it was manufactured was of the best quality. But a change came in 1894. The prosperity of the industry disappeared in the general wreck of American enterprise. The foreign woolgrower displaced the American flock master in his own market. What he should have had jingled in the pockets of the woolgrower in the United Kingdom, France, Germany, South America, China, and other countries. Sheep and wool had gone down in price one-half. The balance was transferred to the wrong side of the ledger. Mr. John Bull, the venerable prophet and high priest of free trade, as long as his own interests are not interfered with, was the chief master of the situation; without let or hindrance he could dump the whole Australian wool clip, because he is the first mortgagee of the Australian sheep farms, on the American market and fill his pockets with American gold by the operation. During the McKinley tariff the average annual importation of wool was 133,647,812 pounds, valued at \$16,951,276. In 1895, when the country was just beginning to realize the glories and beauties of the Wilson-Gorman law, that put all grades of wool on the free list, the importation of wool was 248,889,317 pounds, valued at \$33,770,159. It is safe to assert that the flock masters of the United States have lost the comfortable sum of \$40,000,000 by the free-trade-in-wool policy of the Democratic party. This gold crossed the waters never to return, and is now scattered, a free gift from the Democratic party, among the foreign wool-producing nations. What a mighty help these forty millions would have been in paying the obligations of American debtors and canceling the mortgages on their farms. Whilst the American farmer is shearing his sheep, the foreign sheep raiser, with the Democratic shears of free trade, is shearing him, and he certainly realizes the fact when he remembers that he got 60 cents a pound for his wool under the McKinley law of protection, and now under the Gorman Act of oppression and repression less than one-half of this amount is the top of the market.

In 1893, when Cleveland was inaugurated the second time, the wool crop was 364,000,000 pounds. When he was returned to power, with a Congress in full sympathy and cooperation with him, the country was sure that the threat of free trade would be carried into execution. This feeling had a most depressing effect upon the wool industry. The purpose to put wool on the free list was declared at the beginning of his Administration, and the sheep raisers realized the fact that their harvest was about over. The price of wool began to decline rapidly and the owners began to put their sheep into the markets for mutton, so that the crop in 1894 shrank to 328,000,000 pounds, in 1895 fell off to 264,000,000 pounds, and in 1896 fell off in a corresponding proportion. In the first two years of Cleveland's Administration the decrease amounted to 100,000,000 pounds, inflicting a loss of \$60,000,000 to the American people. This decrease in the home clip had to be made up by importing foreign wool, or the American mills had to discharge their operatives and shut down. In consequence of this necessity

the wool importation enlarged from 55,000,000 pounds in 1894 to 250,000,000, an increase of nearly 500 per cent.

It has always been the contention of the free traders that the effect of free wool would be to so reduce its price that woollen fabrics would not be adulterated by cheap admixtures. This is mere claptrap. In the last fiscal year of Harrison's Administration, closing June 30, 1894, the importation of shoddy was 175,744 pounds, and in the next fiscal year, ending June 30, 1895, under the Wilson-Gorman law, the importation of this adulteration was 14,772,690 pounds, an increase close in the neighborhood of 1,000 per cent. In 1895 the American mills were stocked up with 20,000,000 pounds of shoddy. In 1896 the Democratic Administration dealt in shoddy, waste rags, and other rascally adulterations on a still more stupendous scale. Whilst the free-trade fanatics were cutting prices in two, destroying values, annihilating the revenue, spreading universal dismay and ruin, and making an unconditional gift of American wealth and prosperity to foreign nations, they were introducing the shoddy era into the history of our country that will long be remembered for the cheat and worthlessness of its woollen fabrics. There is one pet and unctuous argument that the free traders never fail to advance, and they so discount the popular intelligence as to expect that it will be accepted as sound and correct. Upon it they "ring the changes" and sound every note from the sharp, dry chirping of the cricket to the deep bassoon of the frog. This contention is that the cost of clothing is enormously reduced by free wool, on the false assumption that the tax on wool and woollen cloths is added to the cost of the domestic goods. It is a patent fact to all familiar with the trade in the last ten years that there has been no decline in the price of clothing that does not fully correspond with the general shrinkage of all values. The cost of wholesaling, retailing, and transportation has not been reduced, at least to an extent to be felt by the final purchaser. If there has been a reduction in the cost of clothing, the difference between the old and new rule of prices is more than covered by the difference between the honest manufacture under the McKinley Act and the shoddy substitutes under the Wilson-Gorman law. And so it is that one of the chief necessities of civilization, that contributes so largely to the comfort and health of society from the millionaire to the day laborer and which has been such a prominent and reliable factor in the accumulation of our national wealth, was not safe from the ruthless hands of the free-trade fanatics.

#### TRUCK FARMING.

For the labor and capital employed, truck farming has been the most thriving and profitable division of agricultural industry in the manufacturing and populous sections of the country. The population of towns and cities was mostly composed of busy workers engaged in the varied pursuits of labor. Their principal living came from the truck farms, and it was impossible to glut the market with truck-farm products. These farmers were never discouraged by cheap prices. The increase of industrial enterprises called for more wage earners and consumers. The census of 1890 shows that the product value of the truck was \$76,517,155, and 240,893 persons engaged in the occupation—a yield of over \$300 to each person. The manufacturers of boxes, barrels, baskets, fertilizers, farming implements, the owners of transportation lines, and commission merchants shared in this prosperity. This industry has suffered in a corresponding degree with all other interests from the ravages of free trade. Had the McKinley law been left in undisturbed operation the value of the truck-farm products would soon have reached \$150,000,000 annually, the force employed would have been doubled, with a corresponding gain to those indirectly connected with the industry. I cite this industrial enterprise, small and insignificant as it may be comparatively, to prove that the benefits of protection do not go entirely, as our Democratic brethren so persistently claim and would have us believe, to trusts and combines of wealth and power organized under and protected by a paternal government. There is no employment that will be more munificently rewarded, when protection is restored and the dead enterprises of the country thrilled with new life and vigor, than that of truck farming; and, owing to the efficient contrivances for the safe handling of its products and the facilities of cheap and rapid transportation, every section of the country can engage in this branch of agricultural pursuit and will be immeasurably benefited.

#### LABOR.

Labor, so sensitive and responding so quickly to the conditions of trade and business, is the barometer of the nation's status. There is no infallible guide of determining the wisdom or impolicy of legislative measures regarding finance and revenue save their effect upon the working classes. They are the real producers of wealth and are entitled by every consideration of justice and equity to a liberal share of the earned increment in the way of profitable employment. When they have an abundance, are contented with the lines that have fallen unto them, and have

the cheer and hope and promise that unrestricted opportunities for labor always impart, the business of the country is on a safe basis and the general well-being of the nation is assured. When cruel conditions are forced by unnatural causes, when legislation is directed to the dountearing rather than the upbuilding of business interests for the mere sake of the fruits of a partisan victory, when uncertainty and dread hover over industrial enterprises, when the relations between capital and labor are disturbed by the pernicious agitations of demagogues and anarchists, when the laboring classes are driven to desperation by beggary and loss of employment, it is then that ruin takes the place of prosperity and agony the place of happiness. In the last eight years we have been taught the lesson that national progress and advancement are guaranteed only by a religious regard for the inalienable rights of labor and a vigilant protection of its interests, and that blight, decay, and woe will certainly come when labor is crushed and its God-established claim to sympathy and help denied or ignored. The McKinley law, which was equity, justice, and statesmanship in the concrete, glorified the history of this country with its brightest, happiest, and most prosperous era, brief as was its duration.

This law stimulated the productive energies of this country to an extent that has never been equaled. This development was a revelation of American possibilities that was surprising and alarming to rival nations. It was the declared purpose and function of the law to honor, dignify, and reward labor, the most potential factor in the production of our national wealth, and the glorious results that followed vindicated its wisdom and beneficence beyond all controversy, at least in the light of our recent experiences. The Wilson-Gorman law, the most perfect piece of free-trade mechanism constructed, proved an electric paralyzer of labor. It spread a Dead Sea stagnation over the industries of the whole country. It left its fatal blight upon every enterprise in which the bread winner had the least interest as a toiler. It transferred the patronage of this country from its needy and deserving workmen to the paupers of foreign countries. It sent American prosperity on a voyage to regions yet undiscovered with the command to never return. Under the McKinley Act the constant cry was for more laborers. No man had to waste time and money hunting for employment. Employment hunted him. The establishment of new industries kept pace with the increase of the working population. Under the free-trade Gorman slaughter act one-half of the working class were turned out of the shops and mills and discharged from the railroads and public works, and all except those who found employment in the fields, becoming producers instead of consumers, and thereby reducing the price of farm products, have been living on public and private charity.

#### PROTECTION A DEBT EXTINGUISHER; FREE TRADE A DEBT CONTRACTOR.

In 1866 the interest-bearing debt of the United States, in consequence of the war, was \$2,333,331,208. From this time to 1892, when the people changed the complexion of the Administration from Republican to Democratic, embracing a period of twenty-seven years, protection to American labor prevailed. Under this policy the Republican Administrations decreased this debt by the payment of \$1,747,301,330, and meeting at the same time the accrued interest. The balance of this debt in 1892 was \$535,029,330. In 1893, the year of Cleveland's second inauguration, the interest-bearing debt was \$583,034,260, and on March 1, 1896, it had increased to \$822,615,170 under the operations of the Gorman law. The financial representative of the free-trade President, who presided over the affairs of the Treasury Department, had not paid a dollar of this indebtedness in a literal sense, but Cleveland and his free-trade coadjutors in the swift destruction of the revenues and the prosperity of the country had added \$237,590,910 to it. The average annual decrease of this debt during the twenty-seven years of protection was \$64,714,884, and the average annual increase of this debt during the free-trade period when Mr. Cleveland was directing the destinies of this great country was \$79,193,637. The average Republican monthly decrease of the debt from 1866 to 1893 was \$5,701,114.77. The average Democratic monthly increase of the debt from 1893 to 1896 was \$7,502,921.28.

Mr. Harrison, with his protection Administration, lessened the debt by \$224,819,730.

Mr. Cleveland, with his free-trade Administration, increased it by \$237,590,910. Not this alone; this eminent Democratic statesman and leader, "called to be an apostle of tariff reform," and who had led the gallant and enthusiastic cohorts of Democracy to glorious victory in two hotly contested campaigns, was compelled, on account of the ruinous effects of his revenue policy, to sell bonds to meet the current expenses of the Government. And not this alone; in his secret negotiations for the sale of the first bonds, amounting to \$100,000,000, he further dishonored and humiliated this proud and opulent nation by placing it in the thrall of a syndicate of foreign capitalists.

The marked reduction of the national debt under the Harrison Administration is the more surprising and gratifying from the

fact that the McKinley Act had taken the duty off of sugar and the reciprocity clause had put on the free list a large number of articles that are not produced in this country, thereby lessening the revenues about \$40,000,000 a year. The vaunted sagacity and fertile ingenuity of the apostle, prophet, and priest of low tariff, who has just been retired to the "innocuous" obscurity and elegant leisure of private life, "pale their ineffectual fires" before the splendor of this achievement.

#### FOOT WEAR.

Boots and shoes are a considerable item in family expenses. When the Wilson-Gorman tariff law came in, their champion revenue reducer and industry destroyer, our overjoyed Democratic friends, their idea being that the consumer pays the tax, assured the wage earners that they would now have cheaper foot wear. This was true as to quality, but not as to price. Foreign factories dumped their poor goods on the American market. Notwithstanding the reduction from the McKinley duty of 5 per cent, boots and shoes constantly advanced in price, and at the close of 1895 they were 12.6 per cent higher than they ever were under the McKinley Act. The theory that the consumer pays the tax was forced to an inglorious retreat before the comparative conditions of this trade. The people had to pay higher prices for the finished iron product, for cotton goods, and woolen clothing, notwithstanding wool was on the free list, and a correspondingly advanced price for boots and shoes. The average increased price of all these necessities in 1895 was 38.3 per cent.

#### TIN PLATE.

Notwithstanding the general use and incessant demand for the finished product, no tin plate was manufactured in this country prior to the adoption of the McKinley tariff in 1890. This act called into existence 188 mills, employing 40,000 hands, and in five years added \$32,000,000 to our national wealth. Had it not been for the encouragement and support of protection this important industry would never have been established, and these \$32,000,000 would have gone to the owners of the tin-plate works in England and Wales, a total loss to our people. The manufacture of tin plate in the United States closed nearly one-half of the mills in these two countries in 1894. The Wilson-Gorman free-trade law brought this new and flourishing industry to the verge of ruin. Foreign tin-plate manufacturers lowered the price of their product, forcing American manufacturers to cut down wages 35 per cent. Through the kindly offices of "a tariff for revenue alone," that constant and vigilant friend of the laboring man, this army of 40,000 workmen, with their 200,000 dependents, were robbed at the ratio of 25 cents to the dollar.

#### THE EFFECT OF FREE TRADE AND PROTECTION ON THE IRON INDUSTRY.

Copious details are not necessary to bring out this object lesson and I shall content myself with a single illustration, founded on the leading item of iron production. Prior to 1870 Great Britain almost entirely supplied American railroads with their iron equipment. The ironmasters of that country had an exclusive monopoly of this trade, because of the low tariff on rails and the low wages paid British laborers in comparison with those of American laborers engaged in the same occupation. The protectionists, then in power, convinced of the unlimited possibilities of this industry and of its incalculable importance to this country as a wealth producer, levied a specific duty of \$28 per ton, and the amazing results of this protection even surpassed the wonderful increase in the wool industry. In the year 1870 only 30,000 tons of steel rails were manufactured in this country, and the infant industry had grown into such proportions that 1,386,277 tons were made in 1888, and from 1877 to 1890, inclusive, 16,763,116 tons, enough to equip 100,000 miles of railway, besides over 20,000,000 tons of steel ingots for other purposes of industry. Out of this enormous production the American ironmasters got a profit of \$340,000,000 and \$1,500,000,000 were distributed in wages among the laborers engaged in this industry in twelve years. The pertinent and interesting question is, Did the workingmen suffer poverty and distress under this régime of protection? Had the counsel of our free-trade friends been followed, that \$340,000,000 of profits would have enriched the English ironmasters instead of the American, and that \$1,500,000,000 of wages would have been distributed among British laborers instead of American. This one case represents the whole history of the development of the iron industry.

#### THE EFFECT OF FREE TRADE ON RAILROADS.

The annual average of railways constructed under the protection Administration of Mr. Harrison was 4,678 miles. Under the free-trade Administration of Mr. Cleveland the annual railway construction was 2,173 miles, a decrease of over 50 per cent. The annual average of railway earnings per mile under the Harrison Administration was \$2,095 and under the Cleveland Administration \$1,784. Dividends decreased from 1894 to 1895 about 13 per cent. In 1893 there were 873,602 persons in the employment of the railroad companies and 779,401 in 1894. The threat of free trade caused uncertainty and alarm among capitalists, and this

lead to great commercial depression in 1894. The stroke fell seriously on the railroads in the heavy reduction of freight and passenger patronage, and they were forced to the strictest economy in the performance of their service. In that year near 100,000 employees, about 46 per cent of the whole force, were dropped from the pay roll and were compelled to seek other employment, and in most instances without success.

#### FREE TRADE AS A CRIME BREEDER.

There is an important social phase to the tariff question which will readily appear when the statistics of crime are examined and analyzed. In 1892, the last year of Harrison's Administration, the murders in the United States were about 6,800. In 1894 they had increased to 9,800, and in 1895 they reached the fearful number of 10,500. In 1892 there were 3,860 suicides, and in 1895 the number reached 5,759. During Cleveland's Administration homicides and suicides were increased by 50 per cent. The crimes against property show an appalling increase. Forgery, defaulting, embezzling, and other forms of larceny, in addition to murder and suicide, were about the only active industries under the tariff-for-revenue-only system of the last Administration. The defalcations under the Cleveland Administration show an increase of over 65 per cent over the defalcations under the Harrison Administration. These statistics, which are gathered from the official records of the country, are eminently suggestive, showing how financial stringency and industrial depression stimulate crimes of every description.

#### IMPORTS AND EXPORTS.

In this important department of business we find a corresponding loss and decadence.

There was the difference in our imports during the last three years of the Harrison Administration and the first three years of Cleveland's Administration of \$208,263,258 in favor of the former.

There was the difference in our exports during the last year of Harrison's Administration, when the McKinley law was in full operation, and the last year of Cleveland's first Administration, of \$334,823,641 in favor of the former.

The exports during the last year of Harrison's Administration exceeded the exports in 1895, when the Wilson-Gorman tariff "law of perfidy and dishonor" was in full swing.

Contrasting our total foreign trade during the last three years of Harrison's Administration with the total foreign trade during the first three years of Cleveland's last Administration, we find a difference of \$433,506,989 to be placed to the credit of protection.

The total exports during the first three years of Cleveland's Administration fell short of those during the last three years of Harrison's Administration \$225,243,711.

In 1894, when we had eight months of protection and four months of the Wilson-Gorman revenue killer, the balance of trade in favor of our country was \$180,999,175, and in 1895, when we had unadulterated "tariff reform," this balance was reduced to \$6,149,211. This ratio holds its own throughout the comparison between Harrison's Administration and Cleveland's last term.

The languishment of our foreign trade is one of the many fascinations with which our Democratic friends have invested their pet scheme of economically administering the Government.

#### A MOST IMPRESSIVE OBJECT LESSON.

That free trade is a sure and swift agency of destruction to all our material interests, and the protective feature of our revenue laws has been a mighty force in the upbuilding and enrichment of the nation, in the creation and expansion of the opportunities of labor, and in the securing of the greatest good to the greatest number, becomes evident when we trace the history of tariff legislation from the foundation of the Government to the present time.

During the period from 1783 to 1790 the tariff charge was from 2½ to 5 per cent, with absolute free trade at many ports of entry. This was a period of enforced idleness and industrial prostration.

Even the money, which at that time was of little worth, was extremely scarce. Universal poverty intensified the distress and dissatisfaction of the people. After a seven years' war for freedom and a new nationality they were almost ready to conclude that the ills they were suffering were more grievous than those against which they had successfully fought. Debts were piling up, with no present or prospective ability to meet them, and the treasuries of the Federal and State governments were virtually empty. Spurred by the sufferings of the people and the necessities of the Government, the ingenuity of statesmanship devised a plan of relief whose essence was the principle of protection.

In 1791 a tariff law was passed with average duties of 20.17 per cent, with the protective feature. Good money became abundant, opportunities were created for labor, industries multiplied, the areas of agriculture were enlarged, commerce increased, thrift took the place of poverty, contentment the place of dissatisfaction, and the brightness of noonday the gloom of midnight. Debtors had no difficulty in meeting their obligations. The new Government, growing with such marvelous rapidity, had accumulated a surplus revenue, though it had prosecuted a second successful war

with the "mother country." These prosperities continued until 1816.

In this year a tariff was levied with average duties of 26.864 per cent on an ad valorem basis for revenue only. The enactment was attended with the usual incident of undervaluation, causing an enormously increased importation of foreign manufactured goods, which commanded high prices, and a corresponding increase of the prices of farm products. Enforced idleness had returned to plague and distress labor. Sheriffs were kept busy selling property executed for old debts, whilst new ones were constantly accruing. The volume of currency shrank from \$110,000,000 to \$45,000,000, property values decreased, and the balance of trade was in favor of other nations, with a deficit in our Treasury. The industrial distress and paralysis of business continued until 1824.

In 1825, with a wholesome quickening of their sense of responsibility and duty to the people, the national lawmakers enacted a protective tariff with average duties of 36.05 per cent. The tide of fortune changed at once. The young Republic bounded to its feet with its vigor refreshed and its ambition renewed. The long nights of dread, dismay, and distress passed away in the radiant dawn of a morning of promise and cheer. There was a marked decline in the importation of the high-priced product of foreign factories. The home manufacturer supplied the principal part of the clothing of the people. The foreign tradesman gathered his spoil alone from the fastidiousness and extravagance of our rich spendthrifts. The opportunities for labor were renewed and increased in the general revival of industry. Timid capital came out of its hiding place and sought investment. Constant employment for every toiler and an abundance of good money enabled the people to pay their debts and accumulate property. The revenue was sufficient to promptly meet every demand upon the Government. The great increase in taxable values came to the relief of the States struggling with debts and deficits.

But the fateful year of 1833 brought a sudden and unexpected revolution in our industrial system, and the distress, anarchy, and chaos invariably consequent upon a wanton violation of the natural law of national development followed with its cumulative calamities. Through the insane agitations of the fiery Hotspurs and blind fanatics of the South, slavery, notwithstanding the safeguards that had been thrown around it by the laws, became a leading political question, overshadowing all other issues and monopolizing the attention of the country. Free trade, under the championship of John C. Calhoun, whose power for evil was commensurate with his tremendous intellectual force, selected this potential factor of danger as its chief ally, in the hope that it might succeed through the sectional division and estrangement produced by this issue. The ad valorem plan of revenue tariff was reestablished mainly through the instrumentality of the South Carolina fire eater and nullificationist. The average duties were 17.13 per cent, a cut of more than one-half from the preceding tariff. The protection feature was entirely erased. It was a measure for "revenue only," pure and simple. The country was swept with the besom of destruction. Its enterprises were hurled as so many shells under a trip hammer. Its largest and most solid business concerns had no more power of resistance against the flood of disasters than so many card houses against the violence of a Western cyclone. Our manufacturers, unable to cope with the competition from the rascally undervaluation of imports and the increase of labor-saving machinery in Europe, were forced to stop operations and close their doors. The prices of farm products were lower than ever experienced, and kept company with pauper wages; but the destruction of industry robbed the masses of the means to purchase the common necessities of life. There was no bustle, activity, and sign of business energy, except in the soup houses established to feed the idle and starving workmen driven out of employment, and the patronage of these institutions of private and public charity was always in excess of their resources. Every day witnessed the incurrence of debts with the resources to pay them constantly contracting. The States were unable to meet the interest on their obligations and current expenses. There was a perplexing and alarming deficiency in the National Treasury, and on account of the impairment of the public credit money could not be borrowed at home or abroad. This state of affairs continued until 1843, resulting in a panic that stands a grim and gloomy monument amid the abounding prosperities that have blessed the country during its protection eras.

In that year a tariff with specific duties averaging 24.895 per cent was levied for protection purposes. The result was electrical. The country threw from its freed limbs the ashen sackcloth of woe and to songs of cheer began afresh the work of carving out a glorious fortune. The wails of despair changed to the symphonies of hopefulness and industry. The languor of idleness was exchanged for the exhilaration of toil. Emancipated labor returned to profitable employment in the mine, forest, factory, and field. Immigration thronged our welcoming shores. Money again was worth its face, and business confidence again replenished the arteries of trade. The magic of the new prosperity

"touched the dead corpse of the public credit, and it sprung upon its feet." There was a surplus revenue, State and national. It was an era of money-making for the masses, and the people and the Government wiped out the obligations standing against them. The American soldier had been to Mexico on a mission of conquest, had planted "Old Glory" above the historic halls of the Montezumas, and added an empire of incalculable resources to our national wealth. But this period of national and individual prosperity, up to that time unprecedented, was terminated by the Walker tariff in 1847. This "tariff for revenue only" was a very decided improvement upon all the preceding Democratic measures of its kind for the destruction of American industry and prosperity. Its duties averaged 23.49 per cent, without any margin for protection. It closed the doors of our mills and factories and filled our markets with foreign goods. It was the old-new story of low wages, idleness, want, accumulating debts, and crushing deficits. The emigrant ships came over empty and went back loaded with workmen returning to their old homes. Again the soup house became a fashionable institution, "the shadow of a great rock in a weary land." It was the only sign of life in a scene of universal decay and barrenness. Gold and silver was locked from the starving and poor, and the currency was the wildcat issues of State banks, a prototype in value and desirability of Confederate money in the last days of the "Lost Cause." American securities were dropping down the scale of values dangerously near zero, and commercial failures were as regular as the rising and setting of the sun. The conditions within and without were unusually favorable to American prosperity, and under protection this ten-year period would have been one of the golden eras of American history. Rich gold deposits had been discovered in California, a fearful famine was devastating Ireland, and the Crimean war was fought. The wheat areas had not been opened in India, the agriculture of Europe could not feed its swarming populations, yet notwithstanding the extraordinary demands for American products from these causes, the balance was against us by nearly \$400,000,000. Under Buchanan's Administration the Democrats revised this iniquity "for revenue only," cutting down the tariff duties to 15.16 per cent. The current of ruin now flowed on with an augmented volume. The severities of the panic were intensified. Broken banks and collapsed enterprises was the daily record of the business world. The circulating medium had disappeared, individual credit was gone, and manufacturers could not operate their plants for the want of funds and patronage. This produced idleness, vagabondage, and suffering far greater than existed during the period between 1847 and 1857. American securities dropped lower and lower, and up to 1861, under the Democratic free-trade Administration of President Buchanan, nearly the whole stock of American gold and silver had been transferred to the money centers of Europe.

From 1862 to 1871 we had a protective tariff whose duties averaged 36.13 per cent. This was an unbroken period of national and individual prosperity, though there were many formidable conditions in the way of this phenomenal growth and development. The most powerful and thoroughly organized rebellion in history was suppressed, requiring an army of nearly 3,000,000 men, which was gathered mostly from the industrial avocations, and which ordinarily would have lessened the productions of the country, but under the stimulus of protection and the resulting good prices they were astoundingly increased. The manufacturers and farmers enlarged their operations to meet the constantly growing demands for their products, and as a consequence labor commanded high prices and employment was constant. A financial system was devised, the best the world has ever seen, that afforded an abundant, sound, and satisfactory currency. The wisdom and efficiency of this measure is attested by the fact that every description of issue provided by it is now as good as gold. There was no lack of money for the people, and no approach to deficits in the State and Federal revenues. The recuperative energies of the insuppressible French were surpassed by the swift recovery of the American people from the effects of a civil war that shook the very foundations of the world.

In 1872 the tariff came again to the top with the grim severity of Banquo's ghost. The average of duties was reduced to 27.34 per cent and there was a 10 per cent reduction affecting almost the entire schedule of customs duties. This was the free-trade régime in a modified form, but still it was charged with mischief and evil consequences to our industries. Values could not be maintained, the market was glutted with foreign goods, causing a suspension of our own mills and factories, with its sequence of idleness and distress. Commercial failures were frequent and a reduction in revenues and an increase in the public debt followed in the train of disorders. The order for the resumption of specie and the increase of the average of tariff duties to 29.1 per cent afforded a moderate measure of relief. A gradual recovery from the panic of 1873 began, greenbacks went to par in 1879, there was a renaissance of industry, and again the golden tide of prosperity

spread over the land. In 1884 the tariff was again revised with an average of duties of 29.86 levied for the purpose of protection, the buoyancy of business continued, wages were fair, and there was no lack of employment. The rates of interest were moderate, money lenders considerate and accommodating, and abundant revenues exceeded the demands upon the Treasury. When the McKinley tariff came in in 1890, with its strong protection feature in a duty average of 23.33 per cent, the effect was magical and instantaneous. Prosperity was recoronated amid the plaudits and rejoicings of the people. Every man had a will to work, for the certain profits were alluring. There was no uncertainty and fear about the Government revenues. There was an abundance of money, and it was all at par. Such an inviting and profitable field was opened up to manufacturers that a number of foreign firms transferred their factories to our country. Peace, contentment, and happiness pervaded all ranks of society. The farmers enlarged their areas, and the returns of bountiful harvests filled their purses with cash and their homes with cheer. The devastated South, struggling heroically to recover from the waste of war, felt the bounding pulsations of a new life as the gold of Midas fell into her outstretched palms. She shared proportionately in the benefits of the money-making period. Investors, men of business experience and sense, had explored her fields and had taught her people, religiously devoted to hog, hominy, and cotton, the profit of diversified industries, which she had in abundance the material to maintain, and she had made a respectable preparation for the happy and glorious conditions that the McKinley law of protection had introduced.

I would not be a sectionalist if I could and could not if I would, but when I compare the census of 1880 with the census of 1890 and realize the phenomenal growth of the South under the stimulus of protection in agriculture and education, in railroad and manufactures, in capital, wealth, and population, I am free to say that I would support the bill under consideration did it benefit the South alone without injury to other sections of the country. This comparison shows an increase of population of 2,917,984, or 19.9 per cent; an increase of actual wealth of \$3,653,815,635, or 62.5 per cent; a decrease of State debts of \$21,735,126, or 18.4 per cent; increase of total State revenues of \$13,233,394, or 100 per cent; and increase of banking capital of \$79,115,670, or 80.1 per cent; an increase of railway mileage of 21,546, or 110.1 per cent; increase of capital invested during the ten years, \$2,339,170,000; increase of men employed in railroading, 102,481, or 118.8 per cent; increase of cost of railroad equipment, \$689,096,740, or 110.9 per cent; increase of the number of manufactories, 22,151, or 64.2 per cent; increase of capital invested in manufactories, \$372,117,670, or 135.2 per cent; increase of the value of the product of manufactories, \$427,941,496, or 135.2 per cent; increase of cotton mills, 173, or 107.4 per cent; increase of the value of the products of cotton mills, \$37,831,418, or 231.4 per cent; increase of the value of cotton-seed products, \$19,348,915, or 267.1 per cent; increase of the tons of pig iron produced, 1,393,891, or 480.9 per cent; increase of tons of steel produced, 178,245, or 4,121 per cent; increase of tons of coal produced, 13,715,906, or 362.9 per cent; increase of the precious metals, \$487,613, or 218 per cent; increase of the total value of minerals, \$31,965,595, or 218 per cent; increase of the value of the lumber output, \$66,441,949, or 183.4 per cent; increase of the value of forest products, \$77,019,738, or 163.8 per cent; increase of acres of land cultivated, 22,872,284, or 33.1 per cent; increase of value of agricultural machinery, \$153,277,500, or 79.2 per cent; increase of bales of cotton produced, 2,002,540, or 3.6 per cent; increase of the value of the cotton raised, \$81,743,094, or 32.6 per cent; increase of the value of fruit, \$25,536,227, or 171 per cent; increase of the value of farm products, \$373,027,855, or 69.0 per cent; increase of the value of live stock, \$195,838,255, or 54.1 per cent; increase of the number of schools, 22,337, or 50.1 per cent; increase of the number of teachers, 24,863, or 50.5 per cent; increase of the number of pupils enrolled, 1,304,553, or 67 per cent; increase of school attendance, 589,406, or 56.9 per cent; increase of school revenues, \$9,160,315, or 161.6 per cent.

Even this amazing development was surpassed in the years 1891, 1892, and 1893 under the quickening impulses and richer awards of McKinleyism, which the free traders are wont to felicitously describe as "the crowning crime of repression and wrong."

Providence, in the distribution of her blessings and benefits, most graciously favored the South. She gave her such a gloriously genial climate that outdoor labor is never interrupted by rigorous winters or prolonged seasons of rain. She placed her outside of the path of destructive storms. She laid the floor of her valleys and plains on limestones and phosphates. She filled her hills and mountains with marble, coal, iron, and every other deposit of the family of valuable minerals, and over them spread illimitable groves of the finest and most useful woods.

Every prospect pleases, and only man is vile.

The fields of the South, too fair and fertile to be scorched by the dirocco of free trade, plead with the eloquence of earnestness and anxiety for the opportunity to yield their copious treasures to the uses of man. Her virgin forests, waiting for the ringing ax of

the woodman, are impatient to pour their awakened melodies into the concert of industry's new song. Her mines listen for the stroke of the delver's pick, eager to uncover their boundless wealth to an astonished world. Her rivers, rolling in idle beauty to the sea, long to become Merrimacs, jeweled with Lowells and Manchester. The border of Southern natural wealth has barely been touched, and its storehouse of treasure awaits the coming of the explorer, capitalist, and laborer. Absorbed wholly in agricultural pursuits, and although producing eight-tenths of the cotton crop of the world, the larger part of which was exported to feed the looms of foreign factories, to her own inconceivable hurt and to the injury of American mill owners, the South has received but little benefit from protection compared to the sections of the older East and the younger West. And now the large importations of the long staple from Egypt and other foreign countries are seriously menacing the American staple. Genial climate, an exhaustless abundance of raw material, and a water power sufficient to drive the machinery of the world, thus avoiding the tremendous expense of steam appliances, with the aid of protective duties will gem the South with manufacturing centers and build up markets that will require the entire crop of farm products.

What excuse can we offer for dallying and procrastination when industries are languishing and perishing all around us, when the agencies of recuperation and increased wealth are unemployed, when the cruel conditions imposed by free trade are crushing the life out of the people and destroying their substance without compensation, and naked and hungry want is lifting its skeleton hands in piteous appeal for immediate rescue and relief?

Our own observation and rough experiences discover to us the line of duty, and the concrete wisdom of past generations of practical statesmen and masters of political economy point out with crystal clearness the path of safety and deliverance in this period of greatest suffering and depression in the history of this country. These opinions and judgments are of peculiar force and emphasis at this time.

Speaking in reference to the adoption of the Federal Constitution, Mr. Mason said:

The people of this country demand a union stronger than the confederation for the very purpose of shielding home industries from the prostrating assaults of foreign competition through the regulation of commerce with other nations, so as to check or to prohibit the importation of commodities that interfered with the growth and prosperity of domestic manufactures, and so as to give native productions an impetus which would develop all the resources inherent within the boundaries of the nation essential for the supply and consumption of the population for all time. No fact is more securely established than this.

In the debate on the first tariff bill in 1779, Fisher Ames, one of the most brilliant and learned men in that Congress, in the course of his profound argument, used this language:

I conceive, sir, that the present Constitution was dictated by commercial necessity more than by any other cause. The want of an efficient government to secure the manufacturing interest and to advance our commerce was long seen by men of judgment and pointed out by patriots solicitous to promote our general welfare.

Bancroft, the accuracy of whose historical statements can not be challenged, said:

The necessity for regulating commerce (that is, for providing a proper tariff) gave the immediate impulse to a more perfect Constitution.

Daniel Webster, whose lucid interpretations of the Constitution no man has ever successfully combated, made this declaration in a speech in Albany, N. Y., in 1844:

I defy the man in any degree conversant with the history, in any degree acquainted with the annals of this country from 1767 to 1789, when the Constitution was adopted, to say that protection of American labor and industry was not a leading, I might almost say the leading, motive, South, as well as North, for the formation of the new Government. Without that provision in the Constitution it never could have been adopted.

In colonial times, and during the convention, the idea was held up that domestic industry could not prosper, manufactures and mechanic arts could not advance, the condition of the common country could not be carried up to any considerable elevation, unless there should be one government to lay one rate upon imports throughout the Union; regard to be had in laying this duty to the protection of American labor and industry.

On this same subject the illustrious Rufus Choate said:

A whole country, a whole generation of our fathers, had in view, as one grand end and purpose of their new Government, the acquisition of the means of restraining by governmental action the importation of foreign manufactures for the encouragement of manufactures and labor at home; and desired and meant to do this by clothing the new Government with this specific power of regulating commerce. This whole country, with one voice, demanded to have inserted in the Constitution the power to enact protective legislation, a power which they held as another declaration of independence—a power by which they were able to protect all our children of labor. This power must not be surrendered, must not sleep, until the Union flag shall be hauled down from the last masthead—a sight which I trust neither we nor our children to the thousandth generation are doomed to see.

The conclusion is inevitable that those who adjusted the machinery of our Government, the wise and heaven-directed framers of the Constitution—that immortal document which is the golden girdle of the Union—regarded protection as the inspiration of our free institutions and the bed rock of our national development and prosperity.

In referring to our nation as "a free people," this meaty and significant paragraph occurs in President Washington's first annual message:

Their safety and interest require that they promote such manufactures as tend to render them independent of others for essentials.

Thomas Jefferson, the alleged founder of the present Democratic party, and whose memory the free traders profess to revere so greatly and gratefully, used this plain and spirited language in reference to protection:

The general inquiry is, Shall we make our own comforts or go without them at the will of a foreign nation? He, therefore, who is now against domestic manufactures must be for reducing us either to a dependence upon that nation or to be clothed in skins and live in caves and dens. I am proud to say that I am not one of these. Experience has taught me that manufactures are now as necessary to our independence as to our comforts.

The prohibiting duties we lay on all articles of foreign manufacture, which prudence requires us to establish at home, with the patriotic determination of every good citizen to use no foreign article which can be made within ourselves, without regard to difference of price, secures us against a relapse into foreign dependency.

My own idea is that we should encourage home manufactures to the extent of our own consumption of everything of which we raise the raw material.

James G. Blaine, the famous author of reciprocity—a piece of diplomacy that has saved this country hundreds of millions of dollars—and who was one of the most studious, observing, and biggest-brained statesmen of his time, said, in referring to the McKinley tariff:

The benefit of protection goes first and last to the men who earn their bread in the sweat of their faces. The auspicious and momentous result is that never before in the history of the world has comfort been enjoyed, educations acquired, and independence secured by so large a majority of the total population as in the United States of America.

In 1869, three years before he was the Democratic candidate for the Presidency, Horace Greeley, the Nestor of the American press in his day, and who, notwithstanding his eccentricities and vagaries on many other questions and the incongruities of his record as a Republican, was a profound sage and a sound political economist, in a carefully prepared editorial for his paper, declared:

Our signal years of disaster and depression have been those in which our ports were more easily flooded with foreign goods; those which intervened between the recognition of our independence and the enactment of the tariff of 1779; those which followed the close of our last war with Great Britain, and were signalled by immense importations of her fabrics; those of 1837-1842, when the compromise of 1833 began to be seriously felt in the reduction of duties on imports, and those of 1864-1867, when the Polk-Walker tariff had had time to take full effect.

In 1816 John C. Calhoun, that true and tried Democrat whom the Democracy of the South followed with the same consuming devotion that the French battalions followed Napoleon, in a strong speech in favor of a protective tariff, said in the course of his invincible argument for this policy:

When our manufactures are grown to a certain perfection, as they will under the fostering care of Government, the farmer will find a ready market for his surplus product, and what is of almost equal consequence, a certain and cheap supply of all his wants. His prosperity will diffuse itself to every class in the community. It (a protective tariff) is calculated to bind together more closely our widespread Republic and give greater nerve to the arm of Government.

Andrew Jackson, the autocrat, idol, and now the patron saint of the Democratic party, in 1824, then a United States Senator, declared:

Providence has filled our mountains and our plains with minerals—with lead, iron, and copper—and given us a climate and soil for the growing of hemp and wool. These being the greatest materials of our national defense, they ought to have extended to them adequate and fair protection, that our manufacturers and laborers may be placed in a fair competition with those of Europe, and that we may have within our country a supply of those leading and important articles so essential in war. We have too long been subject to the policy of the British merchants. It is time we should become a little more Americanized, and instead of feeding the paupers and laborers of Europe, feed our own; or else in a short time by continuing our present policy (the tariff for revenue only of 1816) we shall all be rendered paupers ourselves. It is my opinion, therefore, that a careful and judicious tariff is much wanted.

President Jackson, in his annual message, December, 1832, in referring to the happy results of eight years of protection under the tariffs of 1824 and 1828, said:

Our country presents on every side marks of prosperity and happiness unequalled, perhaps, in any other portion of the world.

Daniel Webster, speaking of the marvelous benefits of the same tariffs, declared:

The relief to the country was profound and general, reaching all classes—the farmer, the manufacturer, the shipowner, the mechanic, and the day laborer. The change was as great as was wrought when Hamilton smote the rock of public credit and abundant streams of revenue gushed forth.

Speaking of this prosperous era under the protective system, Henry Clay made this declaration in the United States Senate in 1832:

On a general survey we behold cultivation extended; the arts flourishing; the face of the country improved; our people fully and profitably employed; the public countenance exhibiting tranquillity, contentment, and happiness; its public debt of two wars nearly redeemed; and to crown all, the public Treasury overflowing.

These deliverances, embalmed in imperishable history, of our most eminent students, thinkers, economists, and statesmen, whose spirits hover over this fierce battle for and against American enterprise and industry, for and against national prosperity and independence, are nuggets of wisdom that we can not afford to subtract from our store of political knowledge; they are counsels that we can not safely esteem of little value or wholly ignore.

The protectionist has testimony "piled Pelion upon Ossa" from living statesmen and economists the world over, who have made the science of government the exclusive study of their lives, with which to fortify his contention, but I shall content myself to cite the utterances of but two.

Prince Bismarck, the leading political philosopher of Europe, and who infused life and soul into the dream of German unity, testifies to the glory of our country and the wisdom of our protective policy in the following language:

The success of the United States in material development is the most illustrious of modern times. The American nation has not only successfully borne and suppressed the most gigantic and expensive war of all history, but immediately afterwards disbanded its armies, found work for its soldiers and marines, paid most of its debt, gave labor and homes to all the unemployed of Europe as fast as they could arrive within its territory, and has done all this by a system so indirect as not to be perceived, much less felt. Because it is my deliberate judgment that the prosperity of America is mainly due to its system of protective laws, I urge that Germany has now reached that point where it is necessary to imitate the tariff system of the United States.

The chosen ruler of 70,000,000 of freemen, who thoroughly realizes the exacting duties of his high station and most keenly feels the tremendous weight of responsibility upon him, charged as he is with the trust of delivering this distressed and burdened country from the bondage and ruin of free trade, President McKinley, who though much younger in years and experience than many of his contemporaries, is the most perfect master of political economy and governmental science in this generation, has engraved these felicitous words on the tablet of American history:

With me protection is a conviction, and not a theory. I believe in it and warmly advocate it, because enveloped in it are my country's highest development and greatest prosperity; out of it comes the greatest gains to the people, the greatest comforts to the masses, the widest encouragement for manly aspirations, the best and largest rewards for honest efforts, and a dignifying and elevating citizenship, upon which the safety and purity and permanency of our political system depends.

We now have the convincing testimony that protection is the science of fact and not of assumption, the verdict of test and not a vagary of speculation.

The pending bill commands my admiration, confidence, and support in that it is a marked advancement of the protection standard, a most signal improvement of the protective system, resulting from growing intelligence and enlarged experience, and in all its adjustments is formulated to meet the present grievous and humiliating conditions.

I shall vote for the pending bill because it is the selection of the best and the fittest, guaranteeing an equality of benefits to all sections and classes; because it will throw safeguards around the weak, extend a hand of deserved help to the struggling, and kindle new hopes in the hearts of despair; because it will attract by the opportunities and possibilities it will open up to human exertion, not the pauperism, scum, and riffraff, but the best labor and intellect of all lands; because it will stimulate the productive energies and intellectual forces of our own nation; because it will be an unflinching guaranty against the large harvest of perils and disasters that our country has experienced in every departure from the sound principles of free government; because it will maintain our honor, credit, and independence, and secure immunity from the perils of foreign influence; because it will arm our own industries and capital against the invasion of foreign labor and wealth; because its reciprocity clause, insuring fair and not free trade, the invention of the most richly dowered intellect that ever graced the galaxy of American statesmen, will enlarge our commerce and conquer the domain of the seas; because it will insure protection against the iron barons of England, the lumber forests of Canada, the wheat fields of Russia, India, and the Mediterranean, the flock masters of Great Britain, France, Germany, Australia, and China, and the cotton kings of Egypt and other countries, where British capitalists have opened wide areas for the production of cotton for the main purpose of destroying the industry in the United States; because it will arrest the decay that is ravenously feeding upon the strength of the Republic and rectify the disorders and evils that are bringing ineffable reproach upon our name; because it will be a godsend to the South, torn and shredded by the storms of war and wrecked in fortune, bringing her compensation for all her past woes and misfortunes; because it is warranted and positively demanded by the needs of a depleted Treasury occasioned by the havoc of Democratic "tariff reform," and because I am firmly convinced that if the present unwise and inadequate revenue law is allowed to remain on our statute books the country in a few years will be completely overwhelmed in financial chaos and anarchy and the masses reduced to the helpless and hopeless degradation of the lowest classes in despotic Europe.

### The Tariff.

A borrowed "surplus" is a liability rather than an asset. It is a bad corner stone for the edifice of business confidence.

### SPEECH

OF

HON. JOHN F. LACEY,

OF IOWA.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 23, 1897.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States—

Mr. LACEY said:

Mr. CHAIRMAN: We have thus far in this debate repeatedly heard the same inquiries that have been made by our opponents ever since the election: "Why did not prosperity come immediately upon the election of Major McKinley?" The other day when the rule was adopted limiting the time of this debate we heard appeals from the opposition to give them more time. They said in substance: "We have an abundance of time; we have met here in the middle of March and we can stay all summer." So with one breath they ask us, "Why don't you hurry up your prosperity?" and with the next they say, "Give us abundant time for debate; there is no hurry."

Mr. Chairman, the situation is too serious for any very long-continued debate. They ask us to "open the mills" promptly, but to be as slow as possible about the legislation which is needed to accomplish that much-desired result. To open the mills we must repeal the bill that closed them. They want the cure, but want to delay taking the medicine. We can not control the movements of the tariff bill after it passes from this House, but we can emphasize to the country the necessity for prompt action, as speedy as may be consistent with the prudent consideration of the bill that is now before us. The national situation presents a twofold problem. First, there is a question of revenue, and second, a question of currency. I am one of that number who have faith to believe that with a sound condition of our revenue system there will be little difficulty in our currency.

In fact, it is by no means sure that when the breach in the Treasury is repaired the currency question will not disappear.

The generation that has grown up since 1862 never saw any currency that was not founded upon the national Treasury, either directly or indirectly. The currency system of this country has had a solvent Treasury to back it; and when the prop of the solvency of the Treasury was withdrawn we had a panic, doubts arose as to our paper money, gold was withdrawn, and our obligations sent from abroad in order to draw our gold from us before we should change our standard of value to the silver basis. During the existence of the Wilson bill, or rather during the forty-eight months of the past Administration, the revenues of the nation have been short of its expenditures every month but six. Out of forty-eight months forty-two have shown an inadequate revenue. When the paper or credit currency of the country was no longer backed up with a solvent Treasury, we would naturally expect to find, and we did find, doubt and uncertainty.

We have heard much about a currency founded upon the faith of a great nation, but our recent experience has taught us again the lesson that faith must be made manifest by works. The commercial world may have faith in the credit of a nation, but that faith is greatly strengthened by abundant assets in the nation's treasury and the existence of revenue laws that will keep up the supply from legitimate sources. There must be other methods of maintaining the reserve than the borrowing of money. A borrowed "surplus" is a bad corner stone for the edifice of business confidence. Borrowed money may be "revenue" within the business teachings of the gentleman from Tennessee [Mr. McMILLIN], but the practical financiers of the world look rather at the liabilities created than the assets realized in a transaction of that sort.

The reports of receipts and expenditures of the Treasury are looked for by the public with the same interest as the market reports. We have a national currency, and we must have sound national finances upon which to base it.

The entire revision of our whole currency system is urged by many people; but the present debate is not a proper occasion for that discussion. With insufficient revenues a nation is not put in a position to change its financial system or standard of value. When the health of the Treasury is restored by a revenue sufficient to prevent the monthly deficit of from \$4,000,000 to \$6,000,000, then the subject of a revision of our currency system can be taken up, and we will then be able to see how far the money question will remain as a present factor in the problem.

The American people would feel no regret if it should disappear altogether. The "endless chain," which was the nightmare of

the last Administration, will at least cease to exist, because its most important link, the deficit, will be broken.

The proposed Dingley bill is a Republican measure, moderate in its provisions, but drawn upon unmistakable protective lines. It is drawn in the light of our recent experiences. The Wilson bill is in many respects also a protective law, but it is unfortunately founded upon the vicious ad valorem system, so subject to fraud and abuse. When the tariff duty depends wholly upon value, the importer is tempted to invoice the goods at a very low rate; but before the goods reach the consumer their true value is exacted. They are undervalued for the custom-house only. The Dingley bill attempts to apply specific duties, as far as possible, and thus do away with this source of perpetual fraud and deceit.

As an illustration of the effects of the ad valorem system, we find that the customs reports showed a very large balance of trade in favor of this country at the very time when we were shipping much gold to Europe. No doubt other causes also influenced the export of gold, but the large shipments of the precious metals demonstrated that the apparent balance of trade in our favor was not real. The goods imported were undervalued, as they always are when the duties are not made specific.

And thus the balance of trade is made to appear very much more favorable than it is in fact.

The title of the Wilson bill is "An act to reduce taxation, to provide revenue for the Government, and for other purposes." It failed to "provide revenue," but it has effected "other purposes" in a manner not at all satisfactory to the American people. The McKinley bill was condemned before trial, and now its author is made President of the United States. The Wilson bill has been condemned after trial, and its author has been made president—of a college.

The Dingley bill has the benefit of a good title. It is a bill to "provide revenue for the Government and to encourage the industries of the United States."

The child that is well named at its christening has already a good start in life.

When Mr. Cleveland brought forward the tariff issue by his celebrated message in 1887, his complaint was that there was a surplus in the Treasury. In 1893 how gladly would he have welcomed a return of that surplus. That message was full of theory. The subsequent pages of its author's history are full of instructive facts.

We ought to be able to frame a good tariff bill now. We have had the experience of two bills framed upon entirely different theories, and we need not go far back into our national history to ascertain the workings of the two bills.

Mr. Cleveland, in his message in 1887, directed our attention to the "markets of the world," and his delusive promise of that market has led to much misery.

The "home market" is a tangible and real thing. It has been thrown away in the vain hope of getting something better somewhere else. The opponents of protection point to the fact that the last four months of the McKinley bill showed a great falling off of the revenues.

Importers naturally held back their goods, awaiting the enactment of the new law.

The next two months will show the direct converse of this proposition. Importers will take their goods out of bond and the last days of the Wilson bill will be much better than the first.

Nothing in this life will be so becoming to that bill as the leaving of it. Even now, the gentleman from Alabama [Mr. WHEELER] has begun to point to these increasing revenues as evidence that the Wilson bill is an adequate revenue measure, and the gentleman from California [Mr. MAGUIRE] is already prophesying that prosperity is about to come in the natural order of events, and that when it comes it will not be due to the Dingley bill, but in spite of it. He says that good times always follow hard times, and as we have had hard times, of course, "there is a good time coming." We will at least hope that this bill may assist the good times in arriving on schedule time.

The country is ready for good times, and will hail their arrival by whatever route they may come.

In 1893 we were told by the platform of the Democratic party that the protective-tariff policy fostered no industry but that of the sheriff, implying that the proposed new tariff legislation would be inimical to the business of that officer. But the sheriffs were the only people in this country who had no reason to regret the passage of the new legislation. Their business has not suffered by the passage of the Wilson bill. They alone will mourn its repeal.

Since the change of base of General McClellan from the Rappahannock to the James there has been no such sudden shifting of issues as we beheld last fall.

The prosperous condition of the country in 1893 was wholly ignored, and the hard lines of 1896 were all attributed to the "crime of 1873."

The party in power had won a victory in 1892 upon a revision of the tariff, in which they even declared all protective laws

unconstitutional, but in 1896 they went back twenty-three years for a new issue, to divert the attention of the American people from the living present.

We were told in 1892 that what we needed was free trade and cheap things. In 1896 the same gentlemen who in 1892 had preached free trade and cheapness changed their tactics. They wanted free silver and dear things. "Free silver and high prices" was the cry. Instead of offering us the "markets of the world" they tendered us the "markets of Asia," and the employers of labor were asked to join in the movement that would enable them to pay their workmen in 50-cent dollars, whilst on the other hand the workmen were assured that their dollar would be just as good as ever. And the gentleman who filled the Executive chair from 1893 until the 4th of March, 1897, seems to have found himself without any friends in the regular organization of the party that elevated him to power. I sat here last night for several hours and listened to torrents of abuse and invective from the opposition side of this Chamber, from Populists and Democrats alike, and not one kind word was said in behalf of the only man who has carried the Democratic party into power in the last generation. Every word against him was cheered, and the Populist fresh from that party—the Populist who supported that party in 1892—was cheered more loudly by the alleged Democrats than the members of their own party. Why was this?

Mr. GREENE. Will the gentleman allow me a question?

Mr. LACEY. Certainly.

Mr. GREENE. To what Populist do you allude who voted for Mr. Cleveland in 1892?

Mr. LACEY. I have not alluded to any Populist who voted for Mr. Cleveland in 1892. I am calling attention to the fact that men who were too good to vote for him in 1892 are the saints now received into the Democratic party of 1897.

Mr. GREENE. That is a reform!

Mr. LACEY. The men who abused the Democratic party in 1892 became its leaders in 1896. What was left for the gold Democrat, the sound-money Democrat, in the last election? Well, I am reminded of an incident that is said to have occurred out in my friend's own State last fall. A young sound-money Democrat went to see his "best girl" and found her "sitting up" with a Populist. He went to his next-best girl and found her similarly engaged with another Populist. Populists were plentiful last fall. He then tried his third-best girl and found her in the same situation. Then he went sadly out, and as he went he heard the church bells ringing. He concluded he would go and seek for comfort at the prayer meeting. When he got there, they called on him to pray. He held up his hands and said: "O, Lord, we come to Thee because we have no other place to go." [Laughter.] Thus the sound-money Democrat last year found himself with no good place to go except into the ranks of the one party under whom we enjoyed universal prosperity during a third of a century, and he came to us and we welcomed him. We hope to make such a good return for his confidence as will keep him with us in the future. We hope to bring back the prosperity which has been lost.

Mr. HANDY. Will the gentleman allow me a question?

Mr. LACEY. Certainly.

Mr. HANDY. Did the gold Democrats who came to the Republican party last fall materially assist that party in carrying the election?

Mr. LACEY. I should think they did.

Mr. HANDY. Now, one other question: Is it not a pretty hard return for the Republican party to make to the gold Democrats to turn around now and give them such a tariff bill as this? [Laughter and applause on the Democratic side.]

Mr. LACEY. The gold Democrat—and I am thankful to the gentleman from the "Blue Hen State" for his suggestion—the gold Democrat has no such hostility to the Republican tariff bill now as he had in 1892. He has tried a tariff bill of his own party. [Applause on the Republican side.] He is glad to be relieved from the incubus under which the country has suffered and which has led so large a portion of the Democratic party to throw itself into the embrace of Western and Southern Populism, as it did last year.

Mr. COCHRAN of Missouri. Do I understand the gentleman to say that the gold Democrats do not now object to a protective tariff?

Mr. LACEY. The gold Democrats are wonderfully silent. They are willing to allow the present Administration to try its own methods. We have heard no protest from them. They neither asked nor expected us to abandon our well-known principles when they came to our aid. In fact, I believe that more Democrats came to us on the tariff, after the experience of the last four years, than did so on the money question itself, although they were hardly frank enough to say so on all occasions. [Applause on the Republican side.]

Mr. COCHRAN of Missouri. If the gold Democrats have now swallowed the McKinley tariff, having already swallowed Mr. Sherman's financial doctrines, I ask the gentleman whether they are not now pretty good Republicans? [Laughter.]

Mr. LACEY. Well, sir, the swallowing capacity of a portion of the Democratic party—the party that swallowed Bryan and Tom Watson last year—certainly can not be questioned. [Laughter and applause.] I am glad to say that there was at least a considerable portion of that party that had the manhood and patriotism to stand by the United States of America; and last night when I heard Mr. Cleveland denounced I could not help but feel that he was denounced more for what he did in maintaining law and order than even for what he did in sustaining the solvency of the country.

Mr. Chairman, I passed through the city of Chicago during the riot, a few years ago, and I saw railway trains burning on the tracks loaded with the products of the State of Iowa, the State of Nebraska, loaded with the products of Minnesota, Illinois, Missouri, and all the States of the great Northwest, and around the smoldering embers I saw the United States soldier, the bluecoat, standing there, who had been sent to the scene to restore the peace as against anarchy and lawlessness. And for this, more than anything else, has Mr. Cleveland been denounced and criticised on the floor of this House and in certain portions of this country. All honor to him, sir, for the noble stand he took on that occasion. [Applause.]

I have not often found it in my line to praise Mr. Grover Cleveland. I have not agreed with him in his policy in the past. But it is certainly a sad spectacle to behold in this age his own party deserting him and denouncing him for enforcing the law of the land. Why should he be condemned for upholding the law? Anarchy is the creed of Moloch.

Mr. Chairman, our attention was called this morning by the gentleman from Missouri [Mr. DOCKERY] to the fact that in the Senate in the last Congress there was introduced and passed a resolution to take away from the Secretary of the Treasury the privilege of the issuance of Government bonds; and that the Republican party in this House, when the matter was brought before them, refused to give their consent to the passage of that resolution, and thus failed to signalize their denunciation of the system of issuing the bonds of the United States in time of peace. The Republican party has not attacked the last Administration for the issuance of Government bonds. They criticised the manner of their issue and they have attacked, and attack now, the policy which rendered the issuance of Government bonds on the one hand, or national bankruptcy on the other, the alternative which inevitably faced us.

We have attacked the methods and the governmental principles advocated by our friends on the other side of the House which made this bond issue absolutely necessary. We have attacked the law that rendered the sale of Government bonds in time of peace a necessity; but we did not attack and have never assailed the last Administration for the issuance of the bonds themselves. Nothing lay between this country and absolute insolvency except the issue of the bonds. In the convention which framed the Federal Constitution a gentleman offered an amendment providing that the standing army of the United States should never exceed 5,000 men. General Washington rose and moved an amendment providing that no invading army should ever exceed 3,000 men [laughter]; and this proposition to do away with bonds and at the same time maintain the law which rendered their issuance necessary is just as absurd as the jocular motion made by the father of our country over a hundred years ago. I am surprised, therefore, Mr. Chairman, that a gentleman of the ability of my friend from Missouri should attack the Republican party for refusing to denounce the Democratic Administration for the issuance of bonds.

But, sir, we have had a good deal of discussion throughout the country and on this floor with reference to the income tax. We have been entertained by the novel proposition that we should sit in judgment upon the Supreme Court of the United States, and that instead of passing a tariff bill to restore the revenues of the country and to restore the solvency of the Treasury, we should instead try the various judges of that court, and determine in all seriousness which of them, if either, changed his mind with reference to that great question, and whether the decision they rendered was right or wrong, constitutional or otherwise. But, sir, with that question we have nothing whatever to do. That court is a coordinate branch of the Government. It has done what it believed to be its duty. The law has been declared unconstitutional. In enacting this law we should keep within the Constitution. Not the Constitution as expounded on this floor, but as decided by the Supreme Court.

But it has been claimed that if that portion of the Wilson bill had been held valid and had been executed, it would have produced revenue enough for current expenses. It has been claimed time and again during the debate that if the revenues from the enforcement of the income tax had not been cut off by the decision of the Supreme Court the bill would have been adequate for the maintenance of the specie reserve at all times, or at least that the bill would have met the ordinary expenses of the Government without the necessity of issuing bonds. But upon what a slender

thread is this proposition based! We have at hand the income reports of one year under the operation of the income-tax law before it was declared unconstitutional by the United States Supreme Court; and I read from the report of the Commissioner of Internal Revenue for the year 1895, on page 191, where it is stated that income taxes were returned to the extent only of \$15,943,748.69. I grant that in view of the litigation then pending in the courts some corporations failed to make their returns. I concede that some individuals took the chances of paying 50 per cent as a penalty for a failure to return the amount of their incomes for the past year. But the total amount could not have been greatly in excess of the amount actually returned.

I know that Mr. Carlisle, then Secretary of the Treasury, in his cheerful way insisted that the revenues would have gained to the extent of \$30,000,000 from that source. But there is nothing tangible upon which to base that claim. The returns for the whole year were less than \$16,000,000, as shown by the official reports. I will not analyze these income-tax returns, but will point out, as showing its inequality, one peculiar fact. Georgia and Iowa each have the same population and eleven Representatives in Congress. The income tax reported for Iowa was \$147,793.75, whilst that of Georgia was only \$112,993.74, or about 25 per cent less than that of Iowa. Now, what is the condition with which we are brought face to face? The deficit in the Treasury, by comparison of the receipts and expenditures for the year 1893, is shown to be \$43,000,000 and over; for 1894 it was \$61,000,000; for 1895, \$35,000,000, and for 1896 it shows a deficit of more than \$50,000,000. If, therefore, you allow this \$30,000,000 income tax, the utmost that has been claimed by the most sanguine friends of that measure, it would still leave the Treasury many millions of dollars short of what is required to carry on the operations of the Government.

Under a protective-tariff system, reasonably constructed, the first Presidential Administration under Democratic control passed through four years securely with a solvent Treasury, and Mr. Cleveland paid during the four years of his first Administration \$341,448,449 upon the national debt. In the four years of Mr. Harrison's Administration, under the same law or under the McKinley bill, which took the place of the law of Mr. Cleveland's first term, there was paid \$336,527,666 on the national debt. He paid \$100,000,000 less than Mr. Cleveland, for the simple reason that the pension list had been largely increased by the act of 1890, and by reason of the liberal pension laws of the Republican party. But under the last Administration the bonded debt has increased \$262,315,400, with an annual increase in the interest charge of over \$10,000,000.

The following table will show the monthly deficits from July, 1893, down to and including February, 1897, and also the sum total of the annual deficits for four years:

*Excess of expenditures and receipts of the United States, by months.*

Month.	Excess of—

1890		43,381,984
1894		61,899,454
1895		36,064,432
1896		50,249,326

Under a protective policy, with the McKinley bill, and with the act of 1883, which preceded it, the two Administrations paid nearly \$600,000,000 upon our national debt in the eight years from 1889 to 1897.

Mr. COX. Will the gentleman permit me in that connection to ask him one question?

Mr. LACEY. Certainly.

Mr. COX. Under the statement made by the chairman of the committee [Mr. DINGLEY], it is estimated that this bill will bring in annually \$413,000,000 more of revenue than the Wilson bill.

Mr. LACEY. No; it is not. It is estimated that if it does not check importations to some extent, it will bring in that amount, but that is assuming that people will import as much into this country under the Dingley bill as they would have imported under the Wilson bill.

Mr. COX. Yes.

Mr. LACEY. Of course that is not a correct assumption at all, and the chairman of the committee makes a proper allowance for that.

Mr. SHANNON. It depends also upon the prompt passage of this bill.

Mr. COX. I suppose you will agree that it will realize something like a hundred million dollars annually in excess of what is brought in by the Wilson bill. Now, your deficit is about \$20,000,000 annually. What is the object in raising eighty, ninety, or one hundred millions more when you do not need more than twenty millions more?

Mr. LACEY. In the first place, the gentleman asks a question founded on an erroneous assumption. He says the deficit is \$20,000,000 a year. The deficit last year was \$30,249,326, or more than two and one-half times as much as the amount stated by my friend from Tennessee.

It is not necessary in this debate to attempt to prove that the recent experiment of so-called tariff reform has not proven satisfactory. Failures in business will occur and misfortunes will come under any system, but the evidence points without controversy to better times in our country when the protective system has been fully recognized than when the opposite policy has prevailed. I will not go back into remote history, but I have compiled a statement of the liabilities of failing debtors during the four years which have just closed, and also during the previous four years of General Harrison's Administration.

For the latter four years the amount increased nearly 50 per cent, as compared with that of the Harrison period.

Total liabilities of failing debtors in the United States during Harrison's and Cleveland's Administrations.

HARRISON'S.	
1889	\$148,784,337
1890	180,859,994
1891	180,889,630
1892	114,044,167
Total	642,554,108
CLEVELAND'S.	
1893	\$945,770,889
1894	172,924,853
1895	173,199,000
1896	226,096,934
Total	919,085,636

But notwithstanding our recent experiences, we are again regaled with the old saws of the past.

We are gravely told that we propose "to make people rich and happy by taxing them." This hoary-headed phrase has done duty in many a free-trade campaign.

We are also told that the proposed bill will immediately increase the price of everything, and therefore it will be an injury to the people.

The same speakers who last fall were proposing to double the price of everything by changing the standard of value and who shouted "free silver and high prices" are now engaged in warning us that an increase in prices is a dangerous thing.

The issue between the two parties is a very simple as well as a very ancient one.

Our forefathers in 1789 set the wheels of this Government in operation. The first bill they passed was an act defining the kind of an oath that should be taken by United States officials, and it provided that Congressmen and other Federal officers should swear to support the Constitution. Many of the members of that First Congress had sat as members of the convention that framed the Constitution. The second act of that First Congress was a protective-tariff bill, and it recited in the preamble:

Whereas it is necessary for the support of the Government, for the discharge of the debts of the United States, and the encouragement and protection of manufactures, that duties be levied on goods, wares, and merchandise imported: Therefore, Be it enacted, etc.

And yet, during the present debate, gentlemen have discussed the constitutional power of this Government to enact a tariff bill upon protective lines.

It is a striking fact that the first Congress that ever assembled should pass as its first law an act requiring an oath to support the Constitution of the United States, and then, in the next bill, proceed to violate it by enacting a protective-tariff law. But President Washington celebrated the Fourth of July, 1789, by signing the first tariff law enacted upon the lines of the policy of Alexander Hamilton.

But our opponents do now agree with us that there must be a tariff. An occasional member may be found, even representing an agricultural district, who thinks that all taxes should be repealed except the Henry George single tax upon lands, but these gentlemen are few and hardly take themselves seriously. But we seem now to be nearly all agreed that there must be a tariff, and the simple question is upon what lines shall it be levied? Some gentlemen say that they will not object to incidental protection; that if the tariff should do any good that it should be incidental—not intentional; that if it benefited the country they did not mean it.

On the other hand, we say that we mean to get some good out of the tariff if we can, and that if it does any good we intend that it should.

The policy of the present bill is to levy specific duties that can not be avoided by fraudulent undervaluations, and to lay such duties as far as can be done upon those things which come into competition with our own products. The policy of the opposition is to permit those products which compete with ours to come in free, and to levy duties on those things which we do not produce.

The policy of this bill is to tax the products which come from countries where wages are lower than in America, and, while raising revenue for the Government, to protect the laboring man in the United States at the same time. The bill may be defective in some of its schedules, and I trust these defects may be amended; but the bill is free from all sectional lines. It knows no East or West, no North or South. It returns to the policy of reciprocity, which was so ruthlessly swept away by the Wilson bill. It protects the products of the mine, the factory, and the farm, and attempts in good faith to give the American markets to the products of the toilers of the United States.

The coal miners of this country were especially the object of solicitude by the Bryan party last fall. Every Populist in the Fifty-third Congress except one (Sibley, of Pennsylvania) voted for the Wilson bill to put coal on the free list, and the small duty of 40 cents a ton was put on by an amendment of the Senate, being only about half the rate of the McKinley bill. The Populists who voted for the Wilson bill which so greatly crippled and injured the coal-mining business of this country were Baker of Kansas, Bell of Colorado, Boen of Minnesota, Coffeen of Wyoming, Davis of Kansas, Denson of Alabama, Kem of Nebraska, McKeighan of Nebraska, Pence of Colorado, and JERRY SIMPSON of Kansas, and also W. J. Bryan, who claimed to be at least half Populist. And yet these gentlemen attempted to hoodwink the coal miners of the West into the belief that their interests were not involved in the issue of protection. Whatever success they may have had with the miners of the West, they utterly failed to deceive those who were engaged in digging coal in the Eastern States, where the competition of Nova Scotia coal was keenly felt. When the Wilson bill passed Harry Tucker and William J. Bryan bore Mr. Wilson from this Hall in triumph on their shoulders. But the miners of West Virginia did still better—they carried Mr. Wilson out of Congress altogether later on.

The miners of the Eastern coal regions could not be deceived by the promised "cheap goods" under the Wilson bill nor by the promised "cheap money" of the last Chicago platform. They

never liked "scrip" for pay, and 50-cent dollars were even worse than any scrip. The miners of the West can not prosper when the miners of the East are out of work.

It is true that we have exported considerable coal to Canada from Indiana, Ohio, and Illinois, but Canada levied a duty on it all at 60 cents a ton while we only placed a duty of 40 cents on the Nova Scotia coal. Our exports to Canada were mainly due to the hard times and low prices at home.

No body of men in America are so deeply interested in good money and protection as the coal miners. To cut their dollar into halves means to lower their scale of wages. To open the seacoast cities to the free importation of Nova Scotia coal on the East and British Columbia and Chinese coal on the West could not fail to injuriously affect the business of the coal miner, and whether the miner agrees with me as to the cause or not, he will not dispute the fact that the Wilson-bill period has been a hard one for every class of American labor and especially for his own. The putting out of the fires in the furnaces and factories has taken away the employment and wages of many a miner. As a West Virginia miner graphically put it, "Coal miners have hard times when cattle and sheep eat the grass that grows on the cold roofs of the unused coke ovens of West Virginia."

The campaign last fall was a shrewd one. Appeals were made to the prejudices of the workmen of the country, and at first it seemed as if the scheme would succeed. But the sober second thought came and the cause of sound money and protection triumphed.

And now this Congress is promptly addressing itself to the task of framing legislation which will take account of the needs of the Treasury and the employment of the American people.

The policy that we enact at the beginning of this Administration will be followed through the next four years, and the greatest century that the world has ever seen will soon pass away and we will turn to greet the rising sun of another hundred years. All true Americans will hope that that sun will rise upon a nation again prosperous, upon happy homes, upon smoking shops and busy fields, upon capital and labor well employed, and that the dark clouds that now lower in the sky shall have passed away.

Let us earnestly endeavor to frame such laws as will cause the closing years of the present Administration to be pointed to by all Americans as the model for the twentieth century. [Applause.]

### The Tariff.

A tariff is a tax, and the consumer has it to pay, and the man who consumes most of the protected article pays the highest tax.

Taxation, in its last analysis, is confiscation by the Government of the property of the citizen for public purposes. Protection is authority indirectly conferred upon certain business men to confiscate the property of their patrons.

Taxation is a necessary burden.  
Protection is an ingenious robbery.

### SPEECH

OF

HON. ANDREW J. HUNTER,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 31, 1897,

On the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. HUNTER said:

Mr. CHAIRMAN: We have been called together by the President of the United States in extraordinary session, and under arbitrary rules required to legislate in an extraordinary manner, to pass into law a bill framed solely in the interests of trusts and kindred combinations. The people had a right to expect that legislation would be in their interests, and, if possible, lift the load of oppression from their shoulders that is now weighing them down. But if we are to judge from the provisions of this bill, the arguments of its friends, and the unparalleled haste with which it is being railroaded through this House, it is evident we are simply called together to ratify and confirm a scheme that was evolved just after the election last fall, at Canton, Ohio, as a scheme of confiscation by which a certain class might enjoy rich rewards. In the light of events that have developed since the election of Mr. McKinley, we are enabled to divine the full scope and intent of those combinations who manipulate legislation in this country for private gain. Their plans are laid with skillful hands, both wide and deep. Behold their handiwork! No novice could frame a bill with such far-reaching provisions as this one, that will so successfully deceive the millions for the benefit of the few.

Mr. Chairman, a reform in our financial system was the paramount issue made by the people in the last campaign. They demanded and expected that the money question would be settled

before all others, but that question is now wholly ignored and set aside by the gold barons and the trusts, and now this bill to protect the trusts is forced to the front over the protests of the people, and defiance hurled into their faces. Let us look back a few months and recall some of the deceptive promises and pledges made to the people by these protectionists, these men who depend upon trick legislation for their profits in business, and also the means employed by them for its consummation. First, the great apostle of protection and the champion of class legislation is sought out as their candidate for the Presidency. He having fallen under adverse financial circumstances a few years ago, is now resurrected and placed upon his financial feet by the beneficiaries of protective tariff laws. He was carefully groomed and provided with all the money that was necessary to organize a nominating machine in all the States. That machine was so fearfully constructed that it run over all opposition. The distinguished Speaker of this House, Mr. REED, Senator ALLISON, Senator CULLOM, and Vice-President Morton, with all their prestige, influence, and power, were unable to resist this purchased McKinley machine. All opposition was swept out of the field like prosperity under a gold standard. The triumph of money in the hands of the protectionists was complete. These old-time Republicans were told to get out of the way, that they were not orthodox, and could not be trusted to force upon the country the climax of McKinleyism. None but the most daring protectionists would be allowed in power.

The friends of this bill, without the least effort at concealment, now declare that their purposes are to increase taxation and protection, leaving the masses of the people without any relief from their unhappy condition. No promises except to the protectionists are to be redeemed. In this debate we have never heard one of these protectionists asking for a reduction of taxation or a reduction in the expenses of the Government. The President in his message to this Congress does not even refer to the question of economy or the reduction of taxation; he simply asks for more money to foster extravagance and pay bounties to his financial indorsers. But, Mr. Chairman, we should not expect him to do so, for that would destroy the only basis for protection. Without extravagance, protection would be a failure, hence a billion-dollar Congress must be had. This law of protection, giving such vast bounties to a small class of people at the expense of all other classes, is a fraud, as the world knows, and it has to be perpetuated in a surreptitious way and hedged about with all the sophistry of the demagogue in order to deceive the masses, until the fraud is fully consummated.

Time alone, however, can fully demonstrate the effect of this bill. The trusts and corporations have full control of a majority of this Congress, and the oppression of the taxpayer is only limited by their avarice. I feel very certain that if this bill should become a law it will not raise as much revenue as the present law for the Treasury. But I am certain that it will raise a much greater sum for the pockets of the protected.

Mr. Chairman, a great economic question like this, permeating every community in this vast country, involving the material interests of 70,000,000 of people, whose welfare and rights are mutual, can not be settled upon a basis so narrow and partisan as this bill presents. The American people, who have been born and reared in the belief that legislation should be just and equitable to all, will be amazed when the intent and purposes of this bill are fully understood. Gentlemen may make arguments that are entirely satisfactory to themselves, they may cite as precedents former vicious statutes to sustain their special partisan demands, they may contend that it is right to give one class of our business men an advantage over all other classes by legal enactment, they may show that former Congresses have violated the letter and spirit of the Constitution in dealing out these special privileges, they may insist on the revival of the old Federal doctrine that it is necessary to make one class of our people rich that they may take care of the poor, they may charge that Grover Cleveland was a Democrat and a deficiency was created under his Administration, but I do not think that the credulity of the people can be further played with and used to sustain this doctrine; in fact, I know that there is a widespread sentiment against it. There can be no permanent adjustment of this question upon such unfair conditions as long as the people have a right to be heard. Thirty years of false and pernicious legislation, under the pretense that the Constitution gives sufficient authority to tax the whole people for the benefit of a certain class, is not binding upon the people or their representatives to-day, and no man who has determined to be just to the people who sent him here will regard such precedents and vote for this bill. Members who fancy that long-standing violations of the Constitution can be plead in justification for their support of this measure is a matter entirely between them and their constituents. However, I think there will be a day of reckoning hereafter.

I arraign no man for honest convictions. I would be glad to have the opportunity of voting for some measure that would give immediate relief to the toiling millions; but, gentlemen, I can not

But notwithstanding our recent experiences, we are again regaled with the old saws of the past.

We are gravely told that we propose "to make people rich and happy by taxing them." This hoary-headed phrase has done duty in many a free-trade campaign.

We are also told that the proposed bill will immediately increase the price of everything, and therefore it will be an injury to the people.

The same speakers who last fall were proposing to double the price of everything by changing the standard of value and who shouted "free silver and high prices" are now engaged in warning us that an increase in prices is a dangerous thing.

The issue between the two parties is a very simple as well as a very ancient one.

Our forefathers in 1789 set the wheels of this Government in operation. The first bill they passed was an act defining the kind of an oath that should be taken by United States officials, and it provided that Congressmen and other Federal officers should swear to support the Constitution. Many of the members of that First Congress had sat as members of the convention that framed the Constitution. The second act of that First Congress was a protective-tariff bill, and it recited in the preamble:

Whereas it is necessary for the support of the Government, for the discharge of the debts of the United States, and the encouragement and protection of manufactures, that duties be levied on goods, wares, and merchandise imported: Therefore, *Be it enacted, etc.*

And yet, during the present debate, gentlemen have discussed the constitutional power of this Government to enact a tariff bill upon protective lines.

It is a striking fact that the first Congress that ever assembled should pass as its first law an act requiring an oath to support the Constitution of the United States, and then, in the next bill, proceed to violate it by enacting a protective-tariff law. But President Washington celebrated the Fourth of July, 1789, by signing the first tariff law enacted upon the lines of the policy of Alexander Hamilton.

But our opponents do now agree with us that there must be a tariff. An occasional member may be found, even representing an agricultural district, who thinks that all taxes should be repealed except the Henry George single tax upon lands, but these gentlemen are few and hardly take themselves seriously. But we seem now to be nearly all agreed that there must be a tariff, and the simple question is upon what lines shall it be levied? Some gentlemen say that they will not object to incidental protection; that if the tariff should do any good that it should be incidental—not intentional; that if it benefited the country they did not mean it.

On the other hand, we say that we mean to get some good out of the tariff if we can, and that if it does any good we intend that it should.

The policy of the present bill is to levy specific duties that can not be avoided by fraudulent undervaluations, and to lay such duties as far as can be done upon those things which come into competition with our own products. The policy of the opposition is to permit those products which compete with ours to come in free, and to levy duties on those things which we do not produce.

The policy of this bill is to tax the products which come from countries where wages are lower than in America, and, while raising revenue for the Government, to protect the laboring man in the United States at the same time. The bill may be defective in some of its schedules, and I trust these defects may be amended; but the bill is free from all sectional lines. It knows no East or West, no North or South. It returns to the policy of reciprocity, which was so ruthlessly swept away by the Wilson bill. It protects the products of the mine, the factory, and the farm, and attempts in good faith to give the American markets to the products of the toilers of the United States.

The coal miners of this country were especially the object of solicitude by the Bryan party last fall. Every Populist in the Fifty-third Congress except one (Sibley, of Pennsylvania) voted for the Wilson bill to put coal on the free list, and the small duty of 40 cents a ton was put on by an amendment of the Senate, being only about half the rate of the McKinley bill. The Populists who voted for the Wilson bill which so greatly crippled and injured the coal-mining business of this country were Baker of Kansas, BELL of Colorado, Boen of Minnesota, Coffeen of Wyoming, Davis of Kansas, Denson of Alabama, Kern of Nebraska, McKeighan of Nebraska, Pence of Colorado, and JERRY SIMPSON of Kansas, and also W. J. Bryan, who claimed to be at least half Populist. And yet these gentlemen attempted to hoodwink the coal miners of the West into the belief that their interests were not involved in the issue of protection. Whatever success they may have had with the miners of the West, they utterly failed to deceive those who were engaged in digging coal in the Eastern States, where the competition of Nova Scotia coal was keenly felt. When the Wilson bill passed, Harry Tucker and William J. Bryan bore Mr. Wilson from this Hall in triumph on their shoulders. Taxation is a necessary burden.  
Protection is an ingenious robbery.

### SPEECH

OF

HON. ANDREW J. HUNTER,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 31, 1897.

On the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. HUNTER said:

Mr. CHAIRMAN: We have been called together by the President of the United States in extraordinary session, and under arbitrary rules required to legislate in an extraordinary manner, to pass into law a bill framed solely in the interests of trusts and kindred combinations. The people had a right to expect that legislation would be in their interests, and, if possible, lift the load of oppression from their shoulders that is now weighing them down. But if we are to judge from the provisions of this bill, the arguments of its friends, and the unparalleled haste with which it is being railroaded through this House, it is evident we are simply called together to ratify and confirm a scheme that was evolved just after the election last fall, at Canton, Ohio, a scheme of confiscation by which a certain class might enjoy rich rewards. In the light of events that have developed since the election of Mr. McKinley, we are enabled to divine the full scope and intent of those combinations who manipulate legislation in this country for private gain. Their plans are laid with skillful hands, both wide and deep. Behold their handiwork! No novice could frame a bill with such far-reaching provisions as this one, that will so successfully deceive the millions for the benefit of the few.

Mr. Chairman, a reform in our financial system was the paramount issue made by the people in the last campaign. They demanded and expected that the money question would be settled

before all others, but that question is now wholly ignored and set aside by the gold barons and the trusts, and now this bill to protect the trusts is forced to the front over the protests of the people, and defiance hurled into their faces. Let us look back a few months and recall some of the deceptive promises and pledges made to the people by these protectionists, these men who depend upon trick legislation for their profits in business, and also the means employed by them for its consummation. First, the great apostle of protection and the champion of class legislation is sought out as their candidate for the Presidency. He having fallen under adverse financial circumstances a few years ago, is now resurrected and placed upon his financial feet by the beneficiaries of protective tariff laws. He was carefully groomed and provided with all the money that was necessary to organize a nominating machine in all the States. That machine was so fearfully constructed that it run over all opposition. The distinguished Speaker of this House, Mr. REED, Senator ALLISON, Senator CULLOM, and Vice-President Morton, with all their prestige, influence, and power, were unable to resist this purchased McKinley machine. All opposition was swept out of the field like prosperity under a gold standard. The triumph of money in the hands of the protectionists was complete. These old-time Republicans were told to get out of the way, that they were not orthodox, and could not be trusted to force upon the country the climax of McKinleyism. None but the most daring protectionists would be allowed in power.

The friends of this bill, without the least effort at concealment, now declare that their purposes are to increase taxation and protection, leaving the masses of the people without any relief from their unhappy condition. No promises except to the protectionists are to be redeemed. In this debate we have never heard one of these protectionists asking for a reduction of taxation or a reduction in the expenses of the Government. The President in his message to this Congress does not even refer to the question of economy or the reduction of taxation; he simply asks for more money to foster extravagance and pay bounties to his financial indorsers. But, Mr. Chairman, we should not expect him to do so, for that would destroy the only basis for protection. Without extravagance, protection would be a failure, hence a billion-dollar Congress must be had. This law of protection, giving such vast bounties to a small class of people at the expense of all other classes, is a fraud, as the world knows, and it has to be perpetuated in a surreptitious way and hedged about with all the sophistry of the demagogue in order to deceive the masses, until the fraud is fully consummated.

Time alone, however, can fully demonstrate the effect of this bill. The trusts and corporations have full control of a majority of this Congress, and the oppression of the taxpayer is only limited by their avarice. I feel very certain that if this bill should become a law it will not raise as much revenue as the present law for the Treasury. But I am certain that it will raise a much greater sum for the pockets of the protected.

Mr. Chairman, a great economic question like this, permeating every community in this vast country, involving the material interests of 70,000,000 of people, whose welfare and rights are mutual, can not be settled upon a basis so narrow and partisan as this bill presents. The American people, who have been born and reared in the belief that legislation should be just and equitable to all, will be amazed when the intent and purposes of this bill are fully understood. Gentlemen may make arguments that are entirely satisfactory to themselves, they may cite as precedents former vicious statutes to sustain their special partisan demands; they may contend that it is right to give one class of our business men an advantage over all other classes by legal enactment, they may show that former Congresses have violated the letter and spirit of the Constitution in dealing out these special privileges, they may insist on the revival of the old Federal doctrine that it is necessary to make one class of our people rich that they may take care of the poor, they may charge that Grover Cleveland was a Democrat and a deficiency was created under his Administration, but I do not think that the credulity of the people can be further played with and used to sustain this doctrine; in fact, I know that there is a widespread sentiment against it. There can be no permanent adjustment of this question upon such unfair conditions as long as the people have a right to be heard. Thirty years of false and pernicious legislation, under the pretense that the Constitution gives sufficient authority to tax the whole people for the benefit of a certain class, is not binding upon the people or their representatives to-day, and no man who has determined to be just to the people who sent him here will regard such precedents and vote for this bill. Members who fancy that long-standing violations of the Constitution can be plead in justification for their support of this measure is a matter entirely between them and their constituents. However, I think there will be a day of reckoning hereafter.

I arraign no man for honest convictions. I would be glad to have the opportunity of voting for some measure that would give immediate relief to the toiling millions; but, gentlemen, I can not

see one ray of hope for them in this bill. It simply proposes to tax the American people \$112,000,000 more annually. Our ability as a nation has been put to the extreme test in the last eight years of raising sufficient revenue to support the Government under the McKinley bill, as well as the Wilson bill. The last year under the operations of the McKinley tariff the expenditures of the Government exceeded the revenue \$89,000,000, and the last year of the Wilson bill the deficit was \$24,000,000. Contrasting these two measures, the Republicans of this House, by their juggling with figures, can not hypnotize the masses and give relief to the people by the demagoguery of this bill. Such a hypothesis should be an insult to all intelligence. This, however, is no new doctrine of the protectionist, to pretend to tax the people into prosperity. They have always invited the lawmaking power to go outside of the Federal Constitution and regard their clamor and private interests as the true basis of legislation, and thus protect them from foreign competition, so that they could force the consumer to pay them an increased price for the goods that they produce.

We are now told that this bill is laden with prosperity and will bring joy to the idle workman, the farmer of this country, and fill the Treasury with gold. It has been conceded by all parties from the commencement of this Government to the present time, except a few beneficiaries of protection, that it was the fixed purpose of the authors of this Government to give to all men in all departments of trade and business an equal chance in the race of life. The existence of republican government must necessarily be short unless this rule is strictly carried out. It must be admitted by the friends of this bill that it is solely in the interest of a class, and that a very small class, not 3 per cent of our population. It is to be regretted that private gain and corporate greed are to be made the sole basis of all this legislation; that a special session of Congress can be called at their command, and at their dictation, and at the expense of the nation, to advance their private interests only.

We are told by the trusts and the protectionists that we must pass this bill and take up no other legislation, that the trusts may have prosperity; that the masses of the people are all doing well enough. Just let them alone; let Congress adjourn and go home, and let the gold standard and protection continue their deadly work on the toiling millions. Gentlemen, can this Congress afford to ignore the interests of the people who produce the material wealth of this country and so legislate that trusts, syndicates, and corporations may acquire fortunes not earned? The distribution of wealth by law in a free country does not consist and can not be maintained. Can any fair-minded representative hope to perpetuate our present form of government with such laws in force? Are we charged by our constituents to legislate for capital alone, or for both labor and capital? I am not aware of any authority or right under the Constitution or by any oath to make any such distinction. This bill, however, in every word and in every line, asks us to abandon the toiling people who sent us into this Chamber and enact a law that will continue a system of spoliation that has already paralyzed the wealth producers of untold millions.

Mr. Chairman, if there were no other influence than conscience to restrain members, that alone would seem sufficient to cause them to call a halt. But no; at every session of Congress the grip of avarice is sought to be more firmly fastened upon the throats of the people. In all this debate so far no member has dared to give the real reason why a protective tariff should be continued. The honest and frank demands of the manufacturers of lumber, recently before the Committee on Ways and Means, are to be commended to most of those who ask for protection under false pretenses. They come squarely to the front and speak out. They say what they want and why they want it. They do not come with a hypocritical plea, saying they want a tariff for the poor laboring man, but they demand protection because others get it and they want their share of the plunder. I here insert a letter sent me by the National Lumber Convention, which has its office in this city. This letter clearly discloses the purposes of a protective tariff:

WASHINGTON, D. C., February 23, 1897.

DEAR SIR: We have taken the liberty of sending you under the frank of Hon. W. B. Linton a copy of that section of the tariff hearings by the Ways and Means Committee of Congress relating to the lumber interests of the country, and we do so under the belief that the welfare of this the largest of all our great manufacturing industries, whether measured by the amount of invested capital, value of annual products, number of men employed, or the amount of wages paid, still much the largest of our great industries, must be of some interest to all our legislators, and any facts relating thereto can be of no small importance.

May we draw attention to the fact that in asking for \$2 per thousand for rough lumber we are confining ourselves to a moderate "revenue-only" tax of less than 30 per cent, in great contrast to the requests of our friends the coal miners, iron manufacturers, or agriculturists, in what seems to us their fair and just requests for a "protective tariff," running from 33 per cent to 100 per cent and in some instances still higher rates, but which the conservatism of a large portion of our numbers restrains us from asking, although all agreeing that a still higher rate would, in our case as in theirs, be better for our own individual interests?

Very truly,

A. H. WINCHESTER,  
For Executive Committee.

You can see they want us to give them \$3 per thousand, not for the men who supply the logs or the men who work in the mill,

but for their "own individual interest." This is a very polite letter asking me to vote a tax on 200,000 people in my district, not one of whom gets one cent of this protection. Our forest reserves are being destroyed too rapidly as it is. Why should encouragement be placed upon such destruction by the imposition of high protective duty? Suppose a small amount of lumber is imported from Canada; is not the result the preservation of part of our own limited forest domain until the time when it will be more valuable? Instead of placing a premium upon the destruction of our forests whose preservation is so desirable for reasons relating to climate and rainfall, the Government should rather undertake to maintain a forest reserve. It is said that high duties on lumber are a benefit to the workmen. This I deny, however. Let it be remembered that the only importation of lumber is from Canada, and while it is desired to levy a duty on such importations, there is nothing to prevent the Canadian workmen from coming across the border into American lumber camps.

High protective duties on lumber would mean higher prices to the consumer, with little benefit to anyone but millionaire lumbermen, who have already made fortunes out of the business. Lumber is a commodity that should be as cheap as possible in order to encourage building. This would encourage labor and benefit the consumer. It has been an enigma for many years with the people who are not familiar with the modern methods of legislation how such partial and unjust laws can get through Congress when there are sixty-nine men that do the protecting and only one man gets the protection—when sixty-nine votes should be recorded on one side, whilst there can be but one recorded on the other. In the earlier days of this Republic all the people trusted their chosen representatives to carry out their will and enact it into law, and it was done. But now every member here that is supposed to be in favor of class legislation is imported and groomed by the agents, committees, and attorneys of the corporations, syndicates, and trusts that are seeking special privileges. Their attendance upon the Committee on Ways and Means and the sessions of Congress is as regular and prompt as the members themselves. They are here now, and have been making out their schedule, fixing the per cent of protection on the articles they produce.

Mr. Chairman, on the 14th day of last December, more than three months before this Congress was organized, a coterie of gentlemen got together and constituted themselves a committee of ways and means, and advertised to those who wanted the tariff laws changed by the next Congress to come and file their schedules of wants and arguments.

Now, let us inquire how this bill got into existence. Certainly not by the authority of this House. It was not appointed by the Speaker of this Congress. If the statements of the newspapers are to be taken as true, the present chairman of the Committee on Ways and Means went to Canton, Ohio, last November and had a conference with Mr. McKinley, and they agreed that Mr. DINGLEY should go to work at once and prepare a bill for the next Congress, which would be called together in a short time after Mr. McKinley's inauguration, and that a tariff bill would be ready and rushed through Congress. At the time this arrangement was made Mr. McKinley was not President, the electoral vote had not been counted, nor had he taken the oath of office. I had always understood that revenue bills should originate in the House of Representatives here in Washington, not at Canton, Ohio. The committee appointed by this Congress has not had time to prepare a tariff bill, and if they had there has not been sufficient time afforded this House to consider a bill of 14 schedules, 163 pages, and 198 sections, proposed by the trusts and some of the members of this House now who were in a former Congress. Not one-fifth of the bill can be considered now at this hour.

The first special industries to be recognized by the committee were the manufactures of chemicals and spirits and wines and other liquors. A large number of advocates were before the committee, and without exception all asked for an increase of duty on the particular industry in which they were interested, and they got it; and they further insisted that the duty should be changed from ad valorem to specific duties, and it was done. Next came the representatives of the Textile Manufacturers' Association and the Cotton Yarn Spinners' Association and asked to have the present law changed to suit their ideas of better profits, and it was done. They were exceedingly fearful that custom-house officers would not be honest and careful in fixing the value of goods, and they wanted ad valorem duties abolished and specific duties adopted, and that was done. The sugar and molasses schedule, with all of its complication, seems to be one of the subjects that can not be settled; but there is, however, one general feature upon which all the trusts do agree—that is, more protection and specific duties. Day after day these special beneficiaries of former protective tariffs swarmed in upon the committee, filed their briefs, and made their arguments for more protection to them for the articles which they produced—wood manufactures, wood pulp and paper, tobacco and cigars, animals, fish and meat, earthenware and glassware, iron, lead, and bituminous coal.

Most of the arguments made before the committee were purely selfish and some of them very amusing. There was one gentleman, representing colored manufactures, who said the present duties were satisfactory, but if the duties were increased on chemicals, then he desired a relative increase on colors. These hearings before the Ways and Means Committee have demonstrated one fact, that the trusts and corporations are going to abolish ad valorem duties and adopt the specific method. Such a change affords additional opportunity to all those who wish to take advantage of the revenue laws in their own private interests. I think one of the most dangerous features of this bill is the change from an ad valorem to specific rate of duty. The experience in this country of more than one hundred years has demonstrated that the only correct and honest way to levy taxes is according to value. All the counties, States, and municipalities in this country have no other method, and would not dare, in the face of the people, to adopt the specific system. Take, for example, flannels in Schedule K that weigh over 4 ounces per square yard. The specific duty is 44 cents per pound and 50 per cent ad valorem.

Now, suppose a package of flannel is in the custom-house to be appraised and the duty fixed under this bill. They would weigh the package, and if it weighed 100 pounds, the specific duty would be \$44, whether the flannel was worth \$30 or \$400. Take another case; here are 2 bales of shawls weighing 100 pounds each; one cost \$1,000, and the other \$100. Now, under the specific duties of this bill they are both taxed \$44. The 50 per cent ad valorem duty is also placed upon them, but this does not equalize in any sense the tax or make it uniform. These specific duties fixed in this bill were a part of the original scheme. There is but one honest method of taxation, and that is to tax every species of property according to its value, not according to weight or size. One of the chief purposes of this Dingley bill is to establish specific duties, by which the power to defeat competition and honest appraisalment will be greatly enhanced, and the opportunity to practice fraud upon custom officers may be better secured. Whenever it is attempted to fix a tax without reference to the value of the article taxed, it is time for serious consideration by the people. If the real object of this bill were to raise revenue, the ad valorem method of fixing duties would not be questioned.

Mr. Chairman, when cupidity and deception enter into a conspiracy, they hold that the revenue laws should be made for their special benefit. And why not? They have been caressed and fed and nourished as infants of this Government so long that they now come swaggering into this Chamber with an imperial air, as though they had rights superior to other citizens of this Republic, and demand that the Government divide the taxes of the people with them; that they are in full partnership with the Government. They set up this claim as a matter of right. Modesty is one of the lost arts with them. At every session of Congress they are here, hovering around this Capitol, like a flock of vultures, and here they remain until they secure what they want. They are unwilling to remain at home, like the farmer, the laboring man, the mechanic, and the merchant, and trust the chosen representatives of the people to make the revenue laws for the whole country. They regard Congress as a stockholders' meeting, where they come to fix the market price of their products and revise their by-laws. Their past raids upon the Federal Treasury have been so successful in driving out competition that they are now enabled to number hundreds of trusts, syndicates, and corporations which bleed the people of hundreds of millions of dollars every year.

I have no doubt that if this bill should become a law as it now stands it would still further augment their wealth and give them greater power. When these bounties are held out to them, like a benediction, who can reproach them for their invasions of these halls? All this plunder is given to them under the forms of law, as legalized booty, and they simply accept it without thanks. This custom that has grown up in the American Congress of allowing certain men and combinations of capital to have privileges and advantages in business, secured by law, that are not accorded to all the people is regarded by the majority here as axiomatic. Protection fosters a class of business men who are not required to depend upon the highest degree of business ability for success, like those who are not protected. They simply have a protective tariff law to drive all competition away; then they fix the price on their own products to suit their own ideas of profit. Anybody can make money under these circumstances, and trusts and combinations have multiplied and exist to-day because of these advantages, and force high prices on the consumer. But we are reminded by the gentleman from New York [Mr. PAYNE] that if we will protect home manufacturers from foreign competition, they will enter into competition with each other and reduce the price of their product to the consumer much lower than if they had the foreign competition.

Mr. Chairman, such statements are not based upon any business principle and practical experience. Twenty years of business under such laws have fully demonstrated that it is not true. Some of our Republican friends who are mild advocates of this policy

tell us that they will do all that the laws of the Government can accomplish to break up and destroy trusts and combinations that impose upon the people; that they are not in favor of fostering trusts and giving them advantages not accorded to all. But at the same time they are in favor of protection, which is the mother of all trusts, and of this bill, which is in all of its provisions the guardian and conservator of all trusts. This monster of the laboring man's slavery is extending its power and tightening its grasp upon its victims in the ratio as protection is increased. It seems to me gentlemen are not fair in their contention when they insist upon more protection and less trusts. Statutes for protection are the only laws upon which a trust can stand; their life and existence depend upon it. These settled and well-devised laws to further deceive the great mass of the people and despoil them of a large share of their hard earnings may seem strange and incredible to those who do not investigate, but the producers of wealth feel the oppression in all departments of business and raise the cry of distress. The homes of the toiling millions seem to me the best places to gather data for the solution of this question, not the countingrooms of Wall street.

Farmers and laborers are the burden bearers who make protection profitable. The source of inspiration for all this class legislation does not come from the producing masses; it comes from the boards of trade, the stock exchange, the gold gambler, the protective tariff league, the trusts and corporate councils. No other legislation is pressed upon the attention of Congress. There is no lobbying for anything else, and all their efforts are in order to disguise and conceal their ulterior purposes. They come here with the hypocritical plea upon their lips that their sole object in securing protective-tariff laws is for the benefit of the laboring man and farmer. Does any man of fair intelligence believe such statements to be honest, founded upon a single fact? Certainly not. All men know, who have given this doctrine of protection any thought, that their contention is not verified by results. They tell us that they want more protection to our American manufactures, so that higher wages may be paid to the laboring man, so that higher prices may obtain with the farmer, that confidence and prosperity may be restored, that infant industries may be sustained, that home competition may be had for the benefit of the consumer.

This is no new doctrine to the American people. The British Tories, at the inception of this Government, sought to ingraft this English system upon us. They insisted that this principle of protection should be extended to a class, so that they could control all the wealth of the country, as they knew how to make money and control it, while the poor man did not know how to make money but did know how to work. So long as this country remains a Republic and equality of right obtains with its citizens, such laws will be met with undying opposition by every patriot of this land. There is not a member upon this floor who will rise in his place and claim that protection is constitutional. In all cases, when put to the test in our courts, it has been decided unconstitutional. In the absence of judicial support, its beneficiaries attempt to throw around its provisions a mist and fog that continues to deceive the people, and thus perpetuate its benefits to them.

The American people have long since learned that the taxing power is one of the most convenient instruments, in the hands of bad and vicious men, to draw the wealth from the producers into the coffers of the protected that has ever been devised. This power was known to the despots of the Old World thousands of years ago. They exercised and forced it upon their subjects in a more open and fearless way than we do, but no less effective. They did not resort to stealth and deception to obtain their exactions. The king sent out a file of soldiers and collected whatever revenue he wanted from the people by the force of arms. The Committee on Ways and Means comes into this House with a bill claiming to be for the purpose of raising more revenue for the Government than the existing law. It is claimed by them that we are not collecting under the present law, by twenty-five or thirty million dollars, enough to pay the current expenses of the Government at the present rate of expenditures. I presume there is no man upon this floor but who is willing to vote for a revenue bill that will raise sufficient money to pay every dollar of legitimate expenses of this Government. But is this bill under consideration such a measure? I have hurriedly looked over its provisions, and I am forced to the conclusion that the country must not look to its adoption for any relief. I have no doubt that it will help a large number of manufacturers, those men who were here and furnished the committee with schedules of their respective wants. They will be enabled to increase the price of their products to their patrons, but I can tell the farmer, the laborer, and the merchant and business man that they need not expect any change from present conditions.

Mr. Chairman, class legislation has borne its natural fruits, and the dangers entailed are now confronting us. For more than a quarter of a century a sharp and relentless contest has been waged between the protected few, who receive all the benefits of protection, upon the one hand, and the toiling millions who do

the protecting upon the other. The Republican party, born of sectional hate and class privileges, naturally espouse the cause of the protected few, while the Democratic party, being the party of the people, coming from the masses, has always defended and legislated for all the people. Consequently, we have the present issue tendered in this bill, a contest between the classes and the masses. The success of the policy of the Republican party has always been followed by the success of the classes, while the success of the Democratic party has always resulted in the welfare of the masses.

Mr. Chairman, we must have taxation to support this Government, but its levy must be placed upon wealth, without discrimination. From the beginning of time taxation in some form was instituted by all nations as a necessary attribute of power: Excessive and unjust taxation by the decrees and statutes of government is almost as old as the expulsion from the garden. With the precedence of the ages before us we are told that the old McKinley rates of protection are to be restored in this bill, and they are to become the tariff law again. They have not only restored the McKinley rates, but raised them 8 per cent higher. It would seem that the disasters and wreck of fortunes that followed McKinleyism should admonish us never to enact such laws again. However, the majority tell us that they intend to reenact substantially the old rates of the McKinley bill. Upon that basis we can make some calculation of the effect it will have upon the country. The Wilson law reduced the price on the necessities of life about one-half below the McKinley bill. It cheapened the price of woolen clothing to the consumers annually \$140,000,000; lumber, \$61,000,000; agricultural implements, \$10,000,000; in the aggregate more than \$400,000,000 on the necessities of life.

Now it is proposed by this bill to put that \$400,000,000 and more back upon the people, to be carried and borne each year by them. For thirty years the powers of this Government have been used, like a private piece of machinery, in the interests of capital and against labor. The capitalists in this country have arrogated to themselves the rôle of foreign lords, and money has assumed the place of the nobility of the Middle Ages. This protected creditor class now assumes to dictate to the whole country the rate and method of taxation; also the quantity, kind, and quality of money the people shall have and how it shall be used and distributed, without consulting the debtor class. This condition is inconsistent with our form of government, and I am glad to know that a large portion of our people have attained that degree of intelligence that prompts them to rise up and throw from their shoulders these burdens heaped upon them by a plutocracy. No people since the days of the Pharaohs have uncomplainingly submitted to such heavy burdens under the hypocritical plea of protecting American labor. They have established an arrogant plutocracy, which comes into this Chamber to-day and shakes the gory pound of flesh extorted from the starved vitals of the wealth producer under the McKinley bill as their insignia of triumph; but the gentleman from Maine asks his party to go one step further and demand the blood as well as the pound of flesh. A Christ died for all, but it was never decreed that labor should starve that capital might live. The records of our country clearly show that since silver was demonetized and the protection theory adopted farm products, prices of labor, and our shipping interests have steadily declined.

When we look back over the long pathway of ruin, misery, and want which the force of class legislation has entailed upon the wealth producers of this vast Republic, still we find a patient, quiet, industrious people making every concession necessary to the development and perpetuity of a common country. Labor troubles were unknown until the Congress of the United States commenced its system of protecting capital, wealth, and idleness, and denied to the wage earner equality before the law—making one law expressly for the capitalist and another law for the laborer and the farmer, claiming that it was nominated in the bond that the lifeblood of labor should flow for the benefit of capital. The effect of these discriminating laws brought discontent, strikes, lockouts, closing of mills, reduction of time and price of labor, and limiting product. Gentlemen may reply that a Democratic Congress enacted the Wilson law. That we admit. It was the best we could do at the time. It was not what we wanted or what we would have given to the country if the Senate had been purely Democratic. The Senate was under the control of the protectionists, and the only reduction that we could secure was about 10 per cent under the McKinley bill.

No tariff at this time can give substantial relief to the country. The restoration of silver as primary money is the talisman that would inspire the wealth producer, and in the absence of silver's restoration, the cry of want and poverty will go on with the toiling millions. Great fortunes are melting away, old business houses are being wrecked, banks are closing their doors, and there is a general stagnation of business throughout the country, while we have the highest tariff known, except the McKinley tariff. All this ruin is taking place now, with a high tariff and a gold standard. Why do we not have prosperity? Mr. Chairman, I attribute the larger part of all the distress now in this country to the demon-

tization of silver. I feel assured that the Republican majority upon this floor are conscious of the disasters that their tariff laws and financial legislation have brought upon the people, and they ask us now to go further and increase these disasters, in order to effect a remedy. They have decided to raise the tariff taxation still higher, as the bill now before the House fully demonstrates. Dingleyism is no new political factor in Republican legislation. It is a faithful reproduction of McKinleyism, that brought desolation and ruin upon the country six years ago.

Mr. DINGLEY has appealed to this House again to lay the heavy hand of taxation upon food, clothing, fuel, and shelter, to increase the burdens upon the taxpayers \$112,000,000 annually; and if we are to be governed by all economic writers, the tax on domestic products will be enhanced five times that amount, which would be \$560,000,000, which would go into the pockets of these protected gentlemen, while only \$112,000,000 would be paid into the Treasury of the United States. The extortion of this bill surpasses all predecessors. It is 8 per cent higher than the McKinley bill, and 18 per cent higher than the Wilson bill, and the amendments that are now being offered will make the bill when it leaves this House more than 9 per cent over the McKinley bill. Its fourteen schedules are so craftily constructed and the rates of duty so confused that it will be a long time before the people will know the full extent of the burden which it really imposes.

The title of the bill does not import its purposes at all. Mr. DINGLEY says it is a bill to provide revenue for the Government and to encourage the industries of the United States. It should have been called a bill to give prosperity to the trusts, syndicates, and corporations, and impose penalties upon the consumer of their goods. I am at a loss to understand how relief can be brought to the people by raising their taxes higher, and at the same time reducing the amount of money in the country to pay them. I can well understand how they might be benefited by reducing expenditures, with a corresponding reduction of taxes. This proposition to raise the tariff still higher is coupled with the declaration that it will help the farmer and the laboring man, but we see that the higher they raise the tariff, and the more the gold standard is enforced, the lower the price of farm products and labor go. To-day, with the gold standard fixed and the highest tariff tax ever known, except one, labor never had so little purchasing power of the necessities of life, and the farmer never had less reward for his toil.

The first year that the McKinley law began to show its effect upon the business of the country, all productive property, farm products, and labor commenced to decline in price, and have continued, notwithstanding the Wilson law, to this hour. It brought poverty with its skeleton hand, and marked the doom of impoverished labor upon the face of wife and children. These victims of mock protection, in the midst of their beggary and despair, look about their little homes which were made desolate by this avarice. They reason with themselves and say, "Here we have spent our days, here were centered all our hopes, the place where our children were born, where we expected to live in peace and quiet until old age should call us away; but, instead of prosperity, debt and inability to pay came upon us." Mortgages came. The walls of the house were unpainted, the roof would no longer resist the falling rain, the fences were falling down, the barn was going to decay, and the children without education. The laboring man says: "I know that I have been industrious and so have my family. I have been frugal in my home, and economy has obtained with all. Why is it at the end of the year I find I am no better off than when I began the battle of life? I have barely kept even with the world; but, upon the other hand, I have seen my protected employer, who gets my labor, growing richer every day."

The advocates of this bill will unblushingly tell this man to be of good cheer, that prosperity will come back to him, because they have increased the price of every necessary article that he has to purchase for his home; that for his benefit they have placed on the free list acorns, snails, asafetida, bladders, skeletons, and human hair. On election day these protectionists and gold gamblers will go to this man and tell him all that is necessary for him to do is to vote the Republican ticket straight and have confidence, which is the panacea of all economic ills. What impudence! This whole doctrine that protection is for the benefit of labor is a cheat and a fraud. Such statements are based on cupidity and avarice alone. Falsehood has a mortgage upon every word of it. Hypocrisy lies concealed, like a poisonous serpent, in the outline of the assertion. In all the millions of laborers in this country who have toiled from year to year in the protected factories I challenge any and all gentlemen on that side of the House to tell us of one man who has ever received one cent more in wages because of protection.

Gentlemen, that man has never been found and never will be. This willful and pernicious falsehood has run its full course, and will receive its condemnation by the people. Any man of ordinary intelligence knows that a tariff on the goods he is compelled to purchase does not and can not protect him who has only his labor to sell. There is no power granted to the laboring man, either by organization or combination, that will enable him to protect

himself from this mock protection. Protection is a heresy born of imperial stock and has no place in the economy of popular government. It is an enemy of our institution and a blight and mildew upon our prosperity. There has been since the days of Alexander Hamilton a class of people in this country who have persistently claimed that capital invested in manufacturing should have an advantage under the laws of the country over the farmer and the laboring man. The 70,000,000 people of the United States will be compelled by this Dingley law to surrender a large share of their earnings to about 805,000 persons who have their capital invested in protected industry.

If protection is for the benefit of the laboring man, why is it necessary to make the employer the custodian of the taxes which the Government levies for his individual benefit? I tried very hard yesterday to get the floor in order to offer an amendment providing that each protected manufacturer receiving protection under this law should keep an accurate account of all such moneys received by him, and at the end of each month pay it out to the laborers in his employ, but the gag rule has been enforced since the bill was reported, and I had no opportunity to do so. I would be pleased if some of these vehement advocates of protection would point out one manufacturer in the protected industries who computes the protection that the laborer is entitled to and pays it over to him in addition to his daily allowance. Take the long catalogue of the various protected industries of this country and examine their scale of wages and you will find that the wages of labor in them upon an average is no higher than in the nonprotected factories. The Committee on Ways and Means of this House, which has been charged with the creation of a new revenue law, has been besieged day after day by those who grew rich under the McKinley tariff, demanding that the rate of tariff duties be increased on the particular articles they manufacture in order that the poor laboring man will receive better wages.

Mr. Chairman, when the manufacturer of woolen goods was before the Committee on Ways and Means, did he explain to the country what he did with the 90 per cent protection which he received on his goods under the McKinley law, or the 40 per cent protection which he now receives under the Wilson law? Did he tell the committee that the entire labor cost was only 20 per cent? Was he endowed with sufficient honesty to tell the committee where the 70 per cent net protection over all labor cost went to, or the 18 per cent under the Wilson law? Has this Christian gentleman ever revealed this fact to the country? If so, they have never been so advised. In order to make this scheme of robbery and deception perfectly transparent, I submit a statement from the last census report, that this claim of protecting labor is a mere subterfuge, that labor does not share in the protection to the manufacturer.

	Labor cost.	Tariff under McKinley Act.
1 ton of steel rails.....	\$1.00	\$13.44
\$100 worth cutlery.....	44.24	80.11
\$100 worth window glass.....	53.09	98.30
\$100 worth mats and matting.....	34.90	98.50
\$100 worth silk piece goods.....	22.54	60.00
\$100 worth cigars and tobacco.....	34.51	125.30
\$100 worth woolen and worsted cloths.....	20.85	100.02
\$100 worth pottery.....	45.96	60.00
\$100 worth pearl buttons.....	30.69	143.61
\$100 worth cotton goods.....	24.24	57.08
\$100 worth linen goods.....	32.92	54.00
1 ton of pig iron.....	1.50	4.72
1 ton of bar iron.....	4.57	52.98
1 ton of coal.....	.50	.75

This table and the whole tariff bill, not only of 1890 but of 1894, show that labor is a small factor in their construction. This practice of lying to the laborer has grown so old that the men who receive these benefits act simply from the force of habit. It makes no difference with these beneficiaries of protection. If the tariff is raised they reduce the price of labor, and if the tariff is reduced they likewise reduce the price of labor, so if the tariff goes up or goes down, labor always goes down. The tariff has nothing to do with labor, except to oppress it. No human enactment can change that immutable law of supply, demand, and skill. It is simply astounding to hear men of good intelligence and business ability arguing before a committee in this country and claiming that a tariff that enhances the price of their goods is for the benefit of the man who creates them with his labor and has them to buy. If such men could be arrested for betraying the common business trust, which a confiding Government allows them to follow, it would take all the room of the public library to hold the indictments. If their statements were true, the Government leaves the poor laboring man just in time to let the monopolists get the funds that the advocates of protection claim is for the laboring people. If the Government is to take charge of the labor question, it must appoint an agent at every protected factory to collect the protection money and see that all the laborers

get their share. That is the way the Government gets its taxes from the distilleries. The Government ought to show the laborer as much consideration as it does whisky. If the laborer is to be the beneficiary of this pretended protection, it is susceptible of demonstration and should be revealed to the country.

How many protectionists have been kind enough to explain to us what part labor gets out of the profit which protection gives to the employer? Not one. The lowest estimate of the increased price that the consumer has to pay because of protection in this country is \$600,000,000 annually. What laboring man has ever heard of this vast sum being distributed by the protectionists to the wage earners, or any part of it? What an object lesson could have been furnished to the laboring man and the farmer had they been permitted to be present at the meeting of the Ways and Means Committee, when the capitalist was there, pleading that protection might be sustained for their benefit! There was the steel baron, the iron king, the president of the glass trust, and the secretary of the tin trust, all there claiming to be in the interest of the farmer and the poor laboring man; in fact, the protected interests were there, from the greatest to the least, leaving their homes for weeks at a time, traveling thousands of miles in Pullman coaches, stopping at the best hotels, incurring vast expenses, drinking the finest of wines and banqueting the influential members of the Committee on Ways and Means, and then going before the committee and pleading the cause of the poor workingman and the farmer, never asking for legislation that would benefit themselves, willing to make these great sacrifices for the poor.

Such exemplary and holy abnegation and personal sacrifice has never had a parallel since the Saviour was on earth. Such disinterested love of their fellow-man as they exhibit should be immortalized in poetry, bronze, and song. A few short years ago the people were reminded by these apologists for protection and political prophets that the only remedy that could eliminate and relieve the panic and the stress upon the country was the unconditional repeal of the purchasing clause of the Sherman Act. That act was repealed, and no relief has come from it, as any man of thought well knew. More recently we were told by these protected gentlemen, the Republican speakers, and subsidized press that as soon as Mr. McKinley was elected, confidence would be restored immediately, prosperity would dawn upon the country, the mills would be opened, and the price of labor and farm products would suddenly rise. It may not be necessary, yet I will remind you gentlemen, that the McKinley law was in full force for years, and that the gold standard has been in full force and is now administered entirely by its friends; still depression in all forms continues in its greatest severity. All such legislation as this, that strikes at the wage earner and the farmer, will be disastrous to the whole country, and the Dingley bill is no barrier to this tide of desolation.

Levy your tariffs as you may; search all the schemes devised by the decrees of kings and legislative bodies; you may tax incomes, corporations, the lands of the farmer, moneys, and credit, or property of any kind; make your laws of taxation as you will, there is no escape for the toiling masses whilst one-half of the primary money of the country is destroyed. Every dollar of taxes, both State and national, is paid by the producers of wealth. Congress has no power to produce wealth or to distribute it. It is no information to the members on this floor to tell them that labor is the first great factor in human welfare and happiness. The people who do not labor create no wealth, adding nothing to the stock or the world's development. Stop the plow in the furrow, the pick in the mine, and the ax in the forest, and prosperity must cease and civilization stand still. Mr. Chairman, protection run mad in the form of selfish legislation has arrayed capital against labor, destroyed that harmony, peace, and cooperation that should obtain for their mutual welfare. Capital, by Congressional favor, has grown arrogant and tyrannical, claiming the mastery over its creator.

Mr. Chairman, the issue is now fairly made up. Shall we reenact McKinleyism and perpetuate the British gold standard, the blighting edict that has crushed labor down to its present distressed condition and forced the prices of farm production below the cost of production, or shall we enact a tariff that shall give equity to all legitimate business, labor as well as capital? Coming from an agricultural district, and knowing the laboring man and the farmers of this country as I do, I am frank to say that they are not asking for special advantages over their fellow-men; they are not beggars asking charity from the Government; they have not authorized their protected self-appointed bosses to come to this Capitol and ask alms for them; all they do ask is that they shall have the right to labor and enjoy the fruits of their own toil. They simply demand their God-given right, under the law, that the revenues of the Government shall be raised by the taxation of the property of all the people.

Upon this question I have taken my stand by the side of the farmer, the toiling masses who are now discriminated against, and to the full extent of my ability there I shall do battle in their

behalf until every discriminating law shall be repealed, every shackle shall be broken, and all honest laboring men shall stand forth without a chain. As long as the laboring man is permitted to use the ballot there will be no peace, and there should be none, until labor and capital stand upon a perfect equality under the laws of this country. I claim nothing for labor I would not accord to capital under the same conditions; I simply want to see the barriers broken down that keep labor and capital at enmity and establish a lasting friendship that shall be beneficial and absolutely necessary to the welfare of both. The capitalist that comes before the Committee on Ways and Means now and claims that he wants a high protective tariff placed upon the goods that he manufactures for the benefit of the men who work in his factory is a miserable hypocrite, and he knows that his claim is not honest, and we are now asked to take these known falsehoods as the basis upon which we will legislate and make laws for the whole country.

Mr. Chairman, if there is one pretense of these clamorous protectionists that deserves condemnation more than another, it is their claim that protection raises wages. The factory that gets 100 per cent protection pays no more for labor than the factory that gets 20 per cent or no protection at all. If protection raises wages, it would necessarily follow that we should see the highest wages paid in those factories which enjoy the highest protection. Does the protected manufacturer pay the railroad company any more for hauling a carload of protected goods than he does for hauling a load that is not protected? Does the protected manufacturer pay the drayman any more for hauling a load of protected goods to the depot than he does for hauling a load that is not protected? Every Republican in this House knows that he does not. Every member of Congress is daily receiving the poisonous statements of this protected class in all their deceptive forms, appealing to this body to protect capital at the expense of labor. They do not hesitate to tell us, notwithstanding that poverty, misery, want, and idleness obtain throughout the country, that they will have to reduce the price of labor unless they can get an increase of tariff duty. There is not a man in this House but knows that 85 per cent of the protected factories that are asking for higher tariffs have reduced the price of labor under the McKinley law as well as the present law. The journals that are published and circulated in the interest of protection are full of accounts of the reduction of labor and the closing of mills. At this point I desire to insert one of the most able and conclusive arguments of one of the leading manufacturers of agricultural implements in the United States, Mr. A. B. Farquhar, of York, Pa.

*To the Ways and Means Committee, House of Representatives:*

HONORABLE GENTLEMEN: You have, naturally, in your public hearings of testimony and recommendations and pleas for amendments to the revenue laws, had far more to do with those desirous of increased duties than with those in opposition. The interest of people in quest of favors is always more intense, as well as more definite, than that of people who have simply to protest against granting favors to others at their expense; though the former may be a few and the latter 70,000,000, yet your committee may easily hear much from the small number and nothing from the great. Easy as it is for all concerned only as individuals of the 70,000,000 to be silent, thinking that where no peculiar interest exists no peculiar exertion is called for, yet the easy course is sometimes the wrong course. Personally, I have nothing to ask of your honorable body, except that you will refrain from putting obstacles in the way of my business, and from strengthening the arms that are aiming a blow at my interests; otherwise, my cause is merely identical with that of the great mass of your fellow-citizens. What is best for them is best for me, and might be asked as well in their name as in mine.

The great practical problem before us, as before all nations and people, is how to apply the force and opportunity at our command so as to derive from them the greatest net result in comforts and conveniences of life. That application of human labor which brings the largest result in these comforts is the one that best serves the body politic and thereby raises to the highest point the demand for labor, and hence the reward for the laborer. Since the best paid labor is, therefore, the kind that produces most, it may easily follow that such labor is of exceptionally low cost in proportion to product. We know that this is true in some instances. The wheat of our Western States must necessarily be produced at a lower labor cost than that of Egypt or India, because it sells freely in the same British market to which the cost of transportation is greater. And yet our lower cost is made up of payments at the rate of \$1 a day, while their higher cost is paid at rates not far from 10 cents a day. This is possible, partly because the Western laborer furnishes labor of higher quality than the ryot or fellah; partly because it is better directed, by improved machinery and better methods.

A similar state of facts exists in all productions that meet foreign competition on equal terms. No labor in the country receives better pay than that employed on exportable goods in direct competition with foreign labor, wages running high, although the price of the product is low, and proving really cheaper because directed by higher brain power.

Some years ago I visited a large agricultural implement factory in England at the invitation of its owner, a member of Parliament. I found plow handles and beams produced in that factory at a labor cost of more than \$1, while similar work cost us but 10 cents at our factory in York, owing to our superior machinery and methods, so that our cheaper labor, at considerably higher wages, fully made up for the disadvantage at which we were put by greater cost of raw material.

I then and there told the proprietor that the trade would all come to us unless he improved his method, and, to make a long story short, it has all come to us. Our works manufacture practically all of that description of plow now sold, perhaps 20,000 a year.

Now see what must necessarily be true if our plows sell in South Africa side by side with those of English make, as I have shown they easily do, if our transportation charge is higher, as it must be when we have to ship by way of England. If our raw materials, lumber excepted, are more costly, as any inspection of comparative prices will instantly prove, then our firm

must either draw no profit or be at less expense for labor. No other conclusion is possible unless some way can be found for making larger subtractions from the same sum without leaving smaller remainders.

Since our business affords enough profit to justify continuance in it, and the profits of our English rivals are not inordinate, the only possible conclusion is that there is less labor cost in our plows than in theirs. The fact of cheaper labor, which is demonstrated by actual observation in my business, supported by similar observations in other business enjoying like advantage of more efficient machinery and superintendence, must necessarily apply to all labor employed on exportable products.

Work on merchandise for export is especially highly paid by the day, and it is exactly this high-paid labor that is really the cheapest labor. What is called "pauper labor," the kind that is ill compensated, is practically a very dear kind. Every sagacious manufacturer having a piece of work which brings him particularly low profit, on which economy in every kind of cost is particularly necessary, puts his best-paid workmen on just that piece. If he dreams of sparing labor cost by doing otherwise, he simply converts his margin of profit into a net loss.

The fact that we are exporting steel rails to Canada, Japan, and elsewhere in the face of English competition, and iron to England itself—something we never could do until the approaching exhaustion of England's iron supply—puts us less at a disadvantage for raw material; and the further fact that never in its history has the country made anything like so large an export of manufactured goods and machinery as during the last year, aided by the cheaper raw material allowed us in the Wilson bill, show what we could do with raw material free; show, indeed, that very many, if not the majority, of manufacturers would have no use for protection if we could go to work on that basis.

Again and again I have declared distinctly and publicly that I desire no import duty on agricultural implements. The duty was swept away in the Wilson Act with my cordial approval. The harm that such duties do to producers who can export is that they suggest and encourage retaliatory duties in the countries that buy of us. The only possible good they do is to enable manufacturers, by combination, to extort higher prices from their fellow-countrymen than from foreign customers. It is with just that motive that many a man asks Government assistance in charging more for his goods than he sells them for in Europe and beyond the tropics. It is just that motive that you cherish and hold up as worthy of praise when you allow drawbacks of duty on goods exported. By that piece of legislation you declare, as plain as words can put it, that foreign customers are the ones you select for favor, while home customers are entitled only to be fleeced.

You wish to aid the American workman. So do I. But, observing, as I do, that he never before received so large a proportion of earnings as he has under recent legislation, and that all possible increase in exported manufactures constitutes additional demand for his labor, I conclude that what he wants is a larger export business. There can not be an increase of importations, demand for money on both sides continuing unchanged, without creating a demand for exported products of agricultural and mechanical labor. If absolute free trade were decreed to-day, American needs and desires would be met only by use of the product of American workmen, as they have been in the past. If those workmen should be employed a little less in making things that go directly to the consumer and a little more in making things that go abroad, to be exchanged for the things the consumer wants, his labor would be none the less demanded, while its application to something it can produce to better economical advantage would insure its being better rather than worse paid after business had adjusted itself to the new conditions.

If I did not believe that I could carry on my manufacturing for what the public would pay freely without Government interference to force fictitious profits, I ought to close up and go at something fitted to my size. I am ready to say the like for my brother manufacturers. If they are not lost to all sense of shame, they must blush to come whining before Congressional committees for a chance to extort extra profits, like a cur for a bone, especially when with this is associated the hypocrisy of pretending that what they seek thus to draw into their own pockets is all taken in trust for the sole benefit of the poor workmen, even if we disbelieve all rumors and disregard all suspicions of campaign contributions and other forms of more or less disguised bribery. And then to think that this craven fear of foreign competition, this cringing dependence on the work of the lobby and on legislative Congresses, is so unnecessary! But for this huge confidence game but for this blighting curse on our industrial independence, the country could step forward at once and become the great source of the world's supply. The predominance in the iron business, in spite of our carefully calculated and persistent efforts to leave it in British hands by oppressing our export trade, has at last come to us. The mines of Britain will not long repay working, while ours are practically inexhaustible.

The chief object I have in addressing you is to make the most earnest possible protest against the calling of an extra session in the spring. I hear that this proposed extra session for the purpose of pulling our revenue laws to pieces is usually advocated as necessary, not because some favorites of Government, large campaign contributors, perhaps, need to have their profits enhanced at the public expense, but because, forsooth, the country needs more revenue. The country would not need more revenue if it would judiciously spend what it has. If its lawgivers would cut down the list of pensioners to those who have an honest claim, and thereby make that list a true roll of honor; if they would frown on public building and river and harbor demands; if they would abstain from waste of public money in useless military defenses and naval armaments, the revenue now provided would more than suffice them.

But, entirely apart from these considerations, the association of increased revenues with such an overloading of the tariff as you are asked to make and are supposed to contemplate is a shame and a swindle, and you know it. You have no certainty—in fact, no good reason for believing—that an increase of protective duties will bring more revenues. The country's income diminished greatly under the McKinley Act, and was actually considerably less during the last year that act was in operation than it has been since duties were reduced. You are perfectly certain, on the other hand, that revenues would be considerably increased by a slightly higher internal tax on beer and tobacco, with moderate duties on tea and coffee. In fact, a higher rate on beer alone—one which the consumer would be insensible of—would quite counterbalance the deficit in the Treasury. If you sincerely wanted more revenue, you would recommend such a measure as this at once, and your recommendation could be made into law in a week.

The extra session is evidently desired for a very different purpose than to increase the public revenues. It is desired because those who are moving for it would rather increase the cost of the workingman's clothing than that of his beer. It is desired because they would rather tax the lumber that goes to build his house than the luxuries he would be better off without.

It is superfluous to remind you that the talk of an extra session is unsettling business; is locking up capital that would go at once into productive enterprise if assured of the continuance of present conditions; is depriving labor of employment by repressing enterprise; is only welcome to those who, in one way or another, prey upon the public—because you know it and you see it. You know it by your reason. You see it in the basket with which

reviving business, after the forward start that followed the national election, has so disastrously met. Leave the tariff alone; let business be undisturbed and enterprise assured of some degree of permanence; give us security instead of a legislative earthquake, and you will be surprised to see the prosperity that will follow your patriotic abstinence.

A. B. FARQUHAR,  
President of the A. B. Farquhar Company, Limited,  
Manufacturers and Exporters of Agricultural Machinery, York, Pa.

This comes from a man who does not deal in theories and speculations to deceive the toiling people.

Mr. Chairman, I wish to insert a table in my remarks showing the cost of labor under the different tariff bills of this country and Great Britain:

	Duty under tariffs of—			Labor cost.		
	McKinley.	Wilson.	Dingley.	United States.	Great Britain.	Difference.
	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.
Carpets .....	61	30	50	20	16	4
Clocks .....	82	50	80	35	25	10
Hats and caps .....	80	35	90	27	21	6
Shawls .....	88	40	112	22	20	2
Clothing, ready-made .....	94	49	87	30	24	6
Blankets .....	80	35	80	18	16	2
Flannels .....	100	35	100	20	17	3
Yarns .....	100	30	100	21	17	4
Women's dress goods .....	102	40	102	15	15	0
Knit goods .....	94	48	76	16	13	3
Glass .....	51	35	52	34	34	0
Tobacco .....	117	100	164	21	16	5

I present this selection of articles because they are the real necessities of life. The Committee on Ways and Means have thought proper to place upon these articles an average duty of 91 per cent, as they claim to make up the deficiency between the cost of labor in this country and Great Britain, but the real facts are that the difference is less than 8 per cent, and if we count the time that it takes the Englishman or any other people to produce the article, and the time that it takes the American workman to produce the same thing, then you gentlemen will discover that we pay less wages to produce the same amount of goods than any country in the world. Our people can produce more of the products of genius and skill in a given time than any other people. Give us free raw material and the world's markets are ours. Such wild statements as our Republican friends are making they do not mean, and can not be seriously considered by this House. They know that the average labor cost of producing these articles in this country is less than 20 per cent, but Mr. DINGLEY and his committee have the audacity to come into this House and ask the members of this body to vote a tax of 91 per cent upon the consumers of these goods, to make up a difference of labor cost of only 8 per cent. He asks us to force upon the country a law that taxes the consumer four times the American cost of all the labor that creates the goods, not the mere difference between this country and Great Britain.

What transparent declamation is this claim of wanting to protect the American laborer. A tariff of 20 per cent protects labor to the full cost of production of every schedule in this bill. I ask the Ways and Means Committee why you are not willing to put the duty at 20 per cent; that would protect American labor from all competition in this country. By this duty the manufacturer would receive sufficient duty to pay for all his labor. It would not cost them one cent to produce their goods. Take out of this proposed duty of 91 per cent the 20 per cent cost of labor, that would leave 71 per cent, which would more than pay the cost of raw material, and you see if this bill becomes a law, the entire cost of all the labor and all the raw material for the manufacturer will be paid by the consumer. Why not give to the farmer 91 per cent of real protection—an export duty—not mere mock protection, so that the consumers of their products would be compelled to pay them for all their seed grain, the plowing of the land, the harvesting and the thrashing of their grain, and of carrying it to market?

I ask the gentlemen on the other side to explain why they propose to levy a duty of 91 per cent in this bill, when 20 per cent will pay more than all the labor-cost of production. May I inquire what you propose to do with the 71 per cent difference? No gentleman dare answer or can answer. They will not offend the patron saints that stand behind this bill. There is but one answer to this question; that is, this bill is drawn to give that to the manufacturer. When this bill is analyzed and understood by the people, it will be pronounced infamous. No man ever commits a crime without having an apology for it. Not one of these men has shown that he has sold his goods one cent cheaper, or even marked them to sell at a lower price. They are quick and ready to reduce the price of labor, but very slow to reduce the price of their goods. These pretended humanitarians and philanthropists are perfectly willing to starve their laborers and their wives and

children as mere arguments to Democrats of this House, hoping thereby to induce them to pass a bill that will continue to rob the laborer for the benefit of their selfish gain.

You gentlemen on the other side of this question will find that the Democratic party is not only opposed to giving capital a supremacy and control over labor, but they will ever be found insisting upon equality of rights and the enforcement of the fundamental principles of justice. I hold that a tariff solely for protection, as advocated by gentlemen on the other side of the House, is clearly unconstitutional—practically the courts have so decided—but if the dignity of the law is insulted by levying a tax on the public for private interests, or the principles of equity and justice be debauched by placing on 'y one dollar in the Treasury and five in the pocket of the protector, it seems to me a Congress that wants to truly represent the people would call a halt. In one year our people used nearly \$20,000,000 worth of blankets. The average tariff was 70 per cent, but the home blanket makers, being satisfied with adding but 60 per cent to the otherwise price, forced the blanket users to pay over \$7,000,000 extra on blankets. So few were imported that the Government received but \$800 duties during the year.

Under this new blanket tax the Government got \$1 into the Treasury for each \$100 of duty, and \$75 of that went into the pockets of the protectionists. Would the law have been any more of a violation of the Constitution had it given the other dollar to the blanket maker? While this was enlightened and patriotic statesmanship, what a fine line it is that divides the criminal from the saint! But let us lift the veil and see what stupendous wrongs are marshaled behind this policy which the people in their mistaken zeal have long defended with their votes. The Democratic party by 6,500,000 votes ratified their declaration made at Chicago for commercial and industrial freedom. I commend these great truths to the gentlemen on the other side of this House. I ask you to read our platform and obey the mandates of the court.

#### TARIFF RESOLUTION.

We hold that tariff duties should be levied for purposes of revenue, such duties to be so adjusted as to operate equally throughout the country and not discriminate between class or section, and that taxation should be limited by the needs of the Government, honestly and economically administered. We denounce as disturbing to business the Republican threat to restore the McKinley law, which has twice been condemned by the people in national elections, and which, enacted under the false plea of protection to home industry, proved a prolific breeder of trusts and monopolies, enriched the few at the expense of the many, restricted trade, and deprived the producers of the great American staples of access to their natural markets.

Until the money question is settled, we are opposed to any agitation for further changes in our tariff laws, except such as are necessary to meet the deficit in revenue caused by the adverse decision of the Supreme Court on the income tax. But for this decision by the Supreme Court there would be no deficit in the revenue under the law passed by the Democratic Congress in strict pursuance of the uniform decisions of that court for nearly one hundred years, that court having in that decision sustained constitutional objections to its enactment which had previously been overruled by the ablest judges who have ever sat on that bench. We declare that it is the duty of Congress to use all the constitutional power which remains after that decision, or which may come from its reversal by the court as it may hereafter be constituted, so that the burdens of taxation may be equally and impartially laid, to the end that wealth may bear its due proportion of the expenses of the Government.

This platform faithfully restates the doctrine of the Democratic party from the foundation of the Government to this time, and I now submit with great confidence the long line of decisions of our Federal and State courts that fully vindicates our position on this question of Federal taxation:

#### UNCONSTITUTIONALITY OF A TARIFF FOR PROTECTION.

The Supreme Court of the United States and the courts of the several States have denounced taxation in all its forms, when imposed to protect or build up manufacturing interests and industries, and for any purpose other than for public use in running the necessary machinery of the Government, as spoliation and legalized robbery.

In the case of the Loan Association vs. Topeka, in 20 Wallace, 657, Judge Miller, delivering the opinion of the court, stated the doctrine in language that has been repeated over and over again, but it will bear repetition. An attempt was made to tax the people of the city of Topeka under the authority given by an act of the legislature so as to issue one hundred bonds of \$1,000 each to establish the King Wrought Iron Bridge Manufacturing and Iron Works Company of Topeka, and to aid in encouraging that company in establishing and operating bridge shops in said city in pursuance of an act of the legislature, which had plenary power, certainly as much power as the Congress of the United States has under the limited power given in the Constitution, which is to lay and collect taxes, duties, imposts, and excises, to pay the debts, and provide for the common defense and general welfare of the United States. Certainly the power of the legislature that imposed the tax is as broad as the power we have, as all power not granted is reserved in the Constitution to the States and the people. The people of Topeka refused to pay the interest upon the bonds. Suit was brought. The case came to the Supreme Court of the United States, and Judge Miller, in delivering the opinion of the court, uses this language:

"The power to tax is, therefore, the strongest, the most pervading, of all the powers of the Government, reaching directly or indirectly to all classes of the people. It was said by Chief Justice Marshall, in the case of McCulloch vs. The State of Maryland, that the power to tax is the power to destroy. A striking instance of the truth of the proposition is seen in the fact that the existing tax of 10 per cent imposed by the United States on the circulation of all other banks than the national banks drove out of existence every State bank of circulation within a year or two after its passage. This power can as readily be employed against one class of individuals and in favor of another, so as to ruin the one class and give unlimited wealth and prosperity to the other, if there is no implied limitation of the uses for which the power may be exercised. To lay with one hand the power of the Government on

the property of the citizen, and with the other to bestow it upon favored individuals to aid private enterprises and build up private fortunes, is none the less robbery because it is done under the forms of law and is called taxation. This is not legislation. It is a decree under legislative forms. Nor is it taxation.

"A tax," says Webster's Dictionary, "is a rate or sum of money assessed on the person or property of a citizen by government for use of the nation or State." "Taxes are burdens or charges imposed by the legislature upon persons or property to raise money for public purposes." Coulter, J., in *Northern Liberties vs. St. John's Church*, says very forcibly: "I think the common mind has everywhere taken in the understanding that taxes are a public imposition, levied by authority of the Government for the purpose of carrying on the Government in all its machinery and operations—that they are imposed for a public purpose."

In that case he calls attention to a very large number of authorities. Judge Miller says further:

"If it be said that a benefit results to the local public of a town by establishing manufactures, the same may be said of any other business or pursuit which employs capital or labor. The merchant, the mechanic, the innkeeper, the banker, the builder, the steamboat owner, are equally promoters of the public good, and equally deserving the aid of the citizens by forced contributions. No line can be drawn in favor of the manufacturer which would not open the coffers of the public Treasury to the importunities of two-thirds of the business men of the city or town."

I desire to call the attention of the distinguished gentleman from Maine, Mr. DINGLEY, to the fact that the Supreme Court of the United States, and especially the supreme court of his own State, contradict every word of his contention that a protective tariff for the benefit of manufacturers is constitutional:

The Supreme Court refer with approbation to cases decided from the State of Maine, embracing exactly the same principle, that whether taxation is in the form of a direct tax or in any other form, it makes no difference; whenever property may be seized or levied on to enforce the payment of the burden imposed on property, it is as much a tax in one form as in another, and all men whose opinions are entitled to any respect admit that the tariff is nothing but a tax. But when it is imposed for revenue purposes I agree that it is constitutional; when it is laid for subsidy or the protection of special interests, I insist it is unconstitutional, null, and void. In that I am fully sustained by the very able opinions by all the judges of the State of Maine, delivering opinions *seriatim* when questions were propounded to them by the State legislature. (See 55 Maine Reports, page 590, etc.) The leading question was:

"Has the legislature authority under the constitution to pass laws enabling towns, by gift of money or loan of bonds, to assist individuals or corporations to establish or carry on manufacturing of various kinds, within or without the limits of said towns?"

The judges took up the question submitted to them. Among other things, the three judges who signed the first opinion, Chief Justice Appleton, Judge Walton, and Judge Danforth, used language some of which I will read. They said:

"Taxes are the enforced proportional contribution of each citizen out of his estate, levied by authority of the State for the support of the government and for all public needs. They are the property of the citizen taken from the citizen by the government, and they are to be disposed of by it.

"There is nothing of a public nature any more entitling the manufacturer to public gifts than the sailor, the mechanic, the lumberman, or the farmer. Our Government is based upon equality of rights. All honest employments are honorable. The State can not rightfully discriminate among occupations, for a discrimination in favor of one branch of industry is a discrimination adverse to all other branches. The State is equally to protect all, giving no undue advantage or special and exclusive preference to any."

That opinion of the judges of Maine is a complete answer to the arguments made by leading Republicans of the House that if there was no revenue required, no pension list, no Army, no Navy, they would still protect manufacturers, and would exact taxes by legislation from the mass of the people for the benefit of private parties, in order to enable them to sell goods at high prices, so that they may carry on their business profitably. The judges of Maine proceed to say:

"No public exigency can require private spoliation for the private benefits of favored individuals. If the citizen is protected in his property by the constitution against the public, much more is he against private rapacity."

"If it were proposed to pass an act enabling the inhabitants of the several towns by vote to transfer the farms or the horses or oxen, or a part thereof, from the rightful owners to some manufacturer whom the majority might select, the monstrousness of such proposed legislation would be transparent. But the mode by which property would be taken from one or many and given to another or others can make no difference in the underlying principle. It is the taking that constitutes the wrong, no matter how taken. Whether the cow or the ox be taken from the unwilling owner and given to a manufacturer, or the gift be of money obtained by a sale made by the collector, or by the payment of the tax to avoid such sale, does not and can not change the principle. In either case the cow or the ox or the value thereof is taken from the owner and is given away by others without the owner's consent. If a part of one's estate may be given away, another and another portion may upon the same principle be given away until all is gone. What is this but manifest and undisguised spoliation?"

Each of the other judges gave substantially the same opinion, in different language of course, but each of them pronounced it legislative robbery, their language being quite as denunciatory as any used on this floor by any of us. Judge Dickerson uses this language:

"What claim has manufacturing to such preference over other branches of industry, commerce, trade, agriculture, and the mechanic arts? These are honorable and beneficial pursuits, and the constitution of this State will be searched in vain to find any powers given to the legislature to authorize towns and cities to discriminate against these employments and in favor of manufacturing in the matter of taxation. If municipal corporations may assess a tax upon their citizens by authority of law to encourage one, it may each and all the branches of necessary industry, and the question is reduced to this: Has the legislature the constitutional authority to authorize the towns and cities in this State to tax their inhabitants for the purpose of aiding, establishing, or carrying on, not only manufacturing properly so called, but also farming, shipbuilding, trading, innkeeping, printing, banking, insurance, and any other branch of beneficial industry?"

When another case came up afterwards, which is reported in 60 Maine, *Allen vs. Inhabitants of Jay*, the chief justice decided a similar question. The authorities, under an act of the legislature, had attempted to grant aid to a manufacturing company, or to a sawmill that was about to be established. The judge said in that case:

"Taxation, by the very meaning of the term, implies the raising of money for public uses, and excludes the raising of for private objects and purposes. I concede," says Black, C. J., in *Sharpless vs. Mayor, El Pennsylvania*, 167, "that a law authorizing taxation for any other than public purposes is void."

"A tax," remarks Green, C. J., in *Camden vs. Allen*, 2 Dutch., 829, "is an impost levied by authority of government upon its citizens or subjects for the support of the State."

"No authority or even dictum can be found," observes Dillon, C. J., in *Hanson vs. Vernon*, 27 Iowa, 28, "which asserts that there can be any legitimate taxation when the money to be raised does not go into the public Treasury, or is not destined for the use of the Government or some of the governmental divisions of the State."

"If there is any proposition about which there is an entire and uniform weight of judicial authority, it is that taxes are to be imposed for the use of the people of the State in the varied and manifold purposes of government, and not for private objects or the special benefit of individuals. Taxation originates from and is imposed by and for the State."

"The idea seems to be that thereby capital would be created. But such is not the case. Capital is the saving of past earnings ready for productive employment. The bonds of a town may enable the holder to obtain money by their transfer, as he might do by that of any good note. But no capital is thereby created. It is only a transfer of capital from one kind of business to another."

"The industry of each man and woman engaged in productive employment is of 'benefit' to the town in which such industry is employed. This can be predicated of all useful labor, of all productive industry. But because all useful labor, all productive industry, conduces to the public benefit, does it follow that the people are to be taxed for the benefit of one man or of one special kind of manufacturing?"

"The sailor, the farmer, the mechanic, the lumberman, are equally entitled to the aid of coerced loans to enable them to carry on their business with Messrs. Hutchins & Lane. Our Government is based on equality of right. The State can not discriminate among occupations, for a discrimination in favor of one is a discrimination adverse to all others. While the State is bound to protect all, it ceases to give that just protection when it affords undue advantages, or gives special and exclusive preferences to particular individuals and particular and special industries at the cost and charge of the rest of the community."

"Where is the difference between the coerced contribution of the taxpayer to be loaned to individuals for their benefit and those of the conqueror from the inhabitants of the conquered country?"

"I can add nothing to strengthen the emphatic condemnation pronounced by the highest judicial authorities of the land against all schemes of taxation and all devices and pretenses whereby either manufacturing or other favored interests are sought to be subsidized, protected from competition, or built up by taxation imposed upon the people for their benefit."

Every utterance applies with full force on the position now assumed by the Republican party in its platform on the measure before the House.

Judge Thomas Cooley, who is recognized by the people of this country as one of the ablest expounders of constitutional law, says, in discussing the power of the Government to lay and collect taxes:

"Constitutionally, a tax can have no other basis than the raising of revenue for public purposes, and whatever governmental exaction has not this basis is tyrannical and unlawful. A tax on imports, therefore (a tariff tax), the purpose of which is not to raise revenue, but to discourage and indirectly prohibit some particular import for the benefit of some home manufacturer, may well be questioned as being merely colorable, and therefore not warranted by constitutional principles."

No statement could be made that could define this question now before the House more clearly. How does the protectionist meet these overwhelming authorities that settle the question? Simply by saying that these great jurists and lawyers did not know what they were talking about.

Taxation can never be oppressive if it is distributed upon all our people according to their wealth. It is well, however, for us to inquire into the objects and purposes of Federal taxation. It was intended under our theory of government that all citizens and persons owning property should be required to surrender a portion of it in order to have a proper administration of the Government.

The very necessities of government create this obligation. The authors of our Federal system, fearing that the people might be oppressed by their legislators if they were not restrained, placed the limitation of the taxing powers in the Constitution. Section 8 of the Constitution provides that Congress shall have power to lay and collect duties, imposts, and excises to pay the debts and provide for the common defense and general welfare of the United States, but all duties, imposts, and excises shall be uniform throughout the United States.

Mr. Chairman, I raise the question now so far as it can be raised in debate, as to the constitutionality not only of the bill but its title. The title in its intent and meaning is a wide departure from all revenue bills of the past. It declares that the object and purposes are to provide revenue for the Government and encourage the industries of the United States. The Constitution says that Congress shall have power to collect taxes, but there is not one word in that provision directing Congress to tax "to encourage industries." No fair construction of the general-welfare clause can bring the title of this bill as well as the text within the meaning of that provision of the Constitution. I think the courts would so construe it. If they did not, it would be a wide departure from the long lines of uniform decisions of both State and Federal courts. The gentleman from Maine [Mr. DINGLEY] proposes by the title of his bill to "encourage the industries of the United States" by taxing the people. That, however, is the new Republican method of making the people happy. We, upon this side of the House, would be glad to know what industries the gentleman means. Would he be kind enough to name them to the House? Does he mean simply the factories, the mills, the mines, agriculture, transportation, and labor? If so, what becomes of

the retired gentlemen who live upon their incomes—the lawyer, the doctor, the teacher, the professor—and what would become of the legislator? These professions and employments are not to be encouraged by this bill.

Gentlemen, if these decisions are to be regarded, it is perfectly plain that there is no authority conferred upon Congress by this section of the Constitution to use the taxing power to protect any man in his trade or his private business. This is the only constitutional provision or authority conferred upon Congress to use the taxing power, and I hold, in common with the Democratic party as set forth in its platforms and its legislation since the Government was created, as well as with the courts, that it is a violation of the fundamental law and the natural rights of man to create any statute that compels any class of our citizens to surrender any part of their earnings to any one man, corporation, or trust. There are quite a number of gentlemen upon this floor, who are known to be good lawyers, who insist that a tariff is not a tax upon those who consume tariff-taxed goods, but a blessing that falls like the dew of heaven upon all. There are a few men left in the Republican party who still claim that the foreigner pays the tax. But in the fear of God, and as intelligence increases, that number is getting to be quite small. In the case of *Brown vs. The State of Maryland*, if gentlemen will read that decision, they will find that the Supreme Court of the United States unanimously decided that a duty upon imports was a tax that had to be paid by the consumer. Of the distinguished men who contradict the position now assumed by the gentleman from Maine [Mr. DINGLEY] and his committee, I will first quote the Hon. Joseph Medill, editor of the Chicago Tribune:

WHAT THE CONSTITUTION SAYS.

"The Congress shall have power to lay and collect taxes, duties, imports, and excises, to pay the debts and provide for the common defense and general welfare of the United States; but all duties, imports, and excises shall be uniform throughout the United States."

"To regulate commerce."

"No tax or duty shall be laid on articles exported from any State." \* \* \*

"Common defense," "general welfare," "no preference," are the key-notes of these constitutional limitations of the taxing power of Congress. There is no shadow of authority given to levy taxes to enrich special capitalists at the expense of the people.

Congress does not "provide for the common defense" by taxes that prevent shipbuilding by prohibitory taxes on ship materials and forbid the creation of a commercial marine that would be a nursery of ships of war.

It is not for the "general welfare" that the only febrifuge—quinine—that will conquer malaria has been taxed, and is, if possible, to be taxed again.

A tax system is not "uniform" that gives the paper manufacturers their raw materials free, but makes all the publishers and readers of the United States pay them a high protective bounty.

Nor is it for the general welfare that \$4 per ton be levied on the sheet tin which is used to hold the farmer's meats, lards, and vegetables, or 100 per cent on the steel wire from which his barbed fences are constructed, or 100 per cent on the steel for his wagon tires, 150 per cent on glass that lets light into his dwelling, or 80 per cent on the china and crockery ware in his pantry.

Nor is it for the general welfare to permit a few monopolists who have bought up the remnants of the Western pine forests to levy a bounty tax of \$2 to \$1.50 per 1,000 feet on the lumber used by the farmers of the treeless States for building and fencing. Such taxes are levied in the interests of voracious capitalists, in plain violation of the Constitution.

I hold with the courts and with this distinguished gentleman, Mr. Medill, that there is no authority or power conferred by the Constitution of the United States upon Congress to use the taxing power to protect any private business, franchise, or corporate right. Taxation must be uniform and for public purposes only. It seems idle to emphasize, in this presence, these great fundamental truths, for every member upon this floor well knows that every State in this Union, through their supreme courts, as well as the decisions of the Supreme Court of the United States, has declared that the power to tax can only be used to raise revenue for public purposes. There is not one word or one line in that constitutional clause to support this bill. The basis of this bill as constructed proceeds upon the lines of a tariff for protection with incidental revenue. A tariff based upon that principle can not be constitutional. No man, aside from partisan prejudice and individual interest, has ever attempted to defend such a law. So far in this debate no advocate of this bill has ever referred to the Constitution of the United States in support of his views. Why are these men silent? Congress derives all of its powers to tax imports from the eighth section of the Constitution. In order to support and strengthen the position I have taken upon this question, I shall quote from some of the great lights of this Republic.

It is true as a general proposition that the consumer pays the duty.—*Alexander Hamilton, Report on Manufactures, 1791.*

We do not derive our ability from abroad to pay taxes. That depends upon our wealth and our industry; and it is the same whatever may be the form of levying the public contributions.—*Henry Clay, in his great tariff speech, April 23, 1832.*

The duty constitutes a part of the price of the whole mass of the article in the market. It is substantially paid upon the article of domestic manufacture as well as upon that of foreign production. Upon one it is a bounty, upon the other a burden; and the repeal of the tax must operate as an equivalent reduction of the price of the article, whether foreign or domestic. We say so long as the importation continues, the duty must be paid by the purchaser of the article.—*John Quincy Adams's Report on Manufactures, 1833.*

All duty paid upon such articles (raw materials) goes directly to the cost of the article when manufactured here, and must be paid for by the consumers.—*U. S. Grant, seventh message, 1875.*

I said it, and I stand by it, that as a general rule the duties paid upon im-

ports operate as a tax upon the consumer. A few years of farther experience will convince the whole body of our people that a system of national taxes which rests the whole burden of taxation on consumption, and not entirely on property or income, is intrinsically unjust.—*Hon. John Sherman, 1867.*

The great apostle of protection, Mr. McKinley, said in his speeches in Ohio:

We took the tariff off of sugar and now you do not have to pay it. See how we have relieved you from taxation by taking the tariff off of raw sugar and reducing your expenses.

In his next breath he tells his audience that "the foreigner pays the tariff," taxing the property of other nations seeking a market in the United States.

Now let us examine this question with a view of ascertaining the facts in a practical way. Marshall Field imported \$1,400 worth of pearl buttons. The McKinley tax was \$3,000. That Mr. Field had to pay as duty at the custom-house. That made the \$1,400 worth of buttons cost him in the store \$4,400. Then he added the cost of transportation, and upon the whole cost he places his per cent, and then sells them out to his customers at 10 per cent profit. So it is plain to be seen that the persons who used those buttons had to pay \$5,000 in order to get \$1,400 worth of buttons. This is McKinleyism, which is insisted upon by men upon this floor as a law which should remain upon the statute books.

I take the broad ground that the whole tariff system is wrong in principle, because it levies its burdens on what we have to consume instead of the property which we possess, making the poor man who toils for a living contribute quite as much to the support of the Government as the millionaire. It is manifest that any such system is vicious. Under this rule the wealthiest man of any of the communities of the United States is not required to pay any more to support the Government than the poorest man who works in the shop. The law which we are now trying to adopt seems to be for the sole purpose of compelling the common people to bear the principal burdens of Government. This system has been popularized throughout the world because every nation on the globe likes to rival every other nation, and extravagance is the result; and the best way to secure the money to meet these fancies is to levy taxes which to the people seem to be paid by others. It has been said by a distinguished statesman, Mr. Blaine, that "\$10 could be collected much easier by indirect taxation than \$1 by direct taxation." Count Bismarck, of Germany, calls protection "a magnificent way of robbing the people, and not telling them how it is done." Mr. McKinley said, in one of his speeches in Ohio in his canvass against Mr. Campbell for governor, that—

The people do not know whether they pay 1 mill, \$1, or \$1,000,000, and if they do not know it, what is the use of saying so much about it?

The people do know how and when they have been robbed. They are not so stupid as these gentlemen would insinuate. They have repeatedly condemned the doctrine, and I feel certain that they always will when that question is fairly presented to them. The elections of 1890 demonstrated their intelligence beyond all question. I would be pleased to learn from some of those friends of protection why a man is paid but 60 cents a day for digging ore in Alabama, \$1.50 in Pennsylvania, and \$3 in Colorado? Protection is the same at each place, the amount of labor performed exactly the same in the same common country, and under the same flag. If protection is for the benefit of labor, why not all get \$3 per day? If protection means anything to labor, the highest prices should be paid. The machine of the capitalist is the only laborer that is protected. It has secured its owners by the aid of Congress the colossal fortunes that now startle the world.

The free pauper labor of the world, which regulates the wages paid to the human laborer employed here, on the universal principle of supply and demand, does not and can not compete with or diminish the profit Congress gives as a subsidy to protected machinery and capital. Machinery is day by day supplanting human factory labor. It neither eats, drinks, nor wears any product of human industry except coal, and needs no protection against any other like machine anywhere. As the proportion of machine work increases and human work decreases the proportion of increase of price which protection gives goes into the pockets of machine owners.

The machine is the laborer in whose behalf the organized bands that fill our lobbies and committee rooms are so clamorous in their demands for protection. Of course as the owners of machinery control the work of both hands and machines, when the demand for products is slack or the supply exceeds the demand, the owner always drops the human laborer first, as far as possible, and limits products, if he produces at all, to what the machines aided by the least amount of human labor can do, so that all of the high prices which protection secures may be retained by him.

The insincerity of the assumption that protection proposes to restrict the sales of manufactured goods to those they produce in the interest of American workmen is intensified tenfold by the fact shown by the record, that they struggle for years to flood the

country with the most degraded character of Chinese labor, and as soon as the war tariff gave them a monopoly of production on their own terms, they passed laws which they maintained in force for over twenty years, authorizing the importation free of duty under contract, to be enforced by penalties and liens upon property acquired, of the cheapest and most depraved class of pauper labor from all parts of the earth, in order to force American workmen under pressure from such competition to accept the lowest wages they could force them down to by this competition or be driven out of their protected establishments. Yet they pose before the country as the special champions of American labor.

Protectionists claim that the tariff protected American labor from foreign competition. Is that true? There is no tariff on labor; there is absolute free trade in labor—the one thing the manufacturer has to buy and the one thing the laborer has to sell. But the manufacturer says we keep out foreign work. Well, when does the foreign laborer most interfere with your job? When he is thousands of miles away, working by hand, with poor machinery, producing goods that have to be transported thousands of miles before they come into our markets, or when he has come here as an immigrant, and stands ready to work right by your side, on the very machine you work with, to make the very goods you are making? When does he most interfere with your job? When he stays a foreigner thousands of miles off, or when he comes here and bids against you? How does it help the employer most? To have him stay at home in Europe or have him here underbidding you?

If we look over the world with an impartial eye, we will discover that the rate of wages is not the determining point in the cost of production; that the lowest labor cost and the highest wages are inseparable. The average wages of India are 8 cents per day; those of China, with the highest protective tariff of any country in the world, are 9 cents per day. Russia, with a tariff equal to the McKinley law, pays 25 cents per day. Germany, with a tariff in many respects higher than ours, pays 45 cents per day. Great Britain, which has practically free trade, pays 90 cents per day.

England and Wales, with 480 people to the square mile, with a landlord system that oppresses the agricultural classes with the most improved methods, pays nearly twice as high wages as any country of the Old World, and yet makes goods so much cheaper than the cheapest-labor people that she can ship her goods into every market of the world and undersell the East Indian in Calcutta, the Chinaman in Hongkong, the Italian in Rome, the Frenchman in Paris, the German in Berlin, and the Russian in Moscow. What gives England this control of the markets of the world? Simply high wages, which means efficient labor and profitable employment, with free raw materials. It is not the man, but the productive capacity of the man, that establishes the wages.

And labor is 9 per cent lower now than it was at the time these tables were made. I now quote from a speech of ROGER Q. MILLS in the Senate of the United States April 24, 1894:

Table showing number of employees, total value of product, value of product per employee, and annual average wages paid per employee in manufacturing industries in the countries named in 1880.

Country.	Total value of product.	Number of employees.	Product per hand.	Annual wages paid.
United Kingdom.....	\$4,100,000,000	5,180,000	\$790	\$204
France.....	2,425,000,000	4,443,000	545	175
Germany.....	2,915,000,000	5,350,000	545	155
Russia.....	1,815,000,000	4,700,000	381	120
Austria.....	1,235,000,000	3,000,000	400	150
Italy.....	605,000,000	2,281,000	265	130
Spain.....	425,000,000	1,167,000	364	120
Belgium.....	510,000,000	953,000	545	165
Switzerland.....	160,000,000	370,000	433	150
United States.....	7,216,000,000	8,837,000	1,880	347

In the United States \$1,880 worth of product cost \$347 for wages. Now our friends point to the fact that the workman in the United States gets \$347 for his annual work; in Great Britain he gets \$204; in France he gets \$175; in Germany \$155. Ours is the high-priced workman, and these are paupers; but when we come to look at the fact that our people are paid less than the foreigner for the amount of work they turn out, the boot is found on the other foot.

Now, let us carry this thing out. Let us take the labor cost in other countries of \$1,880 worth of product and compare it with ours. The \$1,880 worth of goods imported into the United States is the thing that is to test the condition of our workmen. When the goods come here, then, the labor cost of a given amount of goods is compared with the labor cost of the same amount of goods in a foreign country. One thousand eight hundred and eighty dollars' worth of goods cost in this country \$347 for labor.

Now, then, we imported from England last year \$1,880 of cotton yarns that cost for labor in England \$485, and in the United States \$347. The labor cost in England was \$138 more than in the United States; but our tariff taxes it \$985 to protect our labor against competition with the Englishman. We imported \$1,880 worth of kid gloves from France that cost for labor in France \$604; in the United States, \$347. The labor cost in France was \$257 more than in the United States; but they were taxed \$1,165 to protect our workmen against competition with the Frenchman. We imported from Germany \$1,880 worth of woolen goods the labor cost of which in Germany was \$535, which was \$188 more than in the United States; but they were taxed \$1,347

to protect our workmen against competition with the German. We imported from Russia cables, cordage, and twine valued at \$1,880, the labor cost of which in Russia was \$503, which was \$246 more than in the United States; but it was taxed \$487 to protect our workmen against competition with the poorly paid Russian.

We imported \$1,880 worth of buttons from Austria, the labor cost of which was \$689, or \$342 more than in the United States; but these buttons were taxed \$2,690 to protect our workmen against competition with the Austrian. We imported \$1,880 worth of silk piece goods from Italy, the labor cost of which in Italy was \$922, or \$575 more than in the United States.

Mr. MILLS. I have some figures about cotton to give to the gentleman directly. Germany imports cotton yarns from Great Britain and weaves those yarns and sends them back and sells to Great Britain the cloth that is made from them. France imports cotton yarns from Great Britain. We import cotton yarns from Great Britain. There are certain things we can not compete with; there are certain things England can not compete with; and there are certain things that other countries can not. I submit here the table I have prepared, that Senators and others may examine it:

Countries whence imported.	Labor cost of \$1,880 worth of product.	Articles produced in the foreign countries named and imported into the United States.	Labor cost less in United States than exporting country.	Amount of tariff tax on \$1,880 worth of articles imported.
United Kingdom.....	\$485	Cotton yarns.....	\$138	\$695
France.....	604	Kid gloves.....	257	1,165
Germany.....	535	Woolen goods.....	188	1,342
Russia.....	503	Cables, cordage, and twine.....	246	487
Austria.....	689	Buttons.....	342	2,690
Italy.....	922	Silk piece goods.....	575	940
Spain.....	620	Iron ore.....	455	802
Belgium.....	569	Window glass.....	222	1,936
Switzerland.....	651	Lace and embroideries.....	304	1,128
United States.....	347			

Notwithstanding the fact that our labor is cheaper than that of other countries, our people are paying enormous duties to manufacturers to protect their workmen, not one dollar of which ever finds its way to the workman's pocket. Was not the Democratic national convention barking on the right trail when they denounced protection as a fraud? In the face of all these facts Congress is levying taxes to protect American workmen against competition with pauper labor!

The reports which I have read to you show that \$100 worth of manufactures cost for labor in Great Britain \$25.82; in France, \$32.11; in Germany, \$24.44; in Russia, \$31.49; in Austria, \$38.63; in Italy, \$49.05; in Spain, \$32.96; in Belgium, \$30.27; in Switzerland, \$34.64; and in the United States, \$18.45. Now, who has the cheapest labor?

While on the subject I want some one to explain to me, if this tax is for the laborer's benefit and not for the manufacturer's, how it is that the laborer never gets the benefit of any of it. How is it that the tariff and the laborer's pocket fail to connect? How is it that the bounty voted by Congress never gets further than the mouth of the manufacturer? How is it that the tariff puts a tax of \$13.44 on every ton of steel rails, and yet the laborer gets less than \$3. For every ton of pig iron Congress votes to the laborer \$6.72, but he never gets more than \$1.50. For every \$100 worth of cutlery the tariff is \$80, but he only gets \$44. I give here a list of articles which show from the census returns what wages are paid, and from the tariff what protection is voted for our workmen. I hope some one who may be able to do so will explain why it is that the tariff takes the skin off the wrong man.

In 1 ton of steel rails the labor cost is \$3; the tariff is \$13.44.  
In \$100 worth of cutlery the labor cost is \$44.24; the tariff is \$80.11.  
In \$100 worth of mats and matting the labor cost is \$34.90; the tariff is \$68.50.  
In \$100 worth of silk piece goods the labor cost is \$22.54; the tariff is \$90.  
In \$100 worth of cigars and cigarettes the labor cost is \$34.51; the tariff is \$125.36.  
In \$100 worth of woolen or worsted cloths the labor cost is \$20.85; the tariff is \$100.02.  
In \$100 worth of pottery the labor cost is \$45.96; the tariff is \$60.  
In \$100 worth of pearl buttons the labor cost is \$39.69; the tariff is \$143.61.  
In \$100 worth of tannin the labor cost is \$16.34; the tariff is \$119.47.  
In a ton of coal the labor cost is from 40 to 50 cents; the tariff is 75 cents.  
In \$100 worth of cotton goods the labor cost is \$24.24; the tariff is \$57.08.  
In \$100 worth of linen the labor cost is \$32.92; the tariff is \$50.  
In \$100 worth of common window glass the labor cost is \$53.00; the tariff is \$98.38.

In 1 ton of pig iron the labor cost is \$1.50; the tariff is \$6.72.  
In 1 ton of bar iron the labor cost is \$4.57; the tariff is \$32.98.

I ask again, why is it that what you vote for the benefit of labor does not get to the laborer? You do not stand up and tell the people of the United States that you want this for the protection of the capitalists. You do not dare to stand before the people and tell them that. You continue to tell them that it is for the benefit of labor, and after you have got it you put it in your own pocket, and you pay your laborer just what he gets at free-trade prices, and that is all he possibly can get.

In the same class of manufacturing, in the same State, and in the same locality you will find that markets differ in price of daily wages. And prices are constantly changing also at different periods, as new machinery and new methods are adopted. The gentleman from New York [Mr. PAYNE] told us the other day that a protective tariff made high wages. If this be true, why does every factory have a different price for labor? In every part of our country the tariff is the same. Why, then, the difficulty?

What is it that interferes with the free operation of the tariff and prevents it from fixing a high rate of wages all over the country and maintaining it? Mr. Edward Atkinson, who is one of our best authorities on this matter, shows that fifty years ago it required five persons—two carders, two spinners, and one weaver—working by the old method, to make 8 yards of cloth in one day. They got 20 cents a day, a dollar for the whole five. The labor cost of the cloth was 12½ cents, and calculating three hundred working days in the year, the whole product of these five cheap laborers was 2,400 yards of cloth, but when coal and steam and

machinery were harnessed together to produce cloth, five persons to-day in New England produce 140,000 yards of cloth each year.

The labor cost of the cloth is \$1.08 per yard; the wages of labor, instead of being \$60 a year or 20 cents a day, is \$287 per annum for each person. The result of the labor-saving machinery used was an enormous increase in productive capacity; the result of that was a great increase in the rate of wages, and the further result of a great decrease in the cost of production. He says further in his book on the distribution of products that—

In any given country, like the United States, where the people are substantially homogeneous, where the means of intercommunication are ample, where there are no hereditary or class distinctions, and where there is no artificial obstruction to prevent commerce, a high rate of wages in money will be the natural, and therefore necessary, result of low cost of production in labor.

I also quote from page 56 of the same book that—

The nations which have diminished the quantity of human labor in great measure by the application of machinery produce goods at the lowest cost, and by exchange with the hand-working nations, who still constitute the majority of the people of the world, are by way of such exchange enabled to pay the highest rate of wages in money, because their goods are made at the lowest labor cost.

There are here seven establishments. The first one is in Massachusetts. A comparison is instituted between 1849 and 1892, and the industry is cotton print cloth. Each operative made in 1849, in this factory, 44 yards per day. In 1892 he made 100 yards, an increase of productive power of 123 per cent. What wages did he net? The average daily earnings of the laborer in 1849 was 60 cents, and in 1892 \$1. His wages increased 50 per cent. The labor cost of the product decreased 32 per cent. I will not stop to enumerate the other establishments in the same State. While the increase was very large during the same period, yet the different prices of labor were to be found in each establishment.

I wish to quote from Mr. Howard Newhall, who makes this question very plain by a real object lesson:

American ladies' shoes wholesaling at \$1.50 a pair cost for labor of making 25 cents. English ladies' shoes wholesaling at \$1.50 a pair cost for labor of making 34 cents. American men's shoes wholesaling at \$2.00 a pair cost for labor of making 33 cents. English men's shoes wholesaling at \$2.00 per pair cost for labor of making 50 cents.

In the report of the Massachusetts bureau of statistics for 1894 the general average weekly wage in Massachusetts is given as 128 per cent higher than in Great Britain. The general average weekly wage in Massachusetts is given as \$11.63 per week and in Great Britain \$5.08.

It is plain to be seen from this statement of facts that if our people are to be injured and ruined, as stated by gentlemen on the other side of this House, by importation of English shoes into this country the English shoe must be produced at a lower cost than the American shoe, or otherwise it can not be imported in competition with our product if there was no tariff or protection whatever. It is not the rate of wages in England and America, respectively—\$5.08 against \$11.63—that we have to consider, but simply the cost of producing the shoes. The man or country holds the market who can sell his goods cheapest, and the man can sell the cheapest who gets his goods at the lowest cost. In this case it is the man in Massachusetts. What, then, does this difference of wages mean? It simply means increased productive efficiency. It means that the American workman is superior to the British workman.

In order for the American to earn his \$11.63 per week, he makes 35 pairs of men's shoes in a week. The Englishman, to earn his \$5.08 a week, makes 10 pairs of men's shoes.

Now, I want to ask the gentlemen on the other side of this Chamber, who claim the tariff makes the workingmen's wages high, did they make the scale of American workmen's wages \$11.63 per week or was it the number of shoes he made which regulated his wages, and superior skill in using machinery? Is not that what gave him the greater wages over the price of the English wages? Gentlemen, the principle is simply this, that the higher rate of wages means a higher productive power. It is increased pay for increased work. It is not the tariff. It is more work, more efficient work; it is better work, it is cheaper work. It is that that holds the market, and it holds the boot and shoe market of this country against the importation of a single pair of shoes from Great Britain, notwithstanding wages are 128 per cent higher here in shoemaking than in Great Britain.

There can be but one standard for labor, and that is pay for what it can produce. Comparisons by daily wages in different countries is misleading, and I am astounded at the learned gentleman from Maine [Mr. DINGLEY] presuming upon the ignorance of the American people by using such argument. The disparity between wages in this country and Great Britain is growing less every year. Wages in England have advanced 70 per cent since the adoption of free trade in that country, and our wages at home have declined 9 per cent under protection.

Go to India, and there you will see the female laborer knitting, with two sticks, burlaps at 2 cents a yard, working thirteen hours each day, and making 4 yards of goods, earning 8 cents a

day. In this country you will find one woman laborer attending a machine weaving 200 yards per day, working eight hours, receiving 64 cents per day. The woman of India gets 2 cents per yard, while the woman of America gets less than one-third of a cent per yard.

For the benefit of some of my Republican friends upon this floor, I will quote the Chicago Tribune upon this point:

What could demonstrate more conclusively the falsity of the claim that the present excessive duties can not be reduced without lessening the wages paid American labor? Allowing for tariff rates sufficient not simply to cover any alleged margin between wages in this country and in Europe, but the total labor cost of articles produced here, and there still remains 50 per cent or more of the present tariff scale that can only be reckoned as pure plunder and bounty paid to factory bosses and in which labor has no share.

It has been clearly demonstrated that operatives in this country are paid no more than they are in England in the cotton manufacture for the same product. The high tariff on cotton goods has not made wages high in the United States, for Mr. Blaine found as the result of his official inquiry that in proportion to the hours of labor and the work actually performed the American operative was not paid any more than the English. Enjoying the advantages of peculiarly cheap and effective labor, the American manufacturer needs only to get free raw material, cheaper tools and machinery, and untaxed dyestuffs and chemicals to be on a footing with his British competitor in every respect save the facility for transporting goods.

I quote again from Senator MILLS.

It will not do to say that the tariff reduces prices in the United States and free trade reduces prices in Great Britain. The same cause, under the same circumstances, ought to produce the same result. They tell us it will; but here we have prices brought down by free trade in Great Britain and under a protective tariff in the United States. Sir, prices have been brought down by improved production, by machinery, by invention, increasing the amount of product in a given time, and lowering the cost of the product. I have here some figures that will give an illustration of that fact:

A long time ago, when we were boys, when our mothers were spinning with the old hand wheel—

1,000 persons in one week spun 3,000 pounds of cotton yarn, No. 10, at \$1.50 each	\$1,500
1 person now spins 3,000 pounds of cotton yarn, No. 10, and receives for wages	6

Reduction in labor cost	1,494
-------------------------	-------

Our friends point to it and say a protective tariff did that, not the spinning jenny, not the skill and genius of the man who worked the machine and the man who invented it, but a protective tariff; and you levy 50 per cent duty on cotton yarn and say the duty did that.

Let us follow that up a little further:

The cost price of 3,000 pounds of yarn then, at 75 cents per pound	\$2,250
The cost price of 3,000 pounds of No. 10 cotton yarn now, at 15 cents per pound	450

Reduction	1,800
-----------	-------

By a protective tariff!

Labor cost of 247 hand weavers required to weave 3,000 pounds of yarn into 11,000 yards of sheeting, each weaving 45 yards per week and receiving \$3 per week as wages, was	\$741
Labor cost now of 8 weavers, who weave that amount in one week and receive \$6 per week as wages	48

Reduction in weaving	693
----------------------	-----

Cost of cloth made by hand spinning and weaving, at 40 cents per yard	4,440
Cost of cloth now, at 7 cents per yard, by machinery	777

Reduction in cost	3,663
-------------------	-------

And they say a protective tariff did it—not the spinning jenny and the power loom, but the protective tariff that levies 50 per cent duty on cotton yarn and 57 per cent on cotton goods.

Adam Smith tells of the immense benefits that come by the division of labor in making pins, from which I have gathered these figures:

Labor cost of 521 persons required to make 2,500,000 pins in one day, at 1 cent per hundred, was	\$520
Labor cost of 1 person, who now makes 2,500,000 pins in one day, and receives as wages \$1	1

Reduction	249
-----------	-----

That is done by a pin machine. Yet our friends stand here and tell us that is done by a protective tariff, and put on more duty in the interest of the poor workingman, and get him to believe that a protective tariff reduces prices and benefits him. Adam Smith stuck pins in the protective tariff in Great Britain till it was dead, and the common schoolhouse and the schoolmaster in this country are sticking pins in it now, and will continue to stick pins in it until it is as dead in this country as it is in Great Britain.

It would have required 53 persons, working one week, each making 12,000 eight-penny nails, to make 704,000, now made by 1, and the wages of the 53, at 30 each, was	\$348
They are now made by one hand at \$5 per day, six days	30

Reduction	318
-----------	-----

Mr. President, it is not taxing that reduces the price of a thing. Adding to the cost never reduces the price. That can not be done. Adding to the cost of a thing increases the price of a thing, or mathematics is a lie. It is taking from the cost of a thing that reduces the price of it. That is what machinery does, what a revenue tariff does, and that is what free trade does still better. There can be no justification on earth, either in politics or common justice.

On this question of labor cost I will quote Mr. Medill still further:

DIFFERENCES BETWEEN ENGLISH AND AMERICAN WAGES.

Wages are higher in this country because labor is more productive here owing to the superior efficiency of a quick, nervous people, and the abundance

of natural wealth and other advantages in a new and rich country with a comparatively scant population. Under such circumstances to compare English and American wages, and attribute the entire difference to the tariff, is wretched sophistry. With greater fairness a comparison might be made between the pauper wages of high-protection Italy and the comparatively high wages of free-trade England. To get a fair comparison, wages in protected and unprotected industries must be taken side by side in the same country; but the ultra-protectionists will never follow that line of inquiry, since it destroys their claim that high duties in and of themselves make high wages.

#### THE WORST PAID LABOR IS IN THE HIGH-TAXED INDUSTRIES.

It is notorious that the worst paid labor in the United States is that employed in the high-protected industries. Beggary wages forced Americans out of the mills and factories of New England to give place to the Irish, whose discontent was expressed in strikes until they were made to give way to the wretched, superstitious, priest-ridden French-Canadian imported operatives, who can live on less and endure more than any other class the mill barons have yet found. Woman and child labor is the distinctive curse of the industries having the heaviest tariff protection. New England has two strongly distinguished classes of population; tariff-protected monopolists and coupon clippers so rich that they do not know how to spend their money, and the pauper factory hands who never get a cent's worth of protection out of the tariff.

#### "PROTECTED" LABORERS PAID LESS THAN DAY LABORERS.

The average weekly wages paid to workers in woolen goods (enjoying a protection of 70 per cent) in Massachusetts in 1884 was \$6.90, or \$1.15 per day, while the average to workers in flax, linen, and hemp (30 to 40 per cent protection) was only \$6 per week, or \$1 per day; to glassworkers (50 to 100 per cent protection) \$10 per week, or \$1.66 per day; to cotton operatives (40 to 50 per cent protection) \$7.65 per week, or \$1.28 per day, and to clothing operatives (70 per cent protection) \$8.58 per week, or \$1.43 per day. The unprotected classes, especially the mechanics, do far better, the lowest grade of day laborers averaging higher pay than the best skilled operatives in New England. So many of the latter are women and children, employed at starvation wages, that the average is reduced to a low figure. It should be noted also that the statistics we have given as to wages of protected classes in New England include in the averages the cost of superintendence, the figures in this respect being deceptive and probably intended to deceive.

#### WAGES IN HIGH-TARIFF EUROPEAN COUNTRIES.

Germany is a high-protective tariff country and wages are much lower there than in free-trade England. The same is true of France, Russia, and Spain—all high-tariff and low-wage paying countries as compared with England. Labor in these countries has not acquired in the last forty years one-half the added benefits that have been secured by British workmen during that period.

The statements of such men as John Bright should have great weight with those who wish to know the truth.

The facts stated by Mr. Bright are conclusive on this question, at least, and that is the main one, that the difference between wages in England and the United States is nothing like as great now as it was forty years ago. Therefore, American manufacturers do not need as much protection now to compensate them for the higher wages they pay as they did then, while they are demanding more than twice as much.

When Hon. James G. Blaine was Secretary of State, a few years ago, he made a very able report to Congress in regard to wages in this country and in Europe. He caused the consuls of the United States, all of them Republicans, to examine into the wages of operatives in the leading manufacturing cities of Great Britain and the Continent. Consul Shaw made an elaborate report as to the wages of operatives in the cotton mills of Manchester, from all of which information the Secretary made a very valuable report to Congress, giving the American and the European wages paid for similar work, in which he completely refutes all the hired slanderers of the present campaign of the Protective Tariff League in regard to the starvation wages paid to English workmen, and fully corroborates all that Mr. Bright said. On pages 98 and 99 of his official report he says:

Owing to the different arrangements of the English and American tables of wages, it is difficult to give a comparative analysis thereof which would show at a glance the difference in the wages of the operatives of both countries.

The wages of spinners and weavers in Lancashire and in Massachusetts, according to the foregoing statements, were as follows, per week:

Spinners: English, \$7.50 to \$8.40 (master spinners running as high as \$12); American, \$7.07 to \$10.30.

Weavers: English, \$8.84 to \$8.64, subject at the date on which these rates were given to a reduction of 10 per cent; American, \$4.83 to \$8.73.

The average wages of employees in the Massachusetts mills is as follows, according to the official returns: Men, \$8.80; women, \$5.62; male children, \$3.11; female children, \$3.08. According to Consul Shaw's report the average wages of the men employed in the Lancashire mills on the 1st of January, 1880, was about \$8 per week, subject to a reduction of 10 per cent; women from \$3.40 to \$4.30, subject to a reduction of 10 per cent.

The hours of labor in the Lancashire mills are 56; in the Massachusetts mills, 60 per week. The hours of labor in the mills in the other New England States, where the wages are generally less than in Massachusetts, are usually 66 to 69 per week.

Undoubtedly the inequalities in the wages of English and American operatives are more than equalized by the greater efficiency of the latter and their longer hours of labor. If this should prove to be a fact in practice, as it seems to be proven from official statistics, it would be a very important element in the establishment of our ability to compete with England for our share of the cotton-goods trade of the world.

In the two prime factors which may be said to form the basis of the cotton manufacturing industry, namely, raw materials and labor, we hold the advantage over England in the first, and stand upon an equality with her in the second.

Having the raw material at our doors, it follows that we should be able to convert it into manufactures, all things else being equal, with more economy and facility than can be done by England, which imports our cotton and then manufactures it in her mills. The expense of handling, transportation, and commission must be an important item in this regard as compared with our turning in the fiber from the cotton fields to our mills, and shipping it in the advanced form of manufactured goods. Add to this the secondary fact that it costs us no more to handle and manufacture the same than it costs in England, and we stand on an undoubted equality thus far in the race of competition.

The more highly protected the factory is the less the wages are. The selfish and hired protectionist never fails to claim that the high wages paid by American protected manufacturers to their foreign imported laborers are founded upon mere statement, and that in point of fact they are the poorest paid laborers in the United States, and the more highly protected the factories are the less the wages. Wages are higher in this country because labor is more productive here owing to the superior efficiency of a quick, nervous people, and the abundance of mineral wealth and other advantages in a new and rich country with a comparatively scant population.

Under such circumstances to compare English and American wages and attribute the entire difference to the tariff is wretched sophistry. With greater fairness a comparison might be made between the pauper wages of high-protection Italy and the comparatively high wages of free-trade England. To get a fair comparison, wages in protected and unprotected industries must be taken side by side in the same country. But the protectionist and apologist will never follow that line of inquiry, because it destroys their claim that high duties in and of themselves make high wages.

Our Republican friends on the other side of this Chamber have made the important discovery that a high tariff is a blessing to the American people and a curse to every other nation, and that the people of this country can all get rich by taxing themselves. The higher the tax, the sooner they will get their fortune. Mr. McKinley, in advocating his bill in this House, claimed that by raising the average duty from 46 to 49 per cent the whole country would be benefited and prosperity would return to business and wages would be higher. But, gentlemen, after a thorough test of this law for more than four years, it brought a record of strikes and business failures without a parallel; and there are other things it did. It made 15,000 mill owners happy and rich and reduced the price of labor to a point lower than ever before, from which it has never recovered. It also caused the American consumer to pay to the protected manufacturer since it went into force more than \$2,000,000,000. If a millenium can be brought about by high taxation, I would suggest that the tariff be raised to a point that will enable all of us to be millionaires, with a heavy bank account, and make the foreigner continue to pay all the tariff taxes. Then we will pull down the female statue—the insignia of our civilization—take the blindfold from her eyes, break the scales of justice, take from her hand the sword of defense, and in her stead erect the Goddess of Taxation, with a copy of the Dingley bill in one hand and a contribution box in the other, with the superscription: "No 10-cent tithes, but 57 per cent protective-tariff exactions."

Mr. Chairman, this whole Republican scheme of tariff taxation is an ingenious method to obtain money without consideration. While money is the object, oppression necessarily must follow. What gave England her legal crimes but the uses and trusts, primogeniture and estates entail? These were but forms of protection which the nobility obtained from the masses of the people.

The plea of the protectionist that his system of taxation is for the benefit of the people is the argument of the tyrant. There never was a despotic edict, a scheme of oppression or tyranny, but what attempted to justify itself by claiming that it was for the welfare of the people. Ask the nobility of Russia to-day why their laws are a stranger to mercy, why infinite cruelty tortures that Slavic race, and their imperial lips will answer that it is for the benefit of the Russian people. Call up the Vandals who sacked Rome, murdered the women and children of that city, and they will answer back that they did it for the benefit of the people of Greece. Go and ask Queen Victoria and the House of Brunswick to-day why they lay the mailed hand of tyranny and oppression upon the land of O'Connell, Emmet, and Parnell, and they will answer, "For the benefit of the Irish people."

If you will ask the trusts that have reduced the price of labor in their protected mills since the McKinley bill became a law, they will tell you it was done for the benefit of the laboring men in their factories.

Go to the bloody grounds of Homestead and ask Andrew Carnegie and H. C. Frick why they organized an army and a navy and shot down their own employees, and they will tell you, for the benefit of the laboring people.

Go and ask John M. Pailman why he reduced the price and time of his employees and at the same time increased their rent, and he will tell you to help his poor laboring men. Go to the corporations, trusts, syndicates, and individuals who told their men in their employment last fall if they did not vote for Mr. McKinley they would discharge them and turn them away, why they did it. They will tell you for the welfare of the country and their men. Go and ask the gold gambler, the stock broker, the bondholder, and the banker why they reduced and advocated the reduction of primary money, and they will tell you for the benefit of the people, that the poor laboring man might have an honest dollar, a sound dollar, a hundred-cent dollar, and a dollar that will go round the world.

Nobility in all ages of the world has been founded upon that brutal claim that the government should foster and care for certain families known as privileged classes.

Protection is the same principle as fostering and supporting certain business interests by charity, in the name of protecting American labor; the protectionist imports the cheapest labor he can find in the Old World. Does this practice indicate an honest purpose to protect labor? Go and ask John Sherman, who is the father of the foreign pauper-labor law, why he advocated such a measure, and he will tell you, for the benefit of the American laborer. The gentlemen on this floor who are clamoring so strongly for the retention of the McKinley law, claim that they wish simply to levy a duty to make up to the laborer of this country the difference between the price paid here and in England.

Such claims are intended as mere bluffs to the people. Mr. Chairman, the unceasing and persistent statements made on the Republican side of this House that high tariffs are intended to make high wages is contradicted by all the experience of mankind, common sense, and recorded facts. In the discussion of this question, we are not left to grope in the dark or guess at results. Take the census reports for fifty years. They settle the whole question beyond dispute. They leave no crevasse by which you can dodge the facts.

	Tariff.	Labor.
	Per cent.	Per cent.
1860.....	24	25
1870.....	34	23
1880.....	46	22
1890.....	49	20
1894.....	40	18
1897.....	30	15

These figures ought to be an important lesson to an honest man. There is no trocha between a high tariff and a gold standard. They have joined their forces and are now selecting their victims. They lay the same merciless hand upon the farmer that they do upon the laborer. See the decline in wheat:

The price of wheat was—	The price of wheat was—
From 1850 to 1860..... \$1.00	From 1891 to 1892..... \$0.85
From 1860 to 1870..... 1.42	From 1892 to 1893..... .70
From 1870 to 1880..... 1.27	From 1893 to 1894..... .66
From 1880 to 1890..... .97	In 1896..... .65
From 1890 to 1891..... .95	In 1897..... .73

Dingleyism is now brought forth as a remedy for the fall in prices and a decreasing revenue, all of which has taken place under the tariff of the Wilson bill and the high tariff of the McKinley bill. The Wilson tariff was 39 per cent, about double the cost of all production, and labor went down. The McKinley tariff was 49 per cent, one and one-half times the labor cost of production, and labor went down to the lowest point known, but now we are going to bring prosperity and high wages by raising the tariff to 57 per cent.

Now, I ask, Why should we have a tax of three times more than the entire labor cost of production fixed upon the very goods that labor must have in order to live? This pretense of protecting labor with a tariff is an insult to intelligence. Wages in the United States are more than ten times higher than they are in China; three times higher than they are in Russia, Italy, or Spain; twice as high as they are in France or Germany, and 20 per cent higher than they are in the factories of England. Now, would it not seem that if protectionist arguments are true, that China, Russia, and Germany would overrun our country with cheap goods, while England would be caged up in her island home? But not so.

We fear no competition from the cheap-labor countries which are blessed with protective-tariff laws and starvation wages, but all of our tariff laws are aimed at the highest waged country on earth save our own, and all of our fear of competition is from the nation whose high-priced labor makes the cheapest goods of any people and sells them at the lowest price in the markets, and has won on its merits the commercial supremacy of the world. Since England abandoned the protective system, the product of her manufactures has been cheapened 50 per cent, while wages have increased 70 per cent, and between the cheapening of goods and the raising of wages the comforts of the workingman's home are 106 per cent greater.

The pretense that protection benefits the American laborer has been fully demonstrated to be false. Does Andrew Carnegie, who is protected 115 per cent on steel beams, and whose daily net income is more than \$4,000—does he pay any more for a day's work than Senator McMILLAN, who was protected 20 per cent on lumber, or the man who is making fence and digging ditches, who has no protection? All laboring men know that the employer simply pays the market price for labor. The universal law that governs the price of free labor is demand, supply, and skill, and the God of nature has placed this rule above and beyond the legislative power of the state, and there is no other.

High tariff increases prices; increased prices decrease consumption; decreased consumption decreases production; decreased production decreases wages and labor.

If you want 100 men to work for you and there are only 10 men to be had, the price of labor will be high; but if you want only 10 men and 100 come and offer their services, the prices will be low. But our Republican friends seek to remedy this state of affairs by placing a tariff of 57 per cent on commodities that the laborer has to buy. They claim that will raise the price of wages; but, my friends, these men who work for wages are not sellers of commodities; they are sellers of labor. They sell their labor in order that they may buy commodities.

I would like to have some good Republican expert on protection explain how an increase in the price of commodities can benefit the laboring man. They claim, however, that a tax on wheat of 25 cents per bushel will raise the price of wheat to the farmer, and a tax of 87 per cent on ready-made clothing will reduce the price of clothing to the consumer. This paradox must be believed to be a protectionist. It seems to me that we should look at these matters in the most practical way. I wish to submit an aphorism to you gentlemen who so deeply sympathize (on paper) with the poor laboring man.

Have you ever seen the laborer who cared one cent whether he worked for a protectionist or a protected or an unprotected employer?

Have you ever seen a laborer who expected to receive more wages from a protected than an unprotected employer?

Have you ever seen a protected manufacturer who paid higher wages than he was compelled to?

Have you ever seen a protected manufacturer pay higher wages for the same class of work than the unprotected?

Have you ever seen the protected manufacturer pay the coachman who drives his carriage, the boy that shines his boots, or the landlord that feeds him, more for their services than the man who had no protection?

Did you ever see one of them who was willing to subsidize a newsboy or endow a laundry?

If, then, the unprotected manufacturer pays just as high wages and still is able to make a profit, by what method of reasoning do you arrive at the conclusion that the protected manufacturer pays higher wages because of protection?

And if the protected manufacturer does not pay more than the unprotected one, what becomes of your protection theories?

Is it your answer that protection raises all classes of wages in all occupations?

If that is it, then as labor is not protected from foreign immigration, you must of course affect the raising of all wages in all countries. Now, if that is true, then how about the pauper wages of Europe?

If you say capital will not be invested unless it is protected, how do you explain the fact that it is being invested in unprotected industries?

If protection prevents us from selling in foreign markets, does not protection make less work instead of more?

If there is free trade in labor and high protected prices for those things which laborers must buy, is not the laborer being robbed instead of benefited?

If protectionists desired to pay high wages, why do they always employ the cheapest labor they can find?

When laborers go out to find employment do they first go to the protected factory and ask for work, and do they expect better wages in the iron mills which are protected 50 per cent than they can get on the building or on the street that has no protection?

I can not hope, however, for an answer to this question. It has been respectfully asked thousands of times in the last forty years, and has never received an answer, and never will.

The protectionist who was recently before the Committee on Ways and Means claimed that the welfare of the laborer is best cared for by leaving the control of his wages under the management of his employer. The only theory on which our tariff laws can possibly help the laborer is this, that if the protectionists are permitted to extort bounties from all consumers of their goods, they will pay back this money extorted to their laborers. But will they do it? There is not one instance where they have ever done so. The gentleman from New York [Mr. PAYNE] says that the labor unions can compel them to divide their protection bounties given by the Government. That remedy was attempted at Homestead, Birmingham, Chicago, and many other places in this country; but instead of a divide of these protection bounties, labor was answered with musket balls and bludgeons in the hands of hired assassins. They divided life and death.

More than \$900,000,000 was extorted by the operations of the McKinley law from the consumers of protected goods each year. Will any of the defenders of protection tell us how much of this vast sum has been paid back to labor? Ask the men who toiled in these protected mills and they will tell you not one cent.

I appeal to members of this House, is it right that a law should

go upon the statute books another day that thus enables the protected class to take these vast sums from the people as a mere gratuity, without being required to divide with labor? This McKinley law allows them to retain it all and leave labor to beg and to starve.

What laborer wants a conservator or guardian to protect him? None. He simply wants the heavy hand of oppression taken off and that he be left free to maintain his own rights, as God has decreed. When there is depression in business and hard times come, does the protected manufacturer continue to pay his laborers full wages from the surplus money accumulated in good times? Never. He puts them upon half time or cuts down wages, hires other hands, or closes the doors of his factory and turns his men out into the street.

Let us look into this question in the most practical manner. Yonder across the street is a glass works, which is protected under the law now in force from 58 to 400 per cent on all of its products. By the side of the glass works a man has a contract to excavate a cellar.

Gentlemen, you may look all through the Dingley bill and you will find there is no protection on cellars, building houses, railroads, making farms, and digging ditches; they are left out of the Dingley bill.

The glass manufacturer goes into the street and says that he wants two men to work in his factory. Two Republicans reply they want work, and "What price are you paying?" "I pay as much as anybody. I pay the customary price for labor." "Well, how much is that?" They go out and inquire about the city, and find that the custom of the community is \$1.50 per day. "Well," says the laborer, "that is satisfactory," and they go to work in the glass works.

The man who wants labor to dig the cellar goes out into the city to find hands to excavate the cellar, and asks if there is anybody who wants work. Two men answer that they do, and ask, "What price are you paying?" "The custom of the country." They inquire about the city and find that \$1.50 a day is the regular price, and they go to work digging in the cellar. A week rolls around, and the man who is digging the cellar calls up his two men and hands them \$9 each.

The glass manufacturer calls up his two men and tenders to them their \$9. "That is all right as far as it goes, but we want more money than that." "Why, gentlemen, do you demand more money from me?" "Well, sir, we have been sitting in the gallery of the House and we have heard the distinguished leaders of the Republican party making their speeches on the tariff, and they said that the tariff levied upon glass and all other goods was for the benefit of the laboring man, and especially the man who worked in the glass works. Now, sir, we want the protection that is on the glass that we have made for you." "Oh," says the glass manufacturer, "these distinguished Republican speakers upon the tariff are mistaken about this matter; they are not posted on the tariff." "Yes; they are," say the boys, "they are the accredited representatives of the protected industries, and they know more about it than any little glass manufacturer, and they say that the lowest tariff on glass is 58 per cent. Now, sir, we want to know how much glass we made for you." They figure up the amount and find that they have made \$20 worth of glass, \$10 each. "Now," says the laborers, "we have, each one of us, made for you \$10 worth of glass, and the tariff for the benefit of labor is 58 per cent; then we are entitled to \$5.80 more each." The glass manufacturer tells them that they are not entitled to the tariff benefit, and tenders to them their \$9 each and tells them to take it and get out of the office.

They go across the street into a Republican lawyer's office and tell him they want to bring a suit against that glass manufacturer across the way for the tariff on glass they made for him. "Well, what kind of a case have you?" "We hired to him at \$1.50 a day and worked a week for him." "And he refused to pay you, I suppose." "Yes, in part; he paid us the \$1.50 a day for every day we worked, but he refused to pay us the tariff on the glass we made for him." "Well, boys, do you think you can recover for that?" "Of course we can, Mr. Lawyer. Now bring the suit." "Well, boys, you will have to have very strong witnesses to support your case; men who can stand the ordeal of the witness stand. That glass factory is in a trust that has twenty-two millions of capital to back it; they have the best lawyers in the country to defend them. You are two poor workmen with limited means, and it is doubtful if you can succeed. They will run the case through all the courts."

"That may be, but it makes no difference to us. We want this question settled. There are 3,000,000 laboring men in this country who want to know whether they are to get this McKinley protection or not." "Well, boys, who are the witnesses by whom you can prove that a tariff is for the benefit of labor?" "We can prove it by the leading and prominent members of the Republican party, not only in the House but in the Senate. Mr. WALKER, Mr. REED, Mr. DINGLEY, and Senators HOAR and ALDRICH. These

are our witnesses. Now, Mr. Lawyer, go on with the suit." "Why, boys, will these honorable members of the Republican party swear that a protective tariff is for the benefit of labor?" "Of course they will. Here are their printed speeches that they have been making for the last thirty years. They said so this week, and here is the national and the State platforms that say so. They are all honorable men." "Well, boys," says the lawyer, "I will have to be frank with you and tell you the truth, that there is no law, custom, or rule and never has been, by which labor can get one cent of the protective-tariff tax. It all goes into the pockets of the manufacturer."

Every argument in favor of a protective tariff in this country begins with an apology and ends with a lie. These men who make a plaything of the sweat and toil of the laboring man have their prototypes—

And Joab said to Amasa, Art thou in health, my brother? And Joab took Amasa by the beard with his right hand to kiss him. But Amasa took no heed to the sword that was in Joab's hand, so he smote him therewith in the fifth rib—

as the protectionists now have the people by the throat, demanding their money in the name of protection.

Mr. Chairman, if protection be a good system it will have to be expanded until it blesses all. If national aid underlies our industrial system, where is to be the limit of the help, and who are to be the judges of the proper person to receive it? Who are to be the arbitrators? When the business man is about to fail the Government will have to give him assistance, and when the assets and liabilities of the professional man give up their estrangement and fall into each other's arms the nation will have to help him through. But you know that if the system be extended to all it comes out where it started in.

Give every man protection and it ends in free trade. Protection exists upon the theory that one class is to be taxed for the benefit of another class; for all to be taxed for the benefit of all would mean no protection, and if it reached a point where there is no protection, the country, upon the Republican theory, would have to go to ruin. If protection be carried to its legitimate end, it becomes self-destroying.

I do not want to advocate a system of beneficence that is in danger of death when you increase the number of its recipients. Protection acknowledges its weakness when its asks benefits for only a part of the race, and shows how unnatural it is when it commits suicide when extended to all. Protectionists want the application as specific and partial as the inventor of the patent medicine that would only cure red-headed people. I do not blame a manufacturer for wishing to follow a business where the prices are foreordained and predestinated by Congress. I do not blame him for having an immutability in his catalogue fixed by a tariff tax. The doctrine of election, you all know, is a telegram from eternity giving a fellow a reserved seat in the next world. So protection is foreordination and election brought into business.

More than eight hundred millions of the people's money was collected under the McKinley bill annually and handed over to the protected factories in this country, in addition to their legitimate gains. It seems to me that it would be more businesslike to give them capital directly out of the public Treasury, without so much indirection. However, that would expose the whole scheme of plunder, and the people would plainly see the extent and manner of the robbery. They would only want to know the facts in order to stamp the life out of all such laws.

I believe that what is known in this country as a protective tariff is the most insidious engine of deception and oppression that human ingenuity ever conceived. If our people could be led to understand that when they are purchasing the necessities of life they are parting with one-fourth of their earnings in the enhanced price of the goods, this question would be settled at once and forever.

To illustrate in a plain business way, let us take the course of trade of two of our merchants. Here is a merchant in your city who takes \$10,000 and goes to London and purchases a stock of clothing. He ships his goods to New York. There the custom-house officer demands the tariff duty, which is 84 per cent, or \$8,400 on the \$10,000 worth of goods. You see his goods cost him \$10,000 in London and \$8,400 duty, making \$18,400. He places them on board the cars, which are taxed 45 per cent, the locomotive is taxed 52 per cent, and the track over which they are hauled is taxed \$15.44 per ton, upon which they are shipped to Chicago. He opens his goods and takes out a coat that cost him \$10 in London, 40 cents for transportation, and \$8.40 tariff; then he adds \$2.50 profit. He ties a little tag in the buttonhole, marks it to sell at \$21.30, and lays it on the shelf in his store. In comes a laboring man from the woolen mill and says to the merchant, "I want to buy a coat."

The merchant takes down this coat from the shelf and says: "Here is a nice coat. I bought that coat in London." "Well, what is the price?" says the laborer. "I can sell you that coat for \$31.30." "That is very high," says the laborer. "Yes, that is a good price; but I paid \$10 for that coat in London, and I had

to pay \$8.40 tariff tax, 40 cents for transportation, and then I charge you \$2.50 profit." The laborer says, "I am willing to pay you the \$10 it cost you in London, the 40 cents for freight, and the \$2.50 profit, but that \$8.40 tariff I won't pay you." "Well, sir, why won't you pay it?" "Because I am posted on the tariff laws. I am a Republican; I am no ignorant Democrat. The consumer, the person who wears out that coat, don't have to pay the tariff. I read Republican newspapers and Republican speeches, and I read the debates on the tariff in Congress, and they all say that the consumer does not have to pay the tariff. My father says I don't have it to pay, and my mother, and our preacher says I don't have it to pay." "Very well," says the merchant, "if that is your education, all right," and lays the coat back on the shelf.

In about sixty days the snow begins to fly, the ground begins to freeze, and the angry winds of winter come and beat upon that coatless laborer. He comes shivering into the store again, and says, "Let me see that coat again." The merchant hands it to him. "Mr. Merchant, pray tell me the history of that coat again, will you?" "Yes, sir; I paid \$10 for that coat in London, 40 cents for transportation, \$8.40 for tariff tax. Then I charge you \$2.50 profit." "Well," says the laborer, "notwithstanding the statements of the leading men of my party, the opinions of my good old father and mother, and the opinion of the minister of God's redeeming grace, the elements of nature come and speak to me in that inexorable voice, that is more potential than all of them, saying that I must obey, telling me that this body must be clothed or perish."

This was an honest Republican laborer, but he had been educated to believe a falsehood. He had heard nothing but the prejudiced vapors of the demagogues and the statements of a venal press. This laborer supposed he was thoroughly posted on political economy, but he now learns by a test from which there is no escape that the speeches and the publications by his party are untrue, their conclusions deceptive, their objects an imposition and a fraud upon labor. Such are the Republican teachings before the young working boys of this country. That laborer had to work five days more to pay for the same coat, yet he is told that a tariff is a good thing for the laborer.

I will quote from the Hon. Joseph Medill, of the Chicago Tribune, again, as he is good Republican authority.

#### 4 PER CENT OF TARIFF TO SECURE 4 PER CENT OF WAGES.

Over fifty high-tariff Congressmen have spoken elaborately, but no explanation is yet offered why a 4 per cent war tariff, which is much more than double the total percentage of labor cost in American manufactures necessary to "protect" American wages from English competition. This is the great unexplained Congressional cryptogram—4 per cent of tariff to secure 4 per cent of wages. All the high tariffites assert that protection amounting to double the total labor cost of goods and five times as great as any difference between American and English wages is absolutely to protect labor against British labor competition, but none of them explain the riddle.

#### HALF OF TARIFF SCALE PURE BOUNTY PAID TO FACTORY BOSSSES.

The following statement of the labor cost of certain selected articles is taken from the report, for 1886, of Carroll D. Wright, United States Commissioner of Labor, and to make the suggested comparison plain The Tribune adds to the Commissioner's exhibit the rate of duty on the manufactures specified:

Articles.	Labor cost.		Rate of duty.
	Per cent.	Per cent.	
Pair stoga boots.....	17.50	30	
Yard of Ingrain carpet.....	22.58	47	
Suit cassimere clothing.....	16.23	68	
Yard of sheeting.....	20.81	55	
Ton Bessemer rails.....	19.00	84.33	
Pair blankets.....	18.05	62	
Ton pig iron.....	9.72	56.60	
Yard cotton cloth.....	18.80	55.76	
Yard print cloth.....	31.82	49	
Cooking stove.....	36.95	45	
Pound spun silk.....	8.81	30	
Harness leather.....	13.84	30	

What could demonstrate more conclusively the falsity of the claim that the present excessive duties can not be reduced without lessening the wages paid American labor? Allowing for tariff rates sufficient not simply to cover any alleged margin between wages in this country and in Europe, but the total labor cost of articles produced here, and there still remains 50 per cent or more of the present tariff scale that can only be reckoned as pure bounty and plunder paid to factory bosses, and in which labor has no share.

Republicans will differ. The gentleman from North Dakota [Mr. JOHNSON], one of the extreme apologists for this bill, tried to show that the foreigner paid one-half the tax and the consumer the other half. This is a radical departure from the teachings of Mr. McKinley, who always claimed that the foreigner paid all the tax. All economic writers are agreed that a government can not extend the taxing power beyond its own people, and we know that no government on earth can tax any people but its own; no tax can be levied by any government that is not paid by its own people. If the Congress of the United States could levy a tax which would be paid by foreigners, should it not stop taxing the American people? If the British Parliament can levy a tax on us, do

you think it would levy any taxes on its own people? The power of every government on this earth to levy taxes is limited to its own people, and it makes no difference whether it is an import tax, an export tax, or an excise tax, its people alone have it to pay. An export tax is levied upon the goods before they are sold. An import tax is levied upon the payment after they are sold. In either case the government compels its own citizens to pay it. It can not collect it from foreigners, nor can the citizens compel the foreigner to contribute one cent toward its payment. The claim made by some gentlemen upon this floor that the foreigner pays the tax is done to fool the people.

There are a limited number of gentlemen upon this floor who are willing to make these wild statements, not only in our presence, but that they may go to young and old, that the consumer does not have to pay the tariff tax, that the foreigner has to pay the duty. Now, if it was a fair question, I should like to ask what would become of men who are so thoroughly indifferent to the Decalogue. These advocates of protection seek to defend their ruinous policy of robbery by saying, "Why do not the merchants buy their goods in their own country? They can make them as cheap here and sell them as cheap as any place on earth." Well, let us see if this is true. Here is another merchant next door. He says, "I will buy my goods in the home market." He gets a duplicate bill from his neighbor merchant, puts \$10,000 in his pocket, and goes to Boston to buy his stock. He hands his bill to the clothing manufacturer, telling him that is a bill of goods a merchant of his city bought in London. "Now, sir, what will you duplicate that bill of goods for, same quality, style, and finish?" "I will sell you that bill of goods for \$18,400." "Well, but my neighbor bought these goods in London for \$10,000. Can't you afford to sell me that bill of goods as cheap as they do in London?" "Yes, sir." "Well, why don't you do it, then?" "I don't have to." "Why don't you have to?" "Because I am protected under the McKinley law 84 per cent, and you can't get your goods any cheaper in the United States. We are all in a trust. Mr. Heidelberger is our president, and you can't help yourself. You have either to buy of us, or go home, shut up your store, and go out of business. You can take your choice. You can go to London and buy your goods, but when you have paid the tariff duty and your freight and expenses, you had better buy of us, as you will save your personal expenses and time." So he was forced to pay the \$8,400 tariff or go to London. "Mr. Merchant, I am a Republican, and I want to be advised about this tariff. My neighbor, who bought his goods in the foreign market, I understand, paid his \$8,400 tariff tax into the Treasury of the United States, where it was used to pay the expenses of the Government. Now, I want to know where the \$8,400 which the McKinley bill forces me to pay to you goes to." "Well, my dear friend, that goes into my pocket. I am the sole beneficiary; that is what protection is for. Do you suppose I would be an advocate of protection unless I got the benefit of it? The Government does not get a cent. Are you so stupid as to think that protection is for the purpose of raising money for the public Treasury? That \$8,400 of tariff is the share you advance for your customers who buy these clothes. When you go home with your goods, you simply mark them to sell at 10 per cent profit, not only on the \$10,000 alone, but on the \$8,400 and all other expenses. By this process, don't you see that you sell the goods and do the collecting for me? Your customers do the paying as well as the protecting. You do not get one cent of the \$8,400. That is what the McKinley law is for. Do you not now understand why I give \$40,000 at every election to keep the Republican party in power? For that amount is all, and more, paid back by the people that use my goods. You see, I am safe if I can keep representatives in Congress who will always vote for protection." "I would like to have you tell me how much money you are enabled to extort from the consumers of your goods every year?" "Well, I will say from \$200,000 to \$250,000." "Why, that is a splendid business." "Yes, it beats highway robbery, blowing banks, or the confidence game. It beats all the tricks that have ever been discovered to make money. And, besides that, it is the only real system of robbery that is protected by Federal statute. Should any such scheme of plunder be attempted under the State law, the party would be sent to the penitentiary."

"I would be pleased to know what you do with this vast sum of money that is donated to you by the consumer of your goods?" "Why, bless your innocent soul, I send it to my agent in your town, and he loans it back to these consumers of my goods, from whom I extorted it, at 7 per cent, taking mortgages on their farms and homes as security. It is a splendid business for them. You see, they get the clothes and money both; they ought to be contented people. That is the reason our hired representatives in Congress, public speakers, and our newspapers tell all those people that are thus robbed that mortgages and deeds of trust are the highest evidence of prosperity; that the more mortgages they put upon their farms the richer they become. This is the reason our farmers are so prosperous. We furnish all the money that

they can give security for, and besides that we furnish them a home market."

That is the reason farmers are now enjoying such high prices for their products.

I quote again from the Hon. Joseph Medill, of the Chicago Tribune:

#### HOME MARKET WHICH THE FARMERS FURNISH.

The farmers of the United States furnish one-half or more of the entire market for American manufacturers. They furnish all the market they can. They buy all the stuff from the cities which they have the money to pay for—all that their crops and cattle sell for; but their money has reduced purchasing power. They have to buy high protected priced goods with money realized from agricultural products sold at free-trade rates throughout the world. Now, gentlemen, if our mechanics worked on a low-tariff basis and made cheap goods to reciprocate with your cheap agricultural products, you would be able to buy much larger quantities of their mechanism. You could purchase at least a quarter, probably a third, more mechanical products, more lumber, wagons, buggies, furniture, plows, cultivators, reapers, books, carpets, cutlery, china, glass, boots and shoes, salt, groceries, better dresses for wives, daughters, sons, and yourselves. Of the thousand things that you buy in the cities you would be able to purchase more of them. This would give the city people a larger market to supply. I estimate that the high tariff tax we have to-day deprives from 400,000 to 500,000 workmen in the United States of employment, which the farmers would furnish to them if they sold their goods at fairly reciprocal prices which the farmer could justly pay. The manufacturers are cutting the throats of their workmen by their excessive high-tariff protected charges for their goods and filling the country with tramps whenever there is a little flurry in the financial market.

#### FRAUD AND IMPOSITION UPON THE FARMER.

The absolute falsity of the statement that protection furnishes a home market to the farmer would seem to require no refutation. But I regret to say that there are still living in the bright light of the nineteenth century men who are willing to accept this monstrous heresy, and that there are men also who have attained high places in the councils of the country who are bold and daring enough to assert the correctness of such doctrine. What are the facts? Republican tariff legislation is so framed that the farmers are compelled to pay in the purchase of their necessities of life at least \$100 each annually for what is pretended to be a home market for their grain. And after thirty years of protection, in order to secure this market a farmer is compelled to ship 9 per cent more of his products to foreign markets than he did during the days of a Democratic tariff. Should a farmer be a free man, or should he be compelled to purchase at a home market, paying for the privilege of selling to those who desire to buy?

Mr. Chairman, what does the farmer have to pay for this home market—for the privilege of selling his products to those who wish to buy? To secure this home market he pays 82 per cent on paint, 58 per cent on nails, 98 per cent on glass, 84 per cent on ready-made clothing, 130 per cent on worsted knit goods, 38 per cent on muslin, 110 per cent on hats, 60 per cent on carpets, and 110 per cent on blankets. And all the other necessities corresponding to the corruption fund which the profits of the industry will furnish. And as no honest man of intelligence will contend that a duty on cereals was intended for any purpose but to deceive the farmer into submission, the home market must be the only benefit to be derived from the policy.

These excessive demands under the McKinley bill are now to be reenacted and increased by the present measure. In the free-trade market of Liverpool the English grain dealer is now paying 38 cents per bushel more for corn and 71 cents per bushel more for wheat than is being paid at Chicago in our highly protected home market.

What is the matter with protection? The farmer's business is such that he can not retaliate or be protected; when he takes his 50 bushels of seed wheat and goes into his field and sows his 40 acres of land, and by his careful husbandry brings into the granary 800 bushels of wheat, that feeds the nation and creates prosperity, it would seem that that man's business would be entitled to protection, if any man on earth was. But McKinleyism forces him to do the protecting, and he receives none of its benefits.

The plow that turns the furrow, the harrow that cultivates, the drill that plants, the binder that cuts the grain and the machine that thrashes it, the wagon that carries it to market, and the scale that weighs it, are all heavily taxed and charged up to the farmer. But I ask, Mr. Chairman, what is the home market procured at such an enormous price? The American people can not consume the entire American crop of farm product. Hence we must always find a market abroad. And the value of any market to any person or class is the relative value of what the person or class has to spare and what they want in exchange. Naturally, all goods seek such a market.

With pleasure I quote again from the Hon. Joseph Medill:

#### WHAT PROTECTION COSTS THE FARMERS.

I understate the truth when I say that the farmers of the West and the planters of the South are charged \$500,000,000 a year on their goods for the profit of protected Eastern manufacturers more than is fair or necessary, on the principle of live and let live.

But I am asked what would the manufacturers do if their protection were cut down for the purpose of cheapening goods to the farmers? There are a million of men, boys, girls, and women engaged in protected manufactures, and there are a good many thousand capitalists who furnish them employment. What would they do if protection were lowered? "Oh, go to farming," they say. No truth in that, as I have shown you. They would just

keep right along as you do. They would continue producing and selling their stuff at the best price they could get, as you do, and as they did from 1846 to 1861, when the duties were only one-quarter to one-third as high as they are now. But it is said they would be beggared; that it would make pauper labor—a ruined and discouraged people. Not a bit of it! That is another protection delusion. The present system of protection back-taxes and water-logs every other manufacturer. The whole system is mutual plunder one of another and all of each. Suppose I have a protection of 50 per cent, I levy that much extra for my goods on my neighbors. But my neighbors also have a protection of 40 to 100 per cent, and they levy back on me, and when we come to balance books at the end of the year, we find that, so far at least as the workmen are concerned, what they have gained in nominal wages they have lost in the artificial cost of living. The manufacturing capitalists, it is true, have increased their profits, but it has been done at the expense of the unprotected farmers, who can not tax back by fixing an artificial price on their products, because the market value of their crops is determined by the foreign quotations. In this protection struggle to grab one from the other, where the game is the d—l take the hindmost, the unprotected agriculturists are the ones who "get taken in" and done for by the smarter town gentry. Protection is a fraudulent and a false system. Freedom of exchange, like truth, alone leads to honest results.

In a country like ours, where money is abundant and for loan by hundreds of millions; where it goes begging for 4 or 5 per cent on good securities; where there is as much surplus wealth as in any nation in the world except England, and very nearly as much as in England; where men can not find investment for their capital, it is not necessary to our "infant industries" any longer to live on spoon victuals. They have been coddled long enough at the cost of the farmers. They are "stalwarts" now, and if they can not stand, let them sit down or go into some other business.

#### THE FARMER NOT PROTECTED.

The farmers sell their products on free-trade principles throughout the world, without protection. The tariff put down to their credit is straw, chaff—it is worthless to you; because whenever you raise a surplus of any product, and seek a foreign market for it, the price at which you sell that surplus determines the entire price you receive for the whole crop. The farmers buy goods at high protected prices and sell food at free-trade prices. Is that fair trade?

I know of nothing agricultural where the protection is of appreciable value to farmers except on wool, and most of the supposed gain on that is delusion. In the first place, not more than half a million of the 5,000,000 of farmers in the United States keep sheep on their land, and not one in ten of those make sheep raising their principal business. The woolen clothes of the 25,000,000 of agricultural population in this country costs them nearly double price by reason of the enormous duties levied on imported woolen goods of all kinds, and the chief excuse for imposing and retaining those immense duties offered by the manufacturers is the tax on wool which they are obliged to pay. If that tax were repealed, they admit that the tariff on woolen clothing might be largely reduced. Now, you see that nine-tenths of the farmers keep no sheep, and therefore derive no benefit whatever from the duties on the different grades of wool, and nine-tenths of the remainder keep so few sheep and have so little wool to sell that the extra price they receive for it only repays them a part of what they lose in the excessive cost of their clothing by reason of the high tariff on woolen goods, for it is a fact that the manufacturer adds the amount of the tariff to the price of his woolsens, and the retailer charges his profit on the tariff tax as well as on the original price of the article. Hence it is that a 50 or 60 per cent duty actually doubles the price of goods to the consumers. It takes \$20,000,000 to protect wool alone.

What would the farmer do with his surplus wheat, as one of his products, if he were limited to the home market? Last year there was more than 100,000,000 bushels of wheat produced by the farmers of the United States in excess of all demands for bread and for reseeding of the land. Let us take one of the prominent farmers of Illinois, who has 1,000 bushels of this surplus wheat in his granary. He tries but fails to sell at home to his neighbors. They tell him they have all the wheat they want; but if he has clothing or cloth to make winter clothing, they will buy that of him. The farmer finds that no one at home will purchase his wheat except the exporters. He decides to market his own wheat. He looks at the prices current, and finds that he can sell his wheat in the free-trade market of Liverpool for 16 cents per bushel more than he can in the protected market at home. Consequently he places his wheat on board the cars, that are taxed 45 per cent on the wheels, 52 per cent on the locomotive, and \$13.44 per ton upon the rails.

On this tariff-taxed road he ships his wheat to New York. It is there transferred to a foreign vessel, our merchant marine having been driven from the ocean by a protective tariff. It is shipped to Liverpool, and there thrown into a granary by the side of wheat that comes from Russia that is produced by labor at 20 cents per day, wheat from India that is produced by labor at 9 cents per day. The old Republican farmer exclaims, "Where is Billy McKinley with his protective tariff? Mr. DINGLEY has not had time to get in with his bill. I want to be protected from the pauper labor of Europe." But there is no McKinley there with his bill. Notwithstanding the cheap pauper labor of the Old World, wheat is higher in that market than it is in the protected home market. He goes on the board of trade and sells his 1,000 bushels of wheat for \$1,000. He looks into the factories and he finds he can buy clothing and woolen cloth 50 per cent cheaper in the foreign market than he can in the protected home market. He remembers what his neighbors said about their desire for clothing or cloth, so he pays out his \$1,000 for 1,000 yards of cloth. He brings the cloth to his country and comes into the custom-house, and Mr. McKinley says, "Where are you going with that cloth?" The old farmer says, "I am going to take it out to Illinois, where I live, and sell it to my neighbors; they want clothing for the coming winter." Mr. McKinley says, "I am very glad to see you, but before you can take that cloth through this custom-house to your neighbors in Illinois you must pay the tariff on it, which is 50 cents a yard." "Why, how is

that, McKinley; 50 cents a yard, that would be \$500? I have not time to go home and raise another crop of wheat to pay such a tariff tax as that. Why, McKinley, this cloth is the product of my own labor and my wife and children. I raised wheat on my own farm and I exchanged it for this cloth." "Well," says McKinley, "you can not bring that cloth into this country unless you pay the \$500 tariff; that is the penalty." "What is such a law as this for, Mr. McKinley?" "It is to protect home manufactures." "Then, am I to understand that I have to pay this \$500 to protect the home manufacture?" "Yes," says McKinley. "I see," says the farmer, "that I have to do the protecting and I do not get any of it."

"Then you say I can not get my cloth into my own country, where I live as a citizen, pay my taxes, and in time of trouble shoulder my gun for its defense. Mr. McKinley, I have read several of your speeches, and you always contended that the foreigner paid the tax. I am no foreigner. I was born in this country, and my father before me. Now, sir, if you are a truthful man, according to your own doctrines, make the foreigner pay this \$500 of tax. According to your speeches the Englishman from whom I purchased this roll of cloth should pay this \$500 tariff tax, but according to your law I have it to pay." "I can not discuss this question further with you," says McKinley; "you must pay the \$500 tariff tax or I will have to confiscate the cloth and sell it for the tax." The farmer demands his cloth, and he takes it back to England. He tells the merchant from whom he purchased the cloth that the laws of his country are so framed and enforced that he can not take it into his own country; that he can not exchange the product of his farm for what he really needs and wants and take it into his own home without paying 50 per cent tax upon it. He asks the Englishman, "Won't you take back the cloth and let me take the wheat?" "Yes, if your own country treats you as badly as you say." So he trades the farmer back the wheat for the roll of cloth. He brings his wheat back to his own country, and when he gets to the custom-house at New York Mr. McKinley steps out again and says to the old farmer, "Where are you going with that wheat?" "I am going back to Illinois, where I raised it." "Well," says McKinley, "I am glad to see you; but before you take that wheat through this custom-house you will have to pay a tax of 25 cents a bushel on it under my law." "Well, do you say that I have to pay a duty of 25 cents a bushel on my own wheat? What is that for?" McKinley says that 25 cents a bushel is to protect the farmer. "Well, McKinley, I am a farmer; I do nothing else; my whole life is devoted to that business." "Well," says McKinley, "we do not allow farmers to trade outside of our own country; we furnish them a home market and they must trade in it. They must trade in it or pay the penalty, which is an average tax of 60 per cent upon the necessities of life." But the farmer says, "I can get more for my farm products in the foreign market than I could get in the protected market at home." "That is true. We will allow you to sell in the foreign market, but you must pay all the difference either into the Treasury or the pockets of the protected manufacturer."

In the face of experience and reason there must be some extraordinary cause for the never-ending demand of this exploded doctrine. The last annual table of exports discloses the fact that the farmer is over ten times more dependent upon the foreigner for a market than he was under the low tariff of 1860. Now by far the greater portion of all our farm exports goes to England. There is no reason or popular demand for any law or decree against the natural flow of trade. It is a principle as old as barter and exchange itself that all goods would seek the highest market. According to the market reports to-day, the price of wheat is 73 cents in Chicago and \$1.45 in Liverpool, and corn is 23 cents in Chicago

and 56 in Liverpool—wheat being at the lowest 72 cents and corn 33 cents per bushel higher in the free-trade market of England than in the leading markets of protective America.

The free-trade market of England invites the American farmer to a market that is at least 30 per cent better than we can offer him at home. The protection demagogue has caused the farmers to pay millions of dollars to build up their home market, while they have to ship a greater per cent of their products every year to Europe to find a market.

It is impossible by legislation to protect the farmer of this country on their leading products, and the pretense of claiming to do so in this bill by fixing a duty of 25 cents a bushel on wheat, 15 cents a bushel on corn, 15 cents a bushel on oats, \$4 per ton on hay, \$6 to \$30 on horses, \$6 on cattle, \$1.50 on hogs, is a state of presumption by the framers of this bill that has no place in morals or economy. If we should place a tariff of \$25 a bushel on wheat and \$10 per bushel on corn and \$2 per bushel on oats and \$10 per ton on hay and 10 cents per pound on beef and pork, it would not protect or benefit the farmer one cent, because the American farmer with his intelligence, soil, and machinery can produce those articles cheaper than any people in the world, and in greater surplus quantities, and of course is an exporter instead of an importer of these articles. The author of this bill presumes that the farmer is a fool, and therefore legitimate prey for the benefit of the protected, and that he will always be the dupe of the demagogue. Gentlemen, this character of legislation that plunders the farmer and wealth producer will ultimately bring the industrial classes to Asiatic condition.

All men of ordinary intelligence concede that England and other foreign countries are a better market for farm products and a cheaper market for other necessities, while protected America, with all her special advantages, furnishes a poorer market for farm produce and the highest in the world for all other necessities of life. This is the legitimate outgrowth of the doctrine of protection; but our Republican friends maintain that this inequality must be sustained if every farmer in the country is robbed of his entire profits. The price of all the various surplus products of the farmer is fixed at the main point of distribution.

The farmer gets in the home market what the purchaser is compelled to pay by the Liverpool prices. How is the farmer to get the home market that is said to be so beneficial to him? He has to buy his home necessities at an advanced price from somebody—England, Germany, or Yankees—who would build a factory on free American soil, but whose factory would it be when built, and why should the farmer lose the comforts of the family and home in order to build up this private enterprise for others? It is claimed that it would require a large number of men who would be employed and who would consume the farmer's produce, and thus he would secure a home market. By this process you see that the farmers have simply hired some one to eat their bread. But where are the factories that were to furnish the home market? Are they by the side of the farm, where it is convenient to market his produce? No; they are among the rocks and mountains of the East, almost as difficult of access as the far-off market of Liverpool.

Mr. Chairman, living in a State that stands at the head of agricultural wealth, with a people whose enterprise, intelligence, and husbandry have no superior, yet as an humble member of that great State of 4,000,000 people, under the mildew and blight of protection and the gold standard the farmers of Illinois are now unable to sell their farm products for the cost of production. To show what this character of legislation has wrought upon them, I herewith submit the reports of the State board of agriculture of the State of Illinois for the year 1896 of some of the leading products.

WHEAT—(SPRING AND WINTER).

These figures furnish more than a sufficient reason for the complaint of the agriculturists that is so justly expressed in that State. It seems to me that a very important lesson might have been drawn from these figures by the Committee on Ways and Means in framing the pending bill. Economic laws, it seems to me, should be based on the productive capacity of the whole country, instead of the speculation in wealth after it has been created. This report shows a loss on wheat alone in the year 1896 in Illinois of \$3,545,984; a loss on corn of \$11,393,464; and a loss on oats, \$17,002,320, making a loss to the farmers of that State in a single year on three items of products of \$36,941,768.

This tremendous loss could not happen under just economic laws by this Government. Every farmer knows that if we have a just system of Federal taxation and silver restored to its place by the side of gold as primary money, this condition of the farmer could not happen. This new doctrine of Dingleyism to increase taxation without providing money to pay it will crush the farmer still lower. Taxation has now reached under the extravagance of our Republican friends a point beyond the capacity of the people to pay. The farmers of my State and district would hail with great joy a home market that would demand of them their surplus products. But they know a tariff, either high or low, can not furnish them such a market. Their surplus products are increasing every year and a broader market must be had. Take the Western farmer of to-day who has 137 bushels of surplus wheat; he hauls it to market, and gets the American price, 73 cents per bushel. Having thus converted his wheat into \$100 in money, he purchases \$100 worth of goods for his home, less the Dingley tariff as now proposed. Here is the list of goods that he buys with the product of his wheat:

	McKinley bill.	Wilson bill.	Dingley bill.	Difference.
	Per cent.	Per cent.	Per cent.	Per cent.
Hats and caps	86	25	90	65
Shawls	88	40	112	72
Ready-made clothing	84	49	87	38
Blankets	80	35	60	45
Woolen dress goods	102	49	102	53
Cloaks	82	50	80	30
Gloves	51	35	52	17
Yarns	100	39	100	61
Flannels	100	35	100	65
Carpets	60	30	50	30
	83.3	38.7	85.3	46.6
			46.6	
			38.7	

Let us see how this transaction affects this farmer. The 137 bushels of wheat paid for the \$100 worth of goods, but he has yet to settle for the Dingley tariff tax, which is \$85.30. This will take

117 bushels more wheat. Now, under the Wilson bill he could have paid the tariff with 59 bushels of wheat—just one-half. So you will see, gentlemen, that under the Wilson law he could purchase these goods with 196 bushels of wheat, but under the Dingley law, that you are now attempting to force through this House, it would require 254 bushels. The saving to the farmer under the Wilson law, at the present price of wheat, would be \$38.70.

The farmer has sold his wheat for money to pay his bill at Liverpool prices, less transportation, but he was compelled to buy at Massachusetts and Pennsylvania prices, and give this \$38.70 to build up a home market. If he buys where his surplus must sell, he would save the same amount to pay the Treasury for the privilege, and then in wording the bill "duties on same" would be substituted for protection, but as ten bills would be marked protection where one was marked duties, the farmer would soon learn where and how his money went, and would see the magnitude of the robbery.

If the farmer buys foreign goods of those who buy his surplus, the duty is simply a fine for not buying at home. Nations cannot buy unless they can sell, and our refusal to buy where we are compelled to sell has driven the customers for our farm produce away, so that they buy but a fraction of what they otherwise would. The protection policy has not only robbed the average farmer of more than \$100 annually on his necessities, and failed to benefit him in a home market, but is rapidly ruining his foreign market by forbidding him to buy where he is obliged to sell.

In the name of benefiting the farmer with a home market, and after three decades of protection and the wonderful growth of manufactures in this country, the farmer has less people in the United States to feed in proportion to his surplus products than he had in 1850 under the low tariff. After the mill owners have played upon the credulity of the farmer for more than thirty years in pretending to give him a home market and make him independent of foreigners, he is growing more and more dependent upon the foreigner as each year comes and goes.

This wall that has cut off the foreign market has reduced the price of farm products lower than they have been in thirty-five years. There is no resisting the inevitable decline and lower prices that will obtain if this McKinley law is maintained. One of the leading causes that prompted our Revolutionary fathers to separate from Great Britain and declare the war of independence was for "cutting off our trade with all parts of the world." This is the declared purpose, will, and intent of the authors of the present law. Had Mr. DINGLEY and his coworkers lived in the days of the Revolution, they would have been regarded as enemies of the country, English Tories, and treated as traitors and criminals of the Republic by a patriotic people. Whom of you gentlemen can fail to recall the solid array of gentlemen that hovered in and about the rooms of the Committee on Ways and Means in this Capitol last month, men of courtly mien and royal tread, cultured and refined? Wealth and royalty vying with each other.

The manufacturer was there with his accountant, the trust with its attorney, and the stockbroker with his retainers. These constituted the triumvirate of extortion that could be heard in the soft and gentle voice: "We must have class legislation; give us special privileges. Protection, more protection!"

These gentlemen seem to think and act as though they were the only class of people in this country that are entitled to the consideration of the Congress of the United States. I ask you, gentlemen, did you see one of the eight million farmers here in his plain clothes, with his sunburned face and his hard hands, appealing to the committee to fix the laws so that he would have an advantage over his neighbor? Did you see the blacksmith, with his strong arm and dusty face? Were the men here who dig the ditches, make the fence, build the barn, and erect the house? Were the men here who build the railroads, or the men who operate them? Where were the men who build your roads and pave your streets?

Not one of them was here. Where was the doctor, the lawyer, the merchant, the school-teacher? Not one of these men was here. Was the section boss, or any of his men? Where was the machinist, the coal miner, the teamster, or the gardener? Who of you gentlemen saw the puddler, the glass blower, or the stoker? Was the servant girl, the factory girl, or the poor seamstress from the garret crowding about that room demanding protection for their business? These persons are never seen walking through these halls and corridors and swarming around these committee rooms demanding the bounties of the consumer which have been extorted under the law of protection and paid with as much regularity and certainty to the protected gentry as the member of Congress is paid by the Sergeant-at-Arms. These millions are at home in the shop, in the mine, and in the field producing the wealth which is sought to be taken from them by the scheme of protection.

These people, however, are fast learning this whole question; that they are the men and women who pay the tariff, while the sleek and well-fed gentlemen who occupy these galleries here to-day get the tariff. Less than one person in seventy receives any part of the special benefits of protection. The gentleman from Ohio [Mr. GROSVENOR] makes the startling statement that the present low prices are the result of the success of the Democratic party in 1892. I presume there is no person so ignorant as to believe such a proposition. If we are to take the commercial history as the proof of our business, we find that the fall of prices has been steadily going down since silver was demonetized in 1873 and the protective tariff put in full force and effect.

The decline of the wages of labor, as well as the prices of farm products, under both the McKinley and Wilson bills, has been demoralizing to the laborer and the farmer. While the American farmer and laboring man have produced more wealth in the last thirty years in this country than any other country in the world, yet that wealth, by the operation of the doctrine of McKinleyism, has been transferred to the hands of the protected classes, and the farmer and laboring man are substantially as poor as they were ten years ago. The distinguished gentleman from Maine [Mr. DINGLEY] deals largely in prophecy in advocating his bill. He does not claim to be a soothsayer, but he is determined, if possible, to shift the responsibility of hard times from his party onto the shoulders of the Democratic party. He claims that the Cleveland Administration that closed on the 4th of March last emptied the Pandora's box of evils upon the country. I am frank to admit that is partly true. But Mr. DINGLEY knows, the Republican party knows, and the world knows that Mr. Cleveland, and all those whom he could intimidate and buy with public patronage, went into the Republican camp early in 1894, joined their efforts to break up the Democratic party, and with the efforts of the gentleman from Maine and the Republican party, jointly, secured the election of Mr. McKinley in 1896, in opposition to true Democracy.

The gentleman is certainly aware of the fact that every Democratic State convention repudiated Mr. Cleveland when he first betrayed the party in 1894. I want to say now to the gentlemen on that side of the House: "You have got Mr. Cleveland and his subjects; make the most use of the treasonable gang you can; we have no room inside the Democratic lines for such disorganizers, unless they repent and come into the Democratic fold and act as Democrats. The seal of condemnation was laid upon Mr. Cleveland and his policy by the voice of the Democracy of the United States in national convention at Chicago. Mr. Cleveland belongs to you by perfect title, having betrayed the party that elected him; he went voluntarily into your camp; you received him; you acknowledged and accepted his support in the election of your President, and now, in order to make the fellowship complete, Mr. McKinley has adopted his policy and methods of administration of the Government."

I want to say to you gentlemen that you can not shelter yourselves under a transparent subterfuge of your own creation of that kind. I well remember the statements made by many gen-

tlemen now on this floor in the Fifty-third Congress. They contended then that the great distress that hovered over the country like a pall of death was brought upon us by the operations of the Sherman law of 1890. They then said if Congress would repeal that act, prosperity would once more come back to the people and open up the mills and furnaces and gladden every home. Mr. Cleveland joined his efforts with yours and accomplished what you demanded; but still the mildew and blight of desolation continued. Now you have shifted your complaints, and say it is the Wilson bill that brought distress upon the country from 1890 to 1897. Some gentlemen, however, have gone so far as to attribute the last seven years of depression to the six and one-half million people who voted last fall for Mr. Bryan; that their influence was retroactive like the amendment that you now propose to this bill.

The distinguished gentleman from Ohio [Mr. GROSVENOR] says the Democratic party must be destroyed. He has made the prophecy that the idiots who voted for Mr. Bryan will read their stupid records in the red light of hell, and that will be their final doom. It has been almost two thousand years since intelligent people recognized these self-styled prophets, such as the gentleman from Ohio. In the days of Christ false prophets were taken beyond the gates of the city and stoned to death, but I am glad to know that that cruel treatment does not obtain with the good people of the Eleventh district of Ohio. If it did, this House would be denied the presence of one of the most distinguished, affable, and nonpartisan gentlemen upon this floor; and we are really glad that the death penalty in the time of the patriarchs has been transformed into a virtue and hallowed by Republican acclaim in this country. The gentleman seems to think all the ills of life and mistakes in legislation which crucify the laboring people now in this country are on account of the existence of the Democratic party. I say to the gentleman that this country, organized by Thomas Jefferson and his associates, was supported and maintained by the Democratic party sixty-seven years before the Republican party was born. It wrote the Declaration of American Independence, it made the Constitution, it wrote the first tariff-tax law, and laid the foundation of civil and religious liberty.

The Democratic party is here to stay, notwithstanding the consignment made by the gentleman from Ohio. Its existence does not depend upon class legislation and deceiving the people. It should be the object and aim of legislators to look well to those who produce the real wealth of the country. Let us review the markets for farm products and the necessities of the home, that speak in terms which silence all vapory declamation. I shall read an extract from Mr. A. J. Warner's statement on the decline of the price of farm products:

#### HOW PRICES HAVE FALLEN—THE DISASTROUS DOWNWARD MOVEMENT.

[A. J. Warner.]

Let us stop to review first the fall of prices from 1873 to 1893, and its effects upon property and the various industries.

We have not room to repeat long tables, nor is it necessary. Evidence is abundant, however, to prove that the general average of prices of staple commodities has fallen from 45 to 50 per cent since 1873. The same is true of property generally, except where special causes have operated to counteract the general downward tendency.

The effect was felt first in the prices of agricultural products and then in farm lands and farm labor. In fact, the decline fell first on unorganized industries and the products of unorganized labor. There was less resistance in these industries, and they gave way first.

Industries operating under the control or under the influence of organized labor offered stubborn resistance to a reduction in prices, and especially to a reduction in wages. And in large measure the rate of wages has been kept up in organized and protected industries, but duration of employment and total earnings, even in those industries, have materially decreased, as profits have decreased. This condition of things has led to combinations of capital in the form of trusts and combines of various kinds to uphold prices and increase profits. But in the great department of agriculture, embracing 45 per cent of the entire population, and giving support primarily to all, this has been impossible, and hence this greatest of all the industries began to suffer first, and has thus far suffered most.

A few facts will illustrate the effect of this condition on agriculture. Take first the leading staples, wheat, cotton, corn, oats, and hay. The average value of an acre's product of these crops in 1873 was \$15.65; in 1893, for the same quantity of products, \$8.15, a fall of nearly 48 per cent.

If we take wheat alone, the fall has been from \$13.16 to \$6 per acre, or over 54 per cent; and if we take cotton the fall has been greater still, or from \$28.01 to \$10.65, or a decline in the value of an acre's product, the quantity being the same as for 1873, of 62 per cent. The average acre value of the crops of 1873 was 85 per cent greater than in 1893. Nor can this be accounted for by an increase in crops, either for this country or for the world.

The estimated wheat crop of the world for 1891 was 2,432,000,000 bushels; for 1892, 2,403,000,000 bushels; for 1893, 1,904,000,000 bushels. But with a reduced supply the Liverpool price has gone down from \$1.15 in 1891 to 77.3 cents a bushel in 1893, a short crop and the lowest price for over a hundred years. The wheat crop of the United States is placed at 396,000,000 bushels for 1893, as against 516,000,000 for 1892.

The cotton crop for this country for 1892 was 6,717,000 bales; for 1893, 6,000,000 bales. At the same time the price has gone down from 8.4 cents a pound in 1892 to 6.89 cents for 1893. And altogether, if the farm products of this year could be sold at the prices prevailing in 1873, they would bring the farmers nearly \$1,500,000,000 more than at the prices prevailing this year. This would make a big difference in the debt-paying power of farmers.

This recital of the business of agriculture for the past ten years demonstrates the blight and mildew that have fallen upon the

farmer during that time. See what it has done for corn, wheat, oats, and wool since 1850:

Years.	Corn.	Wheat.	Oats.	Wool.
1851-1860	\$0.78	\$1.00	\$0.57	\$0.34
1860-1870	.88	1.42	.59	.50
1871-1880	.50	1.27	.43	.29
1881-1890	.54	.97	.39	.39
Present price	.41	.66	.36	.17

These tables that are made by the laws of trade speak the incontestable facts that necessarily contradict the political apologist who is willing to garble records and facts that political ends may be attained. These figures are old, and they have been often used, but neither age nor wear impairs their usefulness; and when the eloquent advocates for special privilege boast of what protection has done for the farmer, let them recur to these facts. While it may be true that the agricultural products bring more at the door of the Western farmer than they did a third of a century ago, yet this arises from the fact that while prices declined but 25 per cent in the leading markets during the decade in question, transportation was cheapened from 40 to 500 per cent. Hence a decline of 20 cents per bushel in price and a decline of 40 cents per bushel in transportation leaves an advance to the farmer of at least 20 cents per bushel.

While the farmer has been benefited by the improved methods of getting away from the home market, he lost sight of the fact that his produce was declining in price at the other end of the line, and while protection levied a tribute of \$7.80, \$13.44 to \$28 per ton on steel rails and from 20 to 60 per cent on other items of railroad expense, he was persuaded that he owed to protection these cheapened methods of transportation. That every man of discretion knows, notwithstanding the statements made by the gentleman from Michigan. But how could protection furnish a home market? It created no new capacity of the people to eat; it enlarged none previously created; and the well-paid labor which

was to consume the farmer's products is on a strike for enough to preserve life. Surely protection has protected, but whom?

The McKinley law and the Wilson law have reversed the God-given right, and compel the farmer to buy in the highest market and sell as best he can without protection. The farmer goes out with his \$100 that he and his family have laid by to purchase the necessary comforts of their home. He meets the German, who has the kind of goods he wants, and he proposes to buy. But Mr. McKinley reads his law to him, which says: "You can not buy from this foreigner; you must buy in the home market." "Well, but they charge me \$40 in the home market more for the same goods, and the home manufacturer will get \$40 of my money for nothing. What do you call that kind of a transaction, Mr. McKinley?" Mr. McKinley says: "That is protection." "Well, you may call it protection or what you please, but I call it a clean steal of \$40 from my family." These silent and eloquent appeals, fraught with all the pathos of human suffering and despair, find no helping hand on the Republican side of this Chamber. The manufacturer must have his blood money, he must have his heel upon the throat of labor to compel protection. What kind of empiricism guides their economic conduct and their conclusions, baffles all philosophy, patriotism, and statesmanship. History commands no respect and precedents are cast aside. The calamity statesman from Iowa, whose patronymy brought tears to the eyes of his devotees, implored this House to continue the tax of 60 per cent on the goods that the toiling millions must have in order that the manufacturer might have his exorbitant gains.

The following table gives the tariff averages from 1790 to 1890:

From—	Per cent.	From—	Per cent.
1791 to 1812	19.53	1834 to 1847	20.92
1812 to 1817	32.33	1847 to 1858	22.23
1817 to 1825	26.32	1858 to 1862	15.64
1825 to 1829	47.17	1862 to 1864	31.16
1829 to 1832	47.81	1864 to 1890	45.50
1832 to 1834	28.39	1890 to —, about	60.00
1834 to 1843	19.25		

I here insert in my remarks the entire schedules of the bill now under consideration.

## RECAPITULATION.

These figures speak a wonderful truth if we will study them in the light of history. We can see no immediate solution of this vexed question. However, they teach us one important lesson: That under the lowest tariff this Government has ever had we have always had the greatest prosperity. The lowest tariff during the century was known as the Walker tariff of 1846, which was in force from 1847 to 1862. The average rate of duties during that time was about 19 per cent, about one-fourth the rate under which the country is now suffering.

The distinguished member from Maine [Mr. DINGLEY], in his argument a few days ago, made what he supposed to be an attack upon this side of the House, because some gentleman had used percentages in showing the increase of wealth during the operation of the Walker tariff. I have no doubt but he attacked the principle from the fact that the statistics show the greatest increase of wealth this country ever experienced was during that time. From 1846 to 1861, under the tariff law that my friend denounces, the tonnage of our shipping engaged in foreign trade increased from 943,307 tons to 2,495,894 tons, an increase of almost 300 per cent, and from 1861 to 1887, under tariff laws which he commends, our shipping gradually decreased until, according to the last report, we have but 989,412 tons of shipping engaged in foreign trade, showing a loss under Republican rule of two-thirds of our foreign tonnage.

Again, in 1861 American vessels carried 70 per cent of our exports, while to-day they carry about 12 per cent in American vessels. Our exports of domestic merchandise were only \$101,907,734 in 1846. In 1860 they were \$316,242,423, an increase of more than 300 per cent. We had but 4,930 miles of railroad in 1846. In 1861 we had 31,286, an increase of more than 600 per cent. I insist that the history of no country at any time can show such unexampled percentage of progress as this.

By referring to the history of that period we find that trade, commerce, and agriculture were greatly revived as well as emancipated from the protective tariff of 1842. Large enterprises were entered into, capital was seeking investment, farmers were extending rapidly into the West and South, shipping was revived, and labor was in demand at satisfactory prices. There were no strikes, no lockouts; no person who desired employment was forced into idleness. The greatest prosperity obtained in every department of business. The decade preceding this, from 1840 to 1850, showed the increase of wealth to be 64 per cent. But the greatest gain of wealth in the history of our country was from 1850 to 1860, the gain being 126 per cent.

Take the fifteen years that the Walker free-trade tariff law was in full operation, and the increase of wealth in the United States was 103 per cent. From 1860 to 1870 the increase was 17 per cent; from 1870 to 1880 the increase of wealth was 19 per cent. From 1880 to 1890 the increase was 46 per cent. Take the last fifteen years of high protective tariff, including the three years under the McKinley bill, and we find the increase of wealth during the fifteen years under the free-trade tariff was 39 per cent greater. This historical fact attested by experience should satisfy, and I apprehend does satisfy, every man in this country who is not interested in special privileges. As further proof of the correctness of this great principle I submit the statement made by some of the great men of the age:

I submit one more quotation of the Hon. Joseph Medill, of the Chicago Tribune:

#### A TARIFF FOR REVENUE ONLY DEMANDED.

Now, I make the application that if the American tariff were cut down—I do not say totally abolished, I have never advocated that, but cut down to a fair revenue standard, down to about where it was in 1857, 1858, 1859, 1860, and 1861—to 15 or 20 per cent ad valorem, to that point which would prevent throwing what is called "slaughtered" goods on our market, the effect would be, as it was from 1846 to 1861, to cheapen the cost of living in the United States one-third at least. It would lower rent, and fuel, and groceries, and medicines, and tools, and travel, and transportation; and to that extent it would enhance the value of a man's wages in the same degree that the number of dollars paid were lessened. Our mechanics, to their own surprise, would find that under a low tariff judiciously levied, not exceeding 15 or 20 per cent, with a liberal free list of raw material of manufacture, they would prosper better than they do now on their artificial system of high protection, which goes on the principle of high profit on small sales.

#### PROSPERITY UNDER THE LOW TARIFF OF 1846.

But I ought not to fail to state that the low revenue tariff of 1846 produced more general prosperity and progress in the development of all our industry than any protective system since devised has ever done. So satisfactory was its operation that when the parties met and adopted their platforms in 1856 neither party ventured to find any objection to it, and when the further reduction below 20 per cent was made in 1857, it received the almost unanimous approval of the representatives from New England, nearly all of whom were opposed to the then Administration. On the 21st and 25th of March, 1870, Senator ALLISON, then a prominent member of the Ways and Means Committee of the House, spoke of that tariff as follows:

"The tariff of 1846, although confessedly and professedly a tariff for revenue, was, so far as regards all the great interests of the country, as perfect a tariff as any that we have ever had. If any interest was depressed under the tariff of 1846, it was the iron interest. I do not believe that this interest, as compared with other interests, had sufficient advantage under that tariff; yet when we compare the growth of the country from 1840 to 1850 with the growth of the country from 1850 to 1860—the latter decade being entirely under the tariff of 1846 or the amended and greatly reduced tariff of 1857—we find that the increase in our wealth between 1850 and 1860 was equivalent to

123 per cent, while it was only 64 per cent between 1840 and 1850, four years of which decade were under the tariff of 1842, known as a high protective tariff, but the average rate of which was about 70 per cent below the existing rate, or 27 per cent under the tariff of 1842, as against 44 per cent upon all importations under the present tariff. \* \* \* With regard to the condition of the steel industry in 1860, the steel manufacturers in 1866, memorializing Congress for increase of duties on steel, stated that—

"It was reserved for Pittsburg to bring about the first substantial and enduring success in the year 1890; and encouraged by our example numerous establishments have sprung into existence, as already indicated in this paper. This shows that under the revenue tariff of 1857, which imposed only an ad valorem duty of 12 per cent on steel, a substantial success was achieved in the steel manufacture in 1860."

#### REPUBLICAN INDORSEMENT OF FREE TRADE.

If the system of perfect liberty to industry and commerce were the prevailing system of nations, it will not be affirmed that they might not be permitted, with very few exceptions, to serve as a rule of national conduct. If one nation were in a condition to supply manufactured articles on better terms than another, that other might find an abundant indemnification in a superior capacity to furnish the produce of the soil. And a free exchange, mutually beneficial, of the commodities which each was able to supply on the best terms, might be carried on between them, supporting in full vigor the industry of each.—Alexander Hamilton, Report on Manufactures, 1791.

Far be it from me to retard the march of the world toward the free and unrestricted interchange of commodities. When the democracy obtains sway throughout the earth the nations will become friends and brothers.—Andrew Carnegie's Triumphant Democracy.

Every advance toward a free exchange of commodities is an advance in civilization; every obstruction to a free exchange is born of the same narrow, despotic spirit which planted castles upon the Rhine to plunder peaceful commerce; every obstruction to commerce is a tax upon consumption; every facility to a free exchange cheapens commodities, increases trade and production, and promotes civilization.—Hon. John Sherman, June 9, 1868.

#### THE HOPE OF A PATRIOTIC REPUBLICAN.

This is my doctrine of protection. If Congress pursues this line of policy steadily, we shall year by year approach more nearly to the basis of free trade, because we shall be more nearly able to compete with other nations on equal terms. I am for protection which leads to ultimate free trade.—James A. Garfield, April 1, 1870.

The principles laid down in the tariff of 1846 were so satisfactory to the entire trade and business of the country that a change or modification of its provisions was not discussed or made an issue by either party.

I know this House would like to have the gentleman from Ohio explain how the bringing in of \$1,000,000 worth of goods from a foreign country and exchanging them for \$1,000,000 worth of goods produced in this country can injure labor or commerce. The goods we exchange can be made cheaper in this country than anywhere else, and the goods we receive can be made cheaper than we can produce them ourselves. Hence the motive for exchange and trade.

The very thing that enhances the price of labor and broadens trade is exchanging of surplus products of man and nation with other people and other countries. If we should attempt to carry out the doctrine of the gentleman by sending our goods to other countries and demanding money alone in exchange, in a very few years we would have all the money taken from our customers in exchange for our goods. Then what would the condition of the two countries be? We would have all the money; trade would cease; our customers bankrupt, as a result of such short-sighted doctrine. The Chinese Government adopted this policy more than three thousand years ago. They did not have the sagacity of our protection friends to establish by law a wall of penal statutes and proscription. They erected a wall of stone, and upon its battlements they placed a soldiery and said to the outside world that no man or nation shall exchange or trade with our people.

Their system was effective and all trade was prohibited. And what is the result? Their civilization is a mockery, their people are regarded as lepers, and the price of their labor is the lowest of any nation of earth. This is the feast to which the people of this country are invited by the friends of protection. I can not think that the honored gentleman desires such fearful consequences, but his doctrine wherever put to the test has brought about the same result. Go to Italy, and there you will find labor degraded; the same in Russia, Spain, and Mexico. These are the model high-tariff countries the gentleman wishes us to copy after. I think it would be a much safer rule to take the experience of the world than the poisonous demands of avarice. I was very glad to hear the frank and manly confession and admission of the gentleman from New York [Mr. PAYNE], that the object and aim of protection was to enrich the manufacturers so as to enable them to pay their laborers higher wages. I was also amazed as well as pleased to hear the distinguished gentleman from Maine [Mr. DINGLEY] make a like confession and statement to this House. This, however, is no new doctrine.

It was enunciated more than one hundred years ago by the great prototype of the Republican party, Alexander Hamilton, declaring that the true doctrine of protection and purpose of government should be to make one class of people rich by special legislation, so that they might take care of the poor laboring class. Why not carry out this doctrine in a more simple and direct way, without so much circumvention? Our Republican friends insist that the law should be such that the manufacturer can compel the consumer to pay him from 30 to 300 per cent of a tariff tax so that the manufacturer can distribute that amount to his laborers.

Why not make the law so as to pay the money to the laborers and let them divide with the manufacturers? I feel certain that they would deal quite as fairly with the manufacturer as the manufacturer deals with them. I know the laborer to be quite as generous and magnanimous as the manufacturer, and would be as ready and willing to divide as the manufacturer is with them now. I will read what some of the great men who made this Republic had to say on this question:

#### UTTERANCES OF LEADING DEMOCRATS.

THOMAS JEFFERSON.

Cutting off our trade with all parts of the world.—*Declaration of Independence* (among acts of tyranny by Great Britain, alleged as justifying revolution).

I think the world would gain by setting commerce at perfect liberty.—*Letter to John Adams, 1785.*

With all these blessings what more is necessary to make us a happy and prosperous people? Still one thing more, fellow-citizens—a wise and frugal Government which shall restrain men from injuring one another, shall leave them otherwise free to regulate their own pursuits of industry and improvement, and shall not take from the mouth of labor the bread it has earned. This is the sum of good government, and this is necessary to close the circle of our felicities.—*First Inaugural, 1801.*

I shall be glad, too, if an additional tax of one-fourth of a dollar a gallon on whisky shall enable us to meet all our engagements with punctuality. Viewing that tax as an article in a system of excise, I was once glad to see it fall with the rest of the system, which I considered as prematurely and unnecessarily introduced. But the prostration of body and mind which the cheapness of this liquor is spreading through the mass of our citizens now calls the attention of the legislator on a very different principle. One of his important duties is as a guardian of those who, from causes susceptible of precise definition, can not take care of themselves. Such are infants, maniacs, gamblers, drunkards. The last, as much as the maniac, requires restrictive measures to save him from the fatal inattention under which he is destroying his health, his morals, his family, and his usefulness to society. One powerful obstacle to his ruin by his self-indulgence would be a price beyond his competence. As a sanitary measure, therefore, it becomes one of duty in the public guardians.—*Letter, May 3, 1823.*

JAMES MADISON.

I am myself the friend of a very free system of commerce, and hold it as a truth that commercial shackles are generally unjust, oppressive, and impolitic. All are benefited by exchange; and the less the exchange is cramped by government, the greater are the proportions of benefit to each. The same argument holds good between nation and nation, and between parts of the same nation.—*First Congressional Debate.*

ANDREW JACKSON.

In reducing the revenue to the wants of the Government your particular attention is invited to those articles which constitute the necessities of life. The duty on salt was laid as a war tax, and was no doubt continued to assist in providing for the payment of the war debt. There is no article the release of which from taxation would be felt so generally and so beneficially. To this may be added all kinds of fuel and provisions. Justice and benevolence unite in favor of releasing the poor of our cities from burdens which are not necessary to the support of our government and tend only to increase the wants of the destitute.—*Last Annual Message to Congress.*

SAMUEL J. TILDEN.

A protracted struggle between privilege on the one hand and freedom on the other resulted, in 1846, in the triumph of the latter in the substitution of a revenue policy calculated to relieve the burdens of labor from a system falsely denominated "protective," whose operation has been to oppress labor and take from his mouth the bread it had earned. The advance toward commercial freedom made by the tariff laws of 1846 was a great victory for liberal principles, the consequences of which are seen everywhere in the increasing prosperity of agricultural, commercial, and manufacturing industry. With her boundless resources, and the extraordinary facilities for traffic presented by her great natural and artificial channels of travel, New York wants freedom—freedom from restrictive taxation. Give her that and she can protect herself.—*His draft in address of Democratic members of New York legislature, April 12, 1848.*

#### LET "ETERNAL VIGILANCE" TAKE COUNSEL OF THE IMMORTALS.

As a citizen of the great Republic, of humanity at large, I can not avoid reflecting with pleasure on the probable influence that commerce may hereafter have on human manners and society in general. On these occasions I consider how mankind may be connected like one great family in fraternal ties. I indulge a fond idea that the period is not very remote when the benefits of a liberal and free commerce will pretty generally succeed to the devastations and horrors of war.—*George Washington, letter to Lafayette, 1786.*

It were, therefore, to be wished that commerce were as free between all the nations of the world as it is between the several counties of England; so all would, by mutual communication, obtain more enjoyment. These countries do not ruin one another by trade; neither would the nations.—*Benjamin Franklin, 1774.*

This country, or any other country that attempts to control commerce, trade, and labor by acts of legislation, antagonizes the immutable laws of nature. Popular government can not live under such a system. Whenever business has to depend upon political economics, the result of political contests, no business can be stable. Capital will be demoralized and labor thrown out of employment precisely as it is now throughout our country.

The doctrine contended for by our Republican friends that one class of our people shall be compelled by law to protect another class is inconsistent with the doctrine of equality of right and un-American. The country has recognized the fact that it was an evil day when the American Congress permitted themselves to found what they claim to be a revenue system upon the demands of parties and corporations, who were to receive the entire benefits of protection. As well found the jurisprudence of governments upon the decision of the judge who sits upon the bench, testifies, and decides in his own case.

Mr. Chairman, this tariff bill brought in here by the Committee

on Ways and Means is infamous. It stands like a highwayman in the road of the American people to prosperity. It is an enemy to legitimate industry, a menace to the ambition and hopes of enterprising people, a crime against labor and agriculture. It is a financial outlaw; it has not one redeeming quality in all of its provisions; they are all bad. It revives imperial ideas of government. It puts a premium upon profligacy and idleness. It brings the venal and vicious into control. It fastens a shoddy nobility upon the country. It forces the earnings of the wealth producer into the pockets of a class who render no consideration. It is a harlot masquerading in the robes of virtue. The sum of all covetousness, avarice, and inordinate greed. It stands without a rival in extortion, and brings reproach upon American character.

Mr. Chairman, Republicanism of to-day is the synonym of extravagance. Class legislation is its hobby. Prodigality of the people's taxes are made a plaything by them, and deceiving the people is the shibboleth of their power. They recognize no rights of the common people, and legislate their property into the hands of their friends. The table that I submit will show their wild extravagance and the disregard of those who furnish the money to pay the expenses of this Government.

No authority is recognized by the gentlemen who occupy the other side of this Chamber but the wants and demands of the protectionists. Why should not the sixty-eight millions of people who are engaged in all the other departments of business in this country be recognized? Gentlemen, as long as there is a party that seeks or attempts to legislate solely for the benefit of capital at the expense of labor and agriculture there will be work for the Democratic party. How do these gentlemen meet this question? Not in a fair, manly way. Theory is arrayed against facts, and prophecy is set up against experience. I find that all protectionists are prophets and believe in foreordination. When this question was submitted to the people in 1890 and 1892, and the issues were made so plain that the people had no difficulty in expressing an intelligent judgment, we recognized the fact that a long step had been taken toward the destruction of the heresy of protection by the people at the polls. Now is the time for their Representatives to do their duty, and if they are but true to the people the days of tariff robbery are numbered.

Mr. Chairman, I wish to define the Republican doctrine of protection according to its actual effects upon the whole people. As now manipulated under the law, it is a combination between a duty and a trust, and they must both operate together to be of value to the protected. The tariff prevents foreign competition, and the trust prevents home competition; thus designing the few in the charmed circle who fix the price of their products and compel the consumer to pay them or freeze or starve. No industry can be protected where the producers can not combine and fix the selling price. Their own competition destroys the protection.

It lays the burdens of taxation more heavily upon the farmer and the laborer now than ever before.

It has no reference to raising the necessary revenue to support the Government.

It limits the exchange of the farmer's surplus product and reduces the price.

It enhances the value of the protected article to the home consumer and limits the field of labor.

It compels every laboring man in the country to give more of his earnings for the protected goods and leaves labor on the free list.

Its advocates contend that the more money it takes from the taxpayer the richer they become.

It has created 470 trusts and corporations, whose net income is more than six hundred millions annually.

It has established a privileged class that costs the people of this country two hundred times more than the nobility of England.

#### THE IMMORALITY OF PROTECTION.

It violates every principle of honesty and integrity.

Its life is drawn from the polluted blood of avarice.

It feeds upon the credulity of a distorted public sentiment.

It holds its power on the floor of this House by demagogical and dishonest appeals to the people, and hides its cupid in a heartless conspiracy.

It is robbery under the forms of law.

It deprives the owners of their property without due compensation.

It is the only case of grand and petit larceny where the people who are robbed have no remedy under civil or criminal law.

It laughs at the criminal statutes of the States when it puts forth its felonious hand to take the earnings of the toiling millions.

It stands before the world a speculative outlaw, and in the name of beneficence to labor it plunders the widow and orphan.

As the pretended champion of the laboring man's cause it exacts tribute from the blood and muscle and brain of toiling humanity.

It closes the doors of the factories and turns men, women, and

Appropriations made by the Fifty-first, Fifty-second, Fifty-third, and Fifty-fourth Congresses, fiscal years 1891 to 1897, inclusive.

Total Fifty-first, Fifty-second, and Fifty-third Congresses .....	1,035,689,109.94		1,027,104,547.92		989,239,205.69		

a Deficiencies included as follows: 1891, on account of 1890, \$25,321,907.25; 1892, on account of 1891, \$29,335,596.34; 1893, on account of 1892, \$7,674,332; 1894, on account of 1893, \$14,149,724.83.

b This amount includes \$1,302,050.16 actual expenditures under indefinite appropriations for pay and bounty claims.

c This amount includes \$975,188.74 actual expenditures under indefinite appropriations for pay and bounty claims.

d This amount includes \$15,227,000 for refund of direct taxes in addition to the specific sum of \$500,000 appropriated for that purpose.

e This is the amount originally submitted to Congress by the Secretary of the Treasury as estimated to be necessary under permanent specific and permanent indefinite appropriations, except that to the amount thus submitted for 1891, \$101,628,453, there are added expenditures under permanent appropriations made by the Fifty-first Congress subsequent to said estimate, as follows: Salaries, diplomatic and consular service, \$27,756.79; redemption national bank notes, \$24,553,231.50; expenses of Treasury notes, \$218,362.00; coinage of silver bullion, \$210,893.14; rebate tobacco tax, \$770,982.39; and repayments to importers and for debentures and drawbacks, customs service, \$1,915,283.28; in all, \$29,695,678.70.

f This sum is exclusive of \$1,600,000 for second installment on account of purchase of Cherokee Outlet, which has been paid under "permanent annual appropriations," but is not included in the estimates thereunder for 1897. A like sum was included in the Indian appropriation act passed at the last session of the Fifty-third Congress.

g No river and harbor act was passed during the last session, but the sundry civil act of that session carried \$11,287,115 for river and harbor works under contract, while the sundry civil act of this session appropriates only \$3,284,597 for such works.

h This does not include \$1,000,000 estimated to be necessary under indefinite appropriation made in river and harbor act of the first session of the Fifty-fourth Congress to purchase property of Monongahela Navigation Company.

i This sum includes \$5,238,239.08 to pay sugar bounty under legislation enacted by the Fifty-first Congress.

j This sum includes \$1,496,673.56 for objects that are in no sense deficiencies; \$3,614,133.77 to pay judgments of the courts and audited accounts certified by the accounting officers for 1893 and prior fiscal years; in all, \$5,110,813.33.

k Estimated.

children into the street to starve and to die in order to influence and secure legislative favors.

It has consummated combinations and trusts in order to limit production and increase the price of its products.

It has debauched the public press and attempted to overawe majorities.

It contributes millions to corrupt the voter and prevent the free, independent, and unawed will of the people from being expressed.

It exerts all of its energies to prevent the execution and application of the doctrine of popular government.

Protection is a proclamation to the world that the ports of America are closed to a large portion of the world's trade, and to make this blockade effectual 57 per cent of the goods proscribed are to be confiscated in all cases of violation. The blockade has been a grand success, and true to the purpose of all blockades it has ruined the commerce of the country blockaded. The proud American ship, the finest and swiftest on earth, has gone down before this whirlpool of madness and folly. The American sailor, brave and true, has vanished. The shipbuilding industry, second only to agriculture, is annihilated, and the most valuable carrying trade on earth is turned over to the nation of all others that the protectionist hates and fears. Protection has wrenched the banner of progress from America and placed it in the hands of haughty England, and thus found her the commercial mistress of the world.

There is one peculiar feature about this protection blockade. The people are allowed to sell abroad if they will ship with foreigners and buy abroad what the favored class can not furnish them. As the blockade is in the interest of a small class of political hucksters, the people are allowed to buy of the world what these political hucksters do not keep in stock. Of course the farmer must sell his goods in free-trade England, as there is no demand for his goods at home; but he must return and buy his coat, blanket, and wife's dress from the home market. Then he may buy his tea in China, coffee in Brazil, and fertilizers in Peru; but he must not forget to return by way of Pittsburg to buy his iron. The arch enemy to our industrial progress, according to the protectionist, is free-trade England. Yet this protective policy has placed us commercially at the mercy of these fell destroyers. We are dependent upon this enemy for our industrial progress, for a market for over half our entire exports, for almost our entire trade with other countries, for ships and sailors to carry our products and ourselves abroad and to bring back the

things that the political hucksters do not keep in stock. They take our goods abroad, sell them, pay our bills with the world, and bring back our receipt. We have nothing to do but to stay at home as farmers and plow.

I submit a very interesting report furnished by the Department of Agriculture, which shows the agricultural exports and the countries to which they are taken, for the years 1895 and 1896.

The hideous monster of protection that has grown opulent and powerful upon ill-gotten gains comes stalking into this House again at this session and demands additional patrimony from the Government. Its capacious maw will never be satisfied as long as this Congress allows the selfishness of the few to control the rights of the masses of the people. No age, sex, rank, or condition is exempt from its remorseless grasp. It reaches out and demands the contribution of the agriculturist, the railroad corporations, labor, and the great mass of the people in the small trades. Go to the lonely tenant of the poor widow who is making pants at 12 cents per pair and flannel shirts at 45 cents per dozen, in some lonely garret, and there you will see how some of the money is earned to pay Andrew Carnegie 115 per cent for the iron and steel beams that go in the building above her head and 93 per cent on the glass that admits the light upon her never-ending toil. Go down into the cold, damp chambers of the coal mine, and there you will find the honest miner digging coal at 50 cents per ton to pay the stove trust 45 per cent on the stove that cooks his dinner and warms his home.

I have been waiting day after day since the debate began upon

this bill to hear some friend of the measure tell this House in what manner and by what method the adoption of this bill will relieve and aid the millions. It is repeated over and over that you want to raise more revenue by raising the taxes on the people. Doubtless you can tax more money out of the people to meet the wild extravagance of a billion-dollar Congress, but how can that raise the price of farm products and labor? I have always been curious about relieving the people by placing more burdens upon them. Should the revenue be sufficient to meet the present demands of the Government, would that raise the price of labor and farm products? There is no hypothesis by which you can answer in the affirmative. Tariff taxation can have no effect upon the price, except to make the article taxed dearer. It is exceedingly strange to me that great men who seem to be philanthropic toward their fellow men would advocate and hold out such delusions to the people. Are 70,000,000 people going to be prosperous simply because the Government is keeping out of debt? The Government is not in business like the people. It produces no wealth. It earns no money. It plants no seed. It plows no ground. It sails no merchant marine. It is simply an ideal machine. It passes the contribution box to the people when it wants money to run the Government. To ascribe the present distress of the farmer, the merchant, the mechanic, and the laboring man, and also the failure of banks, railroad corporations, and the depression in prices to the mere fact that the Government is not collecting sufficient revenue to meet the demands of current expenses, is certainly not a serious question with them. They must know that all such claims as those set up by the press, the speaker, and the writer in the last campaign and their statements now are not founded upon any fact found in political economy or the experience of any nation or individual.

Mr. Chairman, the settlement of this question of injustice is the most important that can possibly come before this Congress. The masses of the people have been and are now in the throes of expectancy. Party feeling is in abeyance, all hoping for relief. The hearts of the people are turned to this Congress, and what is the response from you? Taxes, more taxes! "They ask for bread and you give them a stone." Instead of reducing these burdens you pile them higher and higher; instead of prosperity you give depression; and now the leader of your party, the author of this bill, comes into this House and issues his orders to all of you to stand in line, and you do so, and all pipe the praises of high taxation. Gentlemen, the Republican party has for the last thirty years been writing its records of oppression upon the blistered palm of the toiling millions, making the wealth producers the subjects of protected barons.

These people now turn to us and demand that we lift from their shoulders this burden that has been weighing them down under the load of legislative monopoly. This is a great task and duty, but we must meet it in the spirit of patriotism and justice, and bring back that equality of right that must obtain if this Government continues. Democratic legislation, unlike Republican, does not mean that the protected classes and the officeholders are only beneficiaries, but a blessing to every man who earns his bread by the sweat of his face, that the clothes that go upon his back, the food he eats, and the shelter above his head may be obtained with less labor and toil, and that taxation be reduced.

The Democratic party was organized at the commencement of the Government as a necessity to protect and defend the great principles of civil and religious liberty and carry out that heaven-born doctrine, "Do unto others as you would have them do unto you"—the greatest good to the greatest number. The Democratic party made this Government and administered it from infancy up to manhood, and now, with its 7,000,000 voters, furnishes the only hope to the toiling millions and redress against unjust taxation and the tyranny of monopoly.

The principles of the Democratic party are the foundations upon which the Republic rests. Democracy is the vitalizing force of free government, embodying the only hope of the patriot and the oppressed of all nations, surviving all reverses, never the party of negation or mere resistance, a party for all the people. It is that form of political sentiment which establishes the self-government of communities and States; it is opposed to paternalism, and is the enemy of centralization of power in the hands of the few against the many.

So long as there is a constitutional form of government demanded, there will be a Democratic party. Internal dissensions or the assaults of its enemies can not destroy it, founded upon the principle of home rule, equal taxation, special privileges to none, separation of church and state, no proscription for conscience sake, equal and exact justice to all. No calamity can extinguish Democracy; no error of those temporarily intrusted with its leadership can destroy it, for it is immortal. After more than a century's trial in the great contest for civil and religious liberty and free government, it stands as the model of the world, stronger than ever before. Democracy cherishes the great principles that stand out as the beacon light of the highest civilization,

and will ever revere the name of Thomas Jefferson, whose mind grasped those great truths like an intellectual parliament and applied them to organized society.

Democracy took its stand by the Constitution at the inception of the Government, and has marched through the century as its chief defender. Democracy must cause it to be ever remembered that the doctrine of protection, as now sought to be enforced against the rights of the toiling millions, in this body must be met and crushed out or it will destroy the Republic; that no subsidy shall be given to any person; that class legislation is un-American and inconsistent with our theory of government; that they must learn that the people are capable of self-government, that it is the people's Government, not an office-holders' Government, and that the people are the fountain of all political power. McKinleyism must be treated as a crime against the laborer and the agriculturist; that the Government can not require any man to surrender any part of his earnings except for public purposes. The edicts and demands of monopoly and the protective scheme of plundering the honest toiling millions of this country must and will cease. [Applause on the Democratic side.]

### The Tariff.

### REMARKS

OF

HON. THETUS W. SIMS,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 31, 1897.

On the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. SIMS said:

Mr. SPEAKER: I had not intended to attempt anything like extended remarks on this bill. It seemed useless. The rule brought in by the Committee on Rules and adopted by the House, limiting debate on this bill to ten days, made it clear that it was not intended that exhaustive debate was to be had, for such, under the rule, was impossible. I think, in reviewing the actions of others, that we should always credit them with sincerity; that we should understand them as they intend to be understood, and accept as real the motives alleged, unless the circumstances are such as to convince a reasonable mind that such is not the case. Now, I propose to discuss the action of the majority of this House in a spirit of fairness, and do not intend to try to arouse feeling by denunciation and abuse. I appeal only to the sober thought and reason of those who may hear these remarks, and if I do not sustain my position by logic, I do not expect anyone to agree with me.

We have been called together in extraordinary session by the President in order to enact such legislation as shall provide a sufficient revenue to run the Government. It is pointed out by the President, in his message to Congress, that the receipts of the Treasury are not equal to expenditures, and he asks Congress to enact such legislation as will prevent a further deficit in receipts.

Extraordinary sessions of any legislative body are never called except for purposes of emergency legislation. The emergency must first exist. It is alleged that there is a deficit in receipts; that is, that the Government is not collecting as much money as it is paying out. This is true. But does this fact alone warrant this attempt at emergency legislation? If it was reasonably certain that the receipts of the Government, including surplus funds now in the Treasury, would not be sufficient to run the Government until the regular session of Congress could deal with the deficit, then it would be proper to call Congress together in extraordinary session. But does such a state of facts confront us? On this, the 31st day of March, 1897, there is a surplus in the Treasury in round numbers, exclusive of the gold reserve, of \$120,000,000.

The deficit in receipts for the last three years, covering a period of the worst financial depression and panic in the history of the country, has not exceeded the sum of the surplus now on hand.

So it is clear that if times do not improve, and the receipts of the Treasury do not increase, that unless extravagant and unnecessary appropriations are made, there can be no actual deficit before 1900. Then where is that emergency that should always exist to justify this extraordinary session of Congress? This surplus money now in the Treasury can not lawfully be used in any other way than in the payment of the current expenses of the Government.

Mr. Speaker, it seems to me that in preparing revenue legislation, with the conditions now confronting us, it is our duty to so shape such legislation that there will not be any increase in the revenues of the Government for the next two years. We should

give time for the use of this hoarded surplus without increasing the burdens of the people by unnecessary increase in taxation. It seems to me that if there was no other cause operating in the President's mind than the one assigned in his message, that no extra session of Congress should have been called, and that at the regular session of Congress next December it would have been the patriotic duty of the President in his message to Congress to have called our attention to the fact that there was a large surplus in the Treasury that could not be applied under the law to any other purpose than the payment of the current expenses of the Government and urging Congress not to increase the taxes on the people until this fund was exhausted. [Applause.]

I know it is urged that the surplus in the Treasury resulted from the sale of bonds, and is a borrowed surplus, on which we are now paying interest. All this is true, I grant you. But to my mind so much the stronger is the reason for using this surplus in the payment of current expenses, instead of increasing the taxes on the people. I do not care how the money got into the Treasury, just so it is in there. It is our duty to get it out before undertaking to get more in by increased taxation. Mr. DINGLEY estimates that if imports for the next fiscal year shall remain as large as they have been in the last the increase in the Government's receipts will amount under this bill to \$113,000,000. This bill is intended to take effect the 1st of May, 1897, as appears on its face, but by the amendment now under discussion it is to take effect tomorrow, the 1st of April. Then, by the operation of this bill, we must add \$113,000,000 to the \$120,000,000 surplus now in hand, less \$40,000,000 estimated deficit in receipts, and by the 1st of July, 1898, we will have a surplus in the Treasury over and above the gold reserve of \$193,000,000. It is very natural that imports for 1898-99 will exceed the imports of 1897-98. But let us suppose that there will be no addition to our imports. There will be a surplus in the Treasury at the end of the fiscal year 1900 over the gold reserve of not less than \$300,000,000. There is no way to prevent such results if this bill increases revenue as claimed by its author, except by extravagant and unwise appropriations, or to buy in our bonds, as was done by Mr. Cleveland and Mr. Harrison. It is plain to the simplest mind that this bill in its operation must lock up in the Treasury in a short while over \$400,000,000 of the circulating medium of the country, already insufficient to do the business of the country on a safe cash basis. Thus will be accomplished the natural, germane, and intended purposes of the framers of this bill. By this bill they will enable the American manufacturer to control the American market and sell his wares to our own people at an artificially enhanced price, and at the same time needlessly lock up the money of the people in the vaults of the Treasury, and enable the money changers on Wall street to corner the circulating medium or inflate it, just as it may appear most profitable to them.

Results which usually and naturally follow an act are presumed to have been intended by the party committing the act. Therefore we must conclude that the framers and supporters of this bill intend that the consumers of American manufactured goods must pay more for them than they do now under the operation of this bill, and have less money with which to pay.

Mr. Speaker, it must have been evident to the framers of this bill that full, fair, and free discussion would result in its defeat, or else they would not have insisted on rushing it through this House with a speed not usual for emergency measures even in time of war. If the reasons put forward by the President were the real causes prompting him to call this extraordinary session of Congress, the more the alleged causes are discussed the stronger and more cogent they would appear; but, on the other hand, if the alleged causes for the calling of Congress together are not the real grounds for such action, the more the measure is discussed the more will this be made to appear. This bill, as introduced, provides that it shall take effect May 1, 1897, and I have not heard a single Republican, in this Chamber or on the outside, express the slightest doubt of this measure being enacted into a law by the 1st day of July, 1897. I ask you, gentlemen on the other side, if it is possible, by any condition that can possibly arise, that there will be an actual deficit in the Treasury by July 1, 1897? Is it not further a fact that the receipts of the Treasury are daily increasing over expenditures? However much importations may be cut down by this bill, is it possible, with the surplus now on hand, that a deficit in the Treasury can arise by July 1, 1898? Then I ask you why you have brought in this retroactive amendment? Why do you seek to make this bill operative from and after to-morrow? As it is plain to the comprehension of the dullest mind that there is no urgent public necessity requiring that this bill shall take effect from to-morrow, we must look elsewhere for the true motives prompting this attempt on the part of the majority to pass an unconstitutional and void law.

It is unnecessary to argue the unconstitutionality of the proposed amendment. The amendment will be absolutely void on the plainest and most familiar grounds. But void and unconstitutional as this amendment is, it will serve the purposes in part of

the protected manufacturers who have demanded it. It will at least retard and hinder importation. The professed object of this bill is to increase revenue. Revenue can not be collected for the Government unless imports continue. The object of this retroactive amendment is to retard imports, and in this way reduce the revenues of which it is claimed the Government stands in so much and such urgent need. Thus we are confronted with the spectacle of a bill being brought in by the Republican party to increase revenue and so amended as to prevent the very object for which it is pretended that it was introduced.

The protected manufacturers and money sharks who furnished the money with which the late Republican campaign was conducted have appealed to their own whom they purchased with their money, and have demanded such legislation as will enable them to recoup their losses sustained by way of campaign contributions in the late election, and to further increase and swell their large private fortunes by enabling those manufacturers to pocket an unnatural and unholy profit on all they sell to American consumers, and to further enrich the money kings by locking up the people's money in the Treasury and making it the more easy for them to create panic or plethora as their exigencies may require.

In 1890, when receipts were exceeding expenditures and the surplus was increasing, the protected monopolists of the country were not satisfied with the then existing high protective tariff, and desiring some pretext or excuse other than the true object in view, they had a bill introduced and passed, ever since called the McKinley bill, increasing the taxes on imports. They did not call it by any name that would indicate the real character of the bill, but it was introduced and supported as a bill to reduce the revenues of the Government. They then expected to reduce receipts by increasing the rate of duty, arguing that it would decrease importations, and thus reduce the revenues of the Government. The patriotic purpose of reducing receipts, and thus preventing an unnecessary and harmful accumulation of the people's money in the Treasury, was to be brought about by increasing duties. These protectionists always give their measure such a name as will tend to popularize it at the time it is sought to be passed. The unnecessary surplus in the Treasury in 1890 was the pretended excuse for increasing taxes by the McKinley bill. Now, while we have an actual surplus in the Treasury, but a deficit in current receipts caused by the Supreme Court decision in the income-tax cases, these same protectionists, with the same old selfish motive, rush to Congress and ask us to restore the rates of taxation as they existed under the McKinley law in order to prevent a deficit, and to popularize their measure they call it a bill to increase the revenues. Introduced in 1890 to decrease Government receipts and prevent a surplus, and now reintroduced in 1897 to increase Government receipts and create a surplus!

How can any reasoning mind accept such hollow pretenses as candid and honest? The Dingley bill is but the resurrection of the old McKinley bill, introduced in 1890 as a revenue reducer, now as a revenue producer; then to prevent a surplus, now to create one. Such is the beauty, consistency, and strength of the Republican position. While the platform of the Republican party in the last campaign declared for protection in general terms, it was not the issue on which the election turned, and it was not so treated by them in the canvass. The burning, paramount, and decisive issue was the financial question. Why did not the Republican party prove the boldness they claim and assume the initiative in financial legislation? Do the Republicans believe for a moment that they carried New York, New Jersey, Connecticut, Indiana, Kentucky, and Maryland by reason of their being in favor of protection? Do they believe for a moment that they lost the States of Colorado, Kansas, Nebraska, Idaho, Utah, Wyoming, and Nevada by any feeling against protection in those States? As those States were decisive of the result in the last election, and as neither of those States was won or lost on the issue of protection, how can the result be claimed as a protection victory?

The other side of this Chamber realizes the fact that there is absolutely no hope of international bimetalism, which they, in their platforms, promised to promote. They are too wise to make any attempt in that direction and thus openly demonstrate their inability to deal with the question, and instead of immediate financial legislation along the lines of Republican promises we are to have a monetary commission, composed of nonpartisan experts, to whom all financial relief measures are to be referred. This is all that will be attempted by the present Administration in this direction. We all know what a monetary commission means. It means that the Republican party do not in good faith intend to do anything to give us that financial relief they were ever so ready to admit that we so much need, and have a monetary commission as an excuse for their failure.

Mr. Speaker, the truth is that the gold-standard members of the Republican party do not want bimetalism of any kind or character. All they want is to have the greenbacks retired by virtually converting them into interest-bearing Government bonds and the

powers of national banks increased. This is all they want, and is all they will permit. They forced the word "gold" into your platform, and they intend to force it into the statutes of this country. It will not do not to at least appear to legislate on the financial question, and a monetary commission is intended to be put off on the country as a fulfillment of Republican promises.

Some of the ablest members of the Republican party in the past have advocated the establishment of a permanent tariff commission, to be composed of experts, to whom all tariff legislation should be referred. Why is not this as good a time as we will probably ever have for such an experiment? We have a surplus in the Treasury sufficient to run the Government for three years. A bill could be passed at this extra session creating the commission. The same could be appointed immediately, and they could make their report in ample time for a bill along the lines of their report to be enacted into law by July 1, 1898. Why is not a tariff commission as good as a monetary commission? If one requires expert knowledge, so does the other. If one can be better dealt with by a nonpartisan board of experts, so can the other.

There is not a single reason that can be given in support of a monetary commission that does not apply with equal or greater force in favor of a tariff commission. Why, then, shall we not have one to go along with the proposed monetary commission? Simply for the reason that the protected interests do not want it. It would prove to be too much of a roundabout way for the protectionist to get his hands still deeper down into the pockets of the people. But a commission is good enough for the millions who are kept idle and suffering on account of an insufficient supply of money with which to do the business of the country.

I do not favor a tariff commission, but think if the money question is to be dealt with in this way, that, to be consistent, the tariff question ought to take the same course. It certainly is reasonable to assume that if the representatives of the people are competent to frame a tariff bill in ten days, without the aid or assistance of a tariff commission, they are competent to take up the financial question without a commission, and at least make a reasonable effort to give the country some financial relief, even if it is along Republican lines.

I have no doubt that if those interested in maintaining the present gold standard of value, who so kindly furnished both votes and money to elect the present Administration, had made a demand that certain financial legislation should be enacted speedily, there would have been sufficient reasons suggested to support the President in urging Congress to act promptly in giving the country the character of legislation demanded. But these gentlemen are willing to let things remain in statu quo. They had "rather endure the evils they have than fly to those they know not of." They are afraid for even a passive attempt at financial legislation to be made.

The rule adopted for the consideration of this bill permits committee amendments to be made anywhere, whether the particular schedule or paragraph has been reached or not, while no one not a member of the majority of the committee is permitted to offer amendments except to the paragraph when it is regularly reached and read.

It was well known that the sugar schedule, the woolen-goods schedule, and all schedules covering things controlled by trusts would not be reached before the hour set for a vote on the passage of the bill. An amendment has been offered making any article free of duty when it shall be made to appear to the Secretary of the Treasury that such article is controlled by a trust in this country, and a point of order was made and sustained by the Chair on the ground that we had not reached the free list in the reading of the bill by paragraphs. We then offered to make almost any kind of an agreement as to passing over the other schedules if they would permit us to offer just one amendment to the sugar schedule, so as to eliminate that part of the schedule favorable to the sugar trust, and this request was refused. It has been made plain beyond dispute that powerful special interests, who are to make millions of dollars by its passage, are behind this bill and urging it through without any material amendment or time to show up the real objects of the bill. It is to be hoped that the Senate, not being fettered by ironbound rules, will give this bill that thorough and full consideration that it demands, and that it will be so amended that its authors, the trusts and special interests, will not recognize it when it comes back here. The representatives of the people on this floor who are opposed to this most iniquitous measure are absolutely powerless. But we believe the day of reckoning will come. We believe that if this bill becomes a law substantially as it will pass this House, there will hardly be enough Republicans left in this House after the next election to demand the yeas and nays. The people have felt the benefit of lower prices of manufactured goods, and they are not going to submit tamely to any legislation that will largely increase the price of all they consume, with no corresponding increase in the purchasing power of the products of labor. [Applause.]

## The Tariff.

## SPEECH

OF

HON. W. D. VINCENT,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 30, 1897,

On the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. VINCENT said:

Mr. CHAIRMAN: Since this bill has been under consideration I have been highly entertained and instructed. If there is anything that is calculated to excite and instruct the human mind, it is a discussion of the tariff question. It is easy to account for this, because it is a new issue, up to date in every particular, and warranted never to wear out, rip, ravel, or run down at the heel.

Some one has said that when Gabriel blows his horn there will be three men who will not hear it. They will be standing on the post-office steps discussing the tariff question. One will be advocating high protection, another a tariff for revenue only, while the third will be clamoring for free trade.

It is quite probable that when that awful day comes there will be three men in this Chamber (I hope the number will not be greater) who will be pawing the air in a desperate attempt to settle the dispute as to whether the foreigner pays the tax.

Mr. Chairman, I do not pretend to say that there is no importance connected with tariff legislation, but as compared with other questions that are pressing for settlement, it sinks into insignificance. These never-ending discussions by the Congress of the United States have cost the people more money than they have ever received or ever will receive as a result of tariff legislation.

Soon after the adoption of the Federal Constitution Congress commenced to discuss this subject, and it has wasted a large portion of its time ever since in a wordy and futile warfare over the same issue. The same old speeches have been made and will continue to be made so long as the people are foolish enough to permit the politicians to divert their attention from the causes that are oppressing them. The same old statistics have been arrayed year in and year out; the same old platitudes presented and the same old programme carried out, with only slight deviation in details. It is a chronic issue—a sham battle, which would be amusing if it were not for the distress and suffering that prevails all over this country. And speaking of distress reminds me that our friends on the other side of this Chamber—the Republicans—are the most scientific and vociferous calamity howlers I have ever heard. From the very beginning of this discussion there has been one continuous tale of woe regarding the evil effects of the Wilson bill. A great deal has been said in the West about "calamity-howling Populists," but you gentlemen can give us Kansas Populists pointers in the art of calamity howling. Oh, no; I have no objections to being called a calamity howler. A man who will not howl when he is hurt deserves to be hurt. The industrial classes have been oppressed, and I thank God that some of them have sense enough to howl. You have been making the calamity, and now it seems we are all doing the howling.

Mr. Chairman, there has been no exaggeration of existing evils. Every man who has spoken upon this floor has admitted the deplorable condition of business and the paralysis of trade.

The Republicans have united in one common chorus about closed mills and factories, idle men and women, soup houses and starvation. But you have not overdrawn the picture. You have only described conditions which are known to exist all over this fair land. But I want to remind you that four years ago you sang this same song; but you did not attribute the distress to the Wilson "free-trade" law then, for there was no such law. We were living under the McKinley law. You said then that it was the buying and coining of silver that was causing the trouble. Oh, you can not deny it, for the RECORD is full of it, and the very gentlemen who are to-day leading the fight for higher taxes upon the people for the benefit of trusts were then clamoring for the gold standard and "honest" money. "Deliver us from the dangers of a depreciated currency," you said, "and prosperity will come again." You repealed the purchasing clause of the Sherman Act and brought us to a gold basis. Did prosperity come with it? Not by any means. Conditions continued to grow worse instead of better, and then you said it was a "lack of confidence." And I want to say to you that, unless I mistake the temper and intelligence of the American voters, a large number of you who are responsible for this Dingley bill, if it ever becomes a law, will find

the worst case of lost confidence among your constituents that you ever had to contend with. One of the distinguished members of the Ways and Means Committee campaigned in my State last year. He was distressingly "long" on confidence at that time. He told us that within twenty minutes after it was known that Mr. McKinley was elected farm products would double in price, and prosperity would be at hand. Now we are told that it is going to take time, and that we must not expect too much the first week or two.

Yes, it is true, as you say, that the people voted for Mr. McKinley, the high priest of high tariff. At least their votes were recorded for him, and I believe they should have what they vote for. They have had a gold-standard "object lesson," now let them have a high-tariff "object lesson." I hope the pending measure will pass, though I will not insult my constituents by voting for it. I have the honor to represent a constituency that has outgrown this horse-play of quarreling over a nickel while the dollar is being filched from them, and I am proud of it. When this bill reaches the Senate, I hope no Populist will attempt to obstruct its passage. Let the Republicans pass it; I am perfectly willing they shall have all the glory they can get out of it. This is their remedy for hard times. Not long ago it was "honest" money, now it is high tariff. When you get this law your remedies will have been exhausted. You offer nothing else, and if it fails, as fail it must, you will be held responsible by a long-suffering people. You will not be able to shift the responsibility upon some other party. Of course you will manufacture some sort of an excuse. But you have the President; you have the Congress; you have the Supreme Court; you have what you call "restored confidence," and when you get your tariff law you will no longer be able to make intelligent people believe that you are not responsible for the appalling conditions you have dwelt upon so eloquently in this debate.

I have no faith in your remedies. One of them is proving to be a failure every day, and you admit it when you talk about the closed mills, idle workmen, and soup houses. The other will prove to be equally futile. Your gold basis has given us what you call an "honest" dollar; that is to say, a dollar that will buy more than it ever would before, and its purchasing power is increasing from day to day. In other words, the price of nearly everything is going down, except those products that are controlled by trusts and combines. Your proposition is to increase the taxes, while you make the dollar with which taxes must be paid harder to get. I do not know how it is in those districts represented by the champions of this measure, but in my district you would find it uphill work trying to convince voters that it is easier to pay \$25 of taxes with 10-cent corn than it is to pay \$30 of taxes with 15-cent corn. They are not sufficiently educated in this back-action, Grover Sherman-John Cleveland political economy to accept such a proposition. But when the distinguished gentleman from Massachusetts [Mr. WALKER] finishes his self-imposed task of sawing into the heads of the Democratic members on this floor and injecting economic "truths," perhaps he will be kind enough to extend his labors to the Western farmers. Until he does that, they are not likely to again fall in with this beautiful doctrine which leads to higher taxes and lower prices.

The gentleman from Pennsylvania [Mr. BRUMM] reminds us that as advocates of free silver and currency reform we are demanding higher prices, and as protection results in higher prices we ought to be in favor of this measure. Protection, Mr. Chairman, makes higher prices for the things protected, but those things produced by the great majority of the people are not protected by this bill, and never can be protected by tariff legislation. If it were possible to protect everybody and the products of everybody's labor alike, there could be no objection to it, except that the making and the execution of such a law would be a waste of time. My friend from Mississippi [Mr. WILLIAMS] expressed this idea better than I can when he said:

The moment a tariff ceases to be class legislation and becomes universal in its attempt to confer benefits, then it ceases to be of any benefit to any class. Then it amounts merely to a system of taxing one dollar from John and Peter in order that Paul may be profited thereby, while you tax Paul and Peter in order that John may be profited, and tax Paul and John that Peter may profit thereby.

The result is that each man comes out just as he started in. They have simply wasted their time "swapping" dollars. It would be unjust to stop when you have taxed John and Paul for the benefit of Peter; but that is precisely what you are doing when you impose a tariff tax. You are taxing the many for the benefit of the few. You are not taxing all for the benefit of all. It does raise the price of what we must buy, but it does not increase the price of what we have to sell. We do not believe that high prices should be confined exclusively to the other fellow's products, especially when you compel us to buy of him. You give him a monopoly of our trade by shutting out foreign competition. We do not want high prices for the sole privilege of being permitted to pay more for what we buy. We have that privilege now. What we want is higher prices for all the products of labor, and

the only way to get this is to increase the volume of money, which is the pricemaker.

Mr. Chairman, the title of this bill ought to be amended so as to read: "A bill to compel nine-tenths of the people of the United States to buy in the highest market and sell in the lowest." Such a title would be no exaggeration whatever. The Western farmer must compete with all the world when he sells the product of his toil. The day laborer must compete with the pauper labor of all nations, because there is no tariff on men. But when these same men go out to buy, your tariff law confines them to the home market. They must deal with the protected manufacturer or not at all. It is true in this bill you have placed a tariff upon wheat and corn and a number of other agricultural products, but you know this is only done for campaign purposes. The farmer who can be caught with such chaff has not sense enough to haul his grain to the nearest market. The absurdity of pretending to help the farmer by placing a tariff upon those products which we export every year, and never import, except for seed, is too ridiculous for a moment's serious consideration. It is an insult to every intelligent farmer in this country. Senator Plumb used to be considered very good authority in the American Congress. His Republicanism was never called in question. He was not a free trader. This is what he said on the floor of the Senate during a session of the Forty-seventh Congress:

Mr. President, I am willing, so far as I am concerned, as representing an agricultural people, to say that if there shall be a general reduction of 20 per cent all around, or an equivalent reduction upon manufactured articles, the agriculturists of Kansas at least will be perfectly willing to forego the 20 per cent protection upon their wheat. In fact, their protection amounts to nothing. The wheat of Kansas goes abroad in competition with the wheat of Russia and with the wheat of India, competing in the great wheat market of the world, Liverpool, and finding there no protection and no advantage growing out of the assumed protection which is given to it by the tariff laws of the United States.

Practically speaking, the tariff is put upon wheat, upon corn, and upon various other agricultural products as a disguise, simply to make the agricultural people of the United States believe that the tariff by its terms protects them while protecting the manufacturing interests of the country. Such is not the case.

We have got to consider all the people of the United States when we consider this question of the tariff. We ought to consider the men who raise the grain. We do not do it except in an indirect way. The tariff upon wheat and upon various agricultural products is not protection. No farmer ever asked for it; no farmer ever received one single dime on account of it.

Now, Mr. Chairman, the Committee on Ways and Means have placed a duty upon potatoes. I suppose this was done to protect the coal miners, for it was not very long ago, according to newspaper reports, that the farmers in some parts of New York were drying potatoes and burning them for fuel; and I want to remind you right here that at that very time thousands of people in every large city in the East were starving for something to eat. Perhaps this "protection" of 25 cents a bushel will keep out foreign potatoes, if there should happen to be a shortage in the crop, so that the farmers of New York will be compelled to buy American coal instead of burning imported potatoes.

But if there is anything that is calculated to cause the farmers of the West to grow proud and haughty, it is this tax of \$1.50 upon straw. If that does not revive the drooping industries and put the idle men to work, I do not know what will. And just think of the immense tax this will impose upon the foreigner! Why not make it \$2 a ton while we are about it, and give the foreigner lessons in scientific taxation? While we are taxing him, let us get enough to go round. I fancy I can see the farmers of my district now clothed in smiles and toothpick shoes and clawhammer coats in anticipation of the blessings that will surround them when they are no longer afflicted with the dangers of competition with imported straw. There is no doubt that the agricultural classes will wear diamonds when they get a duty on straw.

Mr. Chairman, there have been some important facts brought out by gentlemen on both sides since this bill has been under discussion. The Democrats have told us that the country was going to ruin under the operation of the McKinley law. The Republicans have told us that starvation and want have stalked abroad in the land since the Wilson bill was enacted. They have both told the truth. On this side it is predicted that if this bill is passed, the nation will continue on the downward road to perdition, while you gentlemen on that side unite in proclaiming that conditions will grow worse if it is not done. You are both right. Unless you do something contrary to what you have been doing for the past twenty years or more, the people will never get relief. You have been quarreling over this question from the foundation of the Government down to the present hour, and the final solution appears to be as far in the future as it was in the beginning. You have wasted enough wind already in this debate to run a Kansas windmill forty days and forty nights, but paraphrasing the good old song—

You've no less days to sing God's praise  
Than when you first began.

Up to the beginning of the last campaign, when the Democrats had the courage and patriotism to nominate that grand young

American statesman, William J. Bryan, and place him upon a platform of Jeffersonian principles, the two old parties have been fighting over a bone without any meat on it. One wanted the tariff just a little lower than the other desired to have it, if they could find out what that was, which they generally could not; and the other party wanted it a little higher than the opposition, and just how high that was was always a matter of conjecture. I have sometimes thought that when it came to injecting false issues into a campaign, each one of these political parties was a little worse than the other.

Now, I submit, Mr. Chairman, that it is neither high tariff nor low tariff that has brought upon the country the starvation, bankruptcy, and commercial ruin we have heard so much about during the past few days. Why, sir, it is a surprise to me how men can have the assurance to stand upon this floor and say that all these troubles came upon us since the enactment of the Wilson bill. Is it possible that your memories are so short? Do you not know that while such talk as that may be believed by the more ignorant of those who read the CONGRESSIONAL RECORD, it will tend to disgust and drive away the honest, well-informed men of your party?

The gentleman from Illinois [Mr. HOPKINS] dwelt most eloquently upon the wonderful prosperity that prevailed under the Harrison Administration. Among other things, he said:

It is the industrial policy of the Republican party that has wrought such splendid results as I have here but faintly described. It was the overthrow of that policy in the great Presidential election of 1892 that brought distress and want upon labor and an almost perfect paralysis of all our great manufacturing and business interests.

He further says, referring to the McKinley bill:

It was under this law, Mr. Chairman, and a Republican Administration that our industrial and commercial prosperity reached high-water mark.

Almost every member upon that side of the Chamber who has attempted to discuss this bill has given expression to similar statements, one gentleman going so far as to say that the people "never knew they were in distress until the election of 1892 made the repeal of the McKinley law a certainty."

It will strike the average citizen as something most remarkable that this "golden period of our national existence" was all at once knocked into a cocked hat, to use a homely expression, because the American people decided that they would employ a Chief Executive and a Congress that was not labeled "Republican." How strange that millions of farmers, mechanics, and other laborers who had been prospering and accumulating wealth so rapidly for twenty years under the benign influence and paternal care of this glorious policy of Republican protection should suddenly wake up to find themselves paupers and tramps. Strange that they should go to bed with plenty of money, surrounded with all the comforts and luxuries of life, and get up the next morning only to find that they must depend upon charity and soup houses for subsistence; and all because of the success of a political party that a majority of the voters had expressed confidence in. It has been said that a falsehood could be repeated so often that in time the author himself would think it was the truth. Having had no experience, I am unable to say whether this is correct or not, but I have wondered if it were possible that the mythical story about the halcyon days of McKinleyism, when all the workingmen in this country rolled in luxury and feasted upon milk and honey, had been repeated so often and so eloquently in the late campaign by the gentlemen on the other side that they had persuaded themselves to give it the stamp of unadulterated, simon-pure, gospel veracity.

Upon no other theory am I able to account for the rash manner in which they wantonly defy one or more of the Ten Commandments. Have you forgotten the 8,116 strikes and 546 lockouts of 1891? These took place during Mr. Harrison's Administration, while the McKinley law was in operation and long before it was even known that Grover Cleveland would again be the Democratic nominee. Have you so soon forgotten the "protected" American laborers who were cruelly shot down by the Pinkerton hirelings at Homestead in 1892, under the McKinley tariff and a Republican Administration? This occurred almost six months before the Democratic victory in November of that year, and about ten months before the Democratic party took the reins of Government. Have you forgotten that troops were called out in nine States and Territories to shoot down workingmen during that same year? Have you forgotten that in different sections of the country—east, west, north, and south—there was practically a state of civil war? But the gentleman from Pennsylvania [Mr. BUTLER] wants to know if there are not always more strikes in good times than in hard times. His question carries with it its own answer.

Other men upon this floor have tried to explain away the labor troubles and bloodshedding under the reign of Republicanism.

It is not true that men strike against high wages and prosperous

conditions. Such an insinuation is an insult not only to the members of this House, but to the intelligence of every laboring man and every labor organization in America. The men at Homestead were not striking for higher wages; they were striking against a reduction in wages. I want to call your attention to another fact in connection with strikes. You tried to make us believe then, as you are trying to make us believe now, that good times prevailed everywhere, and that every man who wanted work could get it at good wages. Is it not a fact that during the progress of every great strike you complained, and the employers complained, perhaps justly, that those who had quit work refused to permit other men to take their places? This fact was always made prominent by the great daily papers of the country to prejudice public sentiment against the strikers. You said the men had a right to quit work—though the courts have since attempted to deny them this right—but they had no right, you said, to refuse to let other men work. You said there were three or four men ready and anxious to take the place of each striker, but were forcibly restrained from doing so. Every well-informed person in the nation knows that this was what you said.

Now, what I would like to know is this: If everybody had employment at good wages, what were these three or four men doing when the strikers quit work? Is not the very fact that they were ready to take the strikers' places at the risk of their own lives sufficient evidence that they were out of employment and desperately anxious to earn a living for themselves and those depending upon them? These are simple facts of history, and not very ancient history either.

It is well known that the failure of almost every strike has been due to the army of unemployed men which has been increasing from year to year for the past generation. The very conditions which cause the strikes are taken advantage of and used as a means for their defeat. Is it possible, Mr. Chairman, that it is a knowledge of this fact which has prompted so many "friends of American labor" to persistently agitate the tariff question and with equal stubbornness continually refuse to enact laws that will change the conditions? I must confess that the circumstantial evidence leads to such a conclusion.

Now, I wish to call attention briefly to a few other important facts of history in connection with the good old Republican days of protection and prosperity—how William McKinley, who is not unknown to fame, made a report to this House in 1890, with the introduction of his famous tariff bill, in which he said:

That there is widespread depression in this country can not be doubted.

And again, in the same report, he said:

One of the chief complaints now prevalent among the farmers is that they can get no price at all commensurate to the labor and capital invested in their production.

Remember that this was in 1890, after thirty years of protection and under a tariff law made by the Republicans. Mr. Harrison was President, and a Presidential election was two years off in either direction. It was Mr. McKinley, not a free-trade Democrat, who said there was widespread depression. Did he tell the truth, or was he ignorant of the conditions? Either there was widespread depression or Mr. McKinley was guilty of uttering a falsehood. I leave it to the gentlemen over there to settle it between themselves and the President. Under the rules, I suppose it might be referred to the Committee on Ways and Means.

In 1889 Mr. Fassett, the Republican labor commissioner of Ohio under Governor Foraker, in his annual report says:

The number of willing workers out of employment is fully equal to 15 per cent of the whole number of laborers.

The fact that thousands of pairs of pants are being made daily at the rate of 16 cents per pair, and overalls at 4 and 5 cents, has become too well known to admit of doubt or denial.

About the same time Mr. Carroll D. Wright, Commissioner of the United States Bureau of Labor Statistics, said fully one and one-half million wage earners were out of employment in the United States. These quotations are from official reports made by Republicans and published while that party had the President and a majority in both Houses of Congress.

Now, Mr. Chairman, I desire to call attention to a little more Republican authority. If I fail to prove that the advocates of high taxes on this floor have very short memories, I shall certainly succeed in establishing the fact that some of their leaders whom they have elevated to the highest places are the most superlative prevaricators this side of the home precinct of Ananias. I want to read to you what Senator Ingalls said on the Senate floor January 14, 1891. I know you have heard this many times, but it will do you good to hear it again. There was no better authority in the Republican party at the time he made this speech, and he is one of the most brilliant statesmen you ever had. Your party gave him the stamp of approval by keeping him in the Senate six-

teen years, during part of which time he was the President of the Senate and virtually Vice-President of the United States. Here is what your great leader had to say about the "golden period of our nation's prosperity" under the McKinley law:

Four hundred persons possess \$10,000,000 each, 1,000 possess \$5,000,000 each, 2,000 possess \$2,000,000 each, 6,000 people \$1,000,000 each, making a total of 21,000 people who possess \$96,250,000,000.

Mr. President, it is the most appalling statement that ever fell upon mortal ears.

The entire industry of this country is passing under the control of organized and confederated capital. More than fifty of the necessities of life today, without which the cabin of the farmer and the miner can not be lighted or his children fed or clothed, have passed absolutely under the control of syndicates and trusts and corporations composed of speculators, and by means of these combinations and confederations competition is destroyed, small dealings are rendered impossible, competence can no longer be acquired; for it is superfluous and unnecessary to say that if under a system where the accumulations distributed per capita would be less than \$1,000, 31,000 persons obtained possession of more than half of the accumulated wealth of the country, it is impossible that others should have a competence or an independence. So it happens, Mr. President, that our society is becoming rapidly stratified, almost hopelessly stratified, into a condition of superfluously rich and helplessly poor. We are accustomed to speak of this as the land of the free and the home of the brave. It will soon be the home of the rich and the land of the slave.

Lockouts and strikes and labor difficulties have become practically the normal condition of our system, and it is estimated that during the year that is just closed, in consequence of these disorders, in consequence of this hostility and this warfare, the actual loss in labor, in wages, in the destruction of perishable commodities by the interruption of railroad traffic, has not been less than \$300,000,000.

A financial system under which more than one-half of the enormous wealth of the country, derived from the bounty of nature and the labor of all, is owned by a little more than 30,000 people, while 1,000,000 American citizens, able and willing to toil, are homeless tramps, starving for bread, requires adjustment. A social system which offers to tender, virtuous, and independent women the alternative between prostitution and suicide as an escape from beggary is organized crime, for which some day unrelenting justice will demand atonement and explanation. Mr. President, the man who loves his country and who studies her history will search in vain for any national cause for this appalling condition. The earth has not forgotten to yield her increase. There has been no general failure of harvests. We have had benignant skies and the early and late rain. Neither famine nor pestilence has decimated our population nor wasted its energies. Immigration is flowing in from every land, and we are in the lusty prime of national youth and strength, with unexampled resources and every stimulus to their development; but, sir, the great body of the American people are engaged to-day in studying these problems that I have suggested in this morning hour. They are disheartened with misfortune.

Mr. Chairman, the great speech from which I make these quotations was delivered during President Harrison's Administration, when you had a majority in both Houses, and three years before the enactment of the Wilson bill. Was it Democratic free trade that caused the great body of the American people to be disheartened with misfortune? Was that the reason why 1,000,000 American citizens, able and willing to toil, were homeless tramps, starving for bread? Why, sir, I could go on and read for the next five hours from the very best Republican sources in proof of the appalling conditions that prevailed in this country under the McKinley tariff law, but it is not necessary. Enough has been said to show that our misfortunes did not come upon us in one year nor as the result of one election.

The beginning dates back a generation. The discontent among the people was so great that they repudiated the Republican party in 1884 and elected Grover Cleveland in spite of the prejudices then existing against the Democratic party. Did the voters make this change because they were so prosperous? Not by any means. But the change brought but little, if any, improvement. Times continued to grow worse. At the end of four years the voters were still dissatisfied, and they elected Mr. Harrison. They wanted another "change," and they got it—a change of postmasters; but otherwise there was little difference. The result was more strikes, more failures, more starvation—in other words, more calamity. One term of McKinleyism made them so desperate they were anxious to try four more years of Grover, and they elected Mr. Cleveland the second time. They remembered that they were more prosperous, or perhaps a better way to put it would be to say they were not quite so near the door of starvation under Cleveland's first Administration as they had been under President Harrison.

What was the result? Same old story. The patient continued to grow worse. He had the same disease, and he was still taking the same old medicine. He had changed doctors, but the prescription was just the same, except that the size of the doses was increased and they were administered more frequently. Last year the voters were reckless enough to do almost anything, as the result of the election proved, and they went back for the third time to the Republican party. They have been jumping from the frying pan into the fire and from the fire back into the frying pan for the past twelve years, trying to get relief. It is true they got what they voted for, but not what they thought they were voting for. Now, let them have four more years of high taxes and gold standard, if they want it. It is to be regretted, Mr. Chairman, that

the men who do not want it and did not vote for it must endure the evil results with those who are responsible.

I submit that these changes back and forth from one party to the other every four years show that the people were dissatisfied, and the very fact that they were dissatisfied is evidence that they were not prospering. Men will not vote against prosperity any more than they will strike against it, if they know what they are doing.

It was in 1890 that the People's Party became a factor in politics, not alone in one or two States, but in every State in the Union where the atmosphere is conducive to political independence, and where manhood and not money is the test of genuine Americanism and true citizenship. Then it was that the Farmers' Alliance sprang into existence. The People's Party was an organized protest against hard times. Its members broke away from the political associations of a lifetime because they found themselves growing poorer under the rule of the two old parties. In spite of their industry and economy, they saw their property reduced in value and going from them, while at the same time the number of millionaires was increasing. You called them "cranks" because they said the Government was making a few men rich and others poor by law. You said law had nothing to do with it, but I notice when you are discussing the tariff question law has everything to do with it.

You admitted the new party came into existence as a result of the people's misfortunes. You tried to make us believe the hard times were the result of natural causes, and said the agitation would cease in a short time, because the distress would not continue long. You said our party would die with the return of prosperity, for it could only be kept alive upon calamity. The country has been in a chronic state of calamity and panic ever since, and the People's Party still lives. We have more Representatives upon this floor than any third party has had before for thirty-five years. We have twice as many members in each House as we have ever had before. But the party would have died if prosperity had returned. Its mission was to bring prosperity, and if some other party had brought it there would have been nothing for it to live for. But good times did not come under the McKinley law; they did not come under the Wilson law, and they will not come under the Dingley law. There is cause for the distress and prevailing hardships, and they will continue until the cause is removed.

You can not remove it by making the tariff a little higher or a little lower. Direct taxation is the only just means of raising revenue, and if it is not constitutional, the Constitution should be amended. The people made the Constitution, and they can make a new one if they will.

But the most remarkable thing in connection with this discussion is the absence of any attempt on the part of the gentlemen who have control of legislation in this House to reduce the expenses of Government to correspond with existing conditions. You talk long and eloquently about the deficit. Increase of taxation is the only remedy you offer. We never hear anything about bringing the expenditures down to the receipts, but the continual cry is for bringing the receipts up to the expenditures. Why, Mr. Chairman, the members of this House had scarcely got warm in their seats when they appropriated about \$73,000,000 for different purposes. I doubt whether there were twenty men on this floor who had read the bills when they were voted upon, and there are probably not fifty members who know definitely at this time how, where, and for what purposes the money is to be paid out. There was no time given for investigation and less than three hours for debate. We did not hear much said about the dangers of a deficit in the Treasury while this was being done. When the farmer or the merchant complains of his inability to keep out of debt, you tell him to economize. "Cut down expenses; live within your income," is the advice you give him. I find there is a lamentable lack of "parity" between a Republican candidate's precept on the stump and his example in Congress.

Now, Mr. Chairman, as I said before, I want this bill to pass, but I am not going to be guilty of voting for such a measure. I want the Republicans to pass it. I want to see the Republican party break its neck, figuratively speaking, and I think the success of this measure will bring about the happy result. I want the people to have what they voted for. They need a little more experience. I agree with Mr. Cleveland and other distinguished Republicans in the efficacy of object lessons. One ounce of object lesson is worth fourteen pounds of logic with some people. If we must have the infliction, the sooner it comes the sooner we will recover from its evil effects. Four more years of the gold standard and low prices, with increased taxation as the only remedy, will dispel the charm that hovers about the word "protection," and the intelligent American voters will be ready to assert their political manhood and unite with a party that has dropped dead issues and worn-out hobbies—a party that believes in legislating for all the people alike, and not for the trusts at home and the money lords of this and other countries.

## The Tariff.

### SPEECH

OF

HON. JOHN M. ALLEN,

OF MISSISSIPPI.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 31, 1897.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States—

Mr. ALLEN said:

Mr. CHAIRMAN: Up to this time I have refrained from participation in this debate. The people of the United States all know my position on the subject of tariff taxation [laughter and applause], and I preferred to allow members of less prominence [laughter] to air their views rather than take the time of the committee myself. But the country does not seem to be satisfied with the character of the debate we have had [laughter], and I feel impelled to yield to the public demand and come from my modest retirement to the front in this discussion. [Laughter.]

Mr. Chairman, I was truly anxious for the reading of the bill to progress until we could have reached some of the schedules to which I wished to offer amendments I had prepared. I wanted to see members of the committee put to the test in voting on them. I have amendments to put cotton ties and cotton bagging on the free list and to strike out the differential duty on refined sugar, and I had the promise of recognition from the Chairman to offer them when those schedules should be reached. But it is now evident that none of them will be reached at all before we are required to vote; and it looks very much as if the majority of the Committee on Ways and Means never intended they should be reached, or that we should have any opportunity to amend or vote on them.

What did the Republicans on that committee do? They took about three months to prepare their bill, then brought it into the House; had a rule passed forcing the House to vote on it in ten days; gave about four and a half days of that time for the reading of the bill by sections for amendment; took up more than half of the time, under the privilege they had under the rule, in amending the bill themselves; and thus it is that with a bill covering 163 pages, with only 23 pages read for amendment, we must vote in an hour or two, with 140 pages of this important measure not reached, all our requests and appeals for an extension of time and for unanimous consent to turn to schedules we desired to amend having been refused by the Republican majority!

Mr. Chairman, the President, in his message, claims that the object in calling this extra session is to supply sufficient revenues to meet the expenses of the Government, and almost every Republican who has spoken in favor of the measure has commenced his speech with the same false pretense. Mark Twain, in one of his books, attempts to "take off" the cyclone liar, and to do so he gives a number of specimens of the most ridiculous stories imaginable as having been told by a group of artists in the field of cyclone lying, and every man began his lie with the statement that "there appeared in the west a cloud about the size of a man's hand." I have been reminded of this when I hear these tariff artists start their speeches with the false pretense that it is a deficiency in revenue they are wanting to cure. It is an increase in the revenues of the favored classes who vote the Republican ticket and put up money to run Republican campaigns you are working and voting for! It is to pay the political debts and subserve the interests of your favorites that is moving you.

Mr. Chairman, the Treasury statement shows an available cash balance of over \$223,000,000 in the Treasury to-day. Now, take from this amount the \$100,000,000 that you insist shall be held as the gold reserve, it still leaves \$123,000,000 of surplus available for the use of the Government. It is no answer to this proposition to say that this money is borrowed. That mischief has been done; it was borrowed with your approval, and it can not be returned to those from whom it was borrowed for many years to come, and we have no use for it now except to pay the expenses of the Government, and it would be much better to have it in circulation than lying idle in the vaults of the Treasury. But even if the Treasury were empty, this is no time and the country is in no condition to embark on an experiment of increasing taxes, especially on the articles of prime necessity to the great mass of the people.

True statesmanship would rather dictate the cutting down of the expenses of the Government to meet the revenues, instead of increasing the revenues to meet largely increased expenditures. While you prate about the distress prevailing in the country and the prostration of all business interests, and complain of a want of revenue, you have just closed the Fifty-fourth Congress, which

made the largest appropriations ever made by any Congress. You have exceeded in extravagance the extravagance of all Congresses of the past. I really believe that the expenses of this Government could be cut down, not only to meet the present revenues, but that they could be cut down much more than that without impairing at all the efficiency of the public service.

And, Mr. Chairman, I believe that the issue of extravagance is one that will have to be met in the near future. I do not believe the people will always submit to this system of piling up appropriations and squandering the public money, while they have to observe in all their transactions the most rigid economy, and even then can hardly make "buckle and tongue meet." I have myself proposed some measures for the curtailing of expenses, which, if adopted, would render any increase in the revenues unnecessary. But even if we admit the necessity for additional revenue, there are many better ways to raise it than are proposed by this bill. I have here a bill I prepared to increase the revenue tax on beer \$1 per barrel.

This would furnish revenue enough to make the expenses and the revenues of the Government meet, and this would only lessen the profits of the great brewers and beer sellers, who are amply able to stand it, and would be very little, if any, additional cost to the consumer.

Or a better plan still would be to pass an amendment to the Constitution, which I have prepared, to overcome the objections of the Supreme Court to an income tax, and we could raise \$100,000,000 more of revenue that way and never hurt anybody. But to raise revenue out of the rich and the corporate interests would not be in harmony with Republican methods. They levy taxes, not to be paid by those interests, but for their benefit.

Mr. Chairman, as my friend DOLLIVER and several other gentlemen on that side of the House have given some of the reasons why they favor this bill, I will give some reasons why I oppose it. I am opposed to it because, according to the showing made by the committee, it increases the taxes of the people far more than is necessary, and that, too, at a time when the people are least able to bear additional burdens, and it will raise more revenue than is needed if the statement of the committee is to be relied on. The committee estimates that it will add \$113,000,000 to the present revenues; and I am sure if it does that, that it will add \$500,000,000 in burdens on the consumers of the country. The Government will not get one dollar in four that will be exacted by the bill from the people. I am opposed to it in the second place, because it discriminates against the agricultural interests, and especially against the great cotton-raising section from which I come, and which I have the honor in part to represent on this floor. The transparent fraud intended to humbug the Western farmer by putting a high duty on wheat, oats, corn, straw, etc., is too flimsy a pretense to fool anybody. Let me show how the imports of wheat, corn, and oats compared with exports of those commodities last year:

	Imported.	Exported.
	<i>Bushels.</i>	<i>Bushels.</i>
Corn.....	4,338	101,100,375
Oats.....	47,506	13,012,509
Wheat.....	2,116,303	126,443,963

And most of that imported is for seed. With this showing, how can you hope to make the farmer believe that a protective tariff on these commodities can do him any good? The same comparison holds good as to nearly all the agricultural products claimed to be protected by this bill. The farmer does not fear the competition of foreigners in our markets. It is the competition they meet in foreign markets, where they are forced to go with their surplus products and where your tariff laws can not help them, that hurts.

There is more cotton imported into the United States than there is of any other agricultural product raised in this country. There was about five and a half million dollars' worth of long-staple Egyptian cotton imported last year that competes with our long-staple cotton; and if you had been in earnest about wanting to protect farmers you would have put a duty on cotton. But you refused to do that; you paid the Southern farmer the compliment to believe that you could not buy his vote for the Republican party with a duty on cotton, and, sure enough, you could not. [Applause on the Democratic side.]

Mr. Chairman, I have talked here so often for the cotton grower that I do not like to go over the same thing again. But permit me to say that this is one field of industry I know all about. The raising and gathering of a cotton crop requires, under the most favorable conditions, almost an entire year of labor and care, and brings comparatively little money for the work and pains bestowed on it. Usually the cotton planter has to encounter the disasters of either flood or drought, and sometimes both in the same year;

he has the late and early frosts, all sorts of insects that prey on the cotton plant, and the diseases to which the plant is subject, to contend against; and, notwithstanding all these difficulties, the cotton growers of the South have added more to our national wealth since the war than the raisers of any other agricultural product.

Last year we exported, after supplying the home demand, more than \$190,000,000 worth of cotton—more than one-third of all our agricultural exports. This country is more indebted to our exports of cotton for the balance of trade in our favor and for the gold it brings us from other countries than to any other commodity produced in the United States. I just mention these things to refresh your memories and call your attention to the fact that the farmers of the South who produce cotton are entitled to fair treatment at the hands of our Government. They do not expect the Federal Government, by any system of tariff taxation, to make their products higher, but they have the right to expect of the Government that it will not impose upon them any unnecessary burdens.

Now let me call your attention to some of the discriminating features of this bill. Binding twine that is used for binding the Western farmers' grain, where some of the farmers vote the Republican ticket, is put on the free list, so that the wheat grower is to have free binding twine to bind his wheat, but the Southern farmer, who votes the Democratic ticket, has ties and bagging, with which he binds his cotton, put on the dutiable list. I want some member of the majority on the Ways and Means Committee to attempt some explanation of this discrimination.

You gentlemen tell us that the tax makes these things cheaper.

Then why do you not tax binding twine to make it cheaper, too? No; you know that the tax makes it higher and you know you left binding twine on the free list because you were afraid of the Western farmer, and you tax cotton ties, cotton bagging, and cotton gins because you wanted to favor the interests that sell these things to the producers of cotton, and you did not think you could get their votes for the Republican party anyway. [Applause on the Democratic side.]

It has been contended here that bagging and ties were cheaper when they were on the dutiable list than when they were free. Now, I deny this, and I have here the figures. The average price of 2-pound bagging under the protection of the McKinley law from 1890 to 1894 in New York was 6½ cents; the average price when on the free list under the Wilson law from 1894 to 1897 was 5 cents, and the price of cotton ties was 77 cents per bundle in 1893 under the McKinley protection, and the first year under the Wilson bill, when they were put on the free list, they went down to 60 cents, and this year they went down to 50 cents and have advanced about 6 or 7 cents already in anticipation of the passage of the Dingley bill. It is true they got up a corner on ties in 1896 and put the price up. But foreign competition came to our rescue and broke the corner or trust, and they went down to less than half of what they were cornered at. That is the beauty of having a more extended market to draw from; you can still make corners, but you can not keep them.

This bill takes agricultural implements from the free list, where the Wilson bill put them, and taxes them about 40 per cent, and by this you will enable the manufacturer of agricultural implements to again do what they were doing when the Wilson bill was passed—ship their goods abroad to where they come in competition with foreign-made implements and sell them cheaper than they do here in our own country, thus discriminating against the American farmer.

And another objection I have to the passage of this bill is that it will be a blow at our agricultural interest, in that it will practically prohibit us from buying from our foreign customers who buy our products, and will, to that extent, render them unable to trade with us on as favorable terms as they otherwise could. I see that already some foreign governments are taking measures to retaliate on us. They say that if we can not buy from them we shall sell to them only when they are forced to buy from us, and that for our discrimination against them they will discriminate against us. The gentleman from Iowa [Mr. DOLLIVER] said the other day, in replying to a criticism that charged that in this bill we were "slapping England in the face," "that we were making this bill for Americans, and not for foreigners."

They talk very defiantly about the foreigners now, but last year, when we were insisting on establishing a financial policy for this country to conduct its own business, we were told by Mr. DOLLIVER and every other gold-standard advocate that we could not do it because England and the other commercial nations of the world had a different system, and that we must conform our system to theirs. I have always insisted that we could regulate our own financial policy, especially for the conduct of our domestic business. But England is our largest and best customer in trade.

I think those gentlemen place themselves in an inconsistent position who insist that we must conform our financial policy to that of England, but that we can "slap her in the face" in our trade

relations. It is not a good policy in trading to slap your customer in the face.

Mr. Chairman, another objection I have to this bill is that it is a regular propagating garden for trusts, combinations, and monopolies. As the gentleman from Kansas [Mr. SIMPSON] said the other day, trusts will grow out of this bill as naturally as toadstools grow out of a rotten log. I want to say to my nonpartisan friend from Ohio [General GROSVENOR] [laughter] and a number of other gentlemen on the Republican side of the House who have talked about how trusts and combinations have grown and flourished for the last four years under the operation of the Wilson bill, that that is no answer to the demand that we should in this bill put our hands on their throats and destroy them [applause on the Democratic side] and protect the people from their exactions. If they have flourished under some other bill, it is the greater reason why we should see that they do not flourish under this one. [Applause.]

No, gentlemen, the people of this country will not listen with patience to you when you plead as an excuse for your shortcomings what the Wilson bill did or failed to do. They will want some better reason for your failure to grapple the trust question, when you had an opportunity, than that they were flourishing under the operations of the Wilson bill. They will want to know why you did not crush them under the operations of the Dingley bill. [Applause.]

I have read this bill through in vain to find where you had taken some step to keep them from flourishing under it, and I find no effort made to obstruct them; but, on the contrary, every one of them is fostered and helped, and if they did not write many of these schedules themselves, they are written as much in their interest as if they had done so. Let it not be forgotten, Mr. Chairman, that the first proposition made by the Democrats when the reading of this bill was commenced for amendment was to incorporate an amendment that would deprive trusts of the benefit of the protective features of the bill; and then began the most remarkable exhibition of parliamentary quibbling and dodging that was ever witnessed in a parliamentary body. [Applause on the Democratic side.]

It was contended and ruled that that was not the time, and that the place in the bill where such an amendment would be appropriate had not been reached. But the trouble is we will never reach the time or the place for the Republican party to commence smashing trusts; it owes too much to the trusts to do that. [Applause on the Democratic side.]

Mr. Chairman, I wish to call the attention of the committee and the country to the fact that every proposition to legislate against the interests of trusts during the consideration of this bill has come from one side of the House and has been resisted by the Republicans, and that every such proposition has had the unanimous support of Democrats and Populists and the almost solid opposition of the Republicans [applause on the Democratic side]; and I call attention to the further fact that the only voice raised during this entire debate in favor of trusts has come from the Republican side. The only arguments made in this debate to show what a blessing trusts are came from that side. That is the voice and verdict of the Republican party. No Democrat or Populist has made any such contention.

Let me call attention to the effect of Republican victory last fall on the trusts. We all remember the contention of the supporters of McKinley—that his election would put new life in the country, that industry would revive, that the idle would find ready employment at remunerative wages, and that the fires of the closed factories would again light up the land. I had read yesterday when the green-bottle section was reached, an account of a meeting of the association of green-bottle manufacturers held in Philadelphia on the 12th of last November, within ten days after McKinley's election; and what did they agree to do?

Was it to give better wages to labor or more labor to the idle or cheaper goods to the consumer? No; they agreed to reduce production 25 per cent and advance prices 5 per cent. The result was less employment for labor and higher prices for bottles. I am not a manufacturer or consumer of green bottles [laughter], but let us see what this bill does for the green-bottle trust. It increases the duties on green bottles and gives this green-bottle combination more power to regulate production and prices than they had before.

This is a good illustration of many similar instances that might be given if time would permit. But I call attention to one other trust. We have been very anxious to reach the sugar schedule and put some of you to a test on a motion to strike a blow at the all-powerful sugar trust by knocking out the differential duty in favor of refined sugar. But I see you do not intend to allow us to reach that, either regularly or by unanimous consent.

Mr. McMILLIN, in his admirable speech the other day, told us how the representatives of this trust had admitted before the members of the Ways and Means Committee that they controlled the price of sugar, and told how they fixed the price at which the dealer should sell and how the dealers were required to put the

price up or down as the trust directed. I am informed that investigation has developed the fact that there was less than \$20,000,000 put into the sugar trust, and that that was in the purchase of plants at extravagant figures, some of them purchased not to be used, but to be closed up to prevent competition, and that to this investment of less than \$20,000,000 has been added more than \$55,000,000 of watered stock, making the stock \$75,000,000, and that this \$75,000,000 pays dividends, half at 7 per cent and half at 12 per cent. Besides these dividends, they are accumulating a large surplus and the stock is away above par.

Mr. Chairman, these are the facts, that this investment of less than \$20,000,000 has been paying big dividends on seventy-five millions, and is worth nearly one hundred millions. Now, I want to say that in the face of these facts the representative of the people who votes for this bill with the differential duty in favor of refined sugar, the only object of which is to perpetuate the lease of power and pillage of the sugar trust, ought to have to go home to his constituents with "sugar trust" branded across his forehead and the collar of the sugar trust about his neck. [Applause on the Democratic side.]

He need not think he will escape the wrath of the people by telling what the Wilson bill did. Of course, the man who thinks it is better for the country to have one of the great commodities of universal consumption in the hands of a monopoly to fix prices and make just such exactions as it pleases, both from consumer and producer, should vote for this measure; otherwise I warn him he had best not do it. He will be calling on the hills and rocks to fall on him and hide him from the wrath of an indignant people.

Mr. Chairman, I will mention one other objection I have to this bill and the theory on which it is framed, and in it is found my objection to all tariffs laid merely for protection's sake. You can devise no system of protection that is not partial in its effects and that does not build up some interests and classes at the expense of others. It is the inequalities of the system to which I object. There is no way to avoid them if you try; and in this country of ours, the inequalities and hardships of the system fall with a heavy hand on those of our fellow-citizens engaged in agricultural pursuits, and while I am asking for no special privileges for them, I do protest against discriminations against them.

Let me illustrate. In this great country, with its great agricultural population and its almost unlimited productive energy and resources, we produce of the products of the farm a great deal more than we can consume in the United States. This surplus must find a sale in foreign markets, where our tariff laws can not affect the price, and we must compete with the farmers of other lands for these markets.

Last year our agricultural products that were exported sold for \$569,879,297. Two-thirds of all our exports were the products of our farms. The price realized for this surplus abroad, very largely fixes the price of what is sold for consumption in our own country, so there is no way you can help the farmer with your tariffs. You might help him by paying him a bounty on what he exports, but this you do not propose; therefore I insist that you should not put it in the power of any other class of people to make exactions of the farmer through a system that he is powerless to profit by himself.

Another objection to this system of injustice and inequality is its demoralizing effect on legislation. When you once start on this system of paternalism, of legislating to make some of the people rich at the expense of others, they are never satisfied. The more you give them, the more they want. It is only a little more than six years since you passed the McKinley bill, with an average rate of duty of about 50 per cent, and the country repudiated that bill and "spewed" the Republican party out of its mouth for passing it; and now you come back to power and the first thing you do is to allow the interested parties to force on you a bill with average duties of about 57 per cent, and every interest and every representative of a protected interest is having a scramble to see who shall get the most of the benefits.

I think the scenes we have witnessed on this floor in this debate are enough to satisfy anybody of the viciousness of the whole system. Every protectionist here and some who do not claim to be protectionists are trying to get the advantage of everybody else in some particular, or is accusing everybody else of getting some advantage of him, or is helping somebody to get some advantage in order to get help for some advantage for himself, and you begin now to hear gentlemen talk about the support of this and other bills. They do not discuss the principles of the bills, as to whether or not they are right and such as to command the support of statesmen; but the question is, what is there in the bill for me, or what special favor does it confer on my district or some interest in it?

I do think, Mr. Chairman, it is time some higher motive should actuate Representatives in the American Congress than mere local interests by which their locality is to profit at the expense of some other portion of our great country, and that these Congressional

combinations and trusts to plunder other portions of our common country should be done away with.

Just a word as to your claim that the protection you give is for the benefit of American labor and to provide for the difference in the cost of labor in this country and in Europe. You may take the schedules of this bill and examine them, and you will find that in almost every case the protection given is greater than the whole labor cost of the commodity, and after you make your schedules under the pretense of protecting labor, the manufacturer goes out into the unprotected labor market and buys his labor just as cheap as he can, and does not divide the benefit of protection with the labor that produces the goods. Your labor market is, as I said, unprotected, and the beneficiary of protection forces the laborer to take such wages as he chooses to give, or he goes into the pauper labor markets of Europe and gets someone to take his place.

No, Mr. Chairman; this bill, and the action of the majority in this House, only illustrate what I have always contended, that the Republican party is the champion of the classes, the capitalistic combines, and the trusts, and has no sympathy with the great body of plain, deserving people of the country.

A word or two more with my brilliant friend from Iowa [Mr. DOLLIVER]. You all heard him the other day, in concluding his great speech, say that this idea of McKinley's bringing prosperity was a mere dream.

A MEMBER. That is right.

Mr. ALLEN. Did you all understand that this was an effort on his part to hedge against one of his brilliant predictions of a year ago? You see he is the man who first spoke of McKinley as the advance agent of prosperity. [Laughter.] He now finds that his advance agent is too far ahead of his show. He has seen the country go from bad to worse since McKinley's election. He sees that the banks continue to break; that the business depression gets worse, and that wheat and cotton and almost everything else not controlled by a trust is going down. There have been more than 4,000 failures in the United States in the last three months, with liabilities of more than \$60,000,000, and in the number is included 74 banks. Cotton has gone down more than a cent a pound since the election, entailing a loss on the people of the South of fully \$40,000,000.

No wonder Mr. DOLLIVER wants to hedge against his prophecy of McKinley and prosperity and have the people accept it as a mere dream. [Laughter.] I once saw a little boy caught in a story by his mother, and when it was proven on him, he said, "Why, ma, can't you take a joke?" [Laughter.]

Since Mr. DOLLIVER has been found to be a more brilliant than reliable prophet, he says: "Can't you all take a dream?" [Laughter.] The gentleman said in his very entertaining speech the other day that this bill knows no South, no North, no East, and no West; that its blessings will fall equally on the whole country. But his colleague on the Ways and Means Committee [Mr. JOHNSON of North Dakota] came along right after him and gave us as the reason that the South had not been properly cared for in the bill was that we refused to subscribe to the Republican policy of protection, and then told us that when we did pledge our loyal support to that Republican principle they would then take care of us, too.

Mr. Chairman, a great number of the speakers on the side of the majority in this debate have had a good deal to say about the South's prejudices growing out of slavery and secession. Mr. DOLLIVER went back to rethrust the old slavery straw. The truth is that the only available prejudices resulting from slavery and secession are the prejudices that are constantly worked against the Southern people on account of their former connection with slavery and secession. The first seventy-five or eighty times I heard this secession "rot" invoked against my section after I came here, it irritated me some; but the last three or four hundred times I have heard it, it has made no impression on me. [Laughter.] But it is still irritating to the untutored mind of the new member from the South. [Laughter.]

No public question can arise on which the South takes a position but what the opponents of the position they take resort to stale campaign slop about slavery and secession. In the campaign last year, because a very large majority of the Southern people supported the Democratic contention that it was more money the country needed instead of more taxes, every blather-skite, whether Democrat or Republican, in the North, who advocated the gold standard, when he could find no argument to support his contention, turned his attention to invoking prejudice against our platform and candidates by insisting that the South favored them and the South had once been the home of secession and slavery. [Applause on the Democratic side.]

Now, in conclusion, let me say a few words for the South. It is true that a portion of the people of that section once owned black slaves that the Constitution recognized as property which they had bought and paid for. Their slaves were set free; they lost them; they are not complaining about it; they are reconciled

to it and would not have the institution back if they could get it. But their black slaves having been liberated, they will not join you in a programme that tends to enslave a large portion of the white people of the whole country.

It is true that nearly forty years ago nearly all the people then resident in the South participated in the movement for secession, and, as an earnest of their sincerity, made one of the grandest fights for their construction of the Constitution ever made by any people in the world. But, for reasons I will not stop here to discuss, secession failed, and we have been back in the Union for thirty-odd years, with secession and slavery both dead issues.

We have no apology to make for either. We are not repining or grieving over either. A large portion of the voters of the South have been born since both questions were finally settled. Our people have submitted as gracefully as any people ever did to the arbitrament of war; they have gone to work with a heroism never equaled, and are fast overcoming the many disasters and disadvantages the new condition of things has subjected them to. There is no portion of our country that is as thoroughly American or more thoroughly patriotic than the South.

We have learned some hard lessons in the bitter school of experience. Our people are not tramps, but they are at work; they have learned to live at home; they decline your proffer to enter into a scheme of public plunder in order to secure a small division of the stolen goods. [Applause on the Democratic side.] We do not believe in your scheme of legislative robbery, and we will not go into it. All we ask of the North is that it will keep its tramps at home and keep its hands out of our pockets.

Give us a financial policy under which we can all live and a fair and equal showing in the race of life, and with our genial climate and splendid resources we will take care of ourselves and go on, rebuilding our fortunes, building happy homes, voting for good government, and serving the Lord. [Applause.]

### The Tariff.

### SPEECH

OF

HON. ALBERT M. TODD,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 31, 1897.

On the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. TODD said:

Mr. CHAIRMAN: Having already, in the interest of those whom I have the honor to represent, as well as in the interest of humanity, entered my protest against this iniquitous measure as a whole, I now desire to protest against this outrageous provision—the retroactive feature of this bill—which has just been sprung upon the country and this House.

First, I desire to call attention to the fact that the United States Supreme Court, in a similar case, that of *United States vs. Burr*, in a decision rendered June 3, 1895, and delivered by Mr. Chief Justice Fuller, declared against such retroactive feature.

Again, our national Constitution prohibits States from passing ex post facto laws, among which this retroactive feature should now class this law, at least in spirit, if not in technical name. If it is wrong to thus oppress the people by State laws, why is it not wrong to place them on our national statute books?

This new scheme of making this law take effect in April has been sprung in the interest of speculators and others who have been quietly importing large stocks of foreign merchandise on which they wish to secure by this infamous provision an immediate advantage from the people and over their legitimate competitors. Only five minutes ago I received a telegram from a most reputable firm, the majority of whom are also Republicans, saying, "We consider the proposal to make duties retroactive an outrage."

And I wish here, Mr. Chairman, to call the attention of our Republican friends to the fact that the great farming interests of the country already see the unfairness with which you discriminate against them in this bill. And I call their attention to the following resolution of one of the Farmers' Institutes in my district, which, after reading, I shall introduce as a memorial in the House:

#### RESOLUTION OF FARMERS' INSTITUTE.

Resolved by the Branch County Farmers' Institute, held at Coldwater, Mich., February 12, 1897, That the growing use of shoddy in the manufacture of clothing is a menace to the sheep and wool industry of this country; that its use is subversive of the business integrity of manufactures and is a blot on the fair name of our Republic, and that it practices a fraud on the consumers.

That for self-protection we call loudly upon Congress to adopt such measures as shall effectually prohibit the importation of shoddy from foreign hands, and also ask that Congress shall pass such laws as will prevent the sale in this country of shoddy, or goods manufactured from the same, except under its proper name and on their merits as such.

That copies of this resolution be sent to each United States Senator from Michigan and our Representative in Congress from the Third Congressional district.

The committee reporting the above resolution consisted of ex-Gov. Cyrus G. Luce, Republican; Mr. L. E. Lockwood, People's Party, and Mr. H. D. Pessell, Democrat, and was adopted by a hearty and unanimous vote, and transmitted through the secretary, Mr. A. J. Aldrich.

Now I wish, in behalf of the people of Michigan, to correct the statement of my distinguished friend [Mr. WM. ALDEN SMITH] of the Fifth district, who just said that "the people of Michigan showed by their vote in the last election that they were opposed to the free coinage of silver." I wish to remind him that both workingmen and working girls were paid in many cases to march in the gold-standard parades, and through poverty were also coerced into voting that ticket. And I wish to call his attention, and that of the whole country, to the fact that Hazen S. Pingree, a friend of silver and humanity, was elected governor of Michigan on the Republican ticket by a vote 26,541 greater than that cast for Mr. McKinley on the same ticket. The latter had a majority of 56,868, and the former a majority of 83,409.

And we now shall await with interest the verdict which the people will render next Monday, which will reverse the one given last November.

### The Tariff.

### SPEECH

OF

HON. JAMES COONEY,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 29, 1897.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States—

Mr. COONEY said:

Mr. CHAIRMAN: To the amendment just proposed, to increase the duties on toothpicks to 2½ cents per thousand and 15 per cent ad valorem, I am utterly opposed. The pains and penalties already laid by this bill on the efforts of the people to make an honest living are calculated to reduce numbers of them to wholly subsist on the few articles placed on the free list, chief among which are acorns and teeth; and the promised prosperity that is to start the manufactories and open up the mills is likely to choke up and deliver over into the hands of the receiver or the dentist the oldest gristmill in the world, unless it is permitted to use free toothpicks. I am opposed to the adoption of the amendment, if for no other reason than to break the monotony that has accompanied the acceptance of every amendment for the increase and the rejection of every one for diminishing the already extravagant duties reported in the bill by the committee having it in charge.

We have been bluntly told by gentlemen on the other side of this Chamber that we know absolutely nothing about the business necessities of the East; and we have been given to understand by every form in which plain English language could put it for the purpose of driving it home to the mind that the bill under consideration is one to aid the crippled industries of the East, and that we from the great producing regions of the South and West shall have no hand in its construction. In this they are, as ever, logical and true to the economic laws of human and sectional selfishness.

The title of this bill is "To provide revenue for the Government and to encourage industries." The taxes proposed are twofold in their nature; one is to provide revenue for the Government, and is estimated at one hundred and twenty millions more than that produced by the present law. This may or may not be necessary, but it can not be complained of on the ground of uncertainty in its provisions or being unconstitutional in its object. The other is to encourage industries, and the tax levied by the bill for this purpose is unconstitutional, uncertain, and without limit. This tax is not to go to the support of government, but to manufacturers directly in the increased prices of their products to encourage their industries. The amount proposed to be levied by the bill for this purpose is enormous, and compared to which the sum levied for governmental purposes is a mere bagatelle. It is to be raised from the people by compelling them to pay a 57 per cent duty for articles they handle in their business, place upon their table, or wear upon their backs.

There is no power given in the Constitution to encourage any

industry by taxation. The power given to Congress in the Constitution is:

To lay and collect taxes, duties, imposts, and excises, to pay the debts, and provide for the common defense and general welfare of the United States.

The Constitution provides for no tax but that which is to be collected by the Government and expended by and for the Government; but the Dingley bill, less modest in its declarations than its predecessors, openly defies the Constitution and proposes to hand over to the manufacturers and trusts the power to tax for their own greed the producers of this country. No matter what construction may be placed on casual remarks of great and eminent men, the fact still remains that such legislation as attempts to give advantages to the business of any man, or class of men, is abhorrent to the Constitution, and to every impulse that induced the union of so many great States into a nationhood for common welfare and common blessings. This law can not be permanent on the statutes of a free people. Perverted patriotism may assist evil powers to place it there, but it will not be permitted to go unchallenged for a single day or hour of its existence. The hot indignant breath of freemen will turn it into ashes that will be scattered on the heads of its promoters.

There are, as there must necessarily be, two general classes of persons legislated for in this bill, one composed of those who are to receive the benefits and the other composed of those who, by the taxes and penalties laid therein, will be compelled to provide and furnish the benefits. If those who bear the penalties were to be compensated in the benefits, there would be nothing gained, and the measure would be frivolous.

The friends of the bill still insist that the foreigner pays the tax, bears the penalties, and provides the benefits. In vain have we appealed to them: "If such be the fact, in God's name double and treble up the duties, and let us all get rich out of the foreigner as soon as possible!" But the foreigner can relieve himself from the penalties whenever he desires and render the pretended benefits of this measure impotent or, to say the least, very uncertain. It is not to be presumed that the able gentlemen in charge of this bill, conscientiously laboring to discharge a great party debt to Eastern manufacturers, have squandered their splendid talents in chasing an evasive foreigner upon whom to dump the iniquities contained in their bill, and rely on him to be the rainbow of promise to Eastern manufacturers. They know and we know that they have selected a people as a victim of easier and more certain access than the foreigner, a people who can not escape the jurisdiction of Congressional action, a people whose representatives on this floor have been told that they shall have no hand in the construction of this bill, a people who are ever instant and present to the eye and mind of the party who, with a far-away look and in absent-minded manner, undertakes to describe to us the foreigner who shall bear the tax; a people who for all purposes of taxation have ever been regarded and treated as foreigners by the gentlemen who are forcing this measure through the House. That people are the great producing classes of the South and West.

The great agricultural class of this country, which constitutes its greatest productive power and nearly one-half of its consuming force, is a class whose homes are left undistinguished by the hyssop of its favor and abandoned to the vengeance of the destroying angel that is to be conjured up by this bill. The gentlemen who framed this bill know well that the producing class of this country can not escape the operation of that economic law that declares that the debts and taxes of a nation must eventually be paid, if paid at all, in the products of that country; that the farmer, the artisan, and the miner must wrench from the soil and carve from whatever material resources nature has endowed and blessed the land with sufficient of its raw products to give in exchange for and to liquidate all these debts and taxes. Those who purchase these products and handle them in the shops and on the markets can and generally do protect themselves from the burden of these debts by the prices they fix in their own markets. As the national debt increases, as taxes are increased, as privileged and exempted classes are built up, they can save themselves from the extra taxation consequent thereon by ceasing to purchase, or, as is usually the case, by falling back on the producer and forcing him to take less for the products of his toil and labor. This is why in times of great depression the producer gets less and less for his products, while there is no corresponding diminution in the prices of those things he has to buy. And thus the great burden of taxation at last falls either directly or indirectly upon the producer. There is absolutely no protection for him; he can not, from the very nature of his position in industrial society, be protected only in so far as his natural rights are protected by just and equitable laws, laws that preserve his right to deal with his fellow-men without their exacting therefor tribute from him, a right which this bill aims to wrest from him by a mixture of open violence and hidden duplicity.

An increase of Government expenses, or an increase in taxation for any purpose, is notice given to the producer that he must make up his mind to take a diminished price for the results of his toil,

When a similar condition of public affairs, but one in a much more aggravated form, confronted Sully, the great minister of Henry of Navarre, and he undertook to restore prosperity to French industries that had been wholly wrecked in the religious wars, he proceeded on the wise principle that agricultural prosperity was the foundation of all prosperity, and he revived the ruined industries of his country by reducing the expenses and taxes of Government and wiping out trade restrictions that fettered agriculture.

A very different spirit now animates the Dingley bill, a spirit that in the past thirty years has increased the expenses of the Government from a few millions to over \$500,000,000 annually. Conscious that privilege and monopoly spring from the debts and taxation that burden a people, that same spirit has ridden this Government and still rides it in the boots and spurs of profligacy, leaving behind it mountains of debt and plateaux of taxation, until American citizenship is degenerating into a mere taxpaying function to sustain the fustian and livery of privileged individuals and classes.

A fair example of how debts and taxes are made a burden inseparable from the people's life is in the administration of their national debt, contained in facts and figures which can not be too often repeated and should never be forgotten.

On the 1st day of March, 1866, the national debt was \$2,827,868,959  
The Cleveland Administration added to that..... 262,315,400

Total..... 3,090,184,359

The bondholders paid for the above bonds only \$1,633,739,638 and the Government has paid back therefor to the bondholders the following sums:

On the principal..... \$1,800,000,000  
In interest..... 2,600,000,000  
By way of premium..... 58,000,000

Total paid to bondholders..... 4,458,000,000

So that the bondholders have received nearly three times the amount which they paid to the Government and there is still left a balance of the national debt unpaid amounting to \$1,226,007,806.

But the great iniquity of the administration of the national debt is not shown in the foregoing figures, but in the fact that after the people have been honestly laboring for the past thirty years to pay that debt it stands to-day undiminished by the fraction of one cent as a burden of taxation, and it will take as many bushels of wheat, as many bushels of corn, as many pounds of meat, as many pounds of cotton, and as many tears, struggles, and hardships on the part of the people to pay off the balance as it would have taken to pay the whole debt when they first assumed it.

Table showing the average price in 1866 and in 1895 of nine of the staple products of the country.

	1866.	1895.
Wheat.....per bushel..	\$1.90	\$0.58
Corn.....do.....	1.06	.29
Flour.....per barrel..	10.75	3.50
Cotton.....per pound..	.42	.085
Mess pork.....per barrel..	23.97	8.30
Sugar.....per pound..	.11	.05
Wool.....do.....	.53	.21
Beef.....per hundredweight..	15.25	9.50
Bar iron.....per pound..	.0675	.0267

The following table shows how much of the foregoing products, respectively, the whole national debt could have purchased in 1866 and how much the balance left at the close of the year 1895 could purchase:

	1866.	1895.
Wheat.....bushels..	1,486,842,105	2,183,020,689
Corn.....do.....	2,798,800,000	5,630,003,903
Flour.....barrels..	202,790,097	353,571,428
Cotton.....pounds..	5,885,416,606	14,568,823,529
Mess pork.....barrels..	99,570,813	150,915,853
Sugar.....pounds..	25,883,348,314	24,730,000,000
Wool.....do.....	5,330,188,079	5,755,815,953
Beef.....hundredweight..	181,967,213	120,293,136
Bar iron.....pounds..	41,851,851,851	46,348,314,906

The purchasing power of the national debt is, in fact, greater than the foregoing figures show, for the reason that the last bond sale of Mr. Cleveland is not considered in the table.

It will be seen at a glance from the foregoing tables and figures that the purchasing power of the national debt is, if anything, greater now than it was in 1866, and after we have paid upon that debt the enormous sum of \$4,458,000,000.

We can see the effect that this system of increasing the purchasing power of the debts and taxes has had upon the individual by noting the ever-increasing number of failures reported.

Number and liabilities of failures.

Year.	Number of failures.	Liabilities.	Year.	Number of failures.	Liabilities.
1873.....	5,183	\$228,409,000	1885.....	10,637	\$124,230,321
1874.....	5,830	155,239,000	1886.....	9,834	114,644,119
1875.....	7,740	201,000,000	1887.....	9,634	167,540,944
1876.....	9,002	191,117,000	1888.....	10,679	128,829,973
1877.....	8,872	190,600,000	1889.....	10,882	148,784,337
1878.....	10,478	234,483,132	1890.....	10,907	189,856,954
1879.....	6,658	98,149,053	1891.....	12,273	189,868,658
1880.....	4,735	65,752,000	1892.....	10,344	114,044,167
1881.....	5,582	81,155,933	1893.....	15,242	340,749,889
1882.....	6,739	102,000,000	1894.....	13,885	172,992,856
1883.....	9,184	172,874,172	1895.....	13,197	173,196,069
1884.....	10,968	226,343,427	1896.....	15,088	226,986,834

If we take the official reports and apply them to an ordinary farm family and estimate the prices of the surplus products it had for sale twenty-four years ago and now, we find that it loses annually: On 500 bushels of wheat, \$250; on rye, oats, potatoes, etc., \$50; on 600 bushels of corn, \$120; on 10 tons of hay, \$30; on 3 horses and mules, \$100; being a total of \$500.

Taking the farming lands as a whole, it is estimated from the figures of the Agricultural Department that the reduction of the annual income is \$7 per acre. One billion eight hundred million dollars has been taken from the farmers' annual income, which, if left to them, would be a better encouragement and protection to the Eastern industries than a thousand Dingley bills.

During these twenty-four years we have had two grand panics, many minor panics, bankruptcies without limit, five great labor wars, in which 1,000 persons were killed and \$230,000,000 worth of property destroyed, and all under the fostering wing of high protection.

It will be further seen, as I have before stated, that this increased purchasing power of debts and taxes falls heaviest on the agricultural and producing classes.

This increased purchasing power of debts and taxes had its birth and nourishment from the increased purchasing power that was given to the dollar in the demonetization of silver. Long before its evil effects had been felt by the people, honest, sincere, and able men who loved their country and their fellow-men gave notice of the inevitable evils that would follow that act; and there has not been a day passed since then that they have not pointed out that the true remedy of the evils endured by the country is in the reversal of that act that brought them into existence. You have tried every other remedy and failed. You have conjured up new and unknown remedies that you might put off and evade the application of the only true and permanent one. During all these years of falling prices, of the increasing purchasing power of debts, taxes, and the dollar, you have had high protection; you have raised it still higher, and still the tide of falling prices swept on; and now you propose to gather up all the jetsam and flotsam of all the old tariff bills that have been wrecked in the flood of disasters evoked by your gold standard and fashion them into a new bill which, if it can not abate the storm, will admit of plunder in the confusion of affairs. Your remedy of a high tariff will fail now as it has failed before. The people are robbed of the products of their toil and labor by the destruction of their constitutional money—

A tithe purloin'd cankers the whole estate—

and it is not protection but restitution that will reach the disease.

There is nothing in the history of legislation of this kind that can warrant the belief that it will be a permanent remedy even for those for whom it is made. Since we departed from the Walker low-tariff system, since the Republican party undertook the operation of the people's industries through the functions of government, higher protection has been periodically demanded by and given to manufacturers. That which to them appeared sufficient at the time soon lost its force, and they demanded more. Protection has operated on them as the feast of the enchantress operated on Ulysses's men when it turned them into swine that spent their time in grunting for more swill. How long will the great Republican party permit itself to be hired out by its leaders as the sloop carrier to the sty of the manufacturers? How long will the people be taxed for such gluttony? The passage of every such outrageous and one-sided bill as this only hastens the time when the people, unable to endure its burdens longer, will demand the complete destruction of the whole system and the institution of another system of taxation, with methods less uncertain and subtle in its operations than one levied on imports, and which is at any time likely to give birth to a monstrosity like that which is now brought forth as the herald of prosperity.

## The Tariff.

## SPEECH

OF

HON. JOHN C. STURTEVANT,

OF PENNSYLVANIA.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 31, 1897,

On the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. STURTEVANT said:

Mr. CHAIRMAN: The remarks I shall make on the bill before the House will be of a general nature, treating the subject from the standpoint of a business man who has observed the effects of both protection and free trade upon the productive interests of the country. The low tariff of 1857, within six months after its passage, plunged the country into a panic so disastrous in its effects that most of the banks in the country were forced to suspend payment, and in my own State every bank but one. Every intelligent man who lived during those disastrous times knows that the business interests of the country lay dead till the Morrill tariff of 1861 gave protection to our producing industries and brought life into business channels. From that time till 1892 the country was under a protective-tariff system. The scale of duties was changed several times, but the change was always on protective lines, and, as a rule, was made to give greater protection with each revision. During those thirty-two years of tariff protection the United States enjoyed a business prosperity unequalled in this or any other country in the history of the world. The population doubled; the wealth quadrupled; and this included a time during which we carried on for four years a most bitter and determined war, and crushed the most gigantic rebellion on record.

When that war closed, our bonded debt was over \$2,300,000,000, and our unascertained debt was sufficient to make the aggregate about \$3,000,000,000. That unascertained debt had been paid, and the bonded debt had been reduced, at the rate of \$65,000,000 a year for twenty-eight years, until in 1893 it was less than \$600,000,000. Then the Democratic party came into power. The country had withstood that party when they advanced against the national capital with arms in their hands, but it was now to be put to the severer test of an attack by the same party when intrenched in the legislative and executive branches of the Government and wielded the power of the national purse. How it withstood that attack may be seen in the depression of individual industries and the destitution of the poorer classes. It comes to the official cognizance of this House in the decrease of the revenue and the increase of the bonded debt. Under the grip of the present Democratic tariff, which has been strangling both capital and labor for three years, our bonded debt has been increased more than \$262,000,000 to supply a deficiency such as never before had existed in the revenues of the Government. That increase in the bonded debt means a perpetual tax on the people of the United States to the amount of the interest on that sum, about \$11,000,000, because a deficiency of revenue from tariff duties is a total and irretrievable loss.

During the thirty-two years of the protective system the country was a part of the time on a paper-money basis and a part of the time on a gold-money basis. The most prosperous period was under a gold-money basis. Our prosperity in the latter period attracted the attention of the statisticians of the world. That great Englishman, Mulhall, declared that our progress in wealth from 1879 to 1892 was without a parallel. But wealth was not the only beneficiary. Improved machinery had greatly reduced the prices of the products of labor, but the price of labor had steadily advanced. In 1892 a day's labor would purchase 66 per cent more of the necessities or luxuries of life than could have been purchased by a day's labor in 1860. What was true of the purchasing power of a day's labor in 1892 may be true of a day's labor in 1897, but the highways are filled with men of muscle and a will to work, who are seeking work and finding none, and it matters not to a man out of work what a day's work will purchase. What is true of the ordinary day laborer is true of the farmer. He is a laborer if anybody is; he employs himself and pays himself from the products of his labor when he markets them. What the farmer wants is a home market. His market is not the granaries of Europe, but the mouths of the American people, and to some extent their backs. He feeds them, and he ought to clothe them. This bill gives him a chance to furnish the raw material for every yard of woolen or cotton goods worn in America. It ought to be a badge of disgrace to an American citizen to wear a suit of clothes made from the product of a foreign loom. Grover Cleveland, the man

of great promise and small performance, said in his letter of acceptance in 1892:

The manufacturers have been protected and grown rich, but the laboring man is waiting for his divide.

Democratic organs and orators made this a catch-word to ornament their speeches and writings and to illuminate their banners. The laboring man was made to believe that he was being cheated by his employers, and so he voted against those who gave him employment, and against the tariff which enabled them to give it. He paraded the streets and made himself hoarse with the then glad but now sad song:

Grover, Grover, four more years of Grover;  
Out they go, in we go, and then we'll be in clover.

But the laboring man who "was waiting for his divide" while working at protective wages in 1892 is still waiting for his divide while tramping the country in search of work at any wages he can get, or foraging on the public soup houses. It is true that somebody has been in clover. Two hundred and sixty-two million dollars added to the bonded debt bear witness not only that there has been a large consumption of clover by the Democratic leaders, but that the reduction of \$2 a ton on hay did not affect the price paid by the Government for four years' forage of Cleveland clover. Mr. Cleveland said that the country needed an "object lesson." He gave it to our people, and, if I interpret the lesson of the election of last fall, they do not want any more of it. They know it by heart. The siren song of the free-trade speakers of 1892 lured the people with the false hope that, with free raw material, our manufacturers could capture the markets of the world. They promised to pay higher wages to labor and sell the products of that labor cheaper. No party had ever before had the audacity to make such a proposition, so absolutely contradictory to common sense; but that is what the Democratic party did, and on that proposition they led the unsatisfied and the simple-minded to the polls, like lambs to the slaughter. The Republican speakers warned them that free trade meant low wages and little work, an increased importation of foreign products and a decreased American production; that the use of foreign products meant the employment of foreign labor, and the employment of foreign labor meant the idleness of American labor.

Experience had taught this and common sense had confirmed it, yet the stampede went on and protection was doomed. Mr. Cleveland's election at once threw the manufacturing interests into a panic. They believed that the new Administration would carry out their pledge to repeal the McKinley law, and they knew that a business crash would follow. It was their duty to prepare for the storm, and they did it at once. They began by reducing expenses. They ceased buying raw material. They disposed of stocks on hand as best they could. They discharged part of their workmen, and reduced the wages or hours of those retained. They made every possible retrenchment to meet the new condition and escape absolute bankruptcy. That started the worst industrial panic the country had ever seen, and continued it with increasing intensity until McKinley was elected. Even now, though hope gleams through the gloom from the Capitol and the house at the other end of the Avenue, it hangs like the pall of midnight over a country which if properly ruled would not have an unfed mouth or an unclothed back among its 75,000,000 people. I tell you, gentlemen, that though the act may have been done in the form and under the color of law, the change wrought in the country by the tariff legislation of the last four years, in the ruin it has wrought, in the capital it has destroyed, in the labor it has made idle, in the army of tramps it has recruited, and in the beggary it has entailed on men, women, and children, causes it to rank, in the black annals of history, as the crime of the nineteenth century. In the year 1893 the railroad stocks of this country depreciated to the extent of \$700,000,000, and men of wealth were made poor; nor did the rich alone suffer; the estates inherited by widows and orphans, many of them in amounts of a few hundred or a few thousand dollars, were reduced. The capital lost or rendered unavailable made sad inroads into the business interests and drove many to bankruptcy. One-half the railroads are yet in the hands of receivers, and many are unable to pay interest on their bonds. Every class seems to have been under the free-trade ban. Like the locusts of Egypt, it has devoured all and spared none. Like the plague, it has been no respecter of persons. Its rule was strictly a case of equal ruin to all and special privileges to none. There were no exceptions, and even the soup houses were open to the rich and the poor alike.

The scale of duties in the McKinley law, which gave the country the highest degree of prosperity it ever enjoyed, was more perfect than that of any previous tariff, but I believe the scale in the bill now before us is still better. The experience of the country under the McKinley bill gave a practical test of its provisions, and, taking advantage of its lessons, the present committee has made such changes as will remedy the defects of that bill. I believe that this bill will, in a reasonable time, restore business to its former channel, put the mill wheels in motion, take the railroads out of

the hands of receivers, give employment to every man in the country who wants to work, at good wages, and provide for a gradual increase in the price of labor as the mode of living and civilization advances. It will also give the farmer a larger market at increased prices, for the reason that his best customer, the laboring man, will have the means to pay with. The same will be true of the products of the manufacturing establishments. Higher prices of one product inevitably makes a higher price for all products, and experience has shown that everybody is most prosperous when there is a general advance in prices in every line.

A word to those who claim that the sole trouble with the country is because there is too little money. It is admitted that the price of everything is governed by the law of supply and demand, and that the interest rates on loans are governed by the same law. How, then, can it be said that there is less supply, in proportion to the demand, in the money of the country than ever before, when the rates of interest are lower than hitherto known? It is almost a contradiction of terms. There is in fact more money in the country now than the present business of the country needs, and that is why money goes begging for responsible borrowers at cut rates. What the country needs is not more money, but more ways for poor men to get what there is. There is more gold and silver in the mountains of Colorado, Utah, Idaho, Arizona, and Montana than the world ever produced, but it is useless unless we can get at it; and the gold and silver locked up in the vaults of the Treasury and of the banks is as useless to the laboring people of this country as that in the mountains until the means shall be provided to get it. This bill is the key to the money vaults of this country and of the world. Its first effects will be to stop the importation of foreign goods which compete with our home products. When we cease to buy foreign products, we will buy American products. American factories will be ready to start, American workmen will be put to work, and the money which is now paid to the foreign workmen will then be paid to the American workmen. This will in time put everybody to work who wants work. Laboring men having employment will have money, and, having money, will spend it. They will pay it out for what they eat and drink and wear, and there will be a market for every article of the farm and cash for payment. The policy of this bill is to reserve the American markets for the American products and practically exclude every article of foreign origin which would injure the sale of an American product. When such a state has been brought about, the money question will not be heard of or spoken of, except as one of the foolish hallucinations of a bygone age.

The reciprocity feature of this bill is a very important one. Its effects will be practically the same as under the McKinley law. Under that bill reciprocity agreements were made with more than twenty countries of the world, and the result was that our trade with those nations was increased over \$100,000,000 a year. In the Island of Cuba, in which our trade had not before exceeded \$11,000,000, it was increased under the reciprocity agreement with Spain to over \$23,000,000 in 1893. Protection and reciprocity are not antagonistic if carried on under the provisions of this bill. The articles upon which we rebate the duty are such as we can not supply in quantities equal to the demand, and by this we open up a foreign market to the free introduction of articles, mostly the product of agriculture. We really give that which is of no value to us, but is of value to the other party in the reciprocity deal, and get what is of immense value to us in return—a free admission to its markets for our grain and our meat. That protection, reciprocity, and prosperity go together is true in every sense. With free trade every possible advantage is given to foreign countries in the way of trade facilities, and there is no chance for reciprocal trade. You can not give away a thing and charge for it. This bill puts a tariff on foreign articles, and demands an equivalent for taking it off in special cases. That equivalent is a free entry for American products into the foreign market. The difference between free trade and reciprocity is that the former gives away our market for nothing, while the latter exchanges it for a foreign market for American products, and this is business sense.

It has been claimed that the protective system makes the South poor while it enriches the North. This is not true. Protection covers every portion of the country alike, and benefits every industry in the whole country. It is founded on the broad principle that no man can be injured by making others prosperous, nor can anyone be made permanently prosperous by the wreck of the business of others. What is for the good of one section will finally result in the good of all sections, and no section can be materially injured in its business without injuring the whole country. The prosperity of the South and West makes, in those sections, a better market for the manufacturing products of the North and East, while the prosperity of the manufacturing sections of the North and East gives increased employment to the labor and a better market for the products of the South and West. In both cases the money passes from one American citizen to another American cit-

izen and remains in the country. If we pursue this plan, selling all we can abroad and buying nothing abroad which can be produced at home, more money will come into the country every year than goes out of it, and, with our productive mines of money metal yearly increasing the output, we will in time have more money than the aggregate of the rest of the world. A nation gets rich just as an individual gets rich, by producing more than it consumes and selling more than it buys.

Nearly every Democrat who has spoken on this bill has given as a reason for his opposition to it that "it will build up rich corporations and make the rich richer and the poor poorer." This is the cheapest kind of campaign trash, and is an insult to the intelligence of the American people to whom it is addressed. A rich man invests his money in business that he may become richer. If this bill will make the rich richer, it will do so by making business better. In the historic words of Flanagan, "That is what we are here for." I am sure that is what the members on this side of the House are here for, and I hope that the vote on this bill will indicate that some of the members on the other side are here for the same purpose. We have had an object lesson given us by the Cleveland Administration, in placing the country in a condition in which the rich could have no hope of becoming richer, but the poor could have increased facilities for becoming poorer. The result was that capital retired from business and labor was idle. The business of the country can not be carried on by poor men. Poor men can not give employment to poor men. Poor men can not pay wages. Poor men can not build mills. This bill will induce the rich to draw their hoarded money out of the bank vaults, put it into manufacturing enterprises, give employment to all who want work, empty the poorhouses, lock up the soup houses, and put manhood into the heart of beggary and honest wages into the pocket of pauperism. It is for the members of the other side of the House to explain in what way the poor are to be made poorer by such operations.

The census of 1890 shows that property in this country was more evenly distributed at that time than it was ten years before, and that, though there were millionaires, the general average of wealth among the people in 1890 was more evenly distributed than in 1880. Common sense would indicate that under the operation of the protective system, with its increasing employment and constantly increasing average of remuneration of wages, the general distribution of wealth should even up, so to speak, until there should be fewer very rich and fewer very poor people in the land. Plain reasoning would put to scorn the senseless assertion that the policy which gives the idle work, at any kind of wages, makes them poorer. There are hundreds of thousands of American citizens now imploring Congress to pass this bill and make them "poorer" in that way.

Mr. Gladstone has said:

The evidence of statesmanship is seen when a country is so governed that the people are peaceful, prosperous, and happy.

If the condition of the country now gives evidence that there has been any such statesmanship displayed by the late Democratic National Administration, it is in order for any one that knows of it to speak out. It ought not to be kept longer a secret.

Mr. Chairman, I have given many reasons why, in my own opinion, this bill should become a law. My individual vote is but one vote. The vote I cast here is the vote of 19,000 stalwart Republicans, whose servant I am, and whose mandate I bear. These men are reading and thinking men. The subject of protection to them is one of a life education, illustrated by practical experience of the benefits of its operation and the distress felt by its want. I may consider and debate, and differ with my fellow-members on the question of schedules, but when it comes to the vital question, for or against protection, there is nothing for me to consider, and I have only to honestly perform my mission here by delivering the vote of my district where my constituents have ordered me to deliver it. That I will faithfully do.

We are here to do the bidding of a great people, not to consult and do what in our opinion is the best to do for them, but to do what they have determined shall be done and have commissioned us to do in their name. We are 357 men, and it is not in keeping with the principles of a republic that so few men should rule so many; but the voice of this House is the voice of a continent. From the thirteen old colonial States of the East, from the Pacific Coast, from the plains of the great Northern Slope, and from the valley of the Father of Waters are gathered here and united in us the voice of 14,000,000 voters, who sent us here for the express purpose of dissipating the gloom which has settled upon the business interests of this country. Some have been intrusted to do it in one way and some another way, but a majority have declared that it shall be done by the restoration of a protective tariff such as is embraced in this bill. If the American principle is to be observed in good faith in the government by a majority, there ought not to be one vote cast against this bill. The Representative who votes for this bill, be he Democrat or Republican, and assists in the relief of the people of the country from the distress brought

upon them by the crime of November, 1892, will leave a proud inheritance to his children's children.

Mr. Chairman, I feel this to be the grandest opportunity of my life in the discharge of my duty to my country and its people—to be able to speak and to vote for a measure which will, in due time, bring back to us the conditions of prosperity and happiness which we enjoyed in 1892. I am proud to stand here as a representative of a party which has ever striven to maintain the honor and increase the luster of the starry flag, and has now come again to the support of the nation in this the hour of its greatest need.

#### The Tariff and the Cotton Grower.

#### SPEECH OF

HON. J. WILLIAM STOKES,

OF SOUTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 30, 1897.

On the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. STOKES, under resolution of March 19, said:

Mr. CHAIRMAN: The discussion of a mere theory can never be a popular discussion. It is rarely the case that the speech or the speaker upon such a topic can command the continued attention of even the more thoughtful. Still less, if possible, is the history of a theory likely to enlist and hold the attention, even when the theory itself lies back of so absorbing and far-reaching a subject as a tariff tax upon the many for the benefit of the few.

And yet, Mr. Chairman, no discussion of the tariff question would proceed upon logical or statesmanlike lines, unless it recognized both the theory and the history of tariff legislation in this country. And he who looks into the history with unbiased mind, an earnest, sincere searcher for truth, must soon recognize that there is a theory, or rather theories, on this subject, and that the practice of the two leading schools of thought on this subject varies very widely from the theories which they hold, or are charged with holding. On the one hand, the Republicans charge the Democrats with favoring free trade, and hence, they say, we are in positive opposition to the industries of our country. On the other hand, the Democratic party retorts with the charge that Republicans favor protective or prohibitive duties on imports, thus enforcing the exclusive use of American products at a higher price than the same or better goods can be bought in the markets of the world.

As is usually the case, the truth lies between these two extremes. Measured by the tariff measures offered or enacted by each party from time to time, when intrusted with power, the correct statement of the Democratic position has been in favor of a tariff for revenue only, with incidental unavoidable protection; from the Republican side the contention has been tariff for protection of certain industries, with incidental revenue. Yet each in practice has varied widely at times from even this modified statement of position. For instance, the Democratic tariff measure of 1846 was projected more closely on free-trade lines than any that preceded or followed it. Indeed, it was passed by the Democratic party with the avowed intention of putting in operation as far as possible the principles of free trade, and yet an average duty of 30 per cent was imposed on iron and iron manufactures, wool and woolen manufactures, and cotton manufactures; while tea and coffee, which are purely revenue articles, since they are not produced in this country, were admitted free of duty. The same policy was continued in the act of 1857; and yet in a literal sense these measures were by no means free-trade measures. It is a fact worth noting, however, that the period covered by the life of these two bills, which went farthest in the direction of free trade, was characterized by the most general and pronounced prosperity in the history of our country.

It is equally true that Republican tariff measures have not, in all their schedules, been uniformly protective. But he would be blind to truth who should arise from the study of this question without the impression that history has borne out the contention of the Democratic party against protection in respect to the breeding of trusts and combinations. It is curious to note in this connection that the protective feature of our present system, as such, was not suggested by the manufacturers themselves, who have been its chief beneficiaries. It was introduced by the Congress as a compensation to the manufacturers which were made the subject of direct internal taxes to carry on the war. The nation was in peril. Money was needed, and it was raised by the most certain and quickest method; i. e., by excise duties on iron, cotton, woolen, and other manufactures, incomes, etc. But once these industries got a taste of public legislation for private gain,

they combined to retain their advantage, and they still retain it, thirty years after the internal taxes were removed. They have grown to such powerful proportions that they have the Government practically by the throat; and the present tariff bill is but a compilation of the schedules submitted to the Ways and Means Committee by the several combines interested. The circle of protected industries has been steadily enlarged until it includes almost every necessary article in general use by the people. So much for the historical side of the subject, and what it reveals as to the actual attitude of each political party toward this question.

The main point to be borne in mind all through this discussion, the practical point, is that the tariff is a tax. Even Republicans are found frank enough to admit that; and that the effect of that tax is, in most instances, to increase the price of commodities to the consumer. Taxes are direct and indirect according to the mode of laying and collecting them. It is perfectly plain who pays a direct tax such as is levied in the States and counties and municipalities of our land. It is also quite clear who profits by the payment. The party who pays a direct tax takes the itemized receipt of the person designated by law to receive the tax, the amount of which is ascertained pursuant to law; and the beneficiaries of the tax are likewise distinctly designated by law, and how much each is to get for service performed for the public good. There can be no mistake as to the payer and the payee. Both are in the open, and the amount and each item of the amount are definitely fixed by law. It is not necessary to say that a tariff is not this sort of tax.

In the case of the indirect tax, it is only by the closest scrutiny by expert minds that in many cases the tax can be traced from the pocket of the payer (who is usually the consumer) to its final destination in the pocket of some unlicensed collector of the tax. The payer may, and often does, feel the burden without realizing whence it comes, or who is the beneficiary of his added load. That is the very essence of a tariff tax. If the payer could trace always and unmistakably the tax he pays upon salt, sugar, matches, woolen and cotton goods, cutlery, and almost every item of daily living from his own pocket, until it lands in the pocket of the protected trusts and monopolies that control all these necessities of life, does any man believe the existing system could stand? Does any advocate of the protective system dare trust his pet scheme to such a test? You do not dare do it. You know and everybody knows that your system would not stand a year, certainly not longer than the next general election. It is inherently a vicious system; and positively pernicious in the temptation which it offers to shift the burdens of taxation from the strong to the weak, from the alert to the less watchful, from those able to resist unjust exaction to those less able to resist or make themselves heard.

But I need not take up more time upon the general aspect of the question. We have the indirect tax with us in its most vicious and pernicious form. It is the condition in which we find ourselves, rather than the theory with which we are concerned. What of the pending bill? It is obnoxious, of course, to all the objections already pointed out to indirect taxation in general—in most items in an aggravated form.

It will be impossible, within the scope of this discussion, to consider the various schedules, covering thousands of items, in detail. It must suffice to say that almost every conceivable article that enters into the living of the poor is taxed in this bill—salt, matches, sugar, flour, shoes, woolen and cotton clothing, medicines—all these, and a thousand others of like character invite criticism, and it is a temptation to enter into that sort of consideration of this bill; but time and utility suggest a different course.

I desire to be entirely practical and to limit my discussion to present, living phases of the question; and so I will pass at once to that phase which most immediately concerns my section and consider it in the light of the general truths already developed. I refer to the features of the bill in their relation to the cotton-farming industry, easily the most important factor in the industrial problem of my section, whether considered in point of numbers, or of sturdy independence, or of value of product. Not that I underrate the cotton-manufacturing, tobacco, lumbering, and other industries of my State. Far from it. It is simply this. They are so linked with the favored industries of like character in the East that they are fairly well cared for in the general scheme. The cotton farmer is not in that situation. Not only does he bear his full share of the tax on the thousands of articles referred to already as entering into the daily living of all citizens alike, but almost every article used by him in the production of his crop is taxed for the benefit of some other industry; while his product must be sold in the markets of the world in competition with the world's products.

This bill imposes a tax on trace chains of from 1½ to 2½ cents per pound; on agricultural implements, 45 per cent ad valorem; on plows, cotton gins, mowers, and reapers, 45 per cent; on cotton ties, seven-tenths of a cent per pound; on bagging, 60 per cent ad valorem, and so on through an extensive list.

And how is it proposed to compensate the cotton farmer for

these iniquitous exactions? What remedy does this bill propose for the admitted inequality? So far as the bill itself is concerned, it proposes absolutely nothing. But an amendment was voted down in the Ways and Means Committee, we are told, imposing an import duty of 2½ cents per pound on cotton brought to this country from abroad. We are told further that this amendment will be offered in the House, and as the opportunity may not present itself under the rules for full discussion of that proposition, I will discuss it at this time.

Some adjustment of the wrong to the cotton grower is necessary. It is infamous that he should be so discriminated against. I am anxious to vote for and support every measure that promises relief to my fellow cotton growers that does not involve a sacrifice of principle; and I feel sure they will never ask anything of their representatives or for themselves that involves moral or political turpitude. Let us examine closely this proposition for an import tax on cotton.

What does it mean? What does it imply? What benefit does it confer if adopted. How does it square with our principles? These are the questions that I shall attempt briefly to consider and answer.

To my mind this is one of the most momentous propositions, the most far-reaching in its consequences, that has confronted the Representatives from the cotton-growing States and the cotton growers themselves in the last quarter of a century.

Mr. Chairman, in behalf of the cotton producers in my section, I raise my voice against the imposition of the proposed tax upon cotton. The great majority of the cotton farmers down there are Democrats by tradition, as well as by intelligent conviction. They believe that good morals and good political economy go hand in hand, and that upon this particular point both are embedded in the tenets of the Democratic party throughout its history—particularly in that Democratic doctrine enunciated at Chicago in 1892, as follows:

We denounce Republican protection as a fraud, a robbery of the great majority of the American people for the benefit of the few. We declare it to be a fundamental principle of the Democratic party that the Federal Government has no constitutional power to impose and collect tariff duties except for the purposes of revenue only, and we demand that the collection of such taxes shall be limited to the necessities of the Government when honestly and economically administered.

And again, in 1896, the Democratic party, after reaffirming the principles laid down in former platforms, enunciated this doctrine:

We hold that tariff duties should be levied for purposes of revenue, such duties to be so adjusted as to operate equally throughout the country and not discriminate between class or section, and that taxation should be limited by the needs of the Government honestly and economically administered.

Not only did we subscribe to these doctrines when enunciated by the national party, but before those conventions met in Chicago, the farmers of my State had embodied in the platform of the State Democracy the demand of the Farmers' Alliance upon this point:

Believing in the doctrine of equal rights to all and special privileges to none, we demand that our national legislation shall be so framed in the future as not to build up one industry at the expense of another. We demand, further, a removal of the existing heavy tariff tax from the necessities of life that the poor of our land must have.

Upon these declarations of principle, the issue, so far as the tariff question is concerned, was pitched in our State; and upon these issues we were sent as Representatives to this Hall.

For my part, I believe the Democratic party of my State was honest in its profession of principle. I believe the farmers who compose the bone and sinew of that party and who control its destiny were sincere when they embedded those principles in the platform of the party. I refuse to believe that they said one thing and meant another; or that we can truly represent them by promising one thing before election, and doing a different thing after election.

There is no concealment of the purpose of a tax on cotton. It is to protect the home producer of a certain staple of cotton from imports of Egyptian cotton. That is the avowed intention. It is not pretended by anyone who has accurate information on the details of the subject that it will or can produce an appreciable revenue. The purpose is distinctly stated. It is to shut out Egyptian cotton—that is, protect the home producer of cotton of corresponding staple. This is the very essence of the protection doctrine. It is protection for protection sake, without even the incident of revenue. It is protection pure and simple, and its advocates are protectionists. And yet our platform says in unequivocal language:

We denounce Republican protection as a fraud, a robbery of the great majority of the American people for the benefit of the few. We declare it to be a fundamental principle of the Democratic party that the Federal Government has no constitutional power to impose and collect tariff duties except for the purposes of revenue only, and we demand that the collection of such taxes shall be limited to the necessities of the Government when honestly and economically administered.

If that were a true utterance when the Democratic party went before the people in 1892 and in 1896, it is eternally true, and it

can not be displaced by any considerations of mere loss or gain. If it was robbery to take from the farmer his hard earnings in the shape of a tariff tax on bagging and ties for the benefit of manufacturers, is it not equally robbery for the farmer to ask a tax on his product at the expense of others? If it is unconstitutional to levy and collect a tariff duty except for purposes of revenue only, as held by the Democratic platform, how can any Democrat defend a proposition for a protective duty pure and simple?

This proposition is a subtle appeal to that most masterful and sordid of all human passions—self-interest—coupled with an implied sneer at the "sentimentality" that has, they say, kept the South back in the race of dollar prosperity. I remind those who sneer that her sentimentality has been the crowning glory of the South in the past. It is the rudder that has held her true to her traditions and her principles in the past, unshaken, unmoved, amid the mad struggle for mere money prosperity. I would remind the scoffers that there are, in the estimation of the South, other standards of excellence besides the dollar standard.

It is but his just meed of praise to say that to-day the Southern cotton farmer has preserved these higher standards and estimates in purer type, perhaps, than any other class of our fellow-citizens. In the South, as elsewhere, the farmer is the great moral, social, and political breakwater against the tide of sordidness that threatens to engulf society, and merge all standards into that of the American dollar.

But, Mr. Chairman, even if heeding the seductive casuistry concealed under the plausible appellation of "business methods," we should deliberately sit down to compound with principle and juggle with conscience, what of substantial benefit is offered the cotton farmer in the proposition to place a tariff of 2½ cents on cotton imports?

If it be not too violent an assumption, assume sentimentality aside; assume principles and platforms and morals thrown to the wind for the time, and ourselves sitting down in cold blood to consider this proposition from the standpoint purely of "business method." Assume all this, and what is there in the proposition for the farmer. Let us look well to this, for if we are to consider in cold blood this proposition to sell out our platform for pecuniary gain, let us be sure not to sell too cheap. Let us not sell out our birthright for a mess of pottage, and less than a mess of pottage. If we embrace this proposition of the tariff robbers to divide the "swag" with us if we will not squal, let us be sure that the "swag" is worth the sacrifice demanded of us. What do the promoters of this tax offer us as compensation for the abandonment of our platform, as an inducement to compound our principles, as a sedative to our sense of honesty? What do they offer? I assert here and now, and I defy contradiction, that so far as the bulk of the cotton farmers are concerned, the imposition of an import duty on cotton will not help one ten-thousandth of a cent. It would not touch the shortstaple cotton producer at all. It would touch to a very small extent the producer of lower grade sea-island cotton. It would touch directly only a very small class, engaged in producing the intermediate grades; and, as I shall show presently, it would not effect any rise of price to them; but if it should result in an enhancement of price to those few, it would mean just so much tax levied upon the growers of shortstaple cotton, who compose the great bulk of our cotton farmers, for the benefit of those few. In other words, if the proposition to place a tax of 2½ cents on imported cotton should prevail, the promoters of the tax would have us believe that it would result in enhancing the price 2½ cents to producers of the intermediate grades, now raised by a very few farmers, and necessarily limited to a very few. A more absurd contention never emanated from a sane and at the same time serious source. But suppose, for sake of argument, that it did raise the price of the home product 2½ cents, who will pay that additional 2½ cents? It will be paid by the consumer of the goods manufactured from that grade of cotton. The great mass of the cotton farmers will pay their share of that 2½ cents per pound in proportion as they use that grade of goods; and thus the great majority of the cotton farmers will be taxed for the benefit of the very few engaged in producing intermediate staple. And yet this is the result of the boasted "business method" of laying a tariff!

But I said above I would show that not even the grower of cotton with which the Egyptian product competes would be benefited. Why, Mr. Chairman, even the average farmer knows that the price of cotton is fixed in Liverpool. He has an object lesson on this point each recurring season, burned into his memory by hard experience.

The farmer in my section knows that this is in obedience to an inexorable law of commerce, that when any crop is produced in excess of the home demand, the surplus must be sold, if at all, in the markets of the world; that this surplus will be sold at the world's price, and that the price of the home consumption will be regulated in the main by the world's price on the surplus. It is

also well known that in fixing the world's price on cotton the entire production of all countries and all climes in its relation to probable demand has been considered.

The American crop, the Egyptian crop, the Indian crop, the Chinese crop, the Peruvian crop—all are footed up and constitute the world's crop upon which a world's price is fixed in Liverpool; and not a pound can be bought or sold anywhere in the world that is not bought or sold upon the basis of the world's price in Liverpool, less freight. And it makes absolutely no difference whether the ninety thousand bales imported here last year were sold in the American market or in the antipodes, the price would be always and everywhere the Liverpool price, less freight. How, then, can the proposed import tax of 2½ cents help the price to the grower of the grades affected by Egyptian cotton? Is it not perfectly plain that this is a sheer pretense? It is a false pretense upon its face even to the very small class of farmers affected by it, in that it does not, and can not, accomplish what it promises to them; and if it did, such benefit as is conferred would be at the expense of the great majority of cotton farmers along with those who consume the goods manufactured from this grade of cotton.

Can any further demonstration be necessary to the unbiased mind? If corroborative evidence of history in collateral cases be desired, it is ready to hand in the Statistical Abstract issued by the Agricultural Department. The McKinley Act placed a tariff of 15 cents per bushel on corn and 25 cents per bushel on wheat, both of them, like cotton, raised largely in excess of the home consumption. The pretense was to compensate the growers of corn and wheat for the burdens laid on the farmers of the West, for the benefit of the protected industries of the East. Did the import duty help the growers of corn and wheat? No. Although the production of both corn and wheat decreased for several years after that tax went into effect, the price of corn went off from 40.6 cents per bushel in 1891 to 25.3 cents in 1895. Similarly the price of wheat went off from 83.9 cents per bushel in 1891 to 50.9 cents in 1895. It was a pretense and a fraud upon the Western farmer, in fact, just as this will prove to the cotton farmer. The price not only went down to the farmer in spite of reduced production and the protective tariff; but there was no revenue to the Government, as there never had been any appreciable imports.

Hence, I repeat, if we listen to the seductive phraseology of gentlemen who assure us that it will be good "business method" to even up our losses from the tariff robbery by joining the robbers and dividing the "swag," let us throw off all disguise, proclaim ourselves protectionists, and openly demand something substantial. Let us not sell out too cheap. Let us have some real benefit. What shall it be? How shall the cotton farmer secure a bigger divide with the tariff robbers? That is the "business" question. Will it be by demanding a still higher import tax on cotton—say, 5 cents, or 8 cents, or 10 cents? No; it is supreme absurdity to expect any enhancement of price to the producer from a tax on imports so long as the bulk of his product is exported. Reason demonstrates this by infallible proof, and experience verifies the demonstration. There is but one possible way to benefit the producer of an export crop by any legislation, and that is by a bounty on exports or on home consumption. I think even our protectionist friends will hesitate long before committing themselves to the bounty iniquity again. Now, if our friends, the solicitous friends of the farmer, who profess to desire to compensate him by legislation for the unjust exactions laid upon him by legislation, if these friends sincerely desire to do something for the cotton farmer, something worth the cotton farmer's while to consider, let them urge a bounty on exports or on home consumption. If they are sincerely trying to help the cotton farmer, and not talking merely for buncombe or to fool the farmer, let them offer him a bounty, which is the only possible way to reach the farmer's present distress. This is just as consistent as the doctrine they now exploit; and it is also just as pernicious; but why take two bites at a cherry, even though a rotten cherry? They say if protection is to be the policy of the Government, then let us go in for our full share of it by asking a 2½-cent import tax on cotton. It is just as rational, just as proper, to say, "Since protection is to be the policy of the Government, give us something that will really benefit us; give us a bounty." It is no more unconstitutional to take the money out of the Treasury to pay a bounty to cotton growers than it is to take money out of other people's pockets for the benefit of the cotton growers.

This novel and delusive plan of operation, glossed over with the seductive appellation of "business methods," translated into plain, practical, every day transactions, means simply this: They say the tariff is a robber; that it robs the farmer; therefore the farmer should turn robber and in turn rob, not those who prey upon him, but others who are innocent, perhaps, of harm to him. Translated into the everyday transactions of the farm, this proposition means, if a thief breaks into your barn, you may even up your loss by raiding your neighbor's pigpen. If your pantry is robbed, then under the ethics implied in so-called business methods

you are justified in robbing your neighbor's smokehouse or hen-house.

Away with such casuistry! Away with such downright dishonesty! If we believe in the principles upon which we made our fight before the people, let us adhere to them; if we have changed our minds since the election upon this great economic question, let us have the frankness to say so, and defend the change as best we may.

No, Mr. Chairman; the cotton farmer is not demanding the protection of the Government. Bred to the idea of largest liberty and free institutions, with a sturdy self-reliance and a simple faith, begotten of daily, hourly struggle with the mighty forces of nature, he stands out in the perspective of our history as the great conservative force of the nation—the largest contributor to her prosperity and payer of her taxes in time of peace, and her surest defender in time of war. What he does ask, and all he asks, at the hands of the Government is a fair field and no favors—"equal rights to all and special privileges to none."

He will scorn the temptation to compromise that doctrine by going into the robber combine. He has already impressed his demand. It is evidenced by the effort to do something, though that something is a fraud and a pretense. This artful device to fool the farmer is most conclusive evidence that the tariff robbers hear and fear the just protests of the farmers. Let us not flatter by the way nor allow ourselves to be entrapped by cunningly devised remedies that are intended to deceive. We reject with scorn the invitation to put our hands in other people's pockets, and indignantly serve notice upon others to keep their hands out of ours.

But enough of this, Mr. Chairman. The tariff cut no figure in the last campaign, and yet Congress is called in extraordinary session to deal with the tariff. We have already aided our opponents too much in emphasizing this question and correspondingly obscuring the real issue of the campaign—the financial question. In 1893 the old parties insisted upon the tariff as the main issue, and sought to read out all who discussed the money question. Yet when the extraordinary session of Congress was called it dealt, not with the tariff, but with the question of finances; and for this trifling with the verdict of the people at the polls the party responsible was overwhelmingly defeated in 1894. In 1896 the controlling issue was the money question, and this Congress is trifling with the verdict at the polls last November, by tinkering with the tariff. Let the Republican party beware! The fate of the Cleveland dynasty awaits them, as it awaits every party that dares trifle with the verdict of the people at the polls. I refuse further to be diverted from that issue. I insist now, as I have insisted upon every stump since 1890, that the farmer's trouble has been brought upon him by the unjust and vicious financial system. The farmer of the South, equally with the farmer of the West, can never be prosperous until the money of our fathers be given back to their children. You may pile up the tariff like Pelion upon Ossa, but it can never bring prosperity to the farmer.

#### The Tariff.

#### SPEECH

OF

HON. JOHN H. STEPHENS,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 31, 1897.

On the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. STEPHENS of Texas said:

Mr. CHAIRMAN: I represent the district in the State of Texas in which the city of El Paso is situated. The smelting of lead ores containing the precious metals is the greatest industry of that city, furnishing employment for hundreds of men. But if Congress places a duty of 1 cent per pound on the lead-bearing ores shipped from Mexico to these or any other smelting works in the United States for treatment, as proposed by paragraph 181 of this bill, it will result in excluding lead-bearing ores from this country. The smelting industry on the Mexican border will be destroyed, thousands of men will be thrown out of employment, and this smelting industry will be driven into Mexico permanently.

Paragraph 608 places ores of gold, silver, copper, and nickel on the free list. Mexican lead ores nearly always contain some of these metals, and by placing a tariff of 1 cent per pound on the lead in

the ores you prevent the importation practically of all ores from Mexico. This policy is, in my judgment, suicidal.

The avowed policy of the Republican party is, first, to protect home industries; and secondly, to furnish a revenue. The duty on lead ores proposed in this bill will not protect, but will destroy this smelting industry. The hearings before the committee preparing this bill show that one company, the Kansas City Refining and Smelting Company alone, annually smelt and refine between 300,000 and 400,000 tons of these ores, of a net value of between fifteen and twenty millions of dollars.

When we consider that this is only one of many companies thus engaged, it will be readily seen that this is a business of great magnitude, and one that employs an army of American workmen at good wages, and one that should be encouraged rather than destroyed. The tariff act of 1890 imposed a duty of 1½ cents per pound on the lead contents of silver ore. Prior to this act the Treasury Department had ruled that lead ores containing silver should be classified as silver ores when the value of the silver in the ore exceeded the value of its lead contents. Therefore nearly all of the lead ores bearing silver coming from Mexico was admitted free of duty. Under this wise ruling and law these great smelting industries were built up, and their erection and success was due in a great measure to the free importation of Mexican lead ores. Silver ores containing lead are known as fluxing ores, and the lead they contain assists in the extraction of their silver contents and also serves to extract the silver contents from dry ores that contain no lead. These dry ores come mainly from the silver regions of this country. Seventy-five per cent of the fluxing ores used in the smelters at El Paso comes from Mexico. But in the United States the proportion of flux ores is less than 25 per cent of the entire silver ores that we produce; hence the silver-bearing lead ores are absolutely necessary for the successful smelting of the dry ores of our own country.

The tariff law of 1890 prohibited the importation of these silver-lead ores from Mexico, at one stroke ruined the business of smelting these ores on this side of the Mexican line, and drove this smelting industry into Mexico. It is estimated that ten millions of American money was invested in Mexico in smelting works as the direct result of this provision of the McKinley law of 1890. My own State lost at least \$5,000,000 of taxable wealth by this unwise law. The smelting plants thus driven into Mexico have an annual output of lead amounting to about 50,000 tons—equal to one-third of our annual product. This pig lead from Mexico has been thrown on the markets of the world in competition with our lead products, and lead bears a lower price than ever before for this reason, and these smelting works employ Mexican labor in Mexico instead of American labor in the United States.

The Wilson bill of 1894 reduced the duty from 1½ to three-fourths of a cent per pound on these ores. This only proved to be a case of locking the door after the horse was stolen. Now, strange to say, the advocates of this bill propose a duty of 1 cent a pound on these ores, which is a prohibitory duty.

I think that I have shown that this provision of this bill will not protect, but will destroy, our smelting industry. In the second place, it will not produce a revenue, for the reason that enough smelting plants will be located in Canada and Mexico to smelt the lead-silver ores now coming to us from these countries.

Lead in Mexico is worth from 1 to 1½ cents per pound. This bill proposes to tax the lead in this ore at 1 cent per pound, and this estimate is on the lead contents of the ore before it is smelted—it will lose 10 per cent of its weight in the smelting process; thus the duty will be raised to \$1 on 90 pounds of unsmelted lead.

It is therefore clear that under this proposed law no Mexican or Canadian miner will ever bring his lead to this country for treatment. The ultimate result will be that a lead trust will be formed in the United States to raise and control the price of this article so necessary to our people.

Why is it that the Republican party, claiming, as it does, to be a friend of laboring people, drives both labor and capital from our country by driving out the smelters? And, again, why place a prohibitory tariff on lead that so many of our people use and must have, and at the same time let in diamonds free of any duty?

Why does this bill put a tariff duty of 2 cents per pound on dressed meats—a product that is controlled almost exclusively by the packing trust, formerly known as the "big four," headed by Armour, at Chicago—thus legislating into the pockets of this trust multiplied millions of dollars annually, and at the same time we find hides, a product of the farmers and stock raisers, on the free list?

Why do we find that most indispensable article, salt, taxed by this bill at 12 cents per 100 pounds in sacks, etc., and in bulk 8 cents per 100 pounds, and at the same time we find musk, mother-of-pearl, raw silks, etc., all on the free list? Does not this bill say to the country plainly that the Republican party intends to take care of the rich classes, while the poor, the masses, must take care of themselves?

I find in yesterday's New York Journal, a paper published in New York City, an interview with Mr. Franklin Woodruff, of Brooklyn, a Republican; which interview shows that at least one Republican in this country has objections to this bill. I ask that this interview be read as part of my remarks:

[From New York Journal, Sunday, March 23, 1897.]

WOODRUFF EXPOSES THE SALT RING—SAYS DINGLEY TARIFF IS ARRANGED IN THE COMBINE'S INTERESTS—ROBBERY, NOT PROTECTION—BROOKLYN MERCHANT AND REPUBLICAN, HE WILL APPEAL TO THE SENATE FOR FAIR PLAY—A MENACE TO OUR SHIPPING—HE POINTS OUT THAT THE CONSUMER WOULD BE MULCTED AND VESSEL INTERESTS SERIOUSLY MENACED BY THE PROHIBITIVE RATES OF THE BILL.

Franklin Woodruff, the Brooklyn importer of salt, who has just returned from an unsuccessful mission to Washington in the interest of the merchants of the United States who desire to have salt retained on the free list, will make another trip to the capital this week in the hope that he may be able to have the schedule amended in the Senate. He says he sees ruin for many merchants if the stiff tax on salt imposed by the Dingley bill is retained. This has more significance when it is made known that Mr. Woodruff is a staunch Republican and a protectionist.

"The salt tax is an outrage," said Mr. Woodruff to a Journal reporter. Mr. Woodruff used an adjective which need not be repeated here, the better to express his indignation. "This tax will be most disastrous to shipping interests."

"As it is now, our American vessels in many foreign ports, unable to secure return cargoes, bring back salt, but with a duty this will be impossible and they will have to return in ballast. This tax has been put in the Dingley bill simply to enable New York and Michigan salt manufacturers to raise prices and cheat the consumer. I think I am warranted in the statement that the profits now of one salt company located in western New York are unparalleled except by those made by the salt makers in Syracuse during the civil war and up to the year 1872, when a high duty, a premium on gold, and the absence of vigorous or extensive competition gave them an opportunity of which they availed to make enormous profits. They then claimed as stoutly as now the need of protection against foreign salt."

"The sea-water salts, which these manufacturers want barred out, are for the most part brought in American vessels which carry cargoes from our ports to various foreign places, and often depend upon the freight on a return cargo of salt to warrant taking the outward business, which otherwise would be taken by foreign vessels not caring for return cargo. Now, these domestic manufacturers, who, by reason of geographical situation, compete with foreign salt, want to strike a blow at American vessel interests in order to give them a monopoly and a chance to squeeze the consumer."

"But, if I judge rightly, the game won't succeed, as I am advised that there is hope that the Senate will not countenance this grab and will meet our demands for free salt. The Ways and Means Committee of the House seems lost to all reason, and there is no hope there, and the House will follow the committee's bill undoubtedly."

"I make bold to say that salt in this country is protected, in my judgment, to the fullest extent necessary to make the production of it profitable, and that any tax now imposed upon the foreign article would be to simply enable the salt ring in this country to levy a contribution unjustly and unwisely upon different sections of the United States. Transportation fully protects the salt produced in Michigan and the farther Western States, and very largely protects the salt interests in the interior of New York. Yet the Dingley bill provides for a duty of \$1.00 per 2,000 pounds, or more than the present price of a ton of common salt in Michigan, and 80 per cent of the present price of common salt in New York. I ask any fair-minded man, is such protection or any protection necessary in view of these figures?"

"Suppose the bill goes through without amendment and becomes a law, what will happen?"

"It will be a terrible blow at our shipping interests. What's more, the Republican party will be defeated at the next Congressional election, and there will be no more chance of the election of a Republican President in 1900 than that I will be able to fly to my home in Brooklyn. The people are for protection, but not robbery."

Mr. Woodruff has enlisted in the fight against a tax on salt with all the great packing interests in Chicago, Kansas City, and the West, the New York and New England importers and shipping interests generally along the Atlantic coast. These will send delegations to the Senate next week to place before the Senate Finance Committee facts and figures to aid them when the bill reaches them from the House.

I now wish to call attention to the last proviso in this salt paragraph. It reads as follows:

Provided further, That exporters of meats, whether cured or smoked, which have been cured in the United States with imported salt, shall, upon satisfactory proof, under such regulations as the Secretary of the Treasury shall prescribe, that such meats have been cured with imported salt, have refunded to them from the Treasury the duties paid on the salt so used in curing such exported meats in amounts not less than \$100.

This provision was intended to give and does give the meat trust free salt for curing their exported product. Thus this free salt is given the millionaire packers, while the farmers of our country must pay two prices for their salt, for the reason that the Treasury will not refund less than \$100, and not one farmer in a million cures enough meat for the tariff on the salt used by him to amount to \$100 in value. A more outrageous provision was never before placed in a tariff bill in this country. On the one hand it protects the millionaire packer against foreign competition by placing a duty of 2 cents per pound on all imported meats, and on the other hand it gives him free salt to cure his exported meats with.

These protected meat barons have for twenty years, by forming pools, controlled the price of every steer, sheep, and hog raised in the South and West. They have kept the cattle industry in my State, Texas, by the throat for many years, and have exacted a tribute from us of at least \$5 per head on every steer raised on our western plains. They have now gone into politics and laid a heavy tribute on salt, amounting to millions of dollars, and at the same time secured free salt for curing their exported meats. This bill has been framed by the meat, lard, and other trusts, for the purpose of robbing, in the name of the law, the producer of raw

material on the one hand and the consumer of the product manufactured by these trusts on the other. Between the upper and nether millstones, the trusts, through the Republican party, will reduce the people of this country to a condition of industrial servitude. Not content with the desolation produced by this tariff robbery, these enemies of the toiling millions (the Republican party and their goldbug allies, known as the Cleveland Democrats) are seeking to prevent the remonetization of silver, to make gold the only and the permanent standard of values, to take out of circulation the legal-tender United States currency and fund it into interest-bearing bonds, and give national banks the right to issue paper money.

If the trust and money powers, led on as they are now by the Republican party, can carry these, their pet designs, into execution, the laboring and producing millions will be forced into a slavery far worse than the peons of Mexico have ever been subjected to. I now warn our Republican oppressors that whilst the mills of the gods grind slowly, they grind exceedingly fine, and in the near future I expect to see the laborers and producers of this country, by the power of their ballots, drive from power the Republican party and their cormorant allies.

### The South and Its Opportunities.

#### SPEECH

OF

HON. JOHN L. McLAURIN,

OF SOUTH CAROLINA.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 31, 1897.

On the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. McLAURIN said:

Mr. SPEAKER: The provisions of this bill, taken as a whole, disclose such a want of fairness toward the South that a detailed statement, as far as possible, of the condition, rare opportunities, and vast possibilities of that section appears necessary.

As a rule, the people of other sections know but little concerning the real situation in the South, and are apparently willing to draw conclusions from a certain amount of misinformation, obtained through prejudice or error. If I can successfully place before them the true condition of affairs, and at the same time dissipate whatever of error or prejudice that may have obtained, I shall deem myself extremely fortunate.

For more than thirty years past the South has been making a courageous and desperate struggle against great odds. It was compelled to meet the destruction and disasters of war, to face new business, labor, and social problems, and in addition rebuild and readjust its entire economic fabric to conform to radically changed conditions.

During the first twenty years of this trying period the people of the South struggled almost unaided and alone.

Business investments were denied, commercial credits were difficult and uncertain, and immigration was almost at a standstill.

In fact, the unprecedented growth of manufacturing industries in the North and East, together with the rapid development of the great West, caused, during these twenty years, the broken and almost ruined South, in a business sense, to be neglected.

Meanwhile her people, with heroic devotion, continued the work of building up the waste places and stimulating lines of productive industry.

All labored, all economized, and all bent their energies to restore their beloved Southland to its proper position in the nation. Slowly, but surely, a forward movement obtained. Hard work, rigid economy, and a determined spirit at last turned the tide, and the South began to attract the attention of the business world. Immigration began slowly and cautiously. The timidity of capital was overcome, investments in various enterprises were made, and a new era of progress was inaugurated. The dark clouds which had hung so low and threatening over this beautiful and fruitful section began to lift, and the sunshine of a brighter future forced its way through the rifts. One morning the news was flashed throughout the country that a young Georgian, filled with love for his section and her people, burning with a desire to see her wonderful opportunities improved, had stood amid the brains and enterprise of New England and declared there was a New South, and in the name of sound business judgment and safe finan-

cial investments demanded that her advantages, opportunities, and material interests should be recognized.

With an eloquence never surpassed, with facts and statements incontrovertible, Henry W. Grady electrified and astonished his hearers at the progress and standing of the South. While making no apologies for the past, but assenting loyally to her traditions and memories, he proclaimed a New South anxious for development, ready to welcome immigration, and prepared to protect all in life and property. Throwing aside sentiment, casting beneath his feet all prejudice, he manfully declared that the South should henceforth be considered a part of our commercial system; that she had shown herself competent, had proven herself worthy, of the consideration of those who held the power to develop her incomparable resources. It was a wise act, nobly and eloquently performed, and earned him the love and everlasting gratitude of every true Southern heart.

With far less eloquence, but with all the earnestness I possess, I desire to reiterate the sentiments of the lamented Grady and supplement his glorious efforts with the feebleness of my own. Mr. Speaker, the longer I remain in public life, the more I learn of other sections, the more firmly I am convinced that the South should strive to extend her material interests. It is a duty she owes to herself, to the balance of the nation, and to the generations yet to come.

Some may contend that such sentiments are sordid and do not appeal to the nobler instincts of our people. To all such I would reply that disguise it as we may, deprecate it as we should, yet the fact remains that the surest passport to individual independence, with much that this term implies, lies in a well-filled pocket-book. Love in a cottage, with one's neighbors luxuriating in a palace, is usually a myth. Contentment with a crust of bread, while others are living upon the fat of the land, is a delusion, and the individual independence said to come from poverty and want is seldom, if ever, met. The world is becoming more practical and hardheaded every day, and as a result theory and sentiment are retreating before its aggressive advance. To get on, push along, and do something, no matter whether it be in religion, politics, business, science, or upon any other lines, are just now the standards by which men are judged.

In my opinion, the future happiness and contentment of the people of the South will be measured by the increase or decrease in the value of their material interests.

From the Potomac on the North to the great Gulf on the South, and stretching from El Paso on the Rio Grande to Cape Henry on the Atlantic, lies what is usually termed the South.

Between the blue grass of Kentucky and the orange groves of Florida, the vast plains of Texas and the pine forests of the Carolinas, is found an expanse of territory which for fertility of soil, variety of productions, and kindly climate can not be duplicated in any other portion of the globe. There is scarcely a tree, plant, or cereal that can not be grown here, and the wants of man are more nearly met by native production than in any other section of the world.

For the past decade this section has made apparently rapid strides in developing its resources, but this development is not a trifle of what should have been accomplished. Yet it discloses what can be done even under adverse circumstances, and points to the magnificent results which should await the future.

Business sentiment is rapidly changing toward the South, as the following extracts will show:

The New South will be less celebrated in ballads, but better known in the markets and exchanges of the world. She has roused herself to grapple with difficulties which no Northern man can fully appreciate without a visit to her soil. It would be impossible to exaggerate the prostration which prevailed at the close of the war. Her citizens were unaccustomed to labor, her laborers unfitted for citizenship. Her capital had been consumed and her credit had disappeared. But her independence and courage were indestructible. She asked no sympathy and she craved no indulgence. She set herself painfully to learn the hard lesson of toil and economy, and slowly but surely the new life is rising from the ashes of the old. In her heroic struggle she will have the love and admiration of every generous soul, and our children will yet see wealth and abundance flourish where their fathers saw the ruin, desolation, and havoc of war.—*Interior, Chicago.*

The South is a vast country with the best climate in the world, with conditions of health which are absolutely unparalleled, with vast forests untouched, with enormous veins of coal and iron which have yet not known anything beyond their original condition, with soil that under proper cultivation for little capital can support a tremendous population; with conditions in the atmosphere for comfortable living, winter and summer, which exist nowhere else in the country.—*Chauncey M. Depue.*

The New York Financier, one of the ablest financial journals in this country, recently declared:

The marvelous possibilities of the South as a manufacturing section are beginning to attract renewed attention. The trend of capital is undoubtedly in the direction of an area the northern boundary of which is south of Mason and Dixon's line.

To furnish in detail reasons why the South should make material industrial advances would require more space than can well be spared here. But aside from the tangible evidences existing in the shape of new cotton mills, new iron and steel industries, and the certain reflection of abundant prosperity displayed in the many municipal improvements now underway in nearly every town in the South, there are reasons equally weighty for the assertion

that these are but the forerunners of a steady growth in all lines of human progress in that section. In the first place, the South is under an era which could not have existed prior to the war. It invites development, and its corollary advantages in the way of climate and natural resources add to the weight of its invitation.

It is not generally known that the largest percentage of native-born population to-day is found in the South. That fact has been overlooked in the mad rush which made the growth of the West the wonder of the world.

In the South capital will encounter none of the adverse features to which it has been subjected elsewhere. It finds firmly established government, a respect for law and order, and above these inducements an ample opportunity for profit. The natural resources of the South are enormous, and the opportunities for converting its products into finished materials are not equaled in any other portion of the country. The climate is so equable in character that living expenses are less than in the North, while at the same time the standard of living is actually raised. The natural inference is, therefore, that well-paid, contented labor will be the rule, and the disastrous strikes which have interrupted the peaceful progress of our Northern industrial centers will not be met with in constantly recurring periods. We have already seen that the South can compete successfully with the North in almost any branch of manufacturing, and that the advantages on its side are so great that the removal of certain manufacturing establishments to this more favored spot is already assuming formidable proportions. There is an evidence of permanency about this more recent migration that has been lacking heretofore, and it augurs well for the future.

#### Another financial paper says:

The securities offered from and in the South now enjoy favor in the eyes of the investor of the North. The indicator points to the list of investment securities of the South generally as desirable, and we have every reason to believe they will continue to grow into popularity.

The reasons for their being desirable are manifest:

First. Considering the earning powers of the basis of Southern securities, values are low; not inflated as in other sections.

Second. The progress of development in all branches is assured; hence prices will not fluctuate, but an increase is inevitable.

Third. The channel for live investments has been in other directions. The investor's attention has not been directed to the South until recently; hence making it practically a new field.

I could multiply such extracts by the hundred, but give the above at this time to show the more recent trend of business thought toward the South.

At this point I desire to present some statistics regarding the resources and productions of the South. The census shows there are 183,000,000 acres of unbroken forests in the South, which to-day represents the reserve timber lands of the nation. This timbered land, besides vast areas of pine, contains our country's supply of walnut, cherry, cypress, oak, hickory, and other valuable woods. Already the value of these timbered forests is being appreciated, and sawmills, shingle and planing mills, furniture factories and other woodworking enterprises are springing up throughout that section. The manufacturers of furniture, I am informed, are very successful, and this line of industry is rapidly increasing.

The coal and iron resources of the South have been more thoroughly advertised than perhaps all other advantages combined, and yet their extent, low cost of mining, and extremely close connection are imperfectly known. I am told that in some localities coal, iron ore, and limestone are found close together in the same range, a condition that exists nowhere else in the world. Granite, marble, and building stone abound in great variety. Tennessee, Georgia, Virginia, and the Carolinas are especially rich in this material. In fact, some of the finest specimens found in our beautiful new National Library came from the Southern States. Phosphate rock is found in great abundance and richness, and the manufacture of fertilizers is a large and growing industry. In no other section are water powers so abundant or available located. In the Carolinas alone there are water powers sufficient to run all the machinery in this country. Facilities for transportation, both by rail and water, are good and growing better each year, and the time is near at hand when the best paying properties in this line will be found in the South.

The people of the South are religiously inclined, and churches are found everywhere. Colleges, academies, and other institutions of learning are scattered freely throughout the South, and a strong, progressive system of public schools is found in every State. Agricultural colleges are especially fostered and are being carried to a high state of perfection and usefulness. People from other sections will find our educational facilities not disappointing, and our standard of morals fully up to the average of any other portions of the country. Our system of State governments are quickly and easily learned, our land titles are perfect, and our taxes unusually low. In fact, the South, through enforced economy, has reduced the expenses of State administration to a minimum.

While the productions of the South are in some lines enormous, it must be remembered that under favorable conditions such productions could be extended almost without limit. That they are not increased is owing to a want of capital mainly. The cotton crop of 1896 amounted to 9,837,000 bales, or 82 per cent of the total production of the world. This is the largest export crop of this or any other nation, and brings more money from abroad than all other agricultural products combined. The total production of cotton since 1790 was worth, reckoned at the price in gold each

year, \$14,908,558,430. The 81,124,190,650 pounds exported since 1795 brought to our shores \$10,400,000,000. The South holds a monopoly in the production of the best and most desirable cotton, and if permitted to manufacture it would make this the richest nation on earth. The cane-sugar industry is also limited to the South, and its production should be increased many times. We produced last year 729,392,561 pounds of sugar and 37,617,076 gallons of molasses, but imported 3,574,510,454 pounds of sugar and 15,075,879 gallons of molasses. In my opinion the production and importation of sugar discloses a condition not very creditable to the business ability of our people. With an abundance of land suitable for the production of sugar, I can see no reason why investments in that line should not prove remunerative. It presents a fine field for American pluck and energy.

Rice is another product of the South, of which we produced last year 168,665,440 pounds and imported 219,564,320 pounds. Yet there are vast areas of rice land inviting development and cultivation. Here is another opening for capital, with an almost assured profit. All the cereals can be produced in the South at a profit, as agricultural statistics show. Fruits of all kinds are produced easily, and generally all who have made it a business have been amply rewarded. Stock of every description do well in the South and are raised as a rule with profit, since there are no long severe winters through which they must be carried at great cost.

A recent traveler through the South declared:

The South is the finest farming country of the Union. It is the richest in mineral deposits; it has the best timber lands on the continent; it has the most genial and healthful climate; it is well watered by springs, creeks, rivulets, and rivers; it has an abundance of water powers; it has thousands of miles of navigable waters; it has no superior as a fruit-raising section; it has cheap lands for the farmer; mineral lands for the miner; timber for the lumberman and woodworker, and golden opportunities for all classes.

Our lands are cheap and our markets, as a rule, are convenient. I clip the following from a Northern agricultural paper:

Unquestionably the South is the attractive section of the United States for the poor man. The man now living on a rented farm in the overcrowded portions of the North has great difficulty in getting a "farm of his own," while if he comes South it is within the power of almost everyone to secure a place and be in position to build up and enjoy a home, leaving something for his children to inherit.

In taking up the manufacturing opportunities in the South, I will quote from an article written by Mr. M. V. Richards, land and industrial agent of the Southern Railroad, which shows much thought and experience. He says:

There is no section of our country better adapted to manufacturing industries than the South. It has all needed raw materials in the greatest abundance and of the best quality. Its iron-ore fields are practically inexhaustible, and they embrace all varieties of ores, and many of them are of surpassing richness. It has coal enough to last for generations, even with the most prodigal use. It has limestone for reducing its ores and every facility for making a first-class quality of pig iron as cheaply as can be done in any part of the world. It has also been demonstrated that steel making is quite as easy and equally profitable as iron production. It has also extensive forests of timber, with varieties suited to every kind of woodworking industry, and any article that has timber for its raw material can be manufactured in the South and from materials that have no superior anywhere.

In building-stones it has granite, marble, and sandstone, all of excellent quality and in unlimited quantities, as well as clays for pottery and earthenware, porcelain, and brick clays, and glass sand, ocher for paint, etc.

Its forests produce tar, pitch, turpentine, and rosin, while potash is readily and easily made in many places.

It has also been shown that cotton manufactures are more profitable in the South than in New England, and Southern mills have been paying double the amounts in dividends than Eastern mills paid. The advantages in this respect have been so clearly shown that Eastern capital is largely flowing into the South to be employed in this industry. And why should it not be so? Cotton may be grown right by the side of the mill; the water-power is at hand to furnish the motive power to drive the machinery; the timber and other building materials are easily and cheaply obtained to construct the factory; the charges on handling the cotton incident to shipment are avoided, and even if the same wages were paid as are paid to New England operatives, the savings alone alluded to would constitute a handsome profit.

And what is true in regard to cotton manufacturing holds good in regard to the manufactures of wool. There are millions of acres of land in the South admirably suited to sheep husbandry. These ranges afford pastureage for the greater portion of the year, and the climate is so propitious that little care is needed, and sheep raising has paid handsomely to all who have engaged in this business. Sheep and wool are two of the world's staples, and when the sheep ranch and the woolen mill are brought together, as they can be all over the South, why should not these branches of industry go hand in hand equally well with cotton raising and manufacturing? The same possibilities are open to both, and if there be any advantage, it is in favor of the woolen industry. Sheep raising has proved successful in other sections where it has had a fair chance and where both mutton and wool had to be exported to find a market, but where the woolen mill can be successfully put up and operated at the very door of the sheepfold, as it can be in the South, this industry would succeed beyond any reasonable doubt or question.

All branches of industry can be carried on cheaper in the South than in the North or East, for the reason that the cost of living is much less. Food supplies are cheaper and much more abundant; the climate is milder, requiring less fuel and clothing; the raw materials abound in all sections, and are conveniently located for using, and the facilities are unsurpassed for converting the raw material into the finished product at a minimum cost.

It is to be remembered that the South is nearer to the people who consume manufactured goods than any other section; that it has superior transportation facilities, both by rail and water; in fact, nature has given it many advantages, and where these are utilized there can be but one result—success, ample and abundant. With all her native sources of wealth fully developed, the South will be the leading and richest section of the country, both in agriculture and mechanical industry.

The following statements, taken from an address by General Longstreet, show the comparative growth of manufactures in the South:

The value of the manufactured products of the South in 1880 was \$457,454,000. In 1890 it was \$917,580,000—a gain of 100 per cent. In 1889 the factory hands in the South received \$75,917,000 in wages. In 1890 they received \$222,115,000. In 1880 the South had invested in cotton manufacturing \$21,978,000; in 1890, \$81,100,000; and now about \$120,000,000. In 1880 the South had \$3,500,000 invested in the cottonseed-oil industry. It has now more than \$30,000,000 so invested. The railroad mileage of the South has been increased since 1880 more than 25,000 miles, at a cost in building new roads and in the improvements of old ones of over \$1,000,000,000. In 1880 the South made 307,000 tons of pig iron. In 1890 it made 1,702,088 tons. In 1890 the South's output of coal was 6,000,000 tons. At present it is at the rate of 30,000,000 tons per year.

While these comparisons show a large per cent of gain, yet the aggregate is decidedly meager for the advantages presented. The Manufacturers' Record comes much nearer the real situation:

Every man in the South must realize the importance of factory development. The manufacturing advance of this section is scarcely great enough yet to enable our people to see the value of industrial interests. Think of a region having 600,000,000 acres of land, stretching from the Potomac to the Rio Grande, admittedly having more natural resources of coal, iron, cotton, timber, water powers, and other elements of successful manufacturing than any other equal area on earth—with a population of 20,000,000—and yet having \$300,000,000 less capital invested in manufacturing than the one State of Pennsylvania—think of this and then imagine, if you can, the activity of industrial development of the next few years, with a field for expansion to which no limit can be set.

During a recent hearing before the Maine legislature on petitions for a reduction of the hours of labor in the factories the following statements were made concerning the cotton mills of the South as a reason for not acting upon the petitions:

The advantages of the Southern cotton mills are the low cost of labor, nearness to the cotton fields, and low taxes. The only disadvantage is the extra expense of machinery, due to the cost of getting it there. The people's wants are not as great as with us, and they never will be. They are perfectly contented to live for less, and their clothing, food, and fuel cost less than with us. Many of the mills give tenement rent free to their operatives, but when charged for, the rent is usually 25 cents per room per month. The houses are set on posts, usually all open underneath, and contain from two to four rooms. They are not plastered and can not cost more than \$200 or \$300. In such houses it would be impossible to pass a New England winter.

You will notice the tendency to build mills of late in isolated places, away from the cities and away from neighboring mills. The object of this is twofold, to get a supply of cotton and a supply of help. The more mills that are built under these conditions, the more severe will be the Southern competition.

This matter of labor enters into the construction of the mill as well as its management. Bricks for the mill are made on the spot, they are laid by cheap labor, and the timber is bought for less than the Northern mill can buy it; so that the whole cost of the building is much less South than North.

Taxation is a matter of no small importance. I have in mind one of the best cotton-manufacturing plants in the country, costing \$800,000, which is exempt from taxation for ten years.

I have referred to the nearness of the mill to the cotton field as an advantage. In some sections the mills already take more cotton than is raised in the vicinity, and whatever more than this they buy they are on the same plane as the Northern mill. But I have referred to the tendency, of late, to isolate the mills so that under such conditions an ample supply of cotton is obtained. I have seen mill after mill in a field with acres and acres of cotton growing around it, and under such surroundings the conditions must be exceedingly favorable. Not only do the mills buy cotton for less where there is a surplus raised in the vicinity, but I am told they buy cotton one grade better than their Northern competitors, which is, of course, equivalent to an additional reduction in price.

Now, a word as to the success of Southern cotton mills.

They are managed by very able and active men, and are conservative in payments of dividends, so that their future is as well taken care of as the future of the best-managed mills North. While many of the managers are from the North, there is a constantly increasing number of Southern men coming into the business, and I am informed that there are a great many young men of the best class learning the business from beginning to end.

During times of depression such as that of 1893 and the present the modern mills in the South have run without curtailment of production. By this I mean that the Southern mill will of course make all the money it can, but that when it comes a question of price the Southern mill can run at a profit when the Northern mill is running at a loss.

The statement concludes with the following:

There is a large army of help in the Southern cotton mills becoming more and more skilled every day, and I believe that the time is not far distant when this section will be heard from with its fine goods as it is now with its coarse.

I want to say just here that the South has the best labor, white and colored, in the world. There are no strikes, riots, lockouts, or any other labor disturbances. Our people are willing to work for reasonable wages and always seek to give value for what they receive. The war between labor and capital does not exist in the South. Labor is plenty and the climatic conditions are such that the workingman can support himself and family upon much less than a similar family in the North must have to be equally as comfortable. I speak of both farm and factory help.

It is with considerable local pride that I insert a portion of Congressman LOVERING's recent speech on the tariff. Mr. LOVERING is a large manufacturer and has large interests in the South.

The portion quoted was printed by the State, the leading daily in Columbia, and favorably commented on:

I want to tell Mr. McLAURIN that everything is not rose-colored in Massachusetts to-day. I want to tell him and the other gentlemen from the South something which perhaps they do not know about manufacturing in their own States. Within the last two years the increase of spindles in the Southern States has been 382,746, while in the whole of the New England States the increase has been only 671,223. In the South the increase has been 30.5 per cent, while in New England it has been only 5.32, and when you recollect that it would take in that time at least 2,000,000 spindles to make up for the wear

and depreciation of our machinery you will see that you are going ahead much faster than we are. I submit the following table for publication in the Record:

Number of cotton spindles in New England and the Southern States in 1894 and 1896.

States.	1894.	1896.
NEW ENGLAND.		
Connecticut.....	1,033,955	1,045,907

\* 5.32 per cent increase in two years. +30.63 per cent increase in two years.

I want to tell the gentleman from South Carolina something which he probably does not know. There are situated in his own State some of the very best mills in the world. If I were asked to-day where in all our country was to be found the best planned, best ordered, and best equipped mill running in low numbers—aye, and at the best profit—of any mill in America, I would point to South Carolina.

What is true of cotton is true also of woolen mills, since I am informed that the largest woolen mill in America, if not in the world, is located at Knoxville, Tenn. Other industries, such as iron and steel, wagon and carriage factories, tanneries, etc., I can not describe in detail. I sincerely believe, however, that the time will come when Columbia, Atlanta, and Birmingham will be to America what Birmingham, Manchester, and Leeds are to England. When that day dawns, the supremacy of Fall River, Lawrence, and Lowell will be lost forever, and Charleston and New Orleans will be rivals of New York and Chicago. I wish to say further, if the science of mining is ever perfected so that the gold in Georgia and the Carolinas can be separated and secured, there will be as wild a rush for the mines in these States as there was for the gold fields of California. Without disparagement to any other Southern State, but to gratify a feeling of pride and at the same time discharge a duty I owe to those who have both honored and trusted me with their confidence, I desire to call attention to my own native State, South Carolina. It contains 34,000 square miles of as fertile land as the sun shines upon, and 1,151,000 of as kind, brave, and hospitable people as can be found on earth. Its geographical location brings it a genial, healthy climate, luscious fruits, beautiful flowers, bountiful harvests, and all the comforts of life which attach to such a favored region. We have what is known as the coast section, the middle section, and the Piedmont country, each adapted to particular lines of production. Our State is traversed by numerous rivers, many of which are navigable.

It is otherwise well watered, and the annual rainfall is abundant for all agricultural purposes. The soil, as I have said, is fertile, easily cultivated, and noted for its productiveness. All the cereals, grasses, vegetables, fruits, vines, trees, and flowers incident to a temperate and semitropical climate grow luxuriantly. All the staple crops, such as wheat, corn, oats, rye, barley, potatoes, etc., thrive equally well as in any other sections of the country, as statistics show. In fact, to the Northern man unacquainted with the South, the possibilities of production in my State seem exaggerations. I have myself made a crop of oats, cut them the 1st of June, planted corn and pease, and thus harvested three crops the same season from the same land. I have also made a fair crop of cotton after wheat and rye.

In 1890 the American Agriculturist offered a prize of \$1,000 for the largest yield of corn from a single acre, and Mr. Z. T. Drake, of the county of Marlboro, secured it. Mr. Drake gathered 255½ bushels of corn from 1 acre. This seems impossible except for the fact that Mr. Drake gathered two crops the same year. He planted his first crop in season, and by the time that had matured he had a second crop ready to cultivate between the rows. In this manner he made two crops of corn in one season, and secured the premium. Marlboro County, I may say, is one of the banner agricultural counties of the South.

In 1895 the News and Courier, of Charleston, S. C., with its usual liberality and foresight, offered a prize for the best all-round farming in my State. This prize was also secured by a citizen of my home county, Mr. John C. Fletcher. With but 100 acres under cultivation Mr. Fletcher produced at market prices \$3,726.45 worth of farm products, ranging from 48 bales of cotton to 400 dozen eggs. Let those who are seeking new homes remember that in South Carolina nearly \$4,000 in various farm products were made on 100 acres of land. In my opinion, a State with such a record should not want for the very best class of emigrants. Farmers out West have become rich chiefly through the increased value of their lands. Now, when the manufacturing industries increase in South Carolina, population will increase also, and an increased value in our lands will surely follow.

The crops of 1893—the figures are taken from agricultural reports—were: Wheat, 1,732,824 bushels; corn, 29,261,422 bushels; oats, 4,767,821 bushels; rye, 23,641 bushels; potatoes, 349,264 bushels; cotton, 747,471 bales; rice, 30,338,895 pounds (this is about one-fourth of the product of the entire country, in which respect South Carolina stands second); tobacco, 222,898 pounds.

South Carolina has 115,008 farms, 5,255,237 acres of improved land, and 7,929,415 unimproved. The value of its lands and farm improvements is \$99,104,600; value of farm implements and machinery, \$4,172,263; livestock, \$16,572,410; estimated annual value of farm products, \$57,837,985; 59,889 horses, 86,306 asses and mules, 268,293 neat cattle, 494,696 swine, 79,421 sheep (producing 157,707 pounds of wool); the product of milk was 23,833,631 gallons; butter, 5,737,557 pounds, as well as 690,478 bushel of cowpeas, 8,018 bushels of beans, and 42,767 bushels of peanuts. From this it will be seen that South Carolina, as an agricultural State, makes an excellent showing, and that it is admirably adapted for all who desire to engage in farming.

Apples, pears, quinces, plums, peaches, nectarines, apricots, and cherries grow in abundance, and all along the 300 miles of coast oranges, figs, lemons, olives, and pomegranates are raised in perfection. Strawberries, raspberries, whortleberries, and blackberries grow spontaneously and in such quantities that they are largely exported to Northern markets.

Grapes grow wild in many sections, and can be successfully cultivated in all portions, and wine making has every natural facility to make it a leading and profitable industry. The forests are full to repletion of the most valuable timber, there being 10,000,000 acres alone of superior yellow pine, which produces immense quantities of lumber, tar, pitch, turpentine, and rosin. There are also the magnolia, sweet and black gum, white-water, red, black, and live oak, black walnut, elm, hickory, maple, sycamore, ash, cypress, chestnut, beech, locust, persimmon, dogwood, poplar, etc., in fact, about all varieties suitable for all the purposes of the lumberman, shipbuilder, builder, and manufacturer, and all in great abundance.

There is no lack of mineral wealth in South Carolina, as is well known to all who are familiar with the resources of the State.

In building stones are granite of beautiful colors, and porphyritic granite resembling the Quincy granite, white and variegated marble, gneiss for flagging purposes, white feldspathic sandstone, buhrstone, flagstone, limestone, red and yellow ocher, and porcelain clay of superior quality. Experts pronounce the glass sands equal for glass and crystal ware to that from which the justly celebrated Staffordshire ware is made. The limestone of the Blue Ridge is much used as a fertilizer and admirably answers this purpose. There are also the richest deposits of bone fertilizers to be found on the continent. These deposits extend over many miles, and range in thickness from 6 inches to 12 feet, and in some cases from 500 to 1,000 tons are found on a single acre. There is a large amount of capital invested in the development of these deposits, and the output in 1870 was valued at \$2,500,000. There are also rich deposits of manganese, and potash can be cheaply made in the forests. Among other sources of wealth is the turpentine industry. There are many turpentine stills in operation, and the value of the annual product of this article of commerce, which is used for so many purposes, is \$3,000,000.

There are no lack of educational facilities and advantages, both as regards public schools and higher education. Dr. John De La Rue in 1796 established a school which was to provide twelve boys and as many girls of the poorer class with a school and a home free of charge. This is said to have been the first manual-labor school in the country. There are also a number of colleges and seminaries, among which may be mentioned the South Carolina College, State Normal School, Columbia Female College, Presbyterian Theological Seminary and Methodist Female College at Columbia, and Charleston, Erskine, and Clemson colleges, and both the Methodists and Baptists have a theological seminary. Intending settlers and home seekers need have no fear that their children will not find the most ample provision for obtaining a good education.

Provision for the care of the unfortunate has not been over-

looked, and there are institutions provided for the deaf and dumb, blind, lunatics, and for all others for whom the State should care.

South Carolina is a region of many possibilities. It will produce almost any and every thing in the line of grains, grasses, fruits, vines, and vegetables that can be grown in a temperate and semi-tropical climate. It has an abundant supply of the best quality of timber, suitable for all wood workers and wood users. It is rich in mineral wealth, largely yet undeveloped, which, under proper conditions, could make it a manufacturing State of the first rank. It possesses many valuable water powers, which, if utilized, would be ample for all purposes for decades to come. Its agricultural resources would furnish food for millions of people. It has a climate at all seasons which is at once delightful and salubrious. It has a pure, healthy, and plentiful water supply. It has good lands at low prices, waiting only to be cultivated to respond with bountiful crops and generous harvests. It offers ample facilities to all who desire an education to fit them for any station, business, or profession, and it holds out a friendly hand to all home seekers who will cast their lot here and make for themselves a home in one of the best regions to be found anywhere. And it says to all who are contemplating a change of location for farming, manufacturing, merchandising, or other useful vocations, "Come and see our advantages."

As to advancement in manufactures, the State of South Carolina ranks among the first in the South. The census shows that the increase in South Carolina during the period from 1870 to 1890 was very marked, being as follows: Capital invested in these industries in 1870, \$5,400,418; in 1890, \$29,276,261, or nearly 600 per cent increase. In number of hands employed the increase was over 400 per cent, in the amount paid for wages, 350 per cent, and in manufactured products, \$31,926,631, or about 350 per cent. Since 1890 all manufacturing industries have increased very rapidly. The Charleston News and Courier, one of our ablest Southern journals, recently said:

In 1877 the Graniteville, Piedmont, and a few scattered mills stood for South Carolina's cotton industries. To-day there are more than a million spindles at work in this State. These million spindles represent fifteen to twenty million dollars, and that is not all. This already colossal business requires twelve million to fifteen million dollars more to purchase cotton, provide commercial capital, pay wages, etc. Of course this \$12,000,000 or \$15,000,000 of money has to be drawn from the large money centers, North and East; it could not be obtained in our own State. This business statement is made to show that, with all the marvelous advance in this single branch of business, we are compelled to have outside capital to successfully conduct it. Considering this situation, is it not plain, first, that this large business, distributing its blessings through every one of its many centers of work and benefit, should have every good influence that the State and our people can give to it? Second, that this generally accorded approval and cooperation, both by public and private influences, must lead directly to such encouragement as will yearly expand the industry, and consequently enrich South Carolina and her citizens? For illustration, a bale of raw cotton is worth 7 cents \$35; made into cloth it is worth more than three times as much, and the greater part of this difference in value goes to those who spin and weave, and through these many thousands it goes into general circulation.

For the purpose of aiding such laudable efforts as this paper is making I have prepared this speech.

Our principal manufacturing cities in South Carolina are Columbia and Spartanburg. Columbia, the capital of our State, is beautifully situated and rapidly becoming an important commercial center. Eight railroads concentrate here and bring cotton from all parts of the State to the very doors of her mills, some of which are themselves almost surrounded by cotton fields. It is a curious fact that the Granby mill was built in a cotton field, and its brick foundations inclosed a patch from which cotton was picked while the walls were going up. The Columbia Canal, built by the State at a cost of nearly \$1,000,000, furnishes one of the finest water powers in the South. It is estimated at over 20,000 horsepower, with more than 12,000 developed. A power plant developing 8,000 horsepower has just been completed for electrical transmission. This is one of the finest plants in the country, and the second largest operated by water power in the United States.

Columbia has four cotton mills—the Columbia, with a capacity of 1,000 operatives and 35,000 spindles; the Richland, with 500 operatives and 27,000 spindles; the Granby, with 800 operatives and 53,000 spindles; the Congaree, with 200 operatives and 7,000 spindles. These mills consume 52,000 bales of cotton annually and furnish labor for a large number of people. The Columbia Hosiery Mills consume about 360,000 pounds of yarn annually. The Allen Batting Company consumes about 2,000 pounds of cotton daily. Taken as a whole, the cotton manufacturing interests of Columbia are highly satisfactory. Among the other industries are cotton-seed-oil mills, phosphate companies, brickyards, ice factories, and many other minor establishments. In fact, Columbia is fast making her mark as a business city as well as being the capital of the State. For a more detailed statement of Columbia and her resources I refer to a carefully prepared statement which I will print as an appendix to my remarks.

In making known what Spartanburg has done in manufacturing

industries that are thickly scattered throughout that enterprising section some remarkable statements will be made. South Carolina now leads the Southern States in the number of her cotton spindles and looms and in the capital invested in these mills. To Spartanburg is due in a very great measure the honor of this proud record. South Carolina to-day, with her 838,026 spindles and 21,273 looms, is the foremost Southern State in the cotton manufacturing industry, and Spartanburg, with its 316,252 spindles and 9,680 looms, is the most important cotton manufacturing county south of New York. For a detailed statement of the industries of this thriving city I am again indebted to the Charleston News and Courier.

The population of the city of Spartanburg increased nearly 100 per cent in the last census decade, and more than 50 per cent in the last three years.

South Carolina leads the South in the cotton manufacturing industry, and Spartanburg leads South Carolina. Spartanburg County has half as many spindles and 68 per cent as many looms as are operated in the State of Georgia, 27 per cent more spindles than have the two States of Tennessee and Virginia combined, 72 per cent more looms than Alabama and Tennessee put together, and more looms and spindles than the six States of Texas, Louisiana, Mississippi, Kentucky, Arkansas, and Florida combined.

There are 17 large cotton mills now in operation in Spartanburg County and 3 new mammoth mills in course of construction. The actual amount of capital invested in these enterprises is \$4,082,000; the number of operatives, exclusive of the managers and headmen, is 6,650; the consumption of cotton is 110,000 bales a year, more than twice the total cotton product of the county; and the amount paid annually to the operatives is \$1,500,000.

In addition to its cotton mills and banks, Spartanburg is engaged in iron manufacturing, having the largest and best equipped establishment in the State outside of Charleston. It has besides numerous small manufacturing industries.

This story is full of encouragement and hope. It shows what Spartanburg has accomplished within the life of less than a generation. It should serve as an inspiration to the other counties in the State. The opportunities for development in Spartanburg are no greater than they are in York, and Greenville, and Anderson, and Richland, and Charleston, and in many other counties of the State. Perhaps there is a difference in the spirit of the people. Let us hope that their example will prove contagious. They did not sit down and sulk when the tide seemed to be against them; they did not wait for outsiders to come to their aid. They went to work for themselves and have obtained all the help they needed. The people of Spartanburg are an honor to South Carolina.

The city of Charleston, the metropolis of South Carolina, is extensively engaged in the manufacture of fertilizers; in fact, so important are her factories that they fix the price of this product for this country, if not the world. Her rice mills are also very extensive, and, I understand, the largest in the South. She has other important lines of manufacture, as well as numerous smaller industries. This grand old town, in spite of the ravages of war and the devastation of earthquakes, still holds its commercial relations and importance among the foremost in the South. Its commanding location and magnificent harbor, together with its water and railroad facilities, ought to make it the business metropolis of the South.

I am unable to secure exact details as to her industries and development, but I know she is making rapid strides in commercial matters, and stands to-day, as of old, the pride of the people of South Carolina.

There are many other manufacturing establishments in other portions of the State, of which I have not time to mention. In fact, the State is being thickly dotted with them, and in almost every case they have become profitable to all concerned. Within the narrow limits of a speech it is impossible to touch upon every point, and while I have omitted many such, it is not because of a want of interest in their success. I will make this final statement to all who may feel inclined to make a personal examination of the resources of our State, that in my opinion the real situation is far better than I have given. To us South Carolinians the memories of our State are very dear. The record of its statesmen and soldiers are kept bright and fresh in our minds. We remember it was the home of Calhoun, Hayne, and McDuffie. It was the birthplace of Marion, of Morgan, and of Sumter. Its soil has been drenched with the blood of the Revolution as well as that of the war between the States. The bones of its brave sons have bleached on every battlefield from Bunker Hill to Appomattox. Amid it all the people of South Carolina have shown a courage, tenacity of purpose, and devotion to their State well worthy the emulation of all.

The great West is no longer the promised land to the swarming millions of the North and East. Its opportunities and advantages open to the ordinary individual are nearly exhausted, and the stern logic of events have shown that at first many were more apparent than real. Not that I would attempt to injure or take from those brave men and women who faced hardship and danger in settling that portion of our country even a fraction of the credit their due, yet I can not escape the conviction that had the time, labor, and money practically wasted or lost in the West been diverted to the South it would have made that section the paradise of America. As it now stands, immigration has reached its limits on the North and West, and the home seeker must turn elsewhere to establish his "own vine and fig tree."

The South, always more promising, has partially waited for

this turn of affairs, and now stands ready to welcome the honest and industrious from all other sections. The reasons for past neglect are plain, and among them may be enumerated the prejudices growing out of the war, political misrepresentation, and the strenuous efforts made to people the West. The West was extensively advertised as presenting the greatest advantages for the emigrant. Lands were to be had both by homesteading and preemption at nominal cost. States and Territories, to say nothing of counties, cities, and townships, were to be organized and the many public places and positions were to be filled. Here were opportunities for all sorts of ambitious people who had been crowded out or turned down in the older States.

Besides these, there were business chances which come only once in a lifetime, to say nothing of the wide range for speculation. Times have changed. The good lands of the West have very largely been taken up or held so high that men in moderate circumstance can not purchase. The alluring public positions, which called many to that section, have all been filled, and the business chances once so attractive no longer present themselves. Because of this, the South is being thoroughly looked into by those who are seeking better opportunities or the advantages of a change. Many of those who went West are turning their attention toward the South, and some have made it their new home. Does the South want this immigration? I answer, most emphatically, yes; we want all the honest, industrious men and women of the North we can get to come and settle among us.

We will welcome all such most kindly, and will prove to them what Southern friendship and Southern hospitality really mean. We will show them our opportunities and advantages; will treat them fairly, honorably, and impartially, and endeavor to make their new surroundings pleasant and their new ventures profitable. I repeat, we of the South want to increase our material interests; we want to increase in wealth and in the influences which that brings to a people. We want Northern thrift and capital to aid us in this undertaking, and will grasp the hand of every individual in friendship who comes among us for that purpose. In making this statement I voice the sentiment of all true men and women in the South.

We of the South should increase our wealth, stimulate our efforts, and strive for higher and stronger commercial relations. We should neglect a plain duty in not asking the assistance of other sections. Are we not of the same great national family, an integral factor of the same great nation? Do we not stand in the protecting shadow of the same Constitution and under the same flag? Why, then, should our advantages be neglected, our opportunities ignored, and our material development delayed? For one I can see no good reason, and I sincerely trust my feeble effort in calling attention to these conditions may be instrumental in some small degree in changing the situation. My love for my native section, my knowledge of her struggles and trials, the honest efforts she has made to repair her broken fortunes and regain her status in the commercial world, her worthiness and sincerity, and the welfare of her noble men and women, compelled me to make this disclosure of her resources and plea for justice to her people.

#### APPENDIX.

##### Columbia, S. C.

Columbia, the capital of South Carolina, is situated on the eastern banks of the Congaree River at the confluence of Broad and Saluda rivers; its location is a most admirable one, on a high plateau 200 feet above the river, giving it a natural drainage from all sides. Its fine climate makes it a most desirable place to reside in, both winter and summer, and as a business center it has advantages which are not equaled in any city in the South. Its manufacturing, railroad, and educational facilities are unsurpassed; with a canal running along its western boundary developing 12,500 horsepower; with the second largest electric plant run by water in the United States; a great railroad center; the Congaree River navigable to within 1 mile of the city limits, and, with a small appropriation from the Government, could be made navigable for steamboats from the ocean to the business portion of the city, all of which give a commercial importance to Columbia which insures her future success and prosperity. The educational facilities are the best that the South affords; a State college for young men and women, a theological seminary, three denominational colleges for young women, a law school, a training school for young women, two collegiate and industrial colleges for negroes, public schools for both races, and many excellent private schools are located in the city. If it is a recognized fact that good schools and colleges are prerequisites in the race for population, wealth, and influence, surely Columbia is fully equipped for the struggle.

The growth of Columbia has been steady and continuous, and every year adds to her population and wealth. In 1890 the United States census gave her 10,036 population; in 1890, 15,600; in 1897, local estimate, 25,000. Since 1890 the Columbia Canal has been opened, and 12,500 horsepower of water power has been developed and is now being utilized as follows: 500 horsepower used by the city of Columbia at its pumping station; 500 horsepower, by the Columbia Electric Street Railway, Light, and Power Company, used in operating its electric street railway and electric lighting plant; 2,000 horsepower used by the Columbia Mills in running its ducking mill (electrical transmission). The Columbia Water Power Company, the owners of the canal, of which Artesta Blood, of Massachusetts, is president, has just completed a power plant developing 8,000 horsepower for electrical transmission, which will utilize the balance of the water power of the canal. This plant is one of the finest in the country, with all the most modern improvements.

Columbia has the following manufacturing and commercial enterprises:

#### THE COLUMBIA MILLS.

Built in 1890; most of it Northern capital, with the following proposed capacity:

Operatives .....	1,000
Spindles .....	35,000
Cotton consumed per annum .....	25,000
Coal consumed for heating, per annum .....	600
Shipment of goods .....	11,000,000
Shipment of waste .....	900,000

Class of goods—Cotton duck and kindred goods. Power—Electrical transmission.

Built in 1894.

#### RICHLAND COTTON MILLS.

Operatives .....	500
Spindles .....	27,000
Looms .....	720
Cotton consumed .....	3,600
Coal consumed for heating, per annum .....	3,600
Shipment of goods .....	1,440,000
Shipments of waste .....	800,000

Class of goods—Fine sheetings. Power—Steam.

#### GRANBY COTTON MILLS.

Operatives .....	800
Spindles .....	53,000
Looms .....	2,000
Cotton consumed .....	8,000
Shipment of goods .....	8,000,000
Shipment of waste .....	600,000

Class of goods—Fine sheetings. Power—Electrical transmission.

#### CONGAREE MILLS.

Spindles .....	7,000
Cotton consumed .....	15,000
Yarn mill—Run by steam.	

#### Recapitulation of cotton mills.

Operatives .....	2,300
Spindles .....	122,000
Cotton consumed per annum .....	51,600
Shipment of goods .....	15,440,000

#### COLUMBIA PHOSPHATE MILLS.

Operatives .....	80
Phosphate rock consumed .....	5,411
Coal consumed .....	700
Nitrate of soda consumed .....	50
Muriate of potash consumed .....	125
Blood and tankage .....	600
Brimstone .....	800
Sulphate of ammonia .....	25
Kainit .....	800
Output of goods .....	9,000

This mill was established in 1890.

#### GLOBE PHOSPHATE COMPANY.

Established in 1891.

Operatives .....	80
Phosphate rock consumed .....	6,000
Pyrites consumed .....	5,000
Coal consumed .....	700
Kainit .....	500
Muriate of potash consumed .....	300
Nitrate of soda .....	200
Output of goods .....	15,000

#### Recapitulation of phosphate mills.

Phosphate of rock consumed .....	11,411
Coal consumed .....	1,400
Pyrites consumed .....	5,000
Kainit consumed .....	1,300
Muriate of potash consumed .....	425
Nitrate of soda .....	250
Blood and tankage .....	600
Sulphate of ammonia .....	25
Output .....	24,000

#### SOUTH CAROLINA COTTON OIL COMPANY.

Operatives .....	75
Cotton seed crushed .....	14,000
Output—	
Meal .....	5,000
Oil .....	575,000
Lint .....	320,000
Hulls .....	3,000

#### SOUTHERN OIL COMPANY.

Operatives .....	75
Seed crushed .....	20,000
Output—	
Meal .....	7,000
Oil .....	800,000
Lint .....	600,000
Hulls .....	3,000

These mills work only six months in the year.

#### Recapitulation of oil mills.

Operatives .....	150
Seed crushed .....	34,000
Output—	
Meal .....	12,000
Oil .....	1,375,000
Lint .....	920,000
Hulls .....	6,000

#### COLUMBIA HOSIERY MILLS.

Yarns consumed, per year .....	800,000
Output .....	825,000

#### ALLEN BATTING COMPANY.

Cotton consumed, per day .....	pounds..	2,000
--------------------------------	----------	-------

#### PALMETTO ICE COMPANY.

Capacity, per day .....	tons..	45
-------------------------	--------	----

Part of which is consumed in Columbia.

#### LIPSCOMB'S BRICKYARD.

Capacity, per month .....	brick..	650,000
---------------------------	---------	---------

#### GUIGNARD'S BRICKYARD.

Capacity, per month .....	brick..	1,300,000
---------------------------	---------	-----------

The granite quarries of Columbia and its vicinity are numerous. Its quality is of the best and its amount is inexhaustible. A number of Government buildings have been erected out of the Winnsboro granite, it being selected over all other granites.

#### STATISTICS OF COLUMBIA, S. C., SHOWING THE TONNAGE SHIPPED.

	Tons.	Value.
Cotton .....	15,000	\$2,400,000
Rosin .....	10,000	74,000
Cotton-seed oil .....	6,000	123,000
Kerosene oil .....	20,000	440,000
Turpentine .....	6,875	550,000
Cotton seed .....	60,000	600,000
Phosphate rock .....	20,000	100,000
Fertilizer .....	20,000	400,000
Cotton-seed hulls .....	30,000	90,000
Cotton-seed meal .....	24,000	528,000
Rock .....	175,000	175,000
Brick .....	28,000	112,000
Lime and cement .....	2,250	30,000
Coal .....	20,000	160,000
Wood (fuel) .....	30,000	100,000
Lumber .....	70,000	175,000
Hardware, machinery, etc. ....	100,000	875,000
Boots and shoes .....	3,500	400,000
Cattle .....	1,280	92,000
Hay .....	4,000	72,000
Grain (corn, oats, etc.) .....	150,000	440,000
Hogs .....	500	35,000
General merchandise (not including above) ..	200,000	2,500,000
Sheep .....	100	5,000
Cotton goods, product of mills .....	56,450	6,000,000
	993,555	16,486,000

#### The Tariff.

A majority of the people of Kansas believe in the American system of protection.

#### SPEECH

OF

HON. CHARLES CURTIS,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 25, 1897.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 359) to provide revenue for the Government and to encourage the industries of the United States—

Mr. CURTIS of Kansas said:

Mr. CHAIRMAN: I do not intend to occupy ten minutes, but I want to enter my protest against the great agricultural State of Kansas being placed in the free-trade column. [Applause on the Republican side.]

A majority of the people of Kansas believe in the American system of protection. We have in that State a board of agriculture which is supposed to be nonpartisan. At their last meeting, held in January, they elected a Democratic president, a Populist vice-president, and a Populist treasurer, and at the same meeting they adopted, among others, the following resolutions:

Whereas the Congress of the United States is now gathering information from the productive industries of our country with a view of determining the fiscal policy of the Government; and

Whereas this body being representative of the most important industry in Kansas, to wit, agriculture: Therefore,

Be it resolved, That as farmers, and representing farmers and their welfare, we earnestly favor such legislative restriction as shall most effectively encourage home industry and our own farm product. \* \* \* We ask the restoration of such duties as will protect the great native cattle, swine, and horse industry of our State from foreign invasion.

Mr. CLARK of Missouri. Will the gentleman allow me to ask him a question?

Mr. CURTIS of Kansas. Certainly.

Mr. CLARK of Missouri. Did not Kansas vote against protection in the last election?

Mr. CURTIS of Kansas. No, sir. In the campaign of 1894, when the issue was protection, the Republicans carried the State. [Applause on the Republican side.]

We elected seven out of eight Republican members of Congress, elected the State ticket, and carried the legislature that

elected a Republican United States Senator. [Applause on the Republican side.]

Mr. CLARK of Missouri. How did you come out in 1896?

Mr. CURTIS of Kansas. Oh, we were defeated on another issue entirely. The Populists there were like your party in Missouri—too cowardly to meet the issue of protection. [Applause on the Republican side.]

Mr. CLARK of Missouri. I want to say to the gentleman that I never have been afraid to meet any protectionist upon the face of the earth.

Mr. CURTIS of Kansas. You did not talk anything but free silver in your State.

Mr. CLARK of Missouri. We wiped up about half a dozen protectionists who talked protection on the stump.

The CHAIRMAN. Does the gentleman yield?

Mr. CURTIS of Kansas. Oh, yes; I will if he will get up and ask a question, but I do not want him to sneak down in his chair like a snail in his shell. [Applause.]

Mr. CLARK of Missouri. If you will answer the question, I will stand up.

Mr. CURTIS of Kansas. I answered your question.

Now, Mr. Chairman, I am in favor of this bill for the following reasons:

First. While it protects American industries, it will yield sufficient revenue to meet the running expenses of the Government.

Second. It will give employment to American labor at higher wages than are paid in any other country in the world.

Third. It will give to the farmers of this country their markets, the home market, which is the best in the world. [Applause.] Another thing which gentlemen on the other side should note is when this bill goes to the President, it will not be branded as a tariff of "perfidy and dishonor," but will be received as a Republican measure of protection, and the world will know that the United States has returned to the American system of protection. [Applause.]

In the Fourth Congressional district of Kansas the people are engaged in cattle raising and feeding; and when you remember that in the four years of the McKinley bill we only imported 19,000 head of cattle, and that in the first twenty-three months of the Gorman-Wilson bill there were imported 361,000 head of cattle, you may know why they favor restoring a duty on cattle. That is not all. Of the cattle imported from Mexico in 1895, 108,000 head were worth, at the border, \$4.15 per head, while in 1896 21,000 were worth \$3.97 a head. Why, gentlemen, a 3-weeks-old Kansas calf, at the side of its mother, is worth more than a 3-year-old Mexican steer at the border. They tell us we ought not to exclude Mexican cattle; that if we do, the Mexicans will retaliate and not take our hogs and pork products. Do the gentlemen who make that claim know that we exported to Mexico in 1891, 1892, and 1893 double the value of hogs and pork products that we did in 1894, 1895, and 1896? We did that, too, when the duty upon cattle was virtually prohibitive. [Applause.]

Our people used to bale hay and ship it East and elsewhere; and when you remember that in the year 1892 we only imported 79,000 tons, and in 1896 302,000 tons, you know we would like a little more protection on that product. In the district which I have the honor to represent there are three counties engaged in the sheep industry. In 1892 in one of these counties there were 50,000 sheep. In that year they sold at from \$3 to \$4 a head, and the wool at from 15 to 18 cents a pound. You could buy those sheep last fall at 75 cents a head, and wool sold at 7 to 8 cents a pound.

Mr. MAGUIRE. Do you know of any lower form of industry from an industrial standpoint than raising sheep? Does not the extension of sheep industry drive out the higher forms of industry wherever it is engaged in?

Mr. CURTIS of Kansas. It does not in the Fourth Kansas district, and I do not believe it does anywhere else. You have paralyzed the sheep industry, one of the greatest in this country, by your Gorman-Wilson bill, and we propose by this measure to encourage it and build it up again, and the people of this country will say "Amen" to our efforts. [Applause on the Republican side.]

Mr. MAGUIRE. We will see about that.

Mr. CURTIS of Kansas. Yes, you will see about that, as you always have. I remember well that in the Fifty-third Congress they told us why they wanted free wool; that with it the people would wear better clothing; that the McKinley law did not keep out shoddy. True. We imported 292,000 pounds of shoddy in 1893, but the first year that the Wilson-Gorman bill was upon the statute book the importation of shoddy increased to 20,000,000 pounds, and the same Democratic orators who told us that their bill would keep shoddy out of this country are trying to fool the people again in face of these figures.

The placing of wool on the free list by the Wilson bill cost the woolgrowers of the United States \$84,000,000 in revenue and \$120,000,000 in reduction of the price of wool in the four years of its operations. This loss of \$124,000,000 equals a loss of \$8 to each

and every family, without a single benefit. If we add to the foregoing the whole deficiency, or increase of the public debt during this same period, the amount apportioned to each family will be more than doubled, amounting to \$16 per family. To this must be added the loss to the American farmer of a market for 80,000,000 pounds of wool in a single year, which the foreign woolgrowers have secured in our country, without contributing in any way, by taxes or otherwise.

Summing up the cost of four years of Democratic blunders, the giving away of the American markets to foreign producers deprived our own Government of more than \$203,000,000 of revenues which would otherwise have been collected in our custom-houses, and the present outstanding debt would have never existed. The following is the table for each year's deficiency:

Deficiency for the fiscal year ended June 30—

1894.....	\$69,803,260
1895.....	43,805,223
1896.....	25,203,246
1897 (estimated).....	65,000,000

Total deficiency..... 203,811,729

I am sorry that hides are not placed in the dutiable list. I do not agree with the gentlemen who claim that the only hides we import are such that those produced in this country can not take their place.

This may be true in some cases, but there is no doubt in my mind but what there are millions of dollars' worth of hides imported every year and sold in the markets of this country that could be supplied by the cattle raisers of the United States.

The records show that we have imported annually on an average \$1,435,196 worth of hides and skins from Mexico during the last six years.

It would be to the interest of the cattle growers to have a duty placed upon hides, and I hope it will be done.

I want to say another thing. I am very sorry that some of the Western members are continually condemning the East. They simply do a great injustice to a people who have helped to build up the opulent West. [Applause.] The people of Kansas are thankful for what the East and Eastern people have done for our great State. [Applause.] If you will carefully examine the records of the last census, you will find that the Western States may well be proud of their great development. The agricultural States need not fear comparison with the manufacturing States. There is not a manufacturing State in the Union that can compare with the growth of the great State of Kansas in the ten years from 1880 to 1890. [Applause.]

Mr. MAGUIRE. Did protection cause that?

Mr. CURTIS of Kansas. Oh, the American system of protection and other wise Republican legislation caused it. [Applause.]

Pennsylvania, with six and a half times more wealth and over five times the population of Kansas, only gained about one-tenth more wealth than Kansas did from 1880 to 1890. Kansas increased in assessed valuation 116 per cent, while Pennsylvania increased only 54 per cent.

Massachusetts, with three and a fifth times more wealth and nearly twice the population of Kansas, only gained about one-sixth the wealth that Kansas did from 1880 to 1890. Massachusetts only increased 35 per cent in assessed valuation.

New York had eight and a third times more wealth and over five times the population of Kansas, yet she gained less than two and a fifth times more than Kansas did from 1880 to 1890. Her increase was only 42 per cent.

I noticed a report in the Topeka Daily Capital, one of the leading dailies of the West, taken from the registers of deeds in thirty-eight counties, showing a decrease in the debt of those counties since 1890 to the amount of \$23,538,493. This is surely a great showing for our State, and should be very encouraging to our people; and it should be sufficient to restore confidence in the minds of Eastern people. The people of Kansas are not only honest, but industrious, and will pay every dollar they owe.

The gentlemen who claim that the hard times of the last few years are the result of the legislation of the last thirty-two years forget that the history of those years tell of the wonderful growth of this country. Not many years ago the United States was one of the poorest of the leading nations of the world, but under the wise policy of the Republican party from 1861 to 1893 this country has advanced to the first place among the nations of the world.

It has been well said that the gentlemen who thirty years ago thought it impossible for us to compete with Great Britain in manufacture did an injustice to the skill and ingenuity of their countrymen, for as they had in former years gloriously contended with them, man to man, gun to gun, step to step, fleet to fleet, and army to army, so they have in late years achieved equal success in perfection in manufacture, greatness in wealth, and advancement in education. [Loud applause on the Republican side.]

## The Tariff.

## SPEECH

OF

HON. J. H. DAVIDSON,

OF WISCONSIN.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 31, 1897.

The House being in Committee of the Whole on the state of the Union and having under consideration the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States—

Mr. DAVIDSON said:

Mr. CHAIRMAN: At the very threshold of its existence the Fifty-fifth Congress is confronted with an extraordinary condition of affairs, a condition the very existence of which sets at naught all the fine-spun theories of the professional free-trade theorists and demonstrates the wisdom and good judgment of the people of our nation, who at the last election directed that the policy which had brought disaster and ruin upon the country during the last four years should cease, and that another and different policy should be substituted in its place. We have been commissioned by the suffering millions of our land with the performance of a sacred duty, and one which the country is now anxiously waiting for us to perform. The President has so clearly expressed the object of this extraordinary session that the language used in his message will bear repeating here:

Congress should promptly correct the existing conditions. Ample revenues must be supplied not only for the ordinary expenses of the country, but for the prompt payment of liberal pensions and the liquidation of the principal and interest of the public debt. In raising revenue, duties should be so levied upon foreign products as to preserve the home market so far as possible to our own producers; to revive and increase manufactures; to relieve and encourage agriculture, and to increase our domestic commerce; to develop mining and building, and to render to labor in every field of useful occupation the liberal wages and adequate reward to which skill and industry are justly entitled. The necessity of the passage of a tariff law which shall provide ample revenue need not be further urged. The imperative demand of the hour is the prompt enactment of such a measure, and to this object I earnestly recommend that Congress shall make every endeavor. Before other business is transacted, let us first provide sufficient revenue to faithfully administer the Government without the contracting of further debt or continued disturbance of our finances.

Notwithstanding this declaration of the President, gentlemen upon the other side of this Chamber still question the necessity of increased revenue at this time; but can any thoughtful or honest man conscientiously question the condition of our finances when the record shows that our disbursements have largely exceeded the receipts and that there has been a deficiency in each of the last four years? The deficiency is as follows:

Fiscal year ending June 30—

1894 .....	\$59,803,260
1895 .....	43,805,223
1896 .....	25,203,246
1897 (estimated) .....	65,000,000
Total deficiency .....	203,811,729

The very fact that this condition exists, and that in time of peace and without any extraordinary expenditures the Government has been compelled to issue bonds to the amount of \$260,000,000, demonstrates conclusively that there has been a change in our revenue system during the last four years, for we find from an examination of the records that during the twenty-five years of Republican ascendancy there never was a time when the receipts were not largely in excess of the disbursements, and that from 1865 to the close of President Harrison's Administration this Government, under Republican rule, not only expended large sums of money for the improvement of its Navy and for its rivers and harbors, for the erection of public buildings, for the extension of the postal service and other improvements, but it paid the necessary annual expenses of a great and growing country and at the same time paid off two-thirds of the debt contracted in the preservation of the Union, and in addition it also paid many hundred millions of dollars in pensions to the soldiers who fought for the preservation of the Union and to the widows and orphans of such soldiers.

At different times during this debate gentlemen upon the other side of this House have declared that it was not tariff legislation that was needed, but that if financial legislation was had along the lines laid down by them—that is, the free coinage of silver at the ratio of 16 to 1—there would be no necessity for the revision of our tariff laws. I desire to call the attention of those gentlemen to the fact that from 1879 to 1893 our nation prospered in a greater degree than at any other time during its existence; that during all this time new railroads were being built, new industries of all kinds

were being developed, the broad prairies of the West became fertile farms, near these farms villages sprung up, and with the coming of manufacturing industries these villages grew into cities, all of which offered opportunities for investment of capital and gave to labor an opportunity for employment at better wages than were ever received by wage earners in any other nation or at any time.

During all this period the people were happy and contented. Homes were being built and furnished with not only the necessities but the comforts of life; churches were being erected and schools endowed, and every laborer of every vocation was enabled to lay aside some portion of his earnings for the benefit of himself and his family in after years. That condition of affairs continued up to 1894, at which time, without any change in our monetary system, the tide of prosperity turned back, and from that day to this the country has been in a state of demoralization, business has been suspended, properties have depreciated in value, the factories have been closed, the wheels have ceased to turn, the fires in the furnaces have gone out, and the men who were earning a good livelihood in those factories and mills have been without opportunity for labor and have become in many instances dependent upon charity for the sustenance of themselves and their families. This condition of things, however, has not been confined alone to the manufacturing centers, but the great agricultural districts of our country have been visited with the same blight. The question now is, What has been the cause of all this, and what the remedy?

Can there be any other solution than that the cause was the change from a protective tariff policy to one of "revenue only," or rather to one for a "deficit?" The whole record of our agricultural, commercial, and industrial systems under the protective policy which existed up to 1894 shows that the change from that policy to the Wilson-Gorman policy was not beneficial to the country, and we are here to-day to repeal that monstrosity and place upon the statute books a measure which will provide not a deficit but revenue for the Government, and at the same time encourage the industries of the United States. It must be admitted by all that a government like ours must necessarily require a large amount of money to meet its annual expenditures. Every American citizen desires to see the country prosperous and to see it developed. We desire to see the internal improvements continued, public buildings erected in the several cities where they are needed, and a sufficient expenditure of money by way of pensions to protect every worthy veteran from penury or want.

In order to meet these expenditures, large sums of money must be received from some source, and as a governmental taxgatherer is never a welcome visitor at our homes, it seems to be conceded that the best way to provide this revenue is by a tax on importations. It is unnecessary at this time to reiterate the oft-repeated arguments as to whether the revenue should be procured by virtue of a tariff law enacted for purposes of revenue only, or whether that law should be so framed that, in addition to producing a revenue sufficient to meet the expenditures of the Government, it will at the same time give protection to American labor and to American industries.

From the time of the first tariff enactment down to the present the history of our country demonstrates conclusively that the nation has been more prosperous when the revenues have been collected under a tariff law which at the same time protected the industries of the nation than under what is known as free-trade legislation. I believe the bill now proposed is better adapted for the needs of the country than any other tariff measure ever proposed for enactment. It is not a sectional measure in any respect. It is as broad as the nation itself, and it affords protection to every industry that needs it, and at the same time the duties have been so regulated that they will not become burdensome upon any class of our people. I shall not undertake to discuss in detail many of the schedules of this bill, but there are one or two in which the people I have the honor to represent are directly interested, and to those I desire to call attention.

## LUMBER.

In the first place, a duty is proposed upon lumber, and it may be urged by some that the consumers of lumber should be entitled to procure this product from any market wherever it may be obtained, but for the present, at least, there is, and, in my judgment, for many years to come there will be, plenty of timber of all kinds in this country, so that a reasonable duty may be imposed upon manufactured lumber brought in from other countries, which will enable the people engaged in that industry in this country to continue with a reasonable assurance that they will not be compelled to compete with the cheaper labor of other countries. We find to the north of us a country, separated from ours only by an imaginary line, that has miles of unbroken forest and labor that can be employed at wages much less than that demanded by and paid to the laborers of this country; and when we notice that the importations of lumber from Canada under the present tariff enactment have increased from \$2,600,000 worth in 1893 to \$12,600,000

worth in 1896, it ought to satisfy every reasonable person that protection should be given to the people employed in this industry.

There are more persons employed in the lumber industry than in any other single industry in this country, and with the large amount of timber still in this country, is there any reason why we should import \$12,600,000 worth of lumber from Canada, 90 per cent of which represents labor, when we have unemployed laborers in our own country? This large importation from Canada has been directly responsible for the closing of many of the mills and manufactories throughout the Northern States—notably Michigan and Wisconsin—thereby turning thousands of men out of employment and compelling the manufacturers of lumber in those States to reduce the wages of their employees, where employment was given to any, in order that they might compete successfully with the cheaper products brought over from Canada.

It has been said that this bill favors the manufacturing industries of the East against the agricultural industries of the West, but I desire here and now to say that, in my judgment, this bill, if enacted into law, will give better protection to the agricultural industries of the country than has ever been given them in any tariff legislation heretofore enacted. Take the whole scale of agricultural products, and you will find that the duties proposed are higher than those of the Wilson law, and if enacted into law will enable the producer of agricultural products to dispose of them in the home markets without competing with foreign nations for that market. The gentlemen on the other side of this Chamber profess at this time to be the friends of the farmer, and are declaiming loudly and continuously against the passage of this bill because it is not in the interest of the farmer.

If I remember correctly, the debates had at the time of the passage of the Wilson bill were replete with statements, made by these same gentlemen, or some of them at least, that they were then legislating in the interests of the farmer, and that the Wilson bill, if enacted into law, would bring prosperity, and that the "markets of the world" would be thrown open to them. Well, it occurs to me that with the home market destroyed the farmers of our country were forced to seek and have been seeking the markets of the world during the last four years. They have sought them earnestly day and night, month after month, during all these years, but they have failed to find them. What has the tariff legislation which our friends on the other side placed upon the statute books done in the interest of the farmers? Let us observe its workings. They said that it would give us the markets of the world in which to sell our products. Let us see if it has fulfilled their promise. The first item I call your attention to is that of barley.

For some reason, malting plants have been erected along our northern frontier, and I understand the owners of those plants have appeared before the Ways and Means Committee and urged that the duty on barley be reduced to 5 cents per bushel, so that they might purchase Canadian barley for malting, but I congratulate the country in having as members of the Committee on Ways and Means gentlemen who were interested first in the welfare of the American farmer, and who, in order to protect him, have raised the duty from 30 per cent ad valorem, which is equal to about 7 cents per bushel, to 30 cents per bushel.

This duty will shut out a portion of the Canadian crop and give a market for the American crop. In 1894, under the McKinley law, we imported only 791,061 bushels of barley, of a value of \$358,744, while in 1895, under the Wilson law, we imported 2,116,816 bushels, of the value of \$867,743, a loss to American farmers of 1,325,755 bushels, of the value of \$509,000.

In 1894, under the McKinley law, we sold to the world 5,219,405 bushels of barley, for which we received \$2,379,714; while in 1895, under the Wilson law, we sold only 1,563,754 bushels, receiving for it \$767,218; a loss of 3,655,651 bushels, and a loss in value of \$1,612,496. Add to this the loss on importations during the same time, and the total loss to the farmers was 4,980,000 bushels, of the value of \$2,121,000.

In 1892, under the McKinley law, we sold to the world 637,972 bushels of beans and peas, receiving therefor \$945,767; in 1895, under the Wilson law, we sold only 242,682 bushels, receiving therefor \$429,006, a falling off of 395,290 bushels, and a loss of \$516,761. These two items show the result of an attempt upon our part to capture the markets of the world under the Wilson law.

While we were attempting to do that the people of other countries successfully captured this market, and instead of its being protected and preserved as a market for the agricultural products of this country, we find that upon the one item of beans, where we purchased in 1892 only 874,000 bushels, of the value of \$957,000, in 1895, under the Wilson law, we purchased 1,536,000 bushels, of the value of \$1,548,749, a loss of 662,000 bushels, of the value of \$590,000. Add to this the loss on exportation of the same article and you find the American farmers lost on beans and peas alone 1,057,290 bushels, of the value of \$1,106,761.

In 1892 we sold in the markets of the world cattle of the value

of \$35,000,000, while in 1895 we sold only \$30,000,000, a loss of \$5,000,000. On the other hand, the world sold to us in 1892 cattle of the value of \$47,466, while in 1895 it sold to us \$765,853 worth, a gain for the foreign dealer of \$718,000.

One of the great industries of this country is the raising of wheat; and in order to sell the excess of our wheat crop in the kernel, it must be transported to Liverpool and sold there in the "markets of the world," in direct competition with wheat raised on the cheap lands of India and Australia. Under that beneficent feature of the McKinley law, conceived in the brain of that magnificent statesman, James G. Blaine, and carried into execution by President Harrison, known as reciprocity, a market, not only for wheat but also for the flour made from the wheat, was opened up for us, and in three years, by virtue of that law, our trade with Cuba increased from 150,000 barrels to 662,000 barrels, making a market for 3,300,000 bushels of wheat. In the West Indies and Bermudas we built up a trade of 400,000 barrels, or 2,000,000 bushels of wheat; and in Brazil of 200,000 barrels, or 1,000,000 bushels of wheat.

Under this same law our trade with Germany increased from 8,000 barrels to 286,000 barrels, or 1,430,000 bushels of wheat. By that law a new market was obtained for 7,700,000 bushels of our wheat, which has now been practically destroyed by the present Wilson-Gorman Act. We must remember also that not only has our trade in these agricultural products been destroyed with other nations, but that owing to the depressed condition of the industries of our country the home consumption has been greatly lessened. Prior to the enactment of the Wilson law, and when our country was prosperous, we consumed 90 per cent of all the agricultural products of this land. This gave to the farmers of our country the best market in the world, viz, the home market; but under this free-trade measure that market has likewise been taken from them to a large extent.

In 1892, under the protective system, the consumption of wheat in this country was 5.7 bushels per capita. In 1895 it had decreased to 4 bushels per capita, showing a loss of 1.7 bushels per capita, or about 120,000,000 bushels less consumed in 1895 than there were in 1892. The decrease per capita in the consumption of corn in the same period was 14 bushels, or 980,000,000 bushels less consumed by the people of our country in 1895 than were consumed in 1892. But it will be said by some that these figures can not be correct, for the reason that our population was greater in 1895 than it was in 1892, and that men must eat whether they work or not. But I say to you that when men are working on short time at low wages, or, worse still, are out of employment and are walking the streets looking for a job, and are obliged from necessity to accept the offerings of charity to keep their wives and children from starvation, I say to you that those families do not consume upon their tables as much bread and meat and the many different agricultural products as they do when the head of the family is receiving steady employment at good wages.

But the loss sustained by the farming community by virtue of free-trade legislation has not been alone in the decrease of consumption, nor in the amount of the products shipped to other countries, but in the shrinkage of values of the products which they have raised. Take the three great staples, wheat, corn, and oats, which are largely raised by the farmers of the United States, and we find that in 1891 they brought the following amounts of money:

Wheat .....	\$513,472,000
Corn .....	836,439,000
Oats .....	232,321,000

Total..... 1,582,232,000

In 1895 the same products brought to the farmer the following amounts of money:

Wheat .....	\$237,938,000
Corn .....	567,930,000
Oats .....	163,655,000

Total..... 969,523,000

Thus the farmers lost on account of the change in our tariff laws the sum of \$612,709,000 in the value of these three articles alone between the protective-tariff year of 1891 and the free-trade year of 1895. But it was not the cereals alone that decreased, but farm animals as well. The farmers' hogs, January 1, 1893, were worth \$295,425,000; on January 1, 1896, they were worth only \$189,529,000, a decrease of \$105,896,000 in three years. On January 1, 1893, the sheep of this country were worth \$125,900,000; on January 1, 1896, they were worth \$65,167,000, a loss or decrease of \$60,742,000 in three years. In 1893 the horses of the United States were valued at \$1,067,593,000; in 1896 they were valued at \$500,140,000, a decrease of \$567,453,000, and a loss in these three items alone of \$677,091,000 to the farmers of this country as a result of Democratic legislation.

The value in 1891 of the wheat, corn, rye, oats, cotton, hay, potatoes, wool, barley, buckwheat, tobacco, hogs, and sheep in this country was \$2,957,000,000; in 1895 the same articles were valued at \$2,061,000,000, showing a decrease in the value of these thirteen articles of \$900,000,000 between the year 1891, under a protective-tariff law, and the year 1895, under the Wilson free-trade law. Can there be any question, then, but that this great depreciation in values of all these products of the farm was directly traceable to the tariff legislation made possible by the last Democratic Administration? The people of this country are entitled to our own market, and they should be allowed to occupy it and to supply it with everything that is raised or manufactured in this country, and such legislation should be enacted as will prevent the foreigner from entering this market until he has paid a tax at least equal to that paid by the people of our own country for the maintenance of the Government.

Just notice a few of the agricultural articles we bought in foreign lands last year.

Products of the farm imported in 1896:

Animals (horses, cattle, and sheep).....	\$3,253,000
Products of animals (except wool).....	41,050,000
Wool.....	32,145,000
Breadstuffs (wheat, oats, barley, etc.).....	2,780,000
Fruits and nuts.....	19,032,000
Flax and hemp.....	2,673,000
Hay.....	2,773,000
Rice.....	2,185,000
Seeds.....	2,683,000
Tobacco.....	16,503,000
Vegetables.....	2,577,000
<b>Total.....</b>	<b>128,354,000</b>

This immense sum of money was sent abroad in the purchase of animals, grain, etc., nearly all of which could have been raised in our own country. Is there any reason, then, why it should not be so raised? We imported from foreign countries last year:

Coal.....	\$3,559,000
Earthenware.....	10,605,000
Glass and glassware.....	7,528,000
Iron and steel.....	25,338,000
Marble.....	2,144,000
Wood.....	20,567,000
<b>Total.....</b>	<b>69,741,000</b>

This sum was paid by the people of our country for the products of the mines, the factories, and the quarries of foreign countries, when we have within our own country all these products which should have been mined and produced by American capital and American labor.

In manufactured goods, such as books, maps, paper, silk, woolen and cotton goods, we imported last year \$178,354,000 worth, while every dollar's worth of these goods could have been manufactured in the United States. During the last year we imported into this country \$780,000,000 worth of foreign goods and foreign products, and during the last five years we have imported \$3,806,000,000 worth.

#### WOOL.

How well the country remembers the rainbow promises about the great benefits to be received from free wool! What are the facts? During the last year of the McKinley law we imported 55,152,595 pounds of wool, of the value of \$6,107,438; in 1895, under the Wilson law, we imported 206,033,906 pounds, of the value of \$25,556,421; and in 1896 we imported 230,911,473 pounds, of the value of \$32,451,242, a loss over the last year of the McKinley law of 175,758,888 pounds, of the value of \$26,343,805.

But they tell us clothing has been cheaper, and thus the poor man has been benefited by having free wool, but my honest judgment is that honest clothing has not materially decreased in value, except as all values have depreciated on account of the depression in business. I admit that a "cheap-john" suit of clothes may be purchased to-day for less, perhaps, than it could have been in 1894, but you will find that these suits are "cheap" in quality as well. The importation of rags, waste, and shoddy has increased from 229,000 pounds in 1894 to 20,000,000 pounds in 1895, and as each pound of shoddy is equivalent to 3 pounds of merino wool, we find that under the free-wool clause of the Wilson law shoddy has taken the place of 60,000,000 pounds of American wool. I am opposed to everything that is shoddy, whether you find it in the coat that is on the man's back or in the man himself, or in the system of legislation which makes such conditions possible. I believe that American flocks should feed on American pastures, and should furnish the fleece which clothes the back of American citizens, and any system which prevents this is un-American and should not be tolerated.

#### SUGAR.

I have filed with the Clerk a petition from several hundred citizens of my State asking for a protective duty on sugar. Until within the last two years it was supposed that a duty imposed upon sugar was one for revenue only, but under the stimulus of the bounty provided by the McKinley law this industry commenced to develop, and not only the cane-sugar industry prospered, but the intelligent farmers of the North, encouraged by the assistance of that broad-minded, courageous friend of the farmer, the then Secretary of Agriculture, Jeremiah M. Rusk, of Wisconsin, turned their attention to the beet-sugar industry as well.

The annual production of sugar in the world is estimated at 8,248,246 tons, of which amount 3,537,151 tons are made from cane and 4,711,095 tons are made from beets. Of this amount our own country produces only 236,000 tons of cane sugar and 30,000 tons of beet sugar, and yet the climate and soil of at least 18 States of our Union are as well adapted to the raising of beets for sugar as any portion of the globe. Why, sir, Germany is the greatest beet-sugar-producing country in the world, and yet that portion of Germany adapted to the raising of beets is only twice as large as the single State of Wisconsin. We are sending to foreign countries about \$125,000,000 annually for this one agricultural product, and while it may take some years to develop this industry sufficiently to supply entirely the home demand, yet every effort in that direction is a benefit to our own people.

As it is now absolutely necessary to impose a duty on sugar for the purpose of obtaining revenue to meet the necessary expenses of the Government and to pay the interest on the bonds issued by the late President, that duty should be so levied as to afford protection to this infant industry, which will soon prove a national blessing. The production of our own sugar would mean the construction of 920 factories, at an average cost of \$250,000 each, and with a daily capacity of 850 tons of beets each. To supply each of these factories with beets would require the product of 2,000 acres of land, or 1,840,000 acres in all, from which would be raised annually 18,400,000 tons of beets. At an average price of \$4.50 per ton, this would produce \$82,800,000.

In the present congested condition of agricultural products, when the supply of the cereals is largely in excess of the demand, if 1,840,000 acres of land now raising wheat, corn, oats, or barley could be used in the sugar industry, what a benefit would result to those who from necessity must raise the cereals, and how much greater would be the income of those who were so situated that they could raise beets instead of cereals. It has been estimated that the average yield per acre of beets is 16 tons, which, if sold at the average price of \$4.50 per ton, would produce an income of \$72 per acre, and as the cost of raising 1 acre of beets is stated to be \$25, it would leave a net profit of \$47 per acre to the owner of the soil. It has been demonstrated beyond a doubt that we have in this country the soil and climate to produce our own sugar.

In the State which I have the honor in part to represent, the agricultural station has been experimenting with the raising of the sugar beet with remarkable results. Tests have been made with beets raised in fifty-nine different counties in that State which show an average of 12.44 per cent sugar, with a purity coefficient of 76 per cent, and from one county in my district the average was 16 per cent sugar. When we remember that European beets never polarize more than 13 per cent, it is not surprising that the people are becoming interested in this matter, and if given an opportunity will in a few years successfully compete with the foreign nations in the production of sugar from beets; and instead of sending \$125,000,000 annually abroad to enrich the farmers of foreign nations, this amount will be distributed among our own people, to the benefit of all and to the benefit of the nation.

Is it not better to encourage the industries of our own country, protect them from the products of foreign manufacture created by cheap labor, and thus enable the artisans of our country to find employment at good wages, and at the same time, by reason of the activity in the commercial and manufacturing industries, so divide the employment of labor that those engaged in agricultural pursuits will not exceed their due proportion, and the products of the farm will find a market at the manufacturing centers just as the products from the manufactory find a market in the agricultural districts? This interchange of products between the people of our own country keeps the money of our country here, benefits all our citizens, and tends to the prosperity of the nation.

This is the theory of a protective tariff. This is the theory upon which the pending bill has been constructed. Against this theory stand the gentlemen on the other side of this Chamber, and they are now entering their protest against the passage of this bill, and declaiming as usual in favor of their pet but now exploded theory that "the tariff is a tax and the consumer pays it." Like the great apostle of infidelity, who seeks to take away from humanity its hope for eternal life, yet offers nothing in its stead upon which poor, weak, human faith may build, so these professional theorists stand here objecting to the passage of this measure; still

they offer nothing as a substitute, nothing which will bring relief to a distressed people; no, not even that creature of their own creation—the Wilson-Gorman monstrosity.

Mr. Chairman, I not only like this bill, but I like its title also. I believe that we should enact a law that will provide sufficient revenue for the Government, and I also believe in the policy of encouraging American industries. I believe in America; I believe we have the grandest country on the face of the earth, and with proper legislation our people will be the most prosperous, the most happy, and the most contented of any people. Experience has taught us that we need protection, and that system of protection which lifts the labor of this country above the degrading and dangerous conditions of the pauper labor of Europe; that system which makes our artisans men, which makes them intelligent, honest American citizens, standing on a plane of equality with all other American citizens, and maintaining their self-respect, independence, and manhood, is the system which I believe in. The bounty which protection gives to labor is, in my judgment, the nation's grandest investment. During the last campaign it was my pleasure to make to the people of the district I represent a promise regarding tariff legislation. It was this, that if chosen to represent them in the Fifty-fifth Congress I would never vote for a tariff bill that would put a high protective duty on the rice of the Southern plantations and a low ad valorem duty on the barley of the North; that I would never vote for a bill that would put wool on the free list and leave a high protective duty on peanuts. That promise, Mr. Chairman, I will keep to-day when I vote for the passage of this bill.

#### The Tariff.

#### SPEECH

HON. GEORGE W. STEELE,  
OF INDIANA.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 25, 1897.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States—

Mr. STEELE said:

Mr. CHAIRMAN: I have been so very busy with matters pertaining to our Soldiers' Homes as to be utterly prevented from preparing any extended remarks on this bill. I will, however, say for it that in my opinion it is the most complete tariff bill that has ever been framed. Not only because of its equity in levying duties upon imports, but because of the superb manner in which it is framed with reference to the collection of the duties imposed. In saying this I am not in any wise reflecting on the McKinley law or its framers, because, had the gentlemen composing that great committee been employed in framing the bill now under consideration, they would have had the advantage of the experience we have all shared since the framing of that measure, and would have been moved by that progressive spirit which characterizes all the performances of the Republican party.

I do not claim that the bill under consideration is perfection, for there are schedules that I would like to change. I agree with our tobacco manufacturers in thinking that the tobacco schedule is too high, and there are other items of the bill concerning which members of the committee and friends of the measure have divergent views. But we must all realize that in the framing of such a measure, involving so many conflicting interests, it is utterly unreasonable for everyone to expect to have things all his own way.

I am a protectionist because I believe firmly in protection, and if I had my own way in framing a bill I might overdo the matter. I believe in manufacturing in this country everything that the country needs and that it is possible for us to manufacture. I believe in our growing everything that it is possible for us to grow in this country, and keeping at home the money we send out to buy the products of other countries.

I have no sympathy with the gentleman from South Carolina [Mr. McLAURIN] in his criticism of the bill. He does not know when he is well off. We have given to that State, which is one of the largest producers of rice in the United States, a duty of \$1.60 a bushel on cleaned rice and \$1.40 a bushel on uncleaned. Yet he complains because we place no duty on the twine that binds our wheat, and gives us no credit for the free twine that binds his rice. Nor does he take into account the fact that it has seemed impossible for the people of the Southern States to grow enough rice to supply the demands of the country. The probability of doing so is, however, better than was that of producing enough sugar to supply the country in 1890, when the McKinley bill was passed. At that time we had not ascertained that it was possible for us to produce all the sugar that is required for consumption in

the United States. We had, prior to that time, produced only a limited amount of cane sugar in Louisiana and other Southern States, but we in the North had submitted to a tax on both sugar and rice uncomplainingly for years. In fact, we thought in 1890 that we had ascertained that we could not produce enough sugar for home consumption, and that it would be better for our people and do exact justice to those in the South to give a bounty on its production rather than tax it.

The wisdom of giving a bounty at that time is apparent, for by this encouragement we have demonstrated beyond the question of doubt that we can produce beets out of which sugar is made in twenty of our great States—my own among the number. I am happy to say—and that in any five of them enough can be grown for the manufacture of all the sugar consumed by our people. On rice we are giving the South Carolina growers a protection of 111.85 per cent, which is much more than we give to any other agricultural product, and this in face of the fact that we have not up to this time had a vote from that section to sustain its own industries. The Republican party believes in protection, and looks forward anxiously to the time when we will produce all the rice we need. Texas is now making a good showing in this direction, and we have a Republican member from that State, as incredible as it seems, who will help us to protect the rice growers and other farmers of Texas. For my part, Mr. Chairman, and I say it boldly, if I had the framing of this bill, unless our friends from the South, in which section only cane sugar and rice can be produced, and upon which a high tariff seems necessary, would help in protecting their own interests, I would permit them to fall by the wayside and suffer for a while the effects of their own folly.

With regard to sugar I predict that if the tariff fixed by this bill is unchanged for a period of ten years, we will at the end of that time be producing not only enough for our home consumption, but as much as we care to export, and at very little additional cost to the consumer. Germany gives an export bounty on sugar, yet the home consumer pays from 6 to 8 cents per pound for it, the bounty enabling the German producer to sell it in this country at a lower price, while the French consumer pays from 8 to 10 cents a pound for the same reason. The farmers in the twenty States where the sugar beet can be successfully raised will reap a double benefit from the development of the sugar industry; first, because the sugar beet is a more profitable crop than wheat or corn, and second, because the land devoted to raising beets will no longer be producing wheat and corn, and the lessened production will increase the price of these products. So in raising cattle and sheep.

The effect of the reductions made by the Wilson-Gorman law on farm products is demonstrated by reference to the statistical report of the Secretary of Agriculture for the year 1896 in the State which I have in part the honor to represent, viz:

In 1880 the live stock of Indiana was valued at \$78,806,248, increasing steadily in value until 1893, when high-water mark was reached at \$113,785,244, an increase of \$34,978,996. From 1893 to 1896 there was a decrease from \$113,785,244 to \$67,301,956, a difference to the bad of \$46,483,288. In 1896 the value of live stock in Indiana was \$11,504,290 less than in 1880. The loss was distributed as follows:

	1892.	1896.	Loss.
Number of horses.....	725,250	694,445	30,811
Value of horses.....	\$53,398,703	\$23,732,946	\$29,655,757
Number of mules.....	50,431	50,431	0
Value of mules.....	\$4,342,014	\$1,904,802	\$2,437,212

A decrease in each case of over 55 per cent.

	1892.	1896.	Loss.
Number of beef cattle.....	1,065,226	796,414	268,822
Value of beef cattle.....	\$30,925,520	\$10,447,970	\$20,477,550

A loss of 21 per cent.

	1892.	1896.	Loss.
Number of sheep.....	1,161,702	727,509	434,193
Value of sheep.....	\$4,298,762	\$1,009,779	\$3,288,983

A loss in number of over 39 per cent and in value of over 61 per cent.

	1892.	1896.	Loss.
Number of hogs.....	2,596,260	1,654,772	941,488
Value of hogs.....	\$12,737,061	\$7,802,580	\$4,934,481

A loss in number of 36 per cent and in value of 39 per cent.

In 1891 the production of corn in the United States, as shown by the Statistical Abstract for the year 1896 (pages 293 and 294), was 2,060,154,000 bushels, valued at \$836,439,225; in 1895 it was 2,151,138,586 bushels, valued at \$576,509,106, showing an increase in production and a large decrease in value. I have not the statistics for 1896, but they will show an increased production over 1895 and a much further decrease in value.

In the year 1891 we produced in this country our largest crop of wheat, 611,780,000 bushels. The value of the crop was \$513,472,711. In 1895 we produced 467,102,947 bushels, the value of which was \$237,938,998, another great decrease in value.

In 1891 we produced 738,394,000 bushels of oats, valued at \$232,312,267; in 1895, 824,443,537 bushels, valued at \$163,655,068.

Now, Mr. Chairman, there has been a great deal of discussion on the subject of cattle, and an effort will be made to reduce the duty which the proposed bill places upon them, and there seems to be a great deal of concern on the part of some gentlemen here about the farmers of the far West having their corn and hay eaten by cattle imported from Mexico.

Mr. SIMPSON of Kansas. Grass.

Mr. STEELE. No; you do not seem to be concerned about having the grass eaten. What you seem to want is to have cattle raised in Mexico until they are 3 or 4 years old, and then bring them into this country, as 217,000 head were brought in last year, according to the Treasury report, at a valuation of only \$6.87 per head, a ridiculously low valuation, the duty collected on them being \$1.37 a head. Now, the farmer who lives in Kansas, Missouri, Tennessee, Kentucky, and Indiana must keep his cattle until they are 3 years old, when they come into competition with the cattle raised in Mexico and imported as "feeders."

Mr. SIMPSON of Kansas. Oh, no; he does not do that.

Mr. STEELE. He has got to do it, because they are not feeders until they are 3 years old. The man who commences to feed cattle corn before they are 3 years old ought not to be in the business, because he does not know enough. [Laughter.] Our farmers must keep their cattle three years on their pasture, hay, and corn; the latter, on account of the climate, must be fed for cattle to do well in winter. At 3 years old they will have cost for feed alone, saying nothing of the labor, at least \$20 per head. They start for the feeder's place then, the Mexican animal at \$6.87 per head and the American animal at at least \$20. Therefore, if our people did not come in competition with cattle that may be pastured the year round, raised in other countries, the thousands and thousands of acres of land upon which there is scarcely a hoof, in portions of Kansas, Texas, Colorado, Oklahoma, and in many other portions of our own country, would be devoted to raising cattle with which to supply our demands, not only for the market as fatted animals, but as feeders for Kansas, Missouri, and the Dakotas, etc. In Kansas and Texas alone there is enough grass land going to waste to raise about the number of cattle officially reported to have been brought from Mexico last year.

If the people of the former State would devote their time and

attention to the cattle industry instead of raising Populists to send here to misrepresent it, it would be better for all concerned. Two advantages would be derived therefrom. First, we would not send our money to any other country to buy what we can produce at home. Second, our farmers would be able to get fair prices for their products. For my friend to say that these cattle do not enter into competition with our cattle is preposterous. Two hundred and seventeen thousand head of them coming into this country annually from other countries and put to the shambles and not compete with us! It is ridiculous. I have no doubt at all that the number that came in by evading the customs officers was as great as that which came under their observation.

It is said that we should be reciprocal in our relations with Mexico. I am in favor of reciprocity, but I want to have something to say about what is a fair arrangement. When the American farmer sends a hundred pounds of wheat to Mexico, he must pay a duty of \$2.47, and to get flour there we must pay \$4.54 a barrel. What costs our farmer \$20 on each head of cattle will, under the proposed tariff, cost the importer \$6.87 a head, if the report of the collector correctly states the value, and after the tariff is paid \$12.87, a difference of \$7.13. Now, it occurs to me that this is advantage enough to give to the Mexican cattle raiser or to the American speculator who feeds them.

Mr. SIMPSON of Kansas. How does the gentleman account for this fact, that since the reduction of tariff on cattle there has been a large increase in the price.

Mr. STEELE. That we do not agree to.

Mr. SIMPSON of Kansas. That is a fact.

Mr. STEELE. As a matter of fact that is not correct.

Mr. SIMPSON of Kansas. The gentleman is mistaken. It is correct.

Mr. STEELE. The better grades of cattle, what are known as exporters, may bring as high a price in the market as they did prior to our importation of Mexican cattle. But the farmer of this country, in marketing his cattle, has been getting a much lower price for them, as a rule. I will insert the statistics on this question.

Mr. SIMPSON of Kansas. Does not the gentleman know that the kind of cattle we call "stockers" are as much as one-third higher now than they were three or four years ago, the same class of cattle?

Mr. STEELE. I should not be surprised if it is so in the portion of the country from which the gentleman hails, because in driving Mexican cattle through the country they have spread disease that nearly wiped out your native cattle. But in my section of the country feeders will not bring as much money as they did in 1890 to 1892.

The fall in prices of agricultural products since the enactment of the present tariff law is without parallel in the history of our country. The following table shows the agricultural schedules of the McKinley and Wilson-Gorman laws and those proposed in the pending bill:

	McKinley bill.	Wilson bill.	Dingley bill.
<b>Cattle:</b>			
Valued at not more than \$20 per head—			
One year old or over.....		20 per cent.....	\$6 per head.
Less than 1 year.....		do.....	\$2 per head.
Valued at more than \$20 per head.....		do.....	30 per cent.
One year old or less.....	\$2 per head.....		
More than 1 year old.....	\$10 per head.....		
<b>Horses and mules:</b>			
Valued at less than \$150 each.....	\$30 per head.....	20 per cent.....	\$30 per head.
Valued at more than \$150 each.....	30 per cent.....	do.....	25 per cent.
<b>Sheep:</b>			
Less than 1 year old.....	75 cents per head.....	do.....	75 cents per head.
More than 1 year old.....	\$1.50 per head.....	do.....	\$1.50 per head.
<b>Hogs:</b>			
Barley.....	30 cents per bushel.....	30 per cent.....	30 cents per bushel.
Barley malt.....	45 cents per bushel.....	40 per cent.....	45 cents per bushel.
Buckwheat.....	15 cents per bushel.....	30 per cent.....	15 cents per bushel.
Corn or maize.....	do.....	do.....	do.
Oats.....	do.....	do.....	do.
Rice, cleaned.....	2 cents per pound.....	1 1/2 cents per pound.....	2 cents per pound.
Rye.....	10 cents per bushel.....	30 per cent.....	10 cents per bushel.
Wheat.....	25 cents per bushel.....	do.....	25 cents per bushel.
Wheat flour.....	25 per cent.....	do.....	25 per cent.
Butter.....	6 cents per pound.....	4 cents per pound.....	6 cents per pound.
Cheese.....	do.....	do.....	do.
Milk, fresh.....	5 cents per gallon.....	Free.....	2 cents per gallon.
Beans.....	40 cents per bushel.....	30 per cent.....	50 cents per bushel.
Beans, peas, and mushrooms, prepared and preserved.....	40 per cent.....	30 per cent.....	2 1/2 cents per pound and 15 per cent ad valorem.
<b>Pickles and sauces.....</b>	45 per cent.....	do.....	40 per cent.
<b>Cabbages.....</b>	3 cents each.....	Free.....	3 cents each.
<b>Cider.....</b>	5 cents per gallon.....	do.....	5 cents per gallon.
<b>Eggs.....</b>	5 cents per dozen.....	3 cents per dozen.....	5 cents per dozen.
<b>Hay.....</b>	\$4 per ton.....	\$2 per ton.....	\$4 per ton.
<b>Honey.....</b>	30 cents per gallon.....	10 cents per gallon.....	30 cents per gallon.
<b>Hops.....</b>	15 cents per pound.....	8 cents per pound.....	15 cents per pound.
<b>Onions.....</b>	40 cents per bushel.....	20 cents per bushel.....	40 cents per bushel.
<b>Pease:</b>			
Dried.....	20 cents per bushel.....	do.....	50 cents per bushel.
Green.....	40 cents per bushel.....	Free.....	40 cents per bushel.
<b>Potatoes.....</b>	25 cents per bushel.....	15 cents per bushel.....	25 cents per bushel.
<b>Straw.....</b>	30 per cent.....	15 per cent.....	\$1.50 per ton.

	McKinley bill.	Wilson bill.	Dingley bill.
Apples:			
Green or ripe.....	25 cents per bushel.....	20 per cent.....	25 cents per bushel.....
Dried, desiccated, evaporated.....	2 cents per pound.....	do.....	2 cents per pound.....
Grapes and peaches.....	60 cents per barrel.....	do.....	1 cent per pound.....
Bacon and hams.....	5 cents per pound.....	do.....	5 cents per pound.....
Beef, mutton, and pork.....	2 cents per pound.....	do.....	2 cents per pound.....
Lard.....	do.....	1 cent per pound.....	do.....
Poultry:			
Live.....	3 cents per pound.....	2 cents per pound.....	3 cents per pound.....
Dressed.....	5 cents per pound.....	3 cents per pound.....	5 cents per pound.....
Tallow.....	1 cent per pound.....	Free.....	1 cent per pound.....
Wool:*			
Class 1—			
Unwashed.....	11 cents per pound.....	do.....	11 cents per pound.....
Washed.....	22 cents per pound.....	do.....	22 cents per pound.....
Scoured.....	33 cents per pound.....	do.....	33 cents per pound.....
Class 2—			
Unscoured.....	12 cents per pound.....	do.....	12 cents per pound.....
Scoured.....	36 cents per pound.....	do.....	36 cents per pound.....

\* Important changes in the classifications have been made in this schedule which will inure to the benefit of woolgrowers.

By placing articles on the free list or greatly reducing the duty, as above indicated, the farmers of foreign countries are enabled to flood our markets with their products, even though prices have been ruinously low. The free list and reductions of duty by the law of 1894 in some cases seriously crippled, in others utterly destroyed, our manufacturing industries, on account of which thousands upon thousands of persons once employed at good wages were either thrown out of employment or had their wages greatly reduced, thus seriously crippling the very best market our farmers and market gardeners have.

Mr. Chairman, for the information of the committee I will present a short list, taken from Democratic official reports, showing the amount of produce imported into this country during the fiscal year ending June 30, 1896, every item of which, excepting rice, sugar, and wool, are articles that can be produced or were produced in this country in sufficient quantity to supply our needs; and if the McKinley law had not been repealed by the Wilson-Gorman Act we would now be producing nearly, if not quite, all the wool we need for home consumption and thousands of tons more sugar than we are now.

The value of a few articles imported into the United States during the fiscal year ending June 30, 1896.

	Free of duty.	Dutiable.
Animals.....	\$423,687.20	\$2,749,180.47

Total, free and dutiable.....		759,694,084.49

\* Value imported 1895, \$324,217.43.

I do not claim, however, that the importation of the articles enumerated, excepting wool, has materially affected the prices in this country, but on account of the possibility of importation, owing to the free list or low tariff, and of the impossibility of our shippers knowing when they must compete in our great markets with train loads or cargoes of products from other countries, they must prepare to meet foreign prices and buy at such figures as would render their investment safe, which is the more easily done when we have produced more than our home market can take. The fact must not be lost sight of that the importations enumerated

occurred in a year when more people were out of work in this country than ever were before, and when we were blessed with bountiful crops.

What I have said up to this time has been devoted to farming interests, in which occupation more people are employed than in any other. I regret that my time will not permit of further remarks concerning this important industry, nor will I leave it without reminding you that the farmer is a liberal buyer of almost every useful article the merchant or manufacturer has to sell, and that he cheerfully pays good wages to the mechanic and laborer.

The State of Indiana, which I have in part the honor to represent, is not only high up on the list as an agricultural State, but is fast forging to the front as one of the great manufacturing States of the Union, having in 1890, according to the census report for that year, 140,000 persons employed in manufacturing. This number was rapidly increasing at that time, owing to the discovery in 1897 within her borders of the largest natural gas field in the world, the permanence of which was not fully relied upon until 1888 or 1889. This enabled our citizens to offer to the manufacturer free land, and free gas for fuel, as an inducement to locate. Take as an illustration the growth which resulted in my own city of Marion, the population of which in 1880 was 2,990; in 1886, 3,883; in 1890, 8,950, and in 1894, 19,925. The same may be said of Anderson, Muncie, Kokomo, and many other cities within the gas belt, while other cities within the district I have the honor to represent, such as Huntington, Wabash, Peru, and Logansport, to which gas is piped from the fields, also shared in the benefits of the industrial impetus which resulted. There are to-day in Indiana a number of incorporated cities, with modern municipal improvements, where there were only fields and woods in 1888.

Following the election in 1892, there was a great change in the industrial outlook, even in the Indiana gas belt. Confidence was destroyed in anticipation of legislation inimical to the development of manufactures, and a halt was called in all the great industrial enterprises which were adding to the wealth and population of the State, and to the prosperity of its people. Merchants began to trim their sails like the mariner in the face of an impending storm, expenditures were curtailed, and the goods manufactured during the winter of 1892, in anticipation of a ready sale in 1893, became a glut on the market and went begging for purchasers. In the end the manufacturers were forced to sell the output of their mills at a price below the cost of production. It was under such conditions that the manufacturers of Alabama, who have been referred to, sold products abroad at ruinously low prices for the want of a better market at home.

As a necessary consequence, factories were closed by hundreds, and thousands upon thousands of wage earners were deprived of employment. Many of them took the road as tramps who would not have dreamed of so doing under the conditions which prevailed in this country prior to 1893. Some of them, who had before been the willing customers of farmers and gardeners, themselves became competitors of those whom they had formerly

patronized, and raised vegetables in their own little gardens. There was a decreased consumption of agricultural products, caused by an inability of the factory employee to supply his real wants by purchase from the farmer, who also suffered. There was a decrease even in the amount of wheat consumed in the United States from 1892 to 1895 of over 2 bushels per capita, notwithstanding the greatly reduced price of this commodity.

The conditions prevailing in the Indiana gas belt from 1888 to 1892 came within my personal knowledge. I know that during that period all those who desired employment could obtain it at good wages in the multiplying manufactories of that section. Wage earners were buying lots and building their own homes, furnishing them tastefully, dressing their families well, sending their children to school, and providing for the wants of those who depended upon them in a liberal manner. They were accumulating money in savings banks and building and loan associations. Under such conditions they were willing and able to pay to the farmer and market gardener, the tradesman, merchant, and mechanic, a fair price for what he had to sell, and let me here bear testimony to the fact that there is no class of people which more cheerfully pays a fair price for articles of consumption than the employees of our manufacturing establishments when they receive fair compensation and steady employment.

I can look back over the four years of the last Administration to 1892, and see hundreds and hundreds of factories filled with thousands of happy and contented employees, great pillars of flame arising from the chimneys of busy factories, and can hear the roar of the furnaces and the whir of turning wheels, the surroundings of these employees in their homes denoting a generally diffused prosperity. Within a year of that time scores of great establishments stood idle, with dead furnaces and broken window lights denoting the blight which had fallen upon industry. In the homes of their idle employees there were evidences of poverty. Two and three families were crowded into houses formerly occupied by one. Homes they were building and paying for had to be sacrificed. But this is a picture I will not dwell upon. It was not peculiar to Indiana, for the gas belt, with its cheap fuel, has continued to offer superior advantages to manufacturers. I prefer to look forward to a time, which I earnestly hope and believe is not far off, when manufacturing and all other business will be revived, when wage earners shall have steady employment at good wages, and will be able to accord to the farmers, or those otherwise employed, a fair price for what they have to sell.

It will not do for our free-trade friends to roll over as a sweet morsel the fact that American-made goods may sometimes be sold in foreign markets at a lower price than they are sold at home. Why not, if we can thus increase the output of our factories and give employment to more laborers, if that is the only way of finding a market? Business men will not lose sight of the fact that before the owner of the manufactory can declare any dividends he must pay for the labor and material required to produce the manufactured product, must bear the cost of wear and tear on machinery and tools, and generally pay interest upon the investment involved, as well as insurance and taxes upon his plant. As a rule, during the past four years it has required every cent of the income, and more, to keep the factory going. It is better that we protect our own home market from the invasion of foreigners and sell our surplus abroad at the low price determined by foreign competition than to surrender the very foundation of our industrial prosperity—good wages for employees.

Why, within the past year coal operators in Virginia have, on account of their former market in New England being glutted by importations of coal from Nova Scotia and of the decrease in the consumption of coal there on account of the closing of factories, been shipping train loads of coal to Indianapolis and Chicago and selling it at a lower price than that for which it can be mined and delivered from the coal fields within a few miles of these two cities, and has forced our Indiana miners to work at starvation wages, if employed at all, and there have been strikes, misery, and want throughout the coal fields of our State. The mine operator could not tell when he would find a train load of coal from mines 800 miles away to compete with him for a market already greatly depressed, because our people were earning little to buy coal with, and the closing of factories had caused a great decrease in the demand for manufacturing purposes.

Men employed on railroads came in for their full share of the loss, which ultimately extended to every avocation. The Virginia coal was shipped at a loss, to be sure. So in the manufacture of bar and other iron, which has been referred to. It is possible for Pittsburg to ship bar iron into Alabama, where coal is found on one side of a valley and the ore on the other, and undersell them, but it must be done at a loss. Similarly, Alabama may ship iron to Pittsburg; but there is a lack of business sense in such transactions, and business men will engage in them only because they are compelled to do so and to save their financial credit, which has so often been necessary during the past few years.

We are not much concerned in finding a foreign market in

which we can compete with the manufacturers of other countries at prices which do not represent the actual cost of production, if the commodity has been produced after the charges above enumerated, including fair wages, have been met. I prefer to maintain our home market for such of our products as we can consume, and shall welcome the day—and I hope it is not far off—when we can supply not only our own people, but those of other countries with the best goods that it is possible to manufacture by means of good workmanship and ingenious machinery. I desire, Mr. Chairman, to return to the conditions prevailing at a time within the remembrance of us all, when every man who desires work in this country may be employed at good wages, and with those wages may become the profitable customer of those who have commodities to sell.

Our people realized, after it was too late, that they had not given the McKinley law a fair trial, or had been indifferent or careless in permitting the "tariff-for-revenue or free-trade party" to come into power. I need not remind you of the result of the election that year, and will only gently speak of that of 1896, notwithstanding your efforts to muddy the water with a new issue.

I earnestly and solemnly appeal to the friends of protection to home industries, to all who have families and homes, or hope to have them, and would have happiness therein, never to repeat the folly of 1892. Try the Dingley law, failing not to remember what a shock has come to business and to business confidence during the past four years. We must not expect instant relief for a condition so distressing, but in the end it may be expected. We will again pass the bill restricting immigration that was passed at the last session, vetoed by President Cleveland, and by the House passed over his veto, thus giving to labor additional protection from foreign competition. We will provide an abundance of money with which to transact the business of the country, and every dollar of it worth a dollar any place in the world. But it should not be forgotten that industrial conditions have sunk to their lowest ebb, and we must patiently await the return of the tide.

The Republican party has never failed in the face of a national emergency, and it will not fail now. Remember the rapidity with which the Republican party was reducing the national debt and meeting every obligation of the Government, and that the McKinley Act of 1890 was to "reduce the revenue, and equalize the duties on imports," the party feeling that there was no occasion for further reduction of the national debt. The wisdom of the framers of that law is universally acknowledged by Republicans and known by Democrats. You never can forget the Wilson-Gorman law on account of the distress that followed in its wake, and because each year the revenues of the Government have fallen far short of enough to meet its expenses. You will not easily forget that during the last Administration our national debt was increased by \$262,000,000.

When the bill under consideration is enacted, we will have the protection of the McKinley law, with its reciprocity features extended, and McKinley as President of the United States. [Loud applause on the Republican side.]

The CHAIRMAN. The time of the gentleman from Indiana [Mr. STEELE] has expired.

Mr. DOLLIVER. Do you wish more time?

Mr. STEELE. No; I can not take it without infringing on that of others. Just a minute more. I want to call the attention of the gentleman from Ohio [Mr. LENTZ], who has been referring to the showing made in the last election by the gentleman from Iowa [Mr. DOLLIVER] and the gentleman from Ohio [Mr. GROSVENOR], to some facts about his own district. In 1894 the majority against Mr. Watson was 424—he had a plurality—while in 1896 the majority against him was but 106. So that my friend, in criticising the gentleman referred to, it seems to me, has placed himself at a decided disadvantage.

Mr. LENTZ. Will the gentleman allow me to make a statement in connection with those figures?

Mr. STEELE. You have made your statement and refused to yield.

Mr. LENTZ. I have not made any statement with reference to my own district.

Mr. STEELE. I know you did not, but you refused to yield to others.

Mr. LENTZ. I said I was willing to yield to others if the time were given in which to do it.

Mr. STEELE. I can not yield to the gentleman.

Mr. LENTZ. Very well.

Mr. STEELE. These are the figures from the record. I now yield one minute to the gentleman from Iowa [Mr. DOLLIVER].

Mr. DOLLIVER. I wish to occupy only a minute. I should have been pleased if the gentleman from Ohio [Mr. LENTZ] had had the courtesy to allow me to correct an error when he made it. My vote in 1894, which appeared to be one of the features of his argument, instead of being a majority of 15,000, if correctly calculated, as it is not in the Directory, through no fault of mine,

however, would have been 7,500, which, by diligence in the last campaign, I was able to increase to 11,000; and if the campaign had lasted two weeks longer, they would have made it unanimous. [Laughter.]

Mr. LENTZ. Talking about courtesy, I should like to ask the gentleman—

Mr. STEELE. I can not yield.

Mr. LENTZ. I should like to ask further if in his own biographical statement the gentleman did not say 15,000?

The CHAIRMAN. The gentleman declines to yield.

### The Tariff.

Wherefore by their fruits ye shall know them.

Rate of taxation under the McKinley law.....	49.58 per cent.
Rate of taxation under Wilson law.....	39.94 per cent.
Rate of taxation under Dingley bill.....	57.03 per cent.

Annual taxes under the McKinley law.....	\$198,393,452.97.
Annual taxes under Wilson law.....	156,104,598.81.
Annual taxes under Dingley bill.....	278,501,721.53.

### REMARKS

OF

HON. JAMES D. RICHARDSON,

OF TENNESSEE.

IN THE HOUSE OF REPRESENTATIVES,

March 29, 30, and 31, 1897.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States—

Mr. RICHARDSON said:

Mr. CHAIRMAN: The examination of the Dingley bill proves it to be a measure which will fix the highest rates of taxation on the people ever imposed by any law in our history. Take the Morrill tariff law, which was enacted to carry on the war and provide revenue for that purpose; the tariff law of 1883; the tariff law known as the McKinley law; the present, the Wilson law, and they are all greatly exceeded by the pending measure in exactions laid upon the people.

From the comparative statement prepared by the Ways and Means Committee to accompany and elucidate this bill it appears that the average rate of tax imposed by the two great tax laws, the McKinley and Wilson acts, were as follows: McKinley Act, 49.58 per cent; Wilson Act, 39.94 per cent, while this bill fixes the rate at the enormous sum of 57.03 per cent. I know the accomplished chairman of the Ways and Means Committee, in his opening speech and all along in the debate, has claimed that the rates in this bill were fixed so as to fall between those of the McKinley and those of the Wilson bill. But this I deny, and the figures I have just submitted prove my contention is correct. But look further. The taxes collected per year under the McKinley Act were \$198,393,452.97; under the Wilson Act, \$156,104,598.81; while the gentleman himself proposes to collect under the pending bill the great sum of \$278,501,721.53. These figures are conclusive and place the question beyond dispute. As we proceed in the discussion of the bill under the five-minute rule I shall call attention in detail, as far as I am able to do, to the increases of taxation. In very many instances this bill takes articles now on the free list under the Wilson law, and even some that were on the free list under the McKinley Act, and places them on the dutiable list at a high rate of taxation. This is wrong, radically wrong, in my judgment.

Mr. DOCKERY. Do I understand the gentleman from Tennessee to say that this bill increases rates over the McKinley bill?

Mr. RICHARDSON. Mr. Chairman, that is exactly what I am attempting to say here. This bill is made up of fourteen schedules, beginning with the letter A and running down to and including the letter N. What I shall now show may not be known by the gentleman from Missouri [Mr. DOCKERY] or the gentleman from Texas [Mr. SAYERS], who are making inquiries, and pertinent ones, as to increases upon some of these articles. I take this occasion to say that in 12 out of 14 schedules in this bill the rate of duty is higher than under the McKinley bill—12 out of 14! Gentlemen have piled up taxes in this bill beyond the taxes imposed by the McKinley bill. Take the first schedule in the bill, Mr. Chairman—chemicals, oils, and paints. The per centum in the McKinley bill was 30.7; under the Wilson bill, 27.99; under the Dingley bill it is about 31.33, a small percentage of increase in

this case, it is true, but a higher rate than that imposed by the McKinley bill.

While the average rate is shown to be higher, let me call attention to the largely increased taxes which will be collected under this bill over the McKinley and Wilson acts.

The tax collected under the McKinley Act on this schedule, called Schedule A, chemicals, oils, and paints, was the sum of \$6,399,522.42; under the Wilson Act, \$5,513,545.78; the Dingley bill, \$8,418,198.19. In this schedule there are eighty-two items, and on forty-nine specified articles therein the taxes are raised above the McKinley law.

Take Schedule B—earths, earthenware, and glassware. I find the rate under the McKinley bill was 51.20 per cent; under the Wilson bill, 35 per cent, and under the Dingley bill, 52.63 per cent.

The average rate is higher in this schedule than the McKinley law. The amount of taxes to be collected under it are in excess of those collected under that law. In the schedule are thirty-five items, and the taxes are raised above the McKinley law in twenty-nine cases, while thirteen items on the free list under the Wilson law in it are placed on the dutiable list by this bill.

Schedule C—metals, and manufactures of metals. This is one of the schedules of the fourteen—and there is only one other—where the rates are lower in this bill than in the McKinley bill. In the McKinley bill the average tax in this schedule was 57.21 per cent; in the Wilson bill, 37.58 per cent; in the Dingley bill, 46.54 per cent. There is only one other schedule, and I will call attention to it in a moment, that is in that condition.

Under the Wilson Act the taxes collected under this schedule were \$13,334,652.30, and under this bill they are increased to \$17,169,901.82.

Schedule D—wood, and manufactures of wood. Under the McKinley bill the average rate was 14.93; under the Wilson bill, 22.87; under the Dingley bill, 16.58.

Mr. DINGLEY. Less than the Wilson bill.

Mr. RICHARDSON. Yes, sir; less than the Wilson bill. I am glad the gentleman mentions it. Under the McKinley bill the taxes collected, at an average of 14.93 per cent, were \$1,857,000 in round numbers. Under the Wilson bill, although the rate was higher, the amount collected was only \$384,000. Under the Dingley bill it is estimated that there will be collected or imposed of taxes \$2,306,000. Now, the difference grew out of the fact that lumber in part was upon the free list under the Wilson bill, and while the rate was a little higher on the articles upon which a tax was laid, the amount collected was six times greater under the McKinley bill, and will be seven times greater under the Dingley bill, than under the Wilson bill. And yet the gentleman says taxes are not being increased by the pending measure.

In this schedule there are only thirteen items. But there are eleven increases over the McKinley bill, while there are thirteen articles in it that are on the free list under the Wilson Act which are heavily taxed by the pending bill.

Mr. DOCKERY. Will the gentleman from Tennessee allow me to ask him how he reconciles the statement he just made with the statement made by the chairman of the committee in his opening remarks? In reply to a question of the gentleman from Iowa [Mr. HENDERSON] he stated, if I remember him aright, that the rates of duties under this bill average between the rates of the McKinley law and the rates of the Wilson Act.

Mr. RICHARDSON. These figures which the gentleman himself has submitted in this comparative statement do not bear that out. Take Schedule E. Under the McKinley bill the per cent was 14.55.

The CHAIRMAN. The time of the gentleman has expired.

Mr. DOCKERY. I ask unanimous consent that the gentleman from Tennessee have five minutes more.

There was no objection.

Mr. RICHARDSON. I thank the committee. Take Schedule E. Under the McKinley Act the tax was 14.55 per cent; under the Wilson bill, 40.94, but under the Dingley bill it goes to 71.10.

Mr. SAYERS. The gentleman must remember that under the McKinley Act a bounty was given on sugar.

Mr. RICHARDSON. Of course we all remember that. I thank the gentleman for his suggestion.

Next I take Schedule F—tobacco and manufactures of tobacco. Under the McKinley Act the rate was 117.82; under the Wilson Act it was 109.06; under the Dingley bill it is 164.05.

The taxes under the McKinley bill on the articles in this schedule were, in round numbers, \$14,800,000, while under this law they are to be \$22,352,701.34.

Schedule G: Agricultural products and provisions. Under the McKinley Act the tax imposed was 33.07; under the Wilson Act, 23.28, and under the Dingley bill it is 39.94.

Under the McKinley Act the taxes imposed by this schedule amounted, in round numbers, to \$12,000,000; under the Wilson Act to \$7,000,000, and under this bill to \$15,000,000, while there were twenty-five articles in it which were on the free list under the Wilson Act that are taxed by this bill.

Schedule H: Spirits, wines, and other beverages. Under the McKinley Act the rate was 69.78; under the Wilson Act it was 61.54; under the Dingley bill it is 77.01.

Schedule I: Cotton manufactures. This is a schedule wherein the tax under this bill is lower than it was under the McKinley Act. Under the McKinley Act on this schedule it was 55.21; under the Wilson Act it was 48.75; under the Dingley bill it is 54.14.

I call attention, however, to the fact that the increase of tax is a large one over the Wilson Act, and this increase amounts to nearly \$2,000,000.

Schedule J: Flax, hemp, jute, and manufactures of. Under the McKinley Act the rate was 43.68; under the Wilson Act it was 40.38; under the Dingley bill it is 49.52.

The amount of tax collected under this schedule by the McKinley Act was, in round numbers, \$18,000,000; under the Wilson Act, \$12,000,000; by this bill, \$21,000,000, and many articles on the free list under the Wilson Act are taxed by the pending bill.

Schedule K: Wool, and manufactures of wool. Under the McKinley Act the rate was 80.50; under the Wilson Act it was 47.62, and under the Dingley bill it is 81.57.

This is where the poor man's blanket comes in. [Laughter.]

The odious McKinley law placed a tax upon the people in this schedule of \$44,608,120.95; the Wilson Act reduced this tax to \$23,027,569.87, while this bill puts this tax at the marvelous sum of \$67,556,899.85. Surely an indignant people will resent this outrage in thunder tones at the earliest opportunity.

It is of the highest importance to all buyers, especially wage earners, farmers, and laborers, to know what the annual clothing supply and the necessary woollen manufactured goods will cost consumers in the United States. If gentlemen deny the orthodoxy and the reliability of the Republican newspapers I have quoted in this debate, none of them, I am sure, will have the hardihood to deny the preeminent ability of Mr. Edward Atkinson, of Boston, as a statistician and political economist. We all know he has no superior in the United States. He has made a detailed statement of some of the effects of the rates in the wool schedule of this bill. I do not give this statement in full, but will give it as it has been put in condensed form. It is of great importance to all the people, and is as follows:

Mr. Atkinson figures the advance in the price of foreign wool now consumed in this country—375,000,000 pounds—will be 10 cents a pound. This tax will be paid by consumers of clothing in the sum of \$37,500,000. The protection to the domestic woolgrower will then consist in raising the price of domestic wool consumed, 275,000,000 pounds, 10 cents a pound. That would give to the woolgrowers a bounty of \$27,500,000, making the total tax, public and private, upon consumers of woollen goods \$65,000,000. On this basis, each man, woman, and child in our population will pay into the Treasury on the average a tax on clothing of 50 cents per head.

Mr. Atkinson shows that each man, woman, and child will pay increased costs of imports 4 cents per head. Each man, woman, and child will pay to the woolgrowers a bounty of 86 cents per head. Total per capita taxation on clothing, 90 cents per head, on a computed population of about 73,000,000 persons. That tax would be equal to one-fifth part of the total cost of conducting the Government of the United States during the four years of President Cleveland's first Administration, when the expenditures were a fraction under \$4.50 per head, including interest and pensions.

Mr. Atkinson speaks of the taxes and the bounties the Dingley bill proposes to make the people pay for the direct benefit of the woolgrowers and wool manufacturers, without adding a cent to the Treasury; and also as to how it takes money from the Treasury for private gain. He says:

The value of domestic wool at the highest estimate of the largest product of any one year, when the clip reached about 550,000,000 pounds, was \$52,000,000, as given by Secretary North, of the Ways and Means Committee. We may call it \$55,000,000 to give a margin for error. The value of the total product of that year, rated at what 50 cents a day would buy in food, fuel, shelter, and clothing in that year, came to a little over \$13,200,000,000. The proportionate value of wool to the total product on this estimate is 1 to 240. If we apply this ratio of values to population, it follows that 239 men, women, and children are to be subjected to a tariff tax of 90 cents each in order that 1 woolgrower may augment his private income with his proportionate share of the sum of \$7,500,000 bounty. This sum it is proposed to divert from the pockets of the people and from the Treasury of the United States to the private gain of this small fraction of the people of this country under the pretext of the general welfare.

During the reading of the above the time of Mr. RICHARDSON expired.

Mr. RICHARDSON. I trust I may be permitted to conclude reading that article.

There was no objection.

Schedule L: Silk and silk goods. Under the McKinley Act the rate was 53.50; under the Wilson Act it was 46.96, and under the Dingley bill it is 53.89. That is, while they made the duties on blankets, and the whole wool list, considerably higher even than under the McKinley Act, the average duty on silk goods under this bill is 53.89, or only a fraction of 1 per cent above the rate under the McKinley law.

Schedule M: Pulp, paper, and books. Under the McKinley Act the average rate was 23.85; under the Wilson Act, 22.19; under the Dingley bill it is 29.82.

Next comes "sundries," the only remaining schedule. Under the McKinley Act the rate was 26.06; under the Wilson Act it was 23.63; under the Dingley bill it is 30.57.

Under this schedule are included numerous articles. I wish I

had time to comment on them all, but I can not do so. As a sample, take the necessary article to us, buttons.

I ask the attention of the committee to what an intelligent writer says of the duties on buttons and the button schedule. He shows that the Dingley bill places a duty or tax on linen for buttons for underwear of 607 per cent. [Applause.]

The tremendous exactions upon buttons are causing protests all over the East as well as in the West. An analysis of the button schedule by a New York expert shows ad valorem duties which mount skyward, even higher than anything in the McKinley law. Steel trouser buttons costing 10 cents per gross are to pay 21 cents, or 210 per cent ad valorem. This is only a starter. Vegetable ivory buttons, for men's wear, costing 17 cents and a fraction per gross, pay only 130 per cent, but this appears to be a blunder on the part of the tariff framers. They make a better record, from the protective point of view, upon French bone buttons for underwear, which mounts to 150 per cent, and on linen bar buttons for underwear, which go to 447 per cent. These are all surpassed by the rate on nickel bar buttons for underwear, which are charged three-fourths of 1 cent per line per gross, amounting to a duty of 13 cents on buttons of 24 lines, button measurement, when the cost for 12 gross is only 361 cents. The duty, therefore, is more than six times the foreign cost, and is computed by the expert as 607 per cent. The present duty is 35 per cent, so that the new duty is more than fifteen times the old and is substantially prohibitory upon all imports of foreign buttons. The domestic manufacturer has the market shut up in his control to the point which permits him to charge six times the foreign cost in order to put his infant industry upon a manhood footing.

The able and accomplished chairman of the Ways and Means Committee may say this is "juggling" with figures, but the American buyer of buttons will pay for this "juggling" with the duty on this article of prime necessity. The millionaire manufacturer will be made happier and richer while the "juggling" is multiplying his profits, given him by law, and which he has in no sense earned, except by liberal contributions to Republican campaign funds. [Applause.]

I will insert here a table showing the rates of duty under each of the schedules of the bill, also under the Wilson bill, and also the McKinley bill:

SCHEDULE A.—CHEMICALS, OILS, AND PAINTS.		
	Per cent.	
McKinley bill	31.07	
Wilson bill	27.99	
Dingley bill	31.33	
SCHEDULE B.—EARTHS, EARTHENWARE, AND GLASSWARE.		
	Per cent.	
McKinley bill	51.30	
Wilson bill	35	
Dingley bill	52.63	
SCHEDULE C.—METALS, AND MANUFACTURES OF.		
	Per cent.	
McKinley bill	57.21	
Wilson bill	37.58	
Dingley bill	48.54	
SCHEDULE D.—WOOD, AND MANUFACTURES OF.		
	Per cent.	Amount.
McKinley bill	14.03	\$1,857,802.96
Wilson bill	22.87	384,712.85
Dingley bill	16.53	2,306,568.99
SCHEDULE E.—SUGAR.		
	Per cent.	
McKinley bill	14.55	
Wilson bill	40.94	
Dingley bill	71.10	
SCHEDULE F.—TOBACCO, AND MANUFACTURES OF.		
	Per cent.	
McKinley bill	117.82	
Wilson bill	109.05	
Dingley bill	164.05	
SCHEDULE G.—AGRICULTURAL PRODUCTS AND PROVISIONS.		
	Per cent.	
McKinley bill	33.17	
Wilson bill	23.29	
Dingley bill	39.94	
SCHEDULE H.—SPIRITS, WINES, AND OTHER BEVERAGES.		
	Per cent.	
McKinley bill	69.78	
Wilson bill	61.54	
Dingley bill	77.01	
SCHEDULE I.—COTTON MANUFACTURES.		
	Per cent.	
McKinley bill	55.25	
Wilson bill	43.75	
Dingley bill	54.14	
SCHEDULE J.—FLAX, HEMP, AND JUTE, AND MANUFACTURES OF.		
	Per cent.	
McKinley bill	43.68	
Wilson bill	40.38	
Dingley bill	49.52	
SCHEDULE K.—WOOL, AND MANUFACTURES OF.		
	Per cent.	
McKinley bill	80.50	
Wilson bill	47.62	
Dingley bill	81.57	
SCHEDULE L.—SILK AND SILK GOODS.		
	Per cent.	
McKinley bill	53.56	
Wilson bill	46.96	
Dingley bill	53.89	
SCHEDULE M.—PULP, PAPER, AND BOOKS.		
	Per cent.	
McKinley bill	23.85	
Wilson bill	22.19	
Dingley bill	29.82	
SCHEDULE N.—SUNDRIES.		
	Per cent.	
McKinley bill	26.06	
Wilson bill	23.63	
Dingley bill	30.57	

I repeat the whole amount of taxes raised under the McKinley law was \$198,373,452.97; the Wilson law, \$156,104,598.81, while under the pending bill of iniquities the people will be taxed to the enormous sum of \$273,501,731.53.

Now, Mr. Chairman, I simply want to say this: If the wrath of the American people was visited upon the Republican party for its enactment of that high protective-tariff measure known as the McKinley Act, what will the American people do with this same old party for enacting a tariff so much higher in its rates of duties than those of the McKinley Act? [Applause on the Democratic side.] I tell you, gentlemen, in the slang of the street boy, that what they will do for you will be "more than a plenty," and I leave the issue with you. [Applause on the Democratic side.]

Mr. DINGLEY. Mr. Chairman, the remarks of the gentleman from Tennessee [Mr. RICHARDSON] are another illustration of a familiar method of juggling with percentages. Notwithstanding the fact that in the bill which is now pending before the Committee of the Whole, in every schedule except the agricultural, the earthenware and glass, tobacco, sugars, and silk laces, the present bill carries actual duties less than were carried in the act of 1890, and notwithstanding the fact that in two of the schedules it carries duties substantially the same as those in the present law, yet, if you convert these specific duties into ad valorem percentages, not taking into consideration the change of values between 1893 and 1896, you appear to have an increase of duties imposed, when, as a matter of fact, the actual duties imposed are less.

Let me illustrate how this is accomplished: Here is a certain article which in 1890 had a foreign cost of 60 cents, and in this country had a cost of production of 90 cents. The difference in cost of production was 30 cents. A specific duty of 30 cents was imposed under the act of 1890, which was equivalent to 50 per cent on the then foreign value of the goods. Now, this bill imposes precisely the same specific duty, 30 cents; but in the meantime that article has fallen 10 cents abroad and 10 cents in this country, making the value of the article to-day in the foreign country 50 cents and in this country 80 cents, showing precisely the same difference in cost of production, arising from the higher price of labor here, that existed in 1890. The same duty is imposed as under the act of 1890, a specific duty of 30 cents; yet, by the jugglery of percentages, the gentleman from Tennessee is able to say that now the duty has become 60 per cent and that we have increased the duty, when, as matter of fact, we have not increased it a single cent, and the increase exists only in the jugglery of percentages.

Mr. RICHARDSON. Then you "juggle," because this is your statement which shows the percentages.

Mr. DINGLEY. Not at all. We have simply framed that statement so that even in spite of juggling the facts may appear.

Mr. RICHARDSON. I take my figures exactly from this statement.

Mr. DINGLEY. I understand what the gentleman has done. Now I want to call attention to what the fact is. The gentleman has undertaken to create the impression that in every schedule but two in this bill the duties are increased over those of the act of 1890. I say, in reply, that, outside of the sugar schedule and the other schedules I have named, there is no increase in the actual duties, but a reduction. But you convert those figures into juggling percentages, and thus there appears to be an increase when there has been actually a reduction, for the reason I have suggested.

Another thing: Those percentages are estimated on the invoice values of the last fiscal year. Now, we all know that when the act of 1894 was passed, the specific duties of the act of 1890 were converted almost entirely (outside of two schedules) into ad valorem duties. And the moment that was done, what took place in the invoices? Every invoice was undervalued, and goods which did not actually fall in price abroad were in the invoices made to appear to fall. So that you have here, in the basis on which these percentages were computed, the undervaluations of last year, which in nine cases out of ten do not represent the actual foreign value of those goods.

Mr. RICHARDSON. I dislike to interrupt the gentleman, but I would like to ask him right here—

The CHAIRMAN. The time of the gentleman from Maine has expired.

Mr. RICHARDSON. I ask that the gentleman's time be extended?

The CHAIRMAN. If there be no objection, the time of the gentleman from Maine will be extended for five minutes.

There was no objection.

Mr. RICHARDSON. I understand the gentleman to be commenting upon the ad valorem duties of the Wilson bill; and I recognize the difficulty in calculating an accurate per cent—

Mr. DINGLEY. It is not simply a "difficulty," I am pointing out the fact of actual false valuations.

Mr. RICHARDSON. But the gentleman must not get away from the fact that the statement I have just read gives the specific

duties of the act of 1890 in the McKinley bill as compared with the specific duties of the Dingley bill.

Mr. DINGLEY. It does not make any difference with reference to that. As a matter of fact, when you compare the valuations of 1893 with the valuations of 1896—the foreign valuations, upon precisely the same articles—you find an immense undervaluation on the basis of 1896, because it must be borne in mind that the values upon which you compute the effect of the proposed bill are the values in 1896, not those of 1893.

Mr. RICHARDSON. Is not this bill made up upon almost identically the same principle as the act of 1890—the McKinley bill?

Mr. DINGLEY. But your equivalent ad valorem are based in the one case on the invoiced values of 1893 and in the other case on the invoice values of 1896. That is the difficulty with the comparison. There has been an immense undervaluation in goods since 1893; and goods have fallen, too, in consequence of the great depression of business. Now, you are undertaking to compare the prices of 1893 with the prices of 1896, and to convert them into ad valorem, with the result of deceiving the country. Now, what I have to say—

Mr. RICHARDSON. Then you have made an improper statement here, because this is your statement.

Mr. DINGLEY. While it is true that the figures themselves may, perhaps, be as the gentleman represents, the conclusions drawn depend a great deal upon how you use them. [Laughter.]

Mr. RICHARDSON. I only use them as they appear here on the paper.

Mr. RICHARDSON. The gentleman from Maine says that we on this side have been "juggling with figures." I have taken the figures as prepared by his expert—I suppose the clerk of his committee or the expert employed by his committee—and I have shown that in 12 out of 14 schedules the per cent of duty in this bill as compared with the duties in the McKinley bill has been raised. My friend from Maine has undertaken to answer that by saying that we are "juggling with figures." I said that in some instances there was a specific duty levied and in some an ad valorem duty. While sitting here, I have gone to the trouble to take 82 items of taxation which enter into Schedule A, the first schedule of the bill. Out of those 82 items, if I have calculated correctly (and I have endeavored to do so), the rate of duty has been increased in 49 cases above the rates of taxation in the McKinley bill. That may be "juggling with figures." I have not the time, and not being an expert, I possibly would not be able to analyze each one of these estimates as between specific and ad valorem rates—at least it would take a long time for me to do so—but in these 49 instances in Schedule A, covering 82 items of taxation, the rates of duty are increased over the rates of the McKinley bill, sometimes by a specific duty and sometimes by a per cent duty. In making this estimate I take the nonenumerated articles and assume that the tax in those cases is increased.

Mr. HOPKINS. Will the gentleman allow me a suggestion?

Mr. RICHARDSON. Certainly.

Mr. HOPKINS. The gentleman from Maine has already shown the false basis on which the gentleman from Tennessee arrives at the conclusion stated. But even on the gentleman's own theory, what will be the result to the consumer? The gentleman contends that the consumers of the articles he mentions will have to pay more for them than they would if the rates were different—

Mr. RICHARDSON. If not, your bill is a fraud, because that is what you set out to do.

Mr. HOPKINS. Not at all.

Mr. RICHARDSON. You set out to give protection—

Mr. HOPKINS. It simply illustrates the superiority of our system for raising revenue, just as I contended a moment ago—

Mr. RICHARDSON. I can not yield for a speech.

Mr. HOPKINS. Will the gentleman answer my question, how this affects the consumer?

Mr. RICHARDSON. If it did not affect the price to be paid by the consumer, the manufacturer would not be in favor of it.

I have shown that in 49 out of 82 items the duties in Schedule A are increased over those of the McKinley law. We have had this morning the longest speech from the chairman of the Committee on Ways and Means that we have had since he opened this debate. Why? Because the charge has been made here that by this bill he has increased the taxes on the people—has increased the rates of taxation in 12 out of 14 schedules of this bill to a point higher than they were fixed by a measure which was condemned by the American people—the McKinley law. He does not want that idea to go out. He does not want the impression to obtain throughout this land that he and his committee have presented a bill here taxing the American people higher in 12 out of 14 schedules than the McKinley law taxed them. I have called attention to this schedule, and shown (as I shall do, if I am allowed an opportunity, with respect to each schedule in this bill, as it is read) that upon 49 out of 82 articles named here the taxes are higher in this bill than those of the McKinley law; and in every one of the others, almost

without exception, the rates are much higher than the rates under the Wilson bill, which we have had in operation for three years. But I want to emphasize by repetition the fact that upon 49 out of 82 items in this schedule the duties are higher than those in the McKinley bill. I want to place that fact before the country. Let gentlemen explain it if they can by saying that it is "juggling with figures."

Mr. Chairman, the rate of duty under the McKinley law averaged 49.58 per cent, the rate of duty under the Wilson law averaged 39.94 per cent, and the rate of duty under the proposed Dingley law is 57.08 per cent, or 8 per cent higher than the rate fixed by the McKinley law, which was condemned by the American people.

Now let me ask the gentlemen on the other side to answer this if they can. The gentleman from Maine says the Wilson bill was arranged on a basis of ad valorem percentages. But, sir, the McKinley bill was framed under the specific-duty principle in most instances, and so the Dingley bill is framed along the same line; and yet while the McKinley bill was only about 49 per cent on the average, we find the Dingley bill running this rate up to 57 per cent and over. And so I assert that as the McKinley bill was condemned by the American people when they had an opportunity of condemning it, this bill will meet the same fate when the same opportunity is offered to them. [Applause.]

March 30, 1897.

Mr. RICHARDSON. Mr. Chairman, we are treated now to a new doctrine in this discussion by the last two gentlemen who have spoken. They arraign us because we are opposed to protection, which is for the benefit of the manufacturers, and yet they say they favor protection because it reduces the prices of commodities in this country. That is the contention of the gentleman from Massachusetts, and he says we know nothing about the subject.

Mr. WALKER of Massachusetts. I wish to correct the gentleman. I did not say they did not know anything about it. I said they talked as if they did not know anything about it.

Mr. RICHARDSON. It is remarkable to me, Mr. Chairman, that if the object of protection is to reduce the prices of commodities to the people, the manufacturers of the United States should all favor a protective tariff and vote with the party which indorses protection. What is the reason of that?

Mr. WALKER of Massachusetts. Do you want an answer now?

Mr. RICHARDSON. You can answer in your own time. I can not yield now. Mr. Chairman, it is most unreasonable for gentlemen to stand here, in view of the political history of this country, and tell us that our course and our legislation in opposition to protection tends to benefit the manufacturers, while they who favor protection favor a policy which benefits the consumers and injures the manufacturers. Look at the experience of this country last year, and, in fact, in all the years of the past, and you find that the manufacturers have always been arrayed in favor of the Republican party because it gave them protection; yet these gentlemen would have us believe now that the men who favored protection were favoring a policy which damaged the very manufacturers that they proposed to serve, and that we who opposed protection were in favor of a policy that was in the interest of the manufacturers, because it tended to give them higher prices for their goods. Gentlemen on the other side are in the position of claiming that their policy of protection will accomplish certain things. What are they? First, that it will give the manufacturer higher prices for his goods. If it does anything, it must do that. Those who favor high protection do so on the ground that it will encourage the home industry by giving the home manufacturer higher prices for his goods. What else do they claim to do? They say it gives the American laborer higher wages. Here are two things that this policy of protection is to do—increase the prices of commodities and increase the wages paid to labor.

What is the third thing that we are now told this policy will accomplish? These gentlemen say it will reduce prices of the manufactured goods to the consumers throughout this country. Mr. Chairman, if it will do all these things, it is a double-back-action machine such as has never been known before in history. It is a remedy the like of which has never been seen in all our land or in all history. But, Mr. Chairman, the gentleman from Maine [Mr. DINGLEY], in reply to what I had to say a few moments ago about the increased rates of duty imposed by this bill above those imposed by the McKinley Act, started out by saying that this bill does not raise the rates of duty higher than those of the McKinley law, and he referred to certain schedules. Now, I want to answer the gentleman on that, but I will first yield to my colleague, Mr. Cox.

Mr. COX. Will the gentleman allow me a single suggestion? The proposition on the other side is that these increased duties have the effect of reducing prices to the American consumer and to enable us to collect our taxes from foreigners. If that argument is correct, the further we go in that direction the better it will be for us.

Mr. RICHARDSON. Certainly. My colleague makes a very valuable suggestion. The argument of my friend from Illinois [Mr. HOPKINS], who spoke a few moments ago, was that they do not levy these taxes so as to affect the consumers in this country, but that the tax is paid by the foreigner. It seems, according to the gentleman's argument, that we are going to collect \$113,000,000 from foreigners for the benefit of the revenues of this country without affecting prices to our people here. If that proposition is true, then I suggest to the gentleman that he and his committee have made a very great mistake. They ought to go back into their consultation room and frame a new bill, which, instead of raising \$113,000,000 from foreigners, shall levy upon them \$500,000,000 or \$1,000,000,000, thus enabling us to pay off the public debt at once through the contributions of foreigners.

Mr. CLARK of Missouri. Or why not levy such a tax on foreigners as will make us all rich?

Mr. RICHARDSON. Certainly. If we can raise money in this way, let us not only pay off our national debt, but raise enough to make all our people rich, by means of taxes levied upon foreigners. That is the argument.

The CHAIRMAN. The time of the gentleman has expired.

March 30, 1897.

Mr. RICHARDSON. I move to strike out the last word.

Mr. DINGLEY. I will say to my friend that we hope to be able to get along a little faster with this bill. There is no motion pending.

Mr. RICHARDSON. I will not delay the committee unnecessarily; but I want to say that I congratulate the committee upon having a fair and square debater in the person of the gentleman from Nevada [Mr. NEWLANDS]. He comes and states fairly and squarely that he wants higher duties upon these items in order that the manufacturer may make more money out of them.

Mr. SPALDING. Will the gentleman allow me to ask him a question?

Mr. RICHARDSON. I want to know what the gentleman from Massachusetts [Mr. WALKER] is going to say and what the gentleman from Illinois [Mr. HOPKINS] is going to say in reply to that honest and square argument of the gentleman from Nevada. They wanted these duties increased in order that they might be sold more cheaply to the consumer; but the gentleman from Nevada [Mr. NEWLANDS], honest as he is, comes and says he wants them increased in order that the manufacturers may make more money for themselves. Now, if you can harmonize those two positions, I shall be satisfied and not ask for any further debate upon this item.

The Clerk (proceeding with the reading of the bill) read as follows:

77. Sulphate of soda, or salt cake, or niter cake, \$1.25 per ton.

Mr. RICHARDSON. I desire to call the attention of the committee to the fact that both those items were on the free list under the Wilson Act.

Mr. DALZELL. We know that.

Mr. RICHARDSON. They are now put upon the tax list at the rate of \$1.25 a ton. They were free of duty under the act of 1894, and it is a remarkable fact that as to the latter item, salt cake or niter cake, notwithstanding that item was on the free list, there was an importation of 11,469 tons, and under the McKinley law, at \$1.25 a ton, there was imported in one year 19,723 tons, or nearly double as much imported when the tax was \$1.25 as when it was free of duty.

Mr. DINGLEY. That was because the Wilson bill destroyed the industries which made use of this article.

Mr. RICHARDSON. The amount of tax that the change will bring is only about \$15,000, and it seems to me that it is unnecessary to put an additional tax of \$1.25 per ton upon these two items, when it will raise only so small an amount of revenue to the Government.

March 30, 1897.

Mr. RICHARDSON. Mr. Chairman, I move to strike out the last word. I desire to call the attention of the chairman of the Committee on Ways and Means to the fact that this bill proposes to increase the duty on plaster of paris from \$1 a ton, as it was under the McKinley law, to \$1.50 per ton in this law. Now, I ask the gentleman if that is "juggling with figures?"

Mr. PAYNE. The gentleman is juggling. The duty was \$1.75 under the McKinley Act.

Mr. DINGLEY. The gentleman from Tennessee is mistaken.

Mr. RICHARDSON. No, sir; I have the figures here, and they show that ground plaster of paris under the McKinley law was \$1 per ton.

Mr. DINGLEY. And calcined \$1.75. Now, we put the two together, and—

Mr. RICHARDSON. I am not talking about calcined; I am talking about ground plaster of paris, which was \$1 a ton under the McKinley law, and now you tax it \$1.50. Is that juggling? Is

there not an increase of 50 cents per ton upon ground plaster of paris? Generally when I call attention to facts of this kind, I am told that we are figuring on an ad valorem basis as against a specific basis; but in this case the tax under the McKinley law was a specific duty of \$1 a ton, and in this bill it is a specific duty of \$1.50 a ton, so that we can make the comparison directly. Now, Mr. Chairman, I said that I would call attention to every item upon which there was an increase of duty proposed by this bill as the item was reached, and I have taken the floor now simply to call the chairman's attention to this instance.

The Clerk read as follows:

Earthenware and china:

30. Common yellow and brown earthenware, plain or embossed, common stoneware, and crucibles, not decorated in any manner, 25 per cent ad valorem; Rockingham earthenware, 40 per cent ad valorem.

Mr. RICHARDSON. I rise for the purpose of calling attention of gentlemen on the other side to the fact—however disagreeable it may be for them to have these facts pressed upon their attention—that one of the provisions in the section which gentlemen have refused by the mere brute force of numbers to have debated or to have even an amendment offered to it provides a tax of \$283,851.46 upon an article which under the McKinley bill was on the free list—

Mr. PAYNE. Will the gentleman from Tennessee—

Mr. RICHARDSON. I decline to yield.

Mr. PAYNE. All right.

Mr. RICHARDSON. The gentleman declined a moment ago to permit any kind of a statement to be made. I always desire to be respectful to other gentlemen; but I fear that I shall not be able to get my five minutes extended; and I want to call attention to the fact that that very item, embracing asphaltum and bitumen, provided that they shall be taken from the free list (they were on the free list under the McKinley law and also under the Wilson law) and placed upon the tax list at an estimated duty of \$3 per ton, which it is estimated will amount in the form of tariff duty to \$283,851.46.

I can very well see why gentlemen on the other side do not wish such figures as these exposed to the Committee of the Whole and to the country here to-day. I wish to call attention further to the fact that of the 35 items embraced in Schedule B, and which are divided into subitems, 29 subitems will, under this Dingley bill, pay higher taxes than they did under the McKinley bill.

Mr. DALZELL. Let me ask the gentleman a question.

Mr. RICHARDSON. No, sir.

Mr. DALZELL. Will you not allow a single question?

Mr. RICHARDSON. No, sir; you refused to allow me time a moment ago, and now I have but a few moments.

Let us get along. There are 13 items in Schedule B which are on the free list on the Wilson bill that have high duties imposed upon them under the proposed Dingley law. There are 29 higher rates of duty than the McKinley law imposed in this schedule, and, as I have said, 13 on the free list on the Wilson bill that are made dutiable under this bill.

Mr. Chairman, the whole amount of the increase of taxation imposed upon the people of this country in this schedule over and above the McKinley bill amounts to the sum of \$164,005.97. Under Schedule A, sir, the first schedule considered in the bill, as I remarked on Saturday, there are 83 items in all, 49 of which tax the people of the country higher than the McKinley law did. Included in the several items in Schedule A are 67 of this schedule on the free list under the Wilson law and now put on the taxable list at an onerous or high rate of duty by this proposed law. Under this same schedule (Schedule A) there will be imposed a tax on the people of this country of \$3,018,675.77 more than under the McKinley law, which are to be imposed by the so-called Dingley law. We are told that we are "juggling with figures" when we call attention to the facts—first, that you put the rates higher; second, we specify the items that you put higher than they were placed under the McKinley law, and we specify the items on the free list under the Wilson law that you put on the taxable list at a high rate of duty. Yet when we show you that you increase in one instance more than \$2,000,000 the tax in Schedule B, and more than \$164,000 in another schedule, the only response is that we are "juggling with figures!"

The CHAIRMAN. The time of the gentleman has expired.

Mr. RICHARDSON. Mr. Chairman, I move to strike out the last word.

Now, it is quite interesting to hear the gentleman from Massachusetts talk of the effect of putting articles on the taxable list increasing the rate and the price to the consumer. I was struck a moment ago by my amiable friend from Massachusetts [Mr. Moody], who kindly reflected on this side of the House for not speaking to the provisions of the bill; and who went to section 280 of the bill and took up tallow, I believe—

Mr. MOODY. No; not tallow—

Mr. RICHARDSON (continuing). And insisted that the Com-

mittee on Ways and Means did great injustice to the people by taking tallow from the free list and putting it on the taxable list.

Mr. MOODY. The gentleman is mistaken. I made no reference to tallow. I spoke of wool grease, commonly known or commercially known as "degras."

Mr. RICHARDSON. Well, they are in the same paragraph.

Mr. MOODY. Yes; in the same paragraph, No. 280 of the bill.

Mr. RICHARDSON. Very well. But, Mr. Chairman, it is very remarkable that the gentleman should object to this article being taken from the free list and placed on the taxable list because it will raise the cost. That is entirely in opposition to what we have heretofore heard from gentlemen on the other side. This is the point I am trying to emphasize.

I may not be able to understand it all as other people do—but I wish to get the exact facts in reference to these matters. It seems that gentlemen on the other side take much delight, when they can not answer our inquiries, in charging a want of intelligence against us on this side. I wish to know how the gentleman is to get along in harmony with my other able and amiable friend from Massachusetts [Mr. WALKER], who said he wished the articles taken from the free list and put on the dutiable list, or have them protected, so that the people could buy them cheaper. [Applause on the Democratic side.] There is decidedly a conflict between these two gentlemen. Here is the able and intelligent gentleman from Massachusetts [Mr. MOODY], who wants now to take a certain article off the dutiable list, or remove the protection, and put it back upon the free list, so his people can get it more cheaply, while the other able gentleman from Massachusetts [Mr. WALKER], who represents the great boot and shoe industries, wants to take them off the free list and put them on the protection or tax list for exactly the same reason.

All I ask is that the two gentlemen have an opportunity to harmonize their conflicting views on the floor.

Mr. DOCKERY. I ask unanimous consent that they have sufficient time to reconcile these differences.

Mr. RICHARDSON. I hold in my hand an article clipped from a great New York paper which sustains the contention of the gentleman from Massachusetts [Mr. FITZGERALD], when he states to the House the fact that New England did not approve and does not now approve of the high rates of taxation imposed by the McKinley law. It is a paper which supported Major McKinley last year; and it seems to me, in view of what we have heard in this debate, this is a very good time to refer to the complaint made in this great New York organ, the complaint "of false pretenses and bad faith" on the part of the Republican party. It seems to me it is very well for parties as well as individuals always to be grateful—at least not to be ungrateful—not to win by false pretenses and bad faith. What is the complaint made by this leading paper?

Why, this writer says that the Republican party won their great victory last November by reason of their position upon the money question and not the high protective question. I ask attention to the complaint which he now makes against this great party. This leading New York journal says:

If President McKinley's message and Mr. DINGLEY's tariff bill had been put before the people three days before the election of last November, they would have put the sound-money cause and the honor of the nation in the gravest peril.

It seems, Mr. Chairman, that from what we have seen of the Dingley bill and the issue now presented, this great organ is right. This city of Danbury, Conn., spoke yesterday and turned the Republicans out of office in their municipal election, and the entire country will speak when a general election comes.

Several MEMBERS. What is the paper?

Mr. RICHARDSON. This same great paper continues:

The Democratic votes which elected Mr. McKinley were won and kept by false pretenses. He was elected to defend the financial stability of the country, and he has no defensive measures to propose. He was not elected to revise the tariff, but his first act is to force upon the country a tariff that is flagrant in its protective atrocities.

An Administration which starts off with an act of bad faith toward the whole people has made a poor beginning.

Several MEMBERS. What paper?

Mr. RICHARDSON. Mr. Chairman, when we call attention to the fact that in numerous schedules of this bill—in some of the woolen schedules, for instance—the majority in this House proposed to increase the tariff over the McKinley bill of 1893—

Several members rose.

The CHAIRMAN. Does the gentleman from Tennessee yield?

Mr. RICHARDSON. No; I can not yield; it would take up too much of my time. When you have increased the duty on wool from 90 per cent, as it was under the McKinley bill, in one item to 133.20 per cent in this bill, it seems to me it is time to call attention to some of the atrocities of this measure. In one item—paragraph 267, not in the wool schedule—you have increased the duty over that of the McKinley bill 280 per cent and over that of the

Wilson bill 411 per cent; while the tax on certain buttons has been increased 607 per cent.

Now, I insist, Mr. Chairman, that this is bad faith. It shows that the party in control here has obtained possession of the Government under false pretenses; that instead of "sustaining the finances of the country," you have gone to work to pass this culminating atrocity—this monstrosity of the nineteenth century, this trust-breeding iniquity, the Dingley tariff bill. [Applause on the Democratic side.]

Mr. MAHANY. From what paper has the gentleman been reading?

Mr. RICHARDSON. Oh, it is the New York Times, if you want to know. [Derisive laughter on the Republican side.] You do not deny that it supported McKinley, do you?

The CHAIRMAN. The time of the gentleman from Tennessee has expired.

March 31, 1897.

Mr. GROSVENOR, for the Ways and Means Committee, having offered an amendment providing that goods imported after April 1, 1897, should be dutiable under this bill,

Mr. RICHARDSON said:

Mr. Chairman, it was not possible for us to hear all the authorities produced by the distinguished gentleman from Ohio [Mr. GROSVENOR]. The one authority I shall produce is found in 159 United States Reports. It is a decision which grows out of a question arising under the Wilson law. It will be seen the principle decided in that case is absolutely conclusive as to this amendment, and shows that it will be inoperative and void if it is agreed to.

Mr. TAWNEY. Will the gentleman allow me?

Mr. RICHARDSON. I have only five minutes, and the gentleman will see that I can not yield to him to read from the case. I have the case here and shall read from it. I would yield to the gentleman if I had time. I do not want to be impolite, but I have not the time to yield.

Mr. Chairman, the plain question made by this amendment is whether or not goods imported after to-morrow, the 1st day of April, provided this bill becomes a law, one, two or three months from now, shall be taxed under the present law or under the bill now under consideration.

I say that question was squarely submitted to the court under the Wilson law. The case is reported in 159 United States Reports at page 78, and is the case of *The United States vs. Burr*.

I ask the attention of the committee for a moment as to the particular point in that case. I read from the syllabus:

Goods arriving at the port of New York August 7, 1894, entered at the custom-house and duties paid August 8, 1894, and the entry liquidated as entered at the custom-house August 28, 1894, on which day the tariff act of August, 1894, became a law without the signature of the President, are subject to duty under the act of October 3, 1890 (the McKinley law), and not to the duty under the act of August 1, 1890 (the McKinley law), and not to the tariff act of 1894, which took effect August 23 of that year, that from and after the 1st day of August, 1894, there shall be levied, collected, and paid upon articles imported from foreign countries the rates of duty prescribed by that act does not apply to transactions completed when the act becomes a law.

That is the statement of the case. This case was decided by Chief Justice Fuller of the United States Supreme Court.

The facts as agreed upon are as set out in the syllabus of the case which I have read. The court makes this statement of facts:

It was stipulated in the circuit court that the persons composing the firm of Burr & Hardwick, the importers, were James M. Burr and Charles C. Hardwick; that the merchandise in controversy consisted of cotton laces; that the merchandise, if dutiable under the act of October 3, 1890 (the McKinley law), was dutiable at 60 per cent ad valorem under the provision for cotton laces contained in paragraph 873 of Schedule J of that act; and that if the merchandise was dutiable under the act of August 23, 1894, it was dutiable at 60 per cent ad valorem under the provisions for cotton laces in paragraph 278 of Schedule J of the latter act.

I will not read more of it. I would if I had time. The question was fairly and squarely presented as to these goods coming in between the 1st day of August, 1894, and the date when the bill became a law, or August 23, 1894. The court held that they should be taxed, not under that law—the Wilson law—but under the McKinley law.

Mr. TAWNEY. Will the gentleman allow me just a question?

Mr. RICHARDSON. I can not. The other side has had fifteen minutes. I can not yield. Now, I submit, Mr. Chairman, that the court, having held in the case I have just cited that the goods were dutiable under the McKinley law, must hold that goods imported into the United States on and after to-morrow, the 1st day of April, the date fixed in this amendment, and prior to the date on which this bill becomes a law, if it should ever become a law, would be dutiable under the law now in force. Such a decision would be exactly in line with the case I have just read. It can not be otherwise under that decision. It must follow, therefore, that the amendment of the gentleman from Ohio, if adopted, will be nugatory and will wholly fail of its purpose.

Mr. Chairman, I want to speak of one other consideration in the proposed amendment. I must speak hurriedly. I want to say to the gentleman from Ohio, if it be true that you would have a right to tax goods brought into the United States between those dates at a higher rate, what are you going to do with goods brought in where this bill reduces the tax upon them? Are you going to refund it? [Applause on the Democratic side.] Men bring goods into the United States after to-morrow, and before the passage of the bill, upon which this law reduces the import duties, and they pay the higher rate; will you refund them the excess? There may be but few of them, but I submit, respectfully, under this amendment you would be compelled to refund those duties. [Applause.]

Mr. GROSVENOR. The suggestion no doubt is true; but there will be so little it will have no practical effect.

Mr. RICHARDSON. It must be apparent, Mr. Chairman, that the only object of this proposed amendment is to scare importers and make them cease importing goods. It is only a scarecrow. It is a false pretense and a sham, and is unworthy of a great party. [Applause.]

March 31, 1897.

Mr. RICHARDSON. Mr. Chairman, I sought the floor a few moments ago for the purpose of attempting to reply to the rash assertions of the gentleman from Pennsylvania [Mr. WILLIAM A. STONE] that there were 100,000 more laborers at work in Pennsylvania now than there were a few weeks ago. I suppose the gentleman fixed the time the week preceding the election last November, when it was known of all men that the manufacturers of the United States discharged their poor employees and their laborers in order that it might help them to carry that election against the Democratic candidate. [Applause. Cries of "Oh!" on the Republican side.] Mr. Chairman, that is a part of the history of our country. You know it is true. I am not willing to take the off-hand statement of the gentleman that business has so much improved, even in Pennsylvania. I hold in my hand reliable statistics concerning business at the present time. I have here a statement made by Bradstreet's last week, and I ask the attention of the committee while I read it. Bradstreet's says:

At most of the larger centers the feeling of encouragement is stronger among merchants at the prospect for continued improvement in trade, yet the increase in volume of business in dry goods, groceries, hats, and clothing compared with preceding weeks and with like weeks in previous years does not equal anticipations.

The total bank clearings throughout the country amount to \$951,000,000 for six business days ending March 18, an increase of 2.8 per cent over the preceding week, but a decrease of a like proportion compared with the corresponding total in 1896. Contrasted with the like exhibit in 1895, this week's total shows no change, etc.

Now, Mr. Chairman, on yesterday—

Mr. WILLIAM A. STONE. Will the gentleman allow me to ask him a question?

Mr. RICHARDSON. No; I decline to yield. I have hurriedly quoted a part of Bradstreet's report and wish I had time to quote more of it.

The CHAIRMAN. The gentleman declines to yield.

Mr. RICHARDSON. Passing to another question, on yesterday I undertook to quote a great New York newspaper, the Times, whose Republicanism was questioned by gentlemen on the other side. I desire now to quote a Republican paper as to what this Dingley bill is, and I suppose the orthodoxy of this paper will not be questioned. I refer to the Boston Transcript. Does any gentleman on the other side deny the Republicanism of that paper?

Mr. WALKER of Massachusetts. It is independent Republican, but its correspondent is the rankest free trader in Washington.

Mr. RICHARDSON. What does it say in respect to the Dingley bill? It is a Republican paper in good standing in the Republican party. It says:

The proposed tariff on lumber is simply a measure to pick the pockets and crush the industry of a large, useful, and influential class of American citizens. It is uneconomic, unscientific, suicidal.

That is what the Republican Boston Transcript says.

Mr. WALKER of Massachusetts. Is that an editorial or correspondence?

Mr. RICHARDSON. Well, my friend, I decline to yield. This is the further language of this Boston paper:

The result will be to strip the country, not of an annually-recurring income, but of its white-pine principal, which at present rates is within ten years of exhaustion, and also to ruin a large class of business men in the country who deserve better things.

Mr. WALKER of Massachusetts. Is that correspondence or editorial?

The CHAIRMAN. The gentleman from Tennessee declines to yield.

Mr. WALKER of Massachusetts. Will the gentleman answer that question?

Mr. RICHARDSON. The gentleman persists in interrupting me when I declined to yield and when he knows he is out of order. We should be taught good manners from Boston. [Applause on the Democratic side.] This gentleman who is now interrupting me and some others on that side each day since this tariff debate opened have taken delight to themselves in charging us with being ignorant, and telling us that we know nothing, and that we have thick hides, etc. If there is any way in the world to teach him and a few others on the Republican side what to them seems to be the lost art of good manners, "the final and perfect flower of noble character," I will stop long enough for that undeveloped industry to receive encouragement by a high protective duty, or, if it be deemed wiser, by putting it on the free list. [Laughter.]

Mr. Chairman, what else does the Transcript say? I will read:

It does not seem possible that men claiming to represent the people will permit such a measure to have the force of law. If they do, it will cease to be folly and become iniquity.

[Applause on the Democratic side.]

And thus, Mr. Chairman, you see the Republican papers are already denouncing the Dingley bill as being worse than folly, and that it is an iniquity. As the months and years go by, more Republican papers will unite in denunciation of this bill, and it will surely meet with just condemnation at the hands of the American people. [Applause.]

Mr. Chairman, the debate on this bill will close in ten minutes, and we will then vote upon it. It will pass this House, of course. It is an iniquity and a monstrosity. The American people will condemn it as they did that unrighteous thing, the McKinley law. That was a milder measure than the pending one. It imposed \$76,000,000 less upon the people than this bill lays upon them. This bill has not been considered by the Representatives of the people. Only 23 pages of its 163 pages have been read and considered by them. Time has been refused for further consideration. One hundred and forty-one pages of the bill, levying the highest rate of taxes ever imposed upon a people, freemen or slaves, are to be enacted into law, in so far as the action of these Representatives is concerned, without having been read and considered by them. This unwarrantable action violates the spirit and almost the letter of the Constitution, our great Magna Charta, which provides "that all bills for raising revenue shall originate in the House of Representatives." These words mean, of course, such bills shall have their first consideration in the House of Representatives. The bill, I repeat, has not had consideration here. There is no excuse or justification for this action. We are called in extraordinary session, it is claimed, for no other duty but to pass this bill. We have ample time at our disposal. We are not to legislate on other matters. In the opinion of the Republican majority and their President there is no legislation demanded in order to afford relief to the country save and except this iniquitous tariff law. Financial legislation is not necessary. No more money is needed. The condition of the people throughout the land can not be improved by them, except by further exaction for the Treasury and by laying heavier burdens upon them. All other interests are to be neglected, and higher taxes are to be imposed and collected. Those who bear the present onerous burdens of government are to be taxed into prosperity. Mr. Chairman, the Democratic party, through its representatives, welcomes the issue as presented. They appeal from the judgment here to the broader and more patriotic forum, the people, with supreme confidence that the unrighteous and unholy verdict you are about to render will be reversed, and that you will be dismissed from the high places you now occupy, and they will know you no more forever. [Applause.]

Mr. Chairman, a good deal has been said by gentlemen on both sides of the Chamber about conditions in the South, and the benefits it is alleged will come to that section of our country by reason of a high protective tariff. I speak for myself and many others whose sentiments I know well, and do here affirm that we do not ask for the protection of a high tariff. The reasons are obvious, and are easily made apparent to all. The God of nature, in his beneficence, has given our section more protection and better protection than any high tariff devised by human hands will afford. We have cheap coal, cheap iron, cheap land, cheap labor, an unsurpassed climate, a fertile soil which produces everything man or beast can consume, all of which things taken together give us a large per cent of benefit or advantage over any and all competitors. If a high tariff is forced upon us, that per cent of advantage places us still farther in the lead. If the tariff is reduced, on the like principle we will lead. If it be taken off entirely, we will rejoice, for we can then outstrip all competitors and all sections. Instead of loud shouting and the display of great vehemence over the alleged benefits of a high protective tariff, we ask for financial relief, for better banking facilities, for more money, so that better times will come to us, and we of the South can and will fight the battle for prosperity, and will reap the reward which will surely come to an industrious and frugal people. [Applause.]

## The Tariff.

### SPEECH OF

HON. CHARLES N. FOWLER,  
OF NEW JERSEY.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 31, 1897.

On the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. FOWLER of New Jersey said:

Mr. CHAIRMAN: During the discussion of this measure I have been more deeply impressed than ever that the relation of revenue to our present crisis is of comparatively slight importance.

The second object of the measure will be more far-reaching in its effects if its purposes are attained by its passage.

Nor will the mere coincidence of the gradual revival of business with its passage be any guaranty that those who assume that our real difficulty is lack of revenue are correct in their conclusion. For it is more than likely that in the near future we shall see sufficient money coming into the Treasury to pay our current expenses, and yet our gold reserve insufficient to cover the balance of trade against us.

But this fact of itself would not be so serious a matter did it not involve every enterprise and personal transaction from one end of the country to the other. If, therefore, this dire calamity can come upon us, even though our revenues are sufficient to cover our expenses, it is evident we have not yet solved the difficulty, and must look deeper and farther.

Deeply impressed as I am with the gravity of the situation, while I heartily approve of any effort that will tend to better our condition, I can not admit by my silence even that the present measure will more than procrastinate the evil day, possibly the day of national repudiation, certainly a day of panic, ruin, and destruction of values surpassing anything men now living have ever witnessed.

With these convictions I deem this occasion the most opportune for a discussion of those questions which, in my judgment, must be settled before we can confidently look for anything like a general and permanent prosperity.

First. Our finances should be readjusted.

Second. Our currency should be reformed.

With permission, I shall insert in the RECORD a measure introduced at this session proposing certain amendments to our national-bank act with the view of taking the United States out of the banking business, refunding the national debt, reforming the currency, insuring depositors, improving and extending our banking system, and providing funds in case of a deficit.

[Fifty-fifth Congress, first session.]

IN THE HOUSE OF REPRESENTATIVES, March 15, 1897.

Mr. FOWLER of New Jersey introduced the following bill; which was referred to the Committee on Banking and Currency, and ordered to be printed:

A bill (H. R. 50) to amend the national-bank act, take the United States Government out of the banking business, refund the national debt, reform the currency, insure depositors, improve and extend our banking system, and to provide funds in case of a deficit.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That there shall be, and there is hereby, created and established a Department of Finance, which shall have entire and exclusive control and supervision of all national banks, their right to take out secured circulation and issue their notes.

Department  
of Finance.

SEC. 2. That there shall be three ministers of finance, who shall take the place of the Comptroller of the Currency and constitute a board of finance; and said board of finance shall conduct the said Department of Finance. That said ministers of finance shall be appointed by the President, by and with the advice and consent of the Senate, and the term of office shall be for a period of twelve years, at a salary of ten thousand dollars per annum; and said ministers shall be removed only by and with the consent of the Senate for cause stated in writing. That the term of the first three ministers shall be for twelve, eight, and four years, respectively. The minister appointed for twelve years, and his successors, shall be known as First Minister of Finance, and he shall preside at all meetings of the board of finance; and the remaining two ministers shall be known as Associate Ministers of Finance.

Ministers of  
finance.

SEC. 3. That any national bank now doing business, or any other financial institution doing a similar business, or any number of persons may, in accordance with existing law, so far as the same is consistent with this act, organize upon the following terms and conditions:

If any corporation or association of persons described as aforesaid shall deposit with the United States Government any of the United States bonds now outstanding, or any that may be hereafter issued which, at their stated value as herein set forth, (a) shall be equal to the required amount of circulation in the respective cases specified, (b) the United States Government shall issue to said corporation, in lieu of said bonds so deposited, United States Government bonds bearing interest at the rate of two per centum per annum, (c) equal in amount to the value thereof, both principal and interest of said new bonds being payable in gold coin, and to have the like qualities, privileges, and exemptions provided by the act approved January fourteenth, eighteen hundred and seventy-five, entitled "An act to provide for the resumption of specie payments;" and said new bonds shall thereupon be deposited with the United States Government, and circulation known as United States Government bond notes shall be issued to said corporation in an amount equal to the new bonds so deposited, said United States Government bond notes being in denominations of ten dollars or multiples thereof.

(a) That the United States Government bonds now outstanding shall be received at the following prices, to wit:

2s, reg.	Q. Mar.	95
4s, 1907, reg.	Q. Jan.	109
4s, 1907, coup.	Q. Jan.	110
4s, 1925, reg.	Q. Feb.	120
4s, 1925, coup.	Q. Feb.	120
5s, 1904, reg.	Q. Feb.	112
5s, 1904, coup.	Q. Feb.	112
6s, cur'cy, 90, reg.	J. & J.	108
6s, cur'cy, 90, reg.	J. & J.	105
4s (Cher.), 1897, reg.	March.	102
4s (Cher.), 1898, reg.	March.	102
4s (Cher.), 1899, reg.	March.	102

and that from and after the passage of this act said bonds shall be received upon the same income basis, respectively.

(b) All banks organized under this act shall take out for issue United States Government bond notes in proportion to their respective capital as follows: All banks having a paid-up capital of one million dollars and over shall take for issue five hundred thousand dollars of such notes; all banks having a paid-up capital of two hundred thousand dollars and less than one million dollars, shall take for issue an amount of United States Government bond notes equal to one-half of their respective capitals; but no one of said banks shall take for issue less than two hundred thousand dollars of said notes; all banks having less than two hundred thousand dollars of paid-up capital shall take for issue an amount of said United States Government bond notes equal to their respective capitals, and each bank shall pay into the United States Treasury one-fourth of one per centum per annum upon the notes so taken out for issue as a part of the fund to be created and known as "United States National-bank Note Redemption Fund."

(c) The first one hundred million of said two per centum bonds that are issued in exchange for other United States bonds shall become due in nineteen hundred and forty-five.

The second one hundred million of said two per centum bonds that are issued in exchange for other United States bonds shall become due in nineteen hundred and forty.

The third one hundred million of said two per centum bonds that are issued in exchange for other United States bonds shall become due in nineteen hundred and thirty-five.

The fourth one hundred million of said two per centum bonds that are issued in exchange for other United States bonds shall become due in nineteen hundred and thirty.

The fifth one hundred million of said two per centum bonds that are issued in exchange for other United States bonds shall become due in nineteen hundred and twenty-five.

Who may organize.

How banks shall organize.

Price at which bonds will be received.

Amount of United States Government bond notes banks shall take out.

Tax to be paid.

Bonds, when due.

The sixth one hundred million of said two per centum bonds that are issued in exchange for other United States bonds shall become due in nineteen hundred and twenty.

The seventh one hundred million of said two per centum bonds that are issued in exchange for other United States bonds shall become due in nineteen hundred and fifteen.

The two per centum bonds that are issued in exchange for the balance of the United States bonds then outstanding shall become due in nineteen hundred and ten.

That the amount of United States Government bond notes which the banks organized under this act are required to take out for issue may be gradually reduced and retired as follows: Twenty-five per centum thereof may be retired in nineteen hundred and ten, twenty-five per centum in nineteen hundred and fifteen, twenty-five per centum in nineteen hundred and twenty, and the remaining twenty-five per centum in nineteen hundred and twenty-five.

All other holders of United States Government bonds are hereby authorized and entitled to exchange the same at any time prior to January first, eighteen hundred and ninety-nine, for the said new two per centum United States Government bonds upon the income basis hereinbefore set forth.

SEC. 4. That said United States Government bond notes shall be a legal tender between all national banks and shall be redeemed in gold coin when presented for payment at the bank of issue.

SEC. 5. That at the same time that said corporation, if located in a reserve city, shall deposit United States Government bonds as aforesaid it shall also deposit with the United States Government United States legal-tender notes or gold certificates, or both, of such an amount that it, together with the gold said corporation has on hand, will equal fifteen per centum of its deposits; and the United States Government shall deliver to said corporation gold coin in lieu of said legal-tender notes and said gold certificates. Said corporation shall also deposit at the same time with the United States Government United States Treasury notes or United States silver certificates, at the option of said ministers, or both, which, with the silver coin then held by said corporation, shall amount to ten per centum of its deposits, and the United States Government shall deliver to said corporation in lieu thereof silver coin of an equal amount; and said legal-tender notes, gold certificates, Treasury notes, and silver certificates shall be thereupon canceled. Said corporation shall thereafter keep as a reserve twenty-five per centum of its deposits in the following kinds of money: At least sixty per centum of said reserve shall be in gold coin, and the remaining forty per centum of said reserve may be in silver coin or United States Government bond notes: *Provided, however,* That in lieu of one-half of such reserve cash on deposit, subject to check, may be held in reserve cities.

SEC. 6. That at the same time that said corporation, if located outside a reserve city, shall deposit United States Government bonds as aforesaid, it shall also deposit with the United States Government United States legal-tender notes, or gold certificates, or both, of such an amount that it, together with the gold coin said corporation has on hand, will equal nine per centum of its deposits; and the United States Government shall deliver to said corporation gold coin in lieu of said legal-tender notes and said gold certificates. Said corporation shall also deposit at the same time with the United States Government United States Treasury notes or United States silver certificates, at the option of said ministers, or both, which, with the silver coin then held by said corporation, shall amount to six per centum of its deposits, and the United States Government shall deliver to said corporation in lieu thereof silver coin of an equal amount; and said legal-tender notes, gold certificates, Treasury notes, and silver certificates shall be thereupon canceled. Said corporation shall thereafter keep as a reserve fifteen per centum of its deposits in the following kinds of money: At least sixty per centum of said reserve shall be in gold coin, and the remaining forty per centum of said reserve may be in silver coin, or

All bondholders may exchange for new 2 per cent bonds.

Legal tender between banks.

Exchange of notes for gold and silver by banks in reserve cities.

Exchange of notes for gold and silver by banks outside reserve cities.

United States Government bond notes: *Provided, however, That in lieu of one-half of such reserve cash on deposit, subject to check, may be held in reserve cities.*

SEC. 7. That the United States Government shall not pay out or reissue any United States legal-tender notes or gold certificates from and after the first day of January, eighteen hundred and ninety-eight, but the same when received shall be canceled and destroyed; and further, that the United States Government shall not pay out, issue, or reissue any United States Treasury notes or silver certificates from and after the first day of January, eighteen hundred and ninety-nine, but the same when received shall be canceled and destroyed.

SEC. 8. That any corporation organized under this act may, with the permission and under the supervision and control of the board of finance, issue its own circulation, which shall be furnished by the United States Government and be known as United States national-bank notes. Said United States national-bank notes shall be issued in denominations of ten dollars and multiples thereof, and shall be a first lien upon the assets of the bank issuing the same, and also upon the liability of the stockholders, and may be issued only in the following manner and upon the following conditions:

First. Every bank issuing United States national-bank notes shall at all times maintain against the amount of such notes outstanding a reserve corresponding to that required against its deposits.

Second. Any bank that shall have complied with this law may, with the consent and under the supervision and control of the board of finance, issue an amount of United States national-bank notes equal to twenty per centum or one-fifth of its paid-up and unimpaired capital, and shall pay upon such an amount thereof as may be outstanding at any time a tax at the rate of one per centum per annum.

Third. Said bank may issue a second amount of such notes equal to twenty per centum or one-fifth of its paid-up and unimpaired capital, and shall pay upon such an amount thereof as may be outstanding at any time a tax at the rate of two per centum per annum.

Fourth. Said bank may issue a third amount of notes equal to twenty per centum or one-fifth of its paid-up and unimpaired capital, and shall pay upon such an amount thereof as may be outstanding at any time a tax at the rate of four per centum per annum.

Fifth. Said bank may issue a fourth amount of notes equal to twenty per centum of its paid-up and unimpaired capital, and shall pay upon such an amount thereof as may be outstanding at any time a tax at the rate of six per centum per annum.

Sixth. Said bank may issue a fifth amount of notes, equal to twenty per centum or one-fifth of its paid-up and unimpaired capital, and shall pay upon such an amount thereof as may be outstanding at any time a tax at the rate of eight per centum per annum.

Seventh. If the amount of United States national-bank notes issued by any bank shall exceed at any time the paid-up and unimpaired capital of said bank, a tax at the rate of ten per centum per annum shall be paid by said bank on such excess.

Eighth. That said ministers of finance are hereby authorized and empowered to suspend one-half of said tax upon any one or all of the said several issues of United States national-bank notes at any time after nineteen hundred and ten, and at any time after nineteen hundred and twenty said ministers of finance are further authorized and empowered to suspend any portion of the tax then remaining except the ten per centum tax referred to in paragraph seven.

SEC. 9. That all taxes so paid to the Government upon said United States Government bond notes and said United States national-bank notes shall constitute and be known as the "United States National-bank Note Redemption Fund," and be held exclusively for the redemption, first, of the United States Government bond notes; second, for the United States national-bank notes in the event of the liquidation of any bank organized under this law: *Provided, however, That when said "Redemption Fund" shall exceed five per centum of both the United States*

Government bond notes and the United States national-bank notes such excess shall belong to the United States Government and may be used by it to defray its general expenses.

SEC. 10. That the board of finance shall divide the United States into clearing-house districts, and each bank organized under this act shall belong distinctly to some one district, and the number of such district shall be plainly and prominently printed upon the said United States national-bank notes issued by the banks located therein. The several banks of each district, upon receiving United States national-bank notes belonging to any other district, shall forward the same to a bank in a clearing-house city, which shall return them to the district to which they belong.

SEC. 11. That the said United States national-bank notes shall be a legal tender at par between all national banks, and the same shall be redeemed upon presentation at the bank of issue in gold coin, or at the option of the bank of issue forty per centum thereof may be redeemed in United States Government bond notes.

SEC. 12. That each bank organized under this act and doing business outside of a clearing-house city shall select some national bank in the clearing-house city of its own district through which it shall redeem its United States national-bank notes in gold coin, or at the option of said redemption bank forty per centum thereof may be redeemed in United States Government bond notes, and for said purpose shall keep on deposit with said bank a reserve of five per centum of the amount at any time outstanding, and said five per centum may be considered a part of its required reserve.

SEC. 13. First. That in cities with less than two thousand population banks may be organized under this act with a capital of twenty thousand dollars or any greater amount in multiples of five thousand dollars; but no bank shall be organized in any reserve city with a less capital than one hundred thousand dollars.

Second. That under such regulations and restrictions as shall be established by the said ministers of finance, national banks organized under this act may establish branch banks by and with the consent of said ministers, such branch banks to have the right to receive deposits, make loans, grant discounts, and buy and sell exchange, but in no case to be permitted to issue circulating notes other than those of the parent bank. It shall in all respects be considered as a part of the parent bank, and in each case where such branches are maintained the ministers of finance shall receive in the reports of the central bank a statement, properly sworn to and attested, of the condition of its branches.

Said ministers of finance shall also have the right of separate and independent examinations, and they may, whenever they deem it necessary, require, before granting the right to any bank to maintain branches, that the paid-up capital stock of such bank be increased to an amount to be fixed by them.

SEC. 14. First. That in the event of the liquidation of any national bank organized under this act the United States Government shall redeem, upon presentation, after notice given as herein provided, any of said United States Government bond notes or said United States national-bank notes, reimbursing itself for the full amount thereof out of the assets of said bank, and distribute the remaining assets among the depositors and all others having claims in the same manner as now provided by law.

Second. That from the time of the suspension of said bank up to the date set by said ministers of finance for the redemption of said United States national-bank notes, they shall bear interest at the rate of five per centum per annum. Such notice shall be given in some newspaper printed in the clearing-house city where said notes were cleared; but nothing herein contained shall be construed to impose any liability upon the Government of the United States, or any of its representatives, beyond the amount available from time to time out of said "United States National-bank Note Redemption Fund."

SEC. 15. First. That any bank organized under this act may at any time after nineteen hundred and five, with the consent of the ministers of finance,

Clearing-house districts, how formed. Banks must belong to some district.

Notes must be returned to their district.

Legal tender between banks.

Banks outside must clear through some bank in clearing-house city.

Banks with \$20,000 authorized.

Branches may be established.

United States Government shall redeem notes.

Notes to bear interest.

Banks may insure deposits.

United States Government not to pay out notes or certificates after 1898-99.

May issue notes against assets.

Reserve of banks against notes issued against assets.

Notes against assets, how issued.

Suspension of tax upon notes.

Redemption fund, how used.

Use of excess over 5 per cent.

insure its depositors against loss by paying into the United States Treasury one per centum upon the average balance of deposits of the preceding fiscal year, and one-half of one per centum upon the average annual balances thereafter until the amount so paid into the United States Treasury by said bank shall amount to five per centum of the average balance of said bank for the last preceding year, and that said ministers of finance may then suspend said tax for the time being. If the deposits of said bank shall increase, or for any reason the amount of the insurance fund to the credit of said bank shall be less than five per centum of the deposits, said ministers may reimpose said tax of one-half of one per centum upon the deposits of said bank; and if said bank shall fail to pay such tax at any time after the payment of said one per centum the amount already paid by said bank shall be forfeited to the United States Government and the insurance of said depositors shall thereupon cease.

Second. That the amounts of money so received shall constitute and be known as the "Depositors' insurance fund," and each bank shall be entitled to receive interest upon the amount standing to its credit in said "Depositors' insurance fund," at the rate of two per centum per annum, and the same shall be adjusted annually on the thirtieth day of June.

Third. That in the event of the suspension of payment by any bank so insured of any of its liabilities as they accrue, the United States Government shall, within sixty days thereafter, no reorganization then pending, pay the depositors of such bank in full all their just claims, if no question has been raised thereto; but nothing herein contained shall be construed to impose any liability on the Government of the United States, or any of its representatives, beyond the amount available from time to time out of said "Depositors' insurance fund."

Fourth. That the United States Government shall thereupon reimburse itself out of the assets of said bank for any and all such moneys paid out on account of said deposits, less the amount standing to the credit of said bank in said "Depositors' insurance fund," and the remaining assets shall be distributed among the creditors in the same manner as now provided by law.

SEC. 16. That all moneys received by the United States Government on account of the tax upon United States Government bond notes and United States national bank notes, or on account of the taxes paid to insure depositors against loss, may be invested in the following classes of securities, and no others: First, United States Government bonds or United States certificates of indebtedness; second, the bonds of any State which has not defaulted in the payment of either principal or interest of any of its indebtedness for twenty years just preceding such investment; third, the bonds of any city in the United States having a population of more than one hundred thousand, and which has not defaulted in the payment of either principal or interest of any of its indebtedness for twenty years just preceding such investment.

SEC. 17. That for the purpose of carrying this act into effect and enabling the banks organized hereunder to maintain their required reserves, and for the purpose of equalizing and adjusting the relative use of gold and silver in the United States, the ministers of finance are hereby authorized and empowered to sell and dispose of any of said new two per centum bonds at par for gold coin, or to exchange the same for any of the legal-tender money of the United States at par; the bonds so sold or exchanged to be issued in denominations of twenty-five dollars, or multiples thereof, at the option of the buyer, and to become due and payable in nineteen hundred and fifty; and the said ministers, for the same purpose (with the concurrence of the Secretary of the Treasury), are also authorized and empowered to exchange from time to time gold bullion or gold coin for silver bullion or silver coin, and silver bullion or silver coin for gold bullion or gold coin.

SEC. 18. That the loans and discounts of any bank organized under this act granted to its executive officers or employees shall in no case, directly or indirectly, exceed ten per centum of the capital, and the same shall be secured by proper collateral, or by

an additional signature or signatures of financially responsible persons to the notes taken, and that the same be made only upon the written approval of a majority of the board of directors and a separate record thereof kept.

SEC. 19. That no loan shall be made to a director not an executive officer of the bank except either upon a deposit of good and sufficient collateral security, or upon a note given therefor, bearing, in addition to such director's own name, the signature or signatures of one or more financially responsible persons, or unless a resolution has been passed by the board of directors and signed upon the record by at least a two-thirds majority thereof giving to such director a line of credit covering any advances to be made to him.

SEC. 20. That any president, vice-president, cashier, assistant cashier, or employee of any bank organized under this act who shall be convicted of unlawfully borrowing or using any of the funds of the bank with which they are connected shall be imprisoned for ten years, and any officer of any such national bank at the time of its failure shall be ineligible to any official position in any national bank thereafter.

SEC. 21. That it shall be unlawful for any national bank to engage in the promotion of any enterprise, or to loan the funds of the bank upon the bonds or securities of incomplete and partially developed projects of any kind, such as partially constructed railroads, street-car lines, electric-light, gas, water, mining, manufacturing, or irrigation plants.

SEC. 22. That upon a day in each year to be designated by said ministers of finance, the directors of the national banks shall be, and are hereby, required to make an examination of the affairs of the bank with which they are connected, and submit their report thereon upon blanks furnished by said ministers, and said report shall be signed by at least three-fourths of said directors.

SEC. 23. That the assistant cashier, in the absence of the cashier, or on account of his inability, shall be, and he is hereby, authorized to sign the circulating notes of the bank, and sign and make oath or affirmation to the reports called for by said ministers of finance showing the condition of the bank with which he is connected, and such oath or affirmation and all others required of bank officers may be administered by any notary public or commissioner of deeds.

SEC. 24. That the clearing houses of the respective districts shall act under charters granted by the United States Government, running for fifty years and authorizing them to effect clearances between banks and to do other business for and between banks, in accordance with such rules and regulations as may be prescribed by said ministers of finance from time to time.

SEC. 25. That to provide for any temporary deficiency now existing in the Treasury of the United States, or which may hereafter occur, the Secretary of the Treasury is hereby authorized, at his discretion, to issue certificates of indebtedness of the United States, payable in from one to five years after their date, to the bearer, in gold coin, of the denomination of twenty-five dollars, or multiples thereof, with annual coupons for interest at a rate not to exceed three per centum per annum, and to sell and dispose of the same for not less than an equal amount of gold coin at the Treasury Department and at the subtreasuries and designated depositories of the United States and at such post-offices as he may select. And such certificates shall have the like qualities, privileges, and exemptions provided in the resumption act (approved January fourteenth, eighteen hundred and seventy-five, entitled "An act to provide for the resumption of specie payments") for the bonds therein authorized. And the proceeds thereof shall be used for the purpose prescribed in this section and for no other.

SEC. 26. That all acts or parts of acts inconsistent with the foregoing shall be, and the same are hereby, repealed.

The measure which I now submit for your consideration is but an elaboration and redraft of my former bill, H. R. 6442, and my remarks will only be an extension of what I said before the committee on March 23, 1896.

Loans to directors must be secured or authorized by board.

Penalty for breaking law by officers.

Not to engage in speculation.

Directors must examine.

Assistant cashier may sign notes.

Oaths may be taken, how.

Clearing-house charters may be granted by Government.

Deficiency in revenues may be provided for by sale of bonds.

Depositors' insurance fund.

United States Government shall pay depositors in sixty days.

United States Government may reimburse itself.

Guarantee funds, how to be invested.

Means ministers have of carrying the act into effect.

Loans to officers and employees.

## IMPORTANCE OF A CORRECT UNDERSTANDING.

It will be comparatively useless to attempt to deal with the financial question unless the evils from which we are suffering are clearly understood.

As well might the physician attempt to treat a patient without diagnosing his case. It is generally admitted now, I think, that treatment is comparatively easy if you have discovered the cause and thoroughly understand the disease.

As the treatment of any case depends upon the diagnosis, and as treatment must diverge as opinion with regard to the difficulty diverges, our first effort should be to find as many causes of our trouble as possible upon which we can all agree, so that we can proceed along well-established and well-recognized lines of treatment.

In the first place, I think all agree that our deplorable condition is due to an organic weakness and a functional malady often reaching an acute form, and that during the past three years our condition has been chronically acute. Our trouble involves both our national finances and the currency system of our banking institutions. We may administer a few sugar-coated flour or dough pills, like increasing the circulation to par of the bonds and allowing banks to organize with smaller capital in out-of-the-way places, and thereby allay the apprehensions for the afternoon; but unless we actually remove the organic difficulty on the one hand with an unequivocal measure of value, and reinforce the blood by infusing into the currency arteries the buoyancy and elasticity of our vast but rapidly exchanging wealth, this old malady will ever return in more and more malignant form, prey upon an ever-weakening constitution, produce greater and greater anemia, and end in disorder and ruin.

## FUNDAMENTAL TROUBLE.

Let us inquire first, then, what the organic or constitutional weakness is. It began by the Government issuing its first paper money, possibly of necessity, but foolishly kept in circulation long after the necessity, if any ever existed, had disappeared; and it is no guaranty of wisdom simply because the Supreme Court has decided that Congress could make nothing but a piece of paper, that was always being redeemed and yet is never retired, a legal tender. There are a great many things that Congress can do and does do that are supremely and superbly foolish, and conspicuous among its acts of this character was the act perpetuating the existence of the greenback long after its purposes, if born of necessity, had been served. If a small portion of the money that was used in paying off the Government bonds which could not annoy us had been applied in liquidating our demand obligations, we would have been saved an immense amount of financial trouble, and a vast amount of interest, too, before we have finished the greenback chapter. But we were not satisfied even with getting \$346,000,000 for nothing throughout eternity, so we started out upon the silver scent; and while we were cunning enough in the act of 1878 to hide behind the coined dollar deposited, we had the hardihood in 1890 of increasing our demand obligations at the astounding rate of \$50,000,000 a year, with no way of meeting them except the taxing power of the Government. We did not even assure the people and the world of our good faith by putting up a redemption fund corresponding with that lodged against the greenbacks.

## CREDIT STRAINED.

What happened? We soon found that technically we had, including the national-bank notes, about \$1,000,000,000 of demand obligations out, and only the same \$100,000,000 we thought necessary to protect the \$346,000,000 greenbacks, when, in fact, we ought to have had at least \$300,000,000 of gold under the circumstances.

## DISTRUSTED BY ALL.

All classes of our people, to say nothing of the business men, and particularly the bankers, were looking each other mysteriously in the face and inquiring whether it might not be well to hide away some gold. The foreign broker, wanting to appear conservative and protect his client, and of course get another commission on an exchange of securities, advised extreme caution, pointing out that it would be impossible for the United States to maintain the gold standard, and that it was in a position, in fact, to slide from under when the crash came.

What has been the result? The American people of every class have been hoarding gold, while the foreigners have been withdrawing their investments, and, what is quite as bad for an undeveloped country, withholding their money from us.

## OUR DEMAND OBLIGATIONS REQUIRE SALE OF BONDS.

The large outstanding demand obligations of the Government enable those who want gold at home or abroad to force the Government to go on forever paying these greenback and silver demands over and over again, and yet they may never be retired. The only remedy left to the Government under the present circumstances is to sell bonds in advance and corner the \$500,000,000 greenbacks and Treasury notes, about which there is no possible

doubt as to what the Government has got to do, and then wait for a test case of a silver certificate, which must result in the same conclusion and the Treasury be confronted with \$335,000,000 more of demand obligations, while the Government, which the unthinking call the richest in the world, in this very connection finds itself without any of those resources of a bank to meet its debts and literally stripped of every means of defense except its power to tax the people. Was there ever a more pitiable spectacle in the world?

From the foregoing we have discovered some of the disastrous effects growing out of our organic difficulties.

We have observed:

First. That on account of doubt gold constantly left the Treasury and the country.

Second. That our people nursed their gold, and the United States Treasury was compelled to furnish all the gold that was wanted for any purpose whatever, without having any resource except the power to tax the people, and yet must continue an unlimited amount of the paying business of a bank.

How shall we meet the first difficulty and prevent a stream of gold from flowing out of the country and stop the drain on the Treasury by our own people?

There is and will be but one permanent cure, and that is an unequivocal measure of value approved and adopted by all the leading commercial nations of the world, and determined by all human experience to be best suited for settling the balances of trade.

## EXPLICIT TERMS IMPERATIVE.

So long as political parties straddle, and so long as it is possible for members of Congress to declare that the bonds of the United States are in terms payable in silver as well as gold, and so long as one branch of Congress or the other shows its disposition by a vote to take advantage of the word "coin," so long will a most expensive, indeed possibly a ruinous, doubt hang over this country.

## COMMON HONESTY A NECESSITY.

Of those who declare that we are on a gold basis and are going to pay our obligations in gold I would like to inquire, Why do we not put it in black and white and save this country millions in interest every year, and secure hundreds of millions for investments to develop our vast resources? For there is no country on the face of the earth with our citizenship, civilization, well-established laws, and natural resources (which are the magnets that determine where capital goes), and therefore so assuring to capital, as our own, if the measure of value were only unalterably fixed.

How shall we overcome the second difficulty, that has made this great country ridiculous and may render it financially impotent, because the people demand that this debt-doubling process shall cease, little dreaming of the consequences that must ensue? If we would escape the incomprehensible trouble in either event, we must cease the anomalous position of filling all the paying functions of a bank without any of its natural resources.

In other words, the two remedies for our organic difficulty are these:

## FUND THE DEBT.

First. Refund our national debt in long-time 2 per cent gold bonds, furnishing a basis of circulation for our national banks and thereby giving to the people a money redeemable in gold over the counter of the bank of issue, thus utterly destroying the gold-hoarding habit at home, and dissipating the last vestige of doubt and fear abroad.

## RETIRE ALL DEMAND OBLIGATIONS.

Second. Get the Government out of the banking business by converting the greenbacks and Treasury notes into metal reserves of the national banks, and send the silver dollars whirling into the tills of our merchants and over the counters of our banks.

## NATIONAL CREDIT ALWAYS SAFE.

This done, the credit of the nation can not be threatened in times of peace and ought to be maintained unimpaired in times of war. Its business would then be just what that of New York, Chicago, or San Francisco is—the collection of money for the payment of current expenses—and every dollar of the \$625,000,000 of gold in the United States would be free money, and would be taken from the safe-deposit boxes, drawers, and stockings and turned into the channels of commerce.

## OUR TROUBLE NOT LACK OF REVENUE.

So far as I have been able to discover, there is but one other view entertained with regard to our organic weakness, and that has been entertained by my fellow-Republicans—indeed, originated with them—but which is far more political than philosophical, and which will not stand the test of fact established by investigation.

Beginning with President Arthur, we were warned continually of the danger that would grow out of expanding our demand obligations, and all recognized economic writers pointed out the danger long before President Harrison left his office. Even before there had been a deficiency, Secretary Foster was panic-stricken and the Republican Administration had prepared and was ready

to issue \$50,000,000 of bonds for no other purpose than to build up the credit of the nation by increasing the reserve.

I think it will not be denied by anyone who will take the trouble to study the changes from 1878 to 1893 that had the Government begun in 1878 to cover the depreciation of the silver coined with a proper reserve of gold and continued that policy down to 1890 and through all the operations of the Sherman Act to 1893, gradually increasing the reserve up to about \$300,000,000, there would have been no apprehension with regard to the ability of the Government to meet its demand obligations, even though it was compelled to sell \$150,000,000 of bonds to cover the deficit growing out of the lack of revenue.

If this be true, then it is clear that it was simply the expanded credit and not the lack of revenue.

After much honest and earnest investigation on my own part, I am satisfied that the lack of revenue has been in no sense the cause of the trouble, although I am of the opinion that it has served to scrape the scab off a most angry, violent, malignant, and festering sore and kept it a running one. The real trouble was in a lack of that prudence on the part of the Government that a good banker usually exercises in increasing his reserves as his demand obligations expand.

#### LARGE GOVERNMENT RESERVE UNWISE.

But what a frightful waste this prudent policy would have involved, the locking up of \$300,000,000 of money for no other purpose than the safe conduct of a most unwise and foolish policy. Nor would the popular will of the country remain silent while so vast a sum was being withdrawn from the channels of trade and the currency correspondingly contracted. This inherent or constitutional evil from either point of view was to breed discontent and disaster.

While discussing this fundamental difficulty, it may be well to allude to the objection, that has been urged to the gold cure here proposed, on the part of the so-called bimetalist, but the more accurately described silver monometallist, and that is an international bimetallic arrangement.

#### A WORD TO BIMETALLISTS.

To these so-called bimetallists I think we may confidently say that so far as the public sentiment of this country goes two things have been established beyond all peradventure:

First. That the American people are unalterably opposed to the free and unlimited coinage of silver.

Second. That if this country hopes to secure an international arrangement for the free coinage of silver at any ratio, they will be far more successful in their endeavor to do so if they place themselves squarely upon the gold standard, showing to all the rest of the world that there is absolutely no possibility of this country adopting the free coinage of silver while the other great commercial nations of the earth take all the gold and leave us nothing but silver. The way to reason with the selfishness of nations is to exercise the power of compulsion, and the mere possibility that this great country may in some moment of aberration adopt the free-coinage fallacy stands in the way and will do more to defeat an international arrangement than all other causes combined.

#### USE OF METAL SALUTARY.

Then there is another class, who would sacrifice everything to convenience, instead of all convenience to principle, and who urge the inconvenience of using metal instead of paper money, when, as a matter of fact, the salutary effect of having the metal among our people offsets it tenfold. Among these are even those who would not propose to have anything but good paper money, and yet urge the inconsequential consideration of convenience while a great principle is involved, even the credit of the nation. The question of convenience can only be considered after the problem has been solved upon sound economic principles.

Having pointed out what seems to me to be the organic disorders, and dissipated the erroneous diagnosis of those who claim that all our woe is due to lack of revenue, and having pointed out that the very objection of the theoretical bimetalist is really his best if indeed not his only hope of success in securing an international arrangement, and having brushed away the dewy suggestion of convenience, I think we have clearly discerned the true organic weaknesses from which we are suffering.

These being the fundamental difficulties, there can be no question about the remedies that have been suggested.

Assuming that our measure of value has been placed beyond the reach of cavil and forever settled, and our Government has no connection whatever with the currency of our country except as trustee, let us proceed to inquire what the functional trouble is affecting our monetary system.

#### OUR PRESENT BANKING SYSTEM BAD.

I am one of those who believe that we have one of the best banking systems in the world in some respects, and who also believe that it is equally bad in others. All the superficial defects, all the apparent evils, like eruptions on the human body, which are

due to disorders of the blood, are due either to too much or too little money to handle the commerce of this great country at any given time.

Any banking system like our own, which results in a currency panic in one city or several localities or possibly all over the United States every time there is the slightest commotion in any department of commerce, is like an epileptic patient who goes into fits upon the slightest provocation.

Everybody asks, "What is the trouble?" And everybody who has taken the time and trouble to investigate the subject answers, "The want of a sound, elastic currency."

TRUTH AND PATRIOTISM, NOT TRADITION AND PREJUDICE, SHOULD CONTROL OUR THOUGHTS.

We have reached a point in this matter that demands patriotic and heroic action.

We should at once acknowledge every established fact and follow every vein of truth wherever it may lead, if happily we may find a solution to this intricate problem, and save our country from the stress of a continual financial storm and bring back confidence in us throughout the world and secure the blessing of prosperity to our own people.

It has been with this spirit that I have pursued my study and indulged my thought, which has stripped me of some pet notions and dislodged many of my preconceived ideas that were born of political bias or were the children of wishes growing out of party zeal or the inheritance of some tradition partially true or utterly false. And now, when I pass my country in review and contemplate the stupendous losses and frightful havoc of recent years, I am impelled to hope that Diogenes may again appear with his candle and not cease his search until he has found a clear, frank, and honest political platform upon which the American people can fight this thing out, as they are longing to do.

As in 1858 Abraham Lincoln foresaw that this Government could not endure half slave and half free, so now it is clear that the domestic prosperity and commercial supremacy of this nation among all the nations of the earth wait alone upon our unequivocal declaration and irrevocable decision as to our measure of value.

#### OUR PEOPLE FAVOR THE GOLD STANDARD.

The American people, strictly honest, highly intelligent, and supremely brave, are in favor of the gold standard as a measure of value because all history has shown it the most stable metal, all experience has proved it best suited for settling the balances of trade, and all the leading commercial nations of the earth have approved and adopted it. And while our people are in favor of the use of so much paper and silver money as is consistent with prudence and the demands of business, they are unalterably opposed to the free and unlimited coinage of silver.

#### THE EXPERIENCE OF OTHERS SHOULD INFLUENCE US.

In discussing this question we can not take the position of the schoolmaster, the theorist, or the dogmatist; but with a full and perfect knowledge of our present currency, our individual banking system, the extent of our country, and the magnitude of our commerce, we should attempt the solution of this most difficult problem.

The experience of other countries, so far as they have established principles that are equally adapted to our condition, are valuable; but we can not assume that everything that has worked well elsewhere will necessarily work equally well here. It is a question very largely of discrimination and adjustment. However, it is no evidence that because conditions elsewhere are very different from our own, that their experience is of no value to us, or that what has been well done there can not be equally well done here. Common sense here, almost more than anywhere else, must serve as a ballast to theory. Prejudice must give way to truth, and selfishness to principle.

#### A SUDDEN CHANGE UNWISE.

To suppose that the people of the United States will give up a secured currency in a day, a week, a year, or a decade even, for a credit currency, is a most violent presumption, even if such a thing were sound in principle. Again, even if they were willing to do so—and credit currency is sound beyond a peradventure in principle—I do not believe that such a step would be wise.

Banking is a development; it is the result of evolution; and each of the great commercial nations has its own system of banking which is still in the process of evolution. While our movement should be in the direction of radical changes, the movement itself should not be radical, so that what may be proposed may be tested and gradually adjusted to the vast and complicated factors involved in our commerce and banking.

#### SECURED CURRENCY IS UNELASTIC.

That any system of secured currency does lack and must lack all the elements of elasticity I presume no one here doubts. If, however, there are those who think that our system has ever responded and contracted as the demands of commerce required, they have only to consult our bank-note circulation by years and

be convinced that it has practically been controlled by the normal demand of money on the one hand and the profit on the bonds on the other, and has often been lowest when it ought to have been highest, and highest when it ought to have been lowest. There is no pretense that it has been taken out every fall when the crops were to be removed and has automatically contracted when they were disposed of. It was \$146,000,000 in 1865, \$340,000,000 in 1875, \$301,000,000 in 1877, \$352,000,000 in 1882, and \$122,000,000 in 1890. It is now about \$200,000,000.

A TRULY ELASTIC CURRENCY WILL ALWAYS REFLECT LOCAL CONDITIONS AND COMMERCIAL ACTIVITY.

No system of currency will ever have the quality of true elasticity which does not reflect commercial activity and which must pay a tax when it is idle; hence the normal demand throughout the year will be the only material factor affecting the issue.

It will readily be seen why we have money panics somewhere nearly all the time and everywhere some of the time. Under a properly regulated system I think one may safely say there should never be a currency famine anywhere at any time.

The great bulk of the money, the normal money, of any country, may be gold, silver, and secured currency, no one of which, nor all of which put together, is elastic. But to properly and adequately provide for the extra demand for money to handle crops and manufactures, to meet the disturbed conditions in commerce and the flurries in finance, something more is needed and demanded.

THE NATIONAL DEBT WILL SOON BE PAID OFF OR MUST BE FUNDED.

Again, it is admitted that it will not be very long before the national debt will be paid off or much reduced. We all remember what consternation there was throughout the whole country about contraction when President Harrison was paying off the national debt at the rate of about \$100,000,000 a year during part of his Administration. Our system had absolutely no power of self-adjustment. Some were demanding that we have State bonds for security; some suggested city bonds; some urged railroad bonds; some sought relief in the repeal of the tax on State banks, while the bankers met at Baltimore and issued the plan bearing that name. All was confusion; all was chaos; nothing was done.

Now that there has been a slight increase in our bonded indebtedness, some talk as though it were to continue throughout eternity. In the light of a surplus revenue of \$1,333,000,000 from 1879 to 1889, such a suggestion is idle talk, for everybody knows that if the Government were disposed to do so it could wipe out this entire debt in five years, and that to distribute the liquidation over a period of ten years would render the burden so light as not to be noticed. Nothing is more certain than the absolute necessity of some system to succeed the present one in the course of time, and nothing is more important than that there should be an evolution in passing from one to the other and not a revolution, with all its shocks, misfortunes, disasters, and ruin.

IGNORANCE OF TERMS.

As a preface to what I am going to say, I will venture the assertion that you can not mention the matter of credit money in any chance meeting of a dozen business men that some of them—indeed, in most instances a majority of them—will not shrug their shoulders and think of what they may remember, if age will permit, or what their fathers have told them about “red-dog,” “yellow-dog,” or some other dog money, as though they had heard or read all about all kinds of money, when, as a matter of fact, all they know about it is that there really was “red-dog” money, and that the dog died. Neither the cause nor the circumstances surrounding his death seem ever to have entered their minds.

But, discarding the follies of the past, let us inquire into our necessities and misfortunes with a determination of overcoming them, if possible.

LOANING DEPOSITS AND LOANING BANK NOTES ARE IDENTICAL.

As a preliminary but fundamental truth, I suppose all my listeners realize that there is not the slightest difference between a bank which has \$100,000 capital and \$100,000 of deposits subject to check, with \$75,000 of its deposits loaned out on sixty-day two-name paper, and \$25,000 reserve, and a bank which has \$100,000 capital and \$100,000 of credit notes outstanding, \$75,000 of which having been loaned to identically the same men as in the former case and on the same conditions—sixty-day two-name paper, with \$25,000 of notes turned into cash for a reserve against the \$100,000 of notes.

When there are abundant deposits there will be no notes issued under ordinary circumstances, but where there is little wealth in the form of money, but great wealth in other forms, and much money needed to develop it, there notes will be issued.

CITY AND COUNTRY COMPARED.

This fact can be illustrated by a comparison of the national banks of the city of New York in 1884 having \$46,000,000 of capital, with all the national banks of the State of Massachusetts, outside of Boston, having \$45,000,000 of capital. In the former the

deposits amounted to \$184,000,000, and the banks' circulation was but \$13,200,000; while in the latter the deposits were but \$45,400,000, and the circulation outstanding was \$35,800,000—about three times as great.

SUFFOLK SYSTEM.

Again, during the operation of the Suffolk system at Boston, which was before Yankee ingenuity was crystallized into millions, and every river, stream, and rivulet was turned into a source of wealth, the country banks had no deposits to speak of, and many of them, considering the inconvenience of travel and the slowness of mail, were, speaking from our present facilities for both, thousands of miles away. Some of the Maine banks with an actual capital and downright honesty were, though more remote than in a business sense than California is now, issuing their notes and clearing at Boston, thus enabling the sturdy sons of that then far-off region to develop the great resources of that section. So it was with nearly all of New England; but the current redemption which the system enforced kept their money absolutely good.

BANK OF FRANCE LOANS ITS NOTES.

Allow me to call your attention to the condition of the Bank of France January 1, 1895. Its capital is \$36,500,000, with deposits, public and private, of \$163,480,000; its outstanding notes, \$701,140,000. The amount of cash on hand is \$636,980,000, showing that the bills receivable taken in for the notes issued have been paid off and the notes are still outstanding.

It must not be forgotten in passing that the legal note issue, at present, of the bank is \$800,000,000; but it does not seem to issue it and foolishly loan it just because it can do so. It will be observed that it had \$100,000,000 still unissued.

Again, it must be remembered that there is not one dollar of specific security for any part of the whole \$800,000,000 issue, which is a legal tender so long as redemption is maintained. This vast issue rests upon and is protected by the bills receivable taken in exchange for the notes, or the proceeds of those bills receivable which have already been paid off.

CREDIT CURRENCY IN GREAT BRITAIN.

Great Britain, too, has her system of credit notes and metal method of expansion. The banks of England and Wales, outside the Bank of England, have the power to issue credit money amounting to £4,813,400, or about \$25,000,000. But on the 1st day of January they had outstanding only \$10,000,000, leaving credit money to be issued, if needed, amounting to \$15,000,000.

SCOTCH BANKS.

The Scotch banks have an authorized issue of credit money amounting to \$13,331,750, and on the 1st day of January had outstanding only \$6,985,675, leaving to their credit and unissued about \$7,000,000, which could be put out if conditions called for it.

IRISH BANKS.

The Irish banks have an authorized circulation of credit money amounting to \$31,772,470, and on the 1st day of January there was issued only \$15,000,000, leaving to their credit and unissued \$16,772,470.

From these facts it is not reasonable to conclude that the same degree of caution is exercised in issuing credit notes as in loaning the deposits of the banks? A careful comparison of the figures shows that on the 1st day of January, 1895, they had issued less than 50 per cent of their authorized credit circulation, which aggregates about \$70,000,000.

It must not be forgotten in this connection that we are now dealing with a country of vast accumulations and immense bank deposits. The prudence of the credit issues of Great Britain are certified to by the fact that in Scotland, the home of the system, there have never been but three bank failures worth mentioning.

METAL EXPANSION OF THE BANK OF ENGLAND.

In the beginning of my comment upon Great Britain I alluded to her system of metallic expansion. The position of the Bank of England is a most unique one, in that when they need more money or gold in England, London being the clearing house of the world, it is obtained by simply raising the rate of interest to a point that will attract gold from the money centers of the Continent, and against this the issuing department puts out its Bank of England notes.

SUSPENSION OF THE ENGLISH BANK ACT.

Notwithstanding the various facilities for meeting exigencies, the Bank of England, owing to the fact that a limit was placed upon its issuing power by the act of 1844, which it was supposed at the time would forever end all panics, the bank suspended, as it is called over there, and the limit set aside October 25, 1847, November 13, 1857, and May 12, 1860. In February, 1861, and in May and September, 1864, the condition became critical also, while in 1873 the suspension of the act seemed certain for some days. By many it is now thought that it was a mistake to set a limit, for on all occasions when the emergency has arisen she has suspended the act and issued the requisite amount of money to meet the demand.

## GERMAN BANKING.

At the formation of the German Empire, when the financial arrangement was being adjusted, the English act of 1844 was largely followed, except in this particular power of issuing credit money, for they had learned by experience and observation of the English system that there was no limit except that set by necessity when the crises recur.

## LIMIT OF ISSUE PASSED.

No limit was fixed, but rules and restraints were established to keep it down to a certain point—885,000,000 marks, or about \$100,000,000 of money—which was apportioned among the several banks, with the privilege of passing the limit if cash of a certain description was held; but, having passed the limit of issue fixed without cash to cover, the only penalty was a tax of 5 per cent per annum upon the notes issued. This limit has several times been passed by the smaller banks, and also by the Reichs Bank itself, the institution representing the Empire. This happened in the case of the Reichs Bank in December, 1881; in September and October, 1882; in December, 1884; in January, 1885; in December, 1886, and three times in the latter part of 1890. The overissue September 30, 1895, was \$9,200,000; October 7, 1895, was \$4,100,000; December 31, 1895, was \$29,400,000. On some occasions the issues were much beyond the fixed limit, and it is now certain that in several instances the German community was saved from the shock of panic and the spasm of contraction which would have been inevitable if they had been acting under the English banking act of 1844.

But nearer home, even at our very doors, we can find an apt illustration of automatic banking currency.

## CANADIAN SYSTEM.

Canada has no mint of her own, but uses our gold pieces as her standard money. The Canadian system is founded upon the Scotch system, many of her leading citizens and most prominent bankers being of Scotch origin.

The banking capital of Canada amounts to \$62,196,391, or bears about the same proportion to their population that our banking capital bears to our own.

The Canadian banks have the right to issue credit money to an amount equal to their paid-up and unimpaired capital, which would be \$62,196,391. But, as a matter of fact, they have never exceeded \$38,000,000, and the greatest expansion in any one year to move the crops was \$7,000,000, while January 1, 1896, it was only \$32,565,179, about one-half the limit.

Each of the banks is interested in getting out its own money, and therefore is equally interested in keeping the current of redemption running strongly all the time over the counters of all the other banks.

It is a most striking fact that while we are scarcely ever out of a money panic, and consequently a currency famine, Canada does not know what either means.

## ALL EXPERIENCE JUSTIFIES CREDIT CURRENCY.

It would seem from all these illustrations—the Suffolk system, the Bank of France, the Scotch banks, the Irish banks, the English banks, the German banks, and the Canadian banks—we may fairly conclude that credit currency is as good as any in the world, and, indeed, in case of war, when securities often go out of sight, it is better, because resting upon sixty-day bills receivable, which are almost certain of payment without delay or loss, at least a very great portion of them.

## ARE WE AN INFERIOR PEOPLE?

To the man whose reply is—and this is the only answer to this array of evidence—the plan may work well in all the rest of the world but would not do for us, I desire to say that such an admission is an impeachment of our civilization; a plea of guilty to the charge that we are a violent people; a confession that our prudence and money-saving qualities are overshadowed by those of every other nation (which is not true); a declaration that we are unfit for self-government, and consequently self-control, which more than a hundred years of the most glorious history of the human race contradicts and rebukes.

Would any man seriously contend that the president, cashier, or board of directors of a bank would be more foolish in loaning the notes of a bank than its deposits, when circumstances will bring them to its counter for redemption with the certainty and promptness of the checks drawn against its deposits?

"But," said one of the Banking and Currency Committee the other day, "such an expansion will lead to unwise speculations and all its evil consequences." What has just been said clearly shows there would be and could be no undue expansion of money calling for an immediate metal redemption any more than there is to-day.

## CREDIT, NOT MONEY, STARTS SPECULATIONS.

Have you ever inquired into the subject of booms and financial cataclysms with a view of ascertaining what, if any, connection they have had with money—real money—money currently re-

deemed? Have you ever thought it out to the last analysis and found that the increase of money has had absolutely no connection with the great speculations throughout the world during the past thirty years, but that every one of them has been due to our gambling instinct, encouraged by an undue expansion of credit and invariably long credit?

Have you ever thought of it? There has been absolutely no connection between the per capita circulation in the United States and the various booms and consequent shrinkages. From 1865 to 1873 our circulation contracted from \$20.57 per capita to \$18.04 per capita. In 1885 and 1893, respectively, our circulation was \$23.02 and \$23.85 per capita.

Increased circulation had absolutely nothing to do with the Birmingham, Dallas, Kansas City, Wichita, Omaha, Minneapolis, St. Paul, Duluth, Spokane, Seattle, Tacoma, and Los Angeles speculations and reactions; nor a thousand others in the United States and elsewhere.

Increased circulation had nothing to do with the Australian bubble. Increased circulation had nothing to do with the South American gambles. Increased circulation had absolutely nothing to do with that unlimited buying of the London market, from 1886 to 1890, when you could sell almost anything from a beer saloon to an undiscovered continent in that market.

## NINETY-TWO PER CENT OF OUR BUSINESS IS DONE BY CHECKS AND DRAFTS.

Now, since a system of credits in the form of checks and drafts performs over 92 per cent of our work and constitutes the vital factor in effecting nearly all our commercial exchanges, and since we have discovered that all the leading commercial nations of the world have successfully employed credit money based upon the liquid wealth of commerce, and have thereby escaped the difficulties and misfortunes necessarily growing out of an inelastic currency, and since an erroneously supposed connection between currently redeemed credit money and credit expansion does not exist, in fact that they bear no relation whatever to each other, have we not found a remedy for our ever-recurring panics and currency famines?

For these it will certainly prove a specific cure, while for our whole people a source of profit and advantage that can not be measured or comprehended because of a better distribution of the normal amount of our money and a natural, constant, and adequate supply at every point where it is needed to handle our products or develop our resources.

Having discovered our ills and the proper remedies, it is our task, taking into account every fact and condition, to draft a bill that will do what we have found necessary to preserve our financial honor and conserve our commercial prosperity.

## EVILS TO BE OVIATED.

First. We have seen our vast national banking interest, consisting of 3,712 institutions, with resources amounting to \$3,423,629,343.63, and transacting a business of more than \$80,000,000,000 per annum, between the rising and setting of the sun, pass from one political representative of one Administration to that of another, when our banking interests, as a matter of fact, should be free of and unaffected by political caprice or change.

Second. We have found that there is a possibility of doubt about our measure of value, when it ought to be undoubted, unequivocal, unchangeable.

Third. We have found our money hoarded by banks and individuals and congested in the financial centers, when confidence should take the place of fear and money seek the channels of trade.

Fourth. We have found our Government with a bonded debt of \$347,362,920, bearing, mainly, 4 and 5 per cent interest, when it ought to be funded into a popular loan at 2 per cent as a basis of circulation, saving over \$15,000,000 annually to our people.

Fifth. We have found our Government bound to redeem an unlimited amount of obligations, with no power to meet them except by taxing the people, when it ought to have no demand obligations except current expenses.

Sixth. We have found our Treasury warehousing \$500,000,000 of silver, coin value, when it ought to be circulating among our people.

Seventh. We have found our Government a guarantor of the obligations of our banks, when it should be acting only as trustee for the note holders.

Eighth. We have found eight different kinds of money in circulation, when there should be but two besides gold and silver.

Ninth. We have found a system of currency as fixed in quantity as the stars, never varying necessarily with the months or the years according to the demand, but which may all be withdrawn to-morrow, if the bonds do not pay, when our currency should increase and decrease with the ever-varying exchanges of our wealth. In verification of this it is well to observe that during those years of most wondrous development—from 1881 to 1890—our note issues fell from \$325,000,000 to \$123,000,000.

Tenth. We have seen legitimate commerce and development languish because of the restraint and high rates resting upon

money, when it should automatically spring into activity at a reasonable rate of interest as the demands arise and disappear when the work is done.

#### THE PROPOSED CHANGES WOULD PRODUCE MOST SALUTARY RESULTS.

That all these difficulties may be obviated and these advantages secured without in the smallest degree disturbing public confidence, bringing the slightest shock to trade or commerce, or in any way affecting the finances of the Government or banking interests of the country, except to greatly simplify and immeasurably strengthen both, every frank and thoughtful man will admit after careful consideration.

It has been to accomplish these objects that I have prepared this bill which I now submit to every candid thinker without reference to party affiliations, confident that his judgment must at once approve its purposes and will, upon a thorough and exhaustive examination, adopt and advocate its principles.

Appreciating the breadth and technicality of the subject, I shall venture to discuss each provision of the measure in its order and point out its purpose and effect.

#### DISCUSSION OF THE MEASURE BY SECTIONS.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That there shall be, and there is hereby created and established a department of finance, which shall have entire and exclusive control and supervision of all national banks, their right to take out secured circulation and issue their notes.

SEC. 2. That there shall be three ministers of finance, who shall take the place of the Comptroller of the Currency and constitute a board of finance; and said board of finance shall conduct the said department of finance. That said ministers of finance shall be appointed by the President, by and with the advice and consent of the Senate, and the term of office shall be for a period of twelve years, at a salary of \$10,000 per annum; and said ministers shall be removed only by and with the consent of the Senate for cause stated in writing. That the term of the first three ministers shall be for twelve, eight, and four years, respectively. The minister appointed for twelve years, and his successors, shall be known as first minister of finance, and he shall preside at all meetings of the board of finance; and the remaining two ministers shall be known as associate ministers of finance.

#### PRESENT LAW NOT CHANGED.

These two sections refer to the same subject-matter, and while they make no material changes in the law, the effect of them would certainly be to take the banking interests of the country out of politics, as only one minister could be appointed during each Presidential Administration.

#### WISDOM AND SAFETY IN ADVISORY BOARD.

Whether under the supervision of a single individual, however capable, banks have not been permitted to drift into irretrievable ruin on the one hand and often placed in the hands of receivers without warrant on the other, to the very great loss of all concerned, no one can ever definitely know. But inasmuch as the national banking act requires the association of at least five persons to form a bank, the Government has always presumed there was wisdom and safety in a consulting board as against a single individual.

#### PRESENT CRISIS DUE TO WANT OF WISE COUNSEL.

Indeed, it is hardly too much to assume that if we had had such a board of advisers, our present dangers might not now threaten us, for it is only after the horizon of any man is widened so that he can comprehend the needs of the entire country and his opinions are ripened and strengthened by that intelligence which is begotten of experience that his suggestions call for that weighty consideration which may well determine legislative action.

#### MINISTERS SHOULD BE REMOVED FROM POLITICAL INFLUENCE.

So long as men hold office at the will of the people or change with party succession so long will their opinions be colored by popular sentiment and influenced by prevailing prejudice, possibly a most salutary influence upon the usual legislative duties, but certainly most harmful to the judicial determination of any question, a fact that the fathers of the Constitution appreciated when they protected our Supreme Court against it by a life tenure of office.

#### LONG SERVICE IMPORTANT TO USEFULNESS.

Is not the character and importance of the great department of finance of 70,000,000 people such as to make it imperative that it be removed from any possible influence springing from the waves of passion that sweep over the country during our national contests? Again, every man who comes into the office of Comptroller must necessarily bring with him all the prejudices of his environment and the narrowness of local conditions, unless happily he has been a man of large and wide experience. It would be most natural for him to think that the section from which he comes is the most important one simply because he knows nothing of any other; and until he can compare them all and view them as they actually are, treating them with equal justice, he will be comparatively unfit to fill so great an office. Nor can any man, however clever, hope to arrive at a proper appreciation of all the various sections and their still more varied interests within the present term of office. Indeed, just at the expiration of it he has arrived at a point in information and experience where his services ought to be of some real value to the Government.

WITH A LOW SALARY THE OFFICE IS A MERE STEPPING STONE TO POSITION.

Nor is the present compensation of the Comptroller of the Currency such as to retain any man of commanding ability longer than to develop an opportunity for his services in one of the large financial institutions of the country; and so to-day it is little more than a stepping-stone for that purpose.

This Government is entitled to and ought to have the ablest of its men in this most important department of public administration. Most important of all, because it has to do with and controls the very lifeblood of the nation's commerce and domestic trade; and if we shall rightly solve this great financial problem, there ought not to be any banks of discount to speak of operating outside of the provisions of the national-bank act. The number of institutions under the supervision of the Government will then exceed 9,000, while their assets will soon approach a ten-billion mark. Does not common prudence require that so vast an interest, affecting as it does the affairs of every individual and institution within our borders, shall not be subject to the passions of politics, to the ill health, death, or resignation of a single individual whose services may be more appreciated by some corporation than by the Government?

#### IMPORTANCE OF A CONTINUING BODY.

The term of office in this department should be for a long period of time and should not be subjected to the caprice of any Administration which may happen to come into power upon a wave of prejudice, which is invariably given to a narrow policy, and is usually deaf to the voice of reason. It is of the utmost importance that those in charge of the office should be a continuing body, so that the information and traditions accumulating from year to year shall be handed down to the respective successors. Each member of the board, as he comes into it, would be steadied by those who are his associates and who have accumulated much knowledge and valuable experience, which, through conference, he can at once make his own. Create this office upon these lines, which are commensurate with its character and responsibilities, and it will call for the ablest of our men, and will retain them if the remuneration is such as to justify the sacrifice of their lives to the public service.

#### ORGANIZATION OF BANKS AND FUNDING OF DEBT.

SEC. 3. That any national bank now doing business, or any other financial institution doing a similar business, or any number of persons may, in accordance with existing law, so far as the same is consistent with this act, organize upon the following terms and conditions:

If any corporation or association of persons described as aforesaid shall deposit with the United States Government any of the United States bonds now outstanding, or any that may be hereafter issued, which, at their stated value as herein set forth, (a) shall be equal to the required amount of circulation in the respective cases specified, (b) the United States Government shall issue to said corporation in lieu of said bonds so deposited, United States Government bonds bearing interest at the rate of 2 per cent per annum (c) equal in amount to the value thereof, both principal and interest of said new bonds being payable in gold coin, and to have the like qualities, privileges, and exemptions provided by the act approved January 14, 1875, entitled "An act to provide for the resumption of specie payments;" and said new bonds shall thereupon be deposited with the United States Government, and circulation known as United States Government bond notes shall be issued to said corporation in an amount equal to the new bonds so deposited, said United States Government bond notes being in denominations of \$10 or multiples thereof.

(a) That the United States Government bonds now outstanding shall be received at the following prices, to wit:

2s, reg.	Q. Mar.	95 1/2
4s, 1907, reg.	Q. Jan.	109 1/2
4s, 1907, coup.	Q. Jan.	110 1/2
4s, 1925, reg.	Q. Feb.	120 1/2
4s, 1925, coup.	Q. Feb.	120 1/2
5s, 1904, reg.	Q. Feb.	118 1/2
5s, 1904, coup.	Q. Feb.	118 1/2
6s, cur'cy, '98, reg.	J. & J.	102 1/2
6s, cur'cy, '99, reg.	J. & J.	105
4s (Cher.), 1897, reg.	March.	102
4s (Cher.), 1898, reg.	March.	102
4s (Cher.), 1899, reg.	March.	102

and that from and after the passage of this act said bonds shall be received upon the same income basis, respectively.

(b) All banks organized under this act shall take out for issue United States Government bond notes in proportion to their respective capital, as follows: All banks having a paid-up capital of \$1,000,000 and over shall take for issue \$500,000 of such notes; all banks having a paid-up capital of \$300,000 and less than \$1,000,000 shall take for issue an amount of United States Government bond notes equal to one-half of their respective capitals; but no one of said banks shall take for issue less than \$300,000 of said notes; all banks having less than \$300,000 of paid-up capital shall take for issue an amount of said United States Government bond notes equal to their respective capitals, and each bank shall pay into the United States Treasury one-fourth of 1 per cent per annum upon the notes so taken out for issue as a part of the fund to be created and known as "United States national bank note redemption fund."

(c) The first one hundred million of said 2 per cent bonds that are issued in exchange for other United States bonds shall become due in 1945.

The second one hundred million of said 2 per cent bonds that are issued in exchange for other United States bonds shall become due in 1940.

The third one hundred million of said 2 per cent bonds that are issued in exchange for other United States bonds shall become due in 1935.

The fourth one hundred million of said 2 per cent bonds that are issued in exchange for other United States bonds shall become due in 1930.

The fifth one hundred million of said 2 per cent bonds that are issued in exchange for other United States bonds shall become due in 1925.

The sixth one hundred million of said 2 per cent bonds that are issued in exchange for other United States bonds shall become due in 1920.

The seventh one hundred million of said 2 per cent bonds that are issued in exchange for other United States bonds shall become due in 1915.

The 2 per cent bonds that are issued in exchange for the balance of the United States bonds then outstanding shall become due in 1910.

That the amount of United States Government bond notes which the banks organized under this act are required to take out for issue may be gradually reduced and retired as follows: Twenty-five per cent thereof may be retired in 1910, 25 per cent in 1915, 25 per cent in 1920, and the remaining 25 per cent in 1925.

All other holders of United States Government bonds are hereby authorized and entitled to exchange the same at any time prior to January 1, 1899, for the said new 2 per cent United States Government bonds upon the income basis hereinbefore set forth.

#### DOES NOT CHANGE PRESENT LAW.

The first paragraph in this section does not in any way alter the present law under which a national bank may be organized, but extends to them, as well as all State banks, the privileges of this act.

Banks desiring to avail themselves of the advantage of the act must take out for issue the amounts of United States Government bond notes specified for their respective capitals, having deposited with the United States Government the requisite amount of the new 2 per cent Government bonds, which may be obtained either by surrendering a proper amount of old bonds at the schedule price or legal-tender money in accordance with section 17 of this act.

#### COMMUNITIES WITH SMALL BANKS NEED MORE NOTES.

That banks of smaller capital shall be entitled to take out a greater amount of circulation in proportion to their capital is based upon the experience of banks in the past, and is intended to anticipate the greater needs of localities where there is little wealth in the form of money, banks are fewer, and capital invariably smaller than in the great financial centers where the capital of the banks is large and the deposits so great as to preclude the necessity for a corresponding issue of notes.

#### NO CONTRACTION OF CURRENCY.

The schedule has also been arranged with a view of preventing any possible contraction of our present currency; so that while the \$346,000,000 of greenbacks are retired, they will be replaced to the last dollar with gold coin, or United States Government bond notes, which, like the greenbacks, stand upon the credit of the Government, being secured by United States Government bonds payable in gold coin.

#### THE GREAT COMMERCIAL NATIONS HAVE SECURED THE REQUISITE AMOUNT OF GOLD.

But it may be asked whether there is ample gold in the world to meet the requirements of commerce and trade. Does Great Britain want any more? No; she has \$580,000,000. Does France want any more? No; since 1873 she has increased her holding from \$122,500,000 to \$772,000,000. Does Germany want any more? No; the Imperial Bank has accumulated \$434,890,067 since 1875, and she has \$675,000,000. Does Holland, Belgium, Switzerland, Denmark, Norway, or Sweden want any more? No; they have \$125,000,000. Does Russia, which has increased its holdings from \$119,000,000 in 1872 to \$488,000,000 in 1896, want any more? Possibly \$50,000,000; certainly not more than \$100,000,000. Does Canada want any more? No; she has \$16,000,000. Does the United States, which has increased its holdings from \$135,000,000 in 1873 to \$625,000,000 in 1896, want any more? No. The only thing that is now wanting to the United States is assurance to the world that there is not the remotest possibility of a single obligation being dishonored within our borders, either municipal, corporate, or personal, on account of a change in our standard of value.

#### AMPLE GOLD IN THE BANKS AND TREASURY TO SUPPLY THE ENTIRE BANK RESERVES IN GOLD.

If every national bank in the United States held its entire reserve in gold, they would require only \$315,069,831. They now have \$160,738,890, and the United States Treasury holds \$142,811,118 more, making a total between them of \$303,595,008, from which fact it is clear that while under this bill the national banks, according to the estimates of the actuary of the United States Treasury, would be required to hold only \$189,000,086, they could actually have, if they preferred to hold it if this measure were in operation, \$303,595,008, and there would still be left for the remaining banks in the United States \$325,000,000 more, which would at once come from its place of hiding if this question were taken out of the field of debate.

#### GOLD SUPPLY.

What are the probabilities of the future supply? From 1492 down to 1893, a period of four hundred years, the world produced only about \$8,000,000,000 of gold, of which about \$4,000,000,000 is used in the form of money. The product of the last year reached \$215,000,000, an annual rate that will furnish more gold in the next forty years than the world produced in four hundred years prior to 1893. Certainly from such a showing no one of the commercial nations of the world will find any difficulty in obtaining any small addition they may require to supplement their present holdings.

#### METAL CIRCULATION DESIRABLE.

Why have no denominations of bond notes lower than \$10?

First. Because the presence and use of the largest possible amount of metal among the people exercises a most salutary influence.

#### WORK FOR OUR SILVER.

Second. We have about \$500,000,000 of silver on hand, and it could be made to do the work of the one-dollar bills, amounting to \$40,960,091; of the two-dollar bills, amounting to \$28,848,497, and of a large portion of the five-dollar bills, amounting to \$245,168,884, or a total of \$314,477,372.

#### THE GOVERNMENT DEBT SHOULD AND MUST BE FUNDED.

Why fund the national debt in long-time 2 per cent gold bonds? First. Because a very large portion of it will have to be funded in any event in the near future, as it will come due at a time and in such large blocks as to render extension necessary.

Second. The debt should be evenly distributed through a long period of time, so as to relieve the people from any burdensome degree of taxation during any given year.

Third. By a statement of the actuary of the Treasury Department prepared for me, the present annual interest charge on the Government debt, excluding the Pacific railway bonds, amounts to \$34,387,290, while the annual interest charge upon our entire debt, if funded into 2 per cent bonds, would amount to only \$18,908,009.56, making an annual saving to the people of the United States of \$15,484,280.44, or more than \$1,250,000 per month, certainly an item well worth saving, since it would exceed \$150,000,000 every decade—quite a sufficient reason in itself for funding the national debt.

Fourth. To have our secured circulation based on so low a rate of interest as to preclude such an appreciation in the value of the bonds as to lead banks to dispose of them and retire the notes, thus contracting the volume of money and disturbing business conditions.

Fifth. It should be funded in gold bonds, because gold is the standard of value of the civilized world, and we can not afford to have a different standard on account of our vast commercial relations with other nations. Again, if we hope to have the capital of the world flow into our country and assist us in developing our resources, the terms of our obligations must be placed beyond cavil or question. Let us now eliminate the last possible doubt with regard to it, and we shall have unlimited capital remaining permanently with us and at the lowest rates of interest in the world.

#### THIS LIMITED LEGAL-TENDER QUALITY IS THE PRESENT LAW.

SEC. 4. That said United States Government bond notes shall be a legal tender between all national banks and shall be redeemed in gold coin when presented for payment at the bank of issue.

These United States Government bond notes are redeemable in gold coin at the bank of issue, and not by the Government, for the following reasons:

First. The Government should not be responsible for them beyond the proper custody of the guaranty fund and bonds securing them.

#### GOLD REDEMPTION OF BANK NOTES BY THE BANK OF ISSUE ONLY.

Second. These notes, constituting the great bulk of our paper money, should be good enough to pass for their face around the entire globe, and this could only be possible by making them redeemable in gold, the recognized money of the world.

Third. They should be redeemable only over the counter of the bank of issue, because they are as good as gold, being secured by the gold obligations of the Government; and the expense and trouble of Government redemption would therefore be unnecessary.

SEC. 5. That at the same time that said corporation, if located in a reserve city, shall deposit United States Government bonds as aforesaid it shall also deposit with the United States Government United States legal-tender notes or gold certificates, or both, of such an amount that it, together with the gold said corporation has on hand, will equal 15 per cent of its deposits; and the United States Government shall deliver to said corporation gold coin in lieu of said legal-tender notes and said gold certificates. Said corporation shall also deposit at the same time with the United States Government United States Treasury notes or United States silver certificates, at the option of said ministers, or both, which, with the silver coin then held by said corporation, shall amount to 10 per cent of its deposits, and the United States Government shall deliver to said corporation in lieu thereof silver coin of an equal amount; and said legal-tender notes, gold certificates, Treasury notes, and silver certificates shall be thereupon canceled. Said corporation shall thereafter keep as a reserve 25 per cent of its deposits in the following kinds of money: At least 60 per cent of said reserve shall be in gold coin, and the remaining 40 per cent of said reserve may be in silver coin or United States Government bond notes: Provided, however, That in lieu of one-half of such reserve, cash on deposit, subject to check, may be held in reserve cities.

SEC. 6. That at the same time that said corporation, if located outside a reserve city, shall deposit United States Government bonds as aforesaid, it shall also deposit with the United States Government United States legal-tender notes, or gold certificates, or both, of such an amount that it, together with the gold coin said corporation has on hand, will equal 8 per cent of its deposits; and the United States Government shall deliver to said corporation gold coin in lieu of said legal-tender notes and said gold certificates. Said corporation shall also deposit at the same time with the United States Government United States Treasury notes or United States silver certificates, at the

option of said ministers, or both, which, with the silver coin then held by said corporation, shall amount to 5 per cent of its deposits, and the United States Government shall deliver to said corporation in lieu thereof silver coin of an equal amount; and said legal-tender notes, gold certificates, Treasury notes, and silver certificates shall be thereupon canceled. Said corporation shall thereafter keep as a reserve 15 per cent of its deposits in the following kinds of money: At least 50 per cent of said reserve shall be in gold coin, and the remaining 40 per cent of said reserve may be in silver coin or United States Government bond notes: *Provided, however,* That in lieu of one-half of such reserve, cash on deposit, subject to check, may be held in reserve cities.

#### THE GOVERNMENT SHOULD GO OUT OF THE WAREHOUSE BUSINESS.

The purposes of these two sections, the first applying to banks in reserve cities, the latter to those outside, is to convert the demand obligations of the Government into gold and silver and put the metal into circulation among our people, or use it for reserves of the banks, so that hereafter all the reserves of the banks shall be gold and silver or an equivalent of gold.

#### CONTRACTION IMPOSSIBLE.

It will be apparent to the most casual observer that for every gold certificate, Treasury note, or silver certificate a corresponding amount of gold or silver will go out as they are retired, and, therefore, that no contraction can take place on their account. It might possibly be different in the case of retiring the greenbacks; for if the Government should sell bonds and draw gold coin from the banks with which to redeem the balance of the greenbacks, or about \$200,000,000 of them, after allowing for the \$146,000,000 of gold now in the Treasury, there would necessarily result a considerable contraction. But this would not be necessary, and it would not be done, for the schedule which determines the issue of the banks will give us \$435,000,000 of United States Government bond notes, or \$300,000,000 more than we now have of national-bank circulation, the amount now being \$234,000,000.

#### GOLD IN BANKS AND GOLD REQUIRED.

The actual amount of gold that all the national banks would require if 60 per cent of their reserves were held in gold, as required by this bill would, according to the estimate of the actuary of the Treasury, reach only \$189,000,986. But the national banks now hold \$160,728,890; therefore the Government would not be called upon to sell any bonds for coin, but would exchange a large amount of them, about \$300,000,000, for greenbacks under section 17 of this act.

#### IN FUNDING THE DEBT AND RETIRING THE GREENBACKS THE NET GAIN TO THE GOVERNMENT WILL BE \$1,464,390 PER ANNUM.

Here we may probably be met by that common objection of the politician that the people are unwilling to exchange this non-interest-bearing currency, amounting to \$300,000,000, for \$200,000,000 of 2 per cent bonds. We have already shown that the Government would save more than \$15,000,000 annually by funding the debt, from which, if we deduct \$4,000,000 on account of interest on the \$300,000,000 of bonds to be issued for the redemption of the greenbacks, we shall still have a net annual gain of \$11,484,880.44, or nearly \$11,000,000 per month. But should we gain nothing by the transaction, do we want to keep the greenbacks out any longer, considering the danger and expense of doing so?

#### DANGER OF DEMAND OBLIGATIONS.

Of the danger to which they constantly subject us we have all now become aware. Of the great expense incurred in maintaining them Hon. James H. Eckels, Comptroller of the Currency, has advised us in his present report, page 106, where the chief of the loan and currency division of the Treasury Department furnishes the following detailed statement:

#### COST TO THE GOVERNMENT OF MAINTAINING THE GREENBACKS.

Cost of the gold reserve, including liability for principal of bonds sold and interest thereon to their maturity.

Principal of bonds sold for resumption purposes:	
1871 and 1872.....	\$95,500,000
1873.....	100,000,000
1893.....	62,315,400
1895.....	100,000,000
Total principal.....	357,815,400
Interest at 4 per cent on the average amount of the free gold in the Treasury from January 1, 1873, to January 1, 1895.....	93,440,000
Interest from January 1, 1895, to July 1, 1907, on \$35,300,000 4 per cent bonds of 1907.....	451,235,400
Interest from January 1, 1895, to February 1, 1904, on \$100,000,000 5 per cent bonds.....	47,730,000
Interest from February 1, 1895, to February 1, 1905, on \$69,315,400 4 per cent bonds.....	45,416,666
Interest from February 1, 1895, to February 1, 1925, on \$100,000,000 4 per cent bonds.....	74,773,430
Total cost, including liability, except United States notes outstanding.....	1,001,981,096
Add amount of United States notes still outstanding.....	346,081,015
Total cost and liability.....	1,348,062,111

If the United States notes had been funded on the 1st day of January, 1879, into the thirty-year 4 per cent bonds of 1907, then being sold, the total cost to the Government therefor, including interest from January 1, 1879, to July 1, 1907, would be as follows:

Principal of bonds.....	\$346,081,000
Interest from January 1, 1879, to July 1, 1907.....	335,216,840
	741,897,840

Difference in favor of converting the United States notes into bonds..... 330,984,229

GOVERNMENT ISSUES HAVE BEEN DISCARDED BY ALL THE LEADING NATIONS OF THE WORLD.

The experience of all nations has demonstrated the fact that government issues of credit currency are the most expensive and dangerous form of money; therefore such issues have been retired and the United States Government is left in the grotesque company of India, Italy, Japan, and Russia.

SEC. 7. That the United States Government shall not pay out or reissue any United States legal-tender notes or gold certificates from and after the 1st day of January, 1898, but the same when received shall be canceled and destroyed; and further, that the United States Government shall not pay out, issue, or reissue any United States Treasury notes or silver certificates from and after the 1st day of January, 1898, but the same when received shall be canceled and destroyed.

The preceding section fixes the dates when the Government shall begin to cancel any of its demand obligations as fast as they may come into its possession, but the time is postponed so that the process may be gradual and the effect unobserved, the banking interests of the country having already adjusted themselves along the lines laid down in this measure.

#### PROVISIONS FOR CREDIT CURRENCY.

SEC. 8. That any corporation organized under this act may, with the permission and under the supervision and control of the board of finance, issue its own circulation, which shall be furnished by the United States Government and be known as United States national-bank notes. Said United States national-bank notes shall be issued in denominations of \$10 and multiples thereof, and shall be a first lien upon the assets of the bank issuing the same, and also upon the liability of the stockholders, and may be issued only in the following manner and upon the following conditions:

First. Every bank issuing United States national-bank notes shall at all times maintain against the amount of such notes outstanding a reserve corresponding to that required against its deposits.

Second. Any bank that shall have complied with this law may, with the consent and under the supervision and control of the board of finance, issue an amount of United States national-bank notes equal to 20 per cent or one-fifth of its paid-up and unimpaired capital, and shall pay upon such an amount thereof as may be outstanding at any time a tax at the rate of 1 per cent per annum.

Third. Said bank may issue a second amount of such notes equal to 20 per cent or one-fifth of its paid-up and unimpaired capital, and shall pay upon such an amount thereof as may be outstanding at any time a tax at the rate of 2 per cent per annum.

Fourth. Said bank may issue a third amount of notes equal to 20 per cent or one-fifth of its paid-up and unimpaired capital, and shall pay upon such an amount thereof as may be outstanding at any time a tax at the rate of 3 per cent per annum.

Fifth. Said bank may issue a fourth amount of notes equal to 20 per cent of its paid-up and unimpaired capital, and shall pay upon such an amount thereof as may be outstanding at any time a tax at the rate of 4 per cent per annum.

Sixth. Said bank may issue a fifth amount of notes, equal to 20 per cent or one-fifth of its paid-up and unimpaired capital and shall pay upon such an amount thereof as may be outstanding at any time a tax at the rate of 5 per cent per annum.

Seventh. If the amount of United States national-bank notes issued by any bank shall exceed at any time the paid-up and unimpaired capital of said bank, a tax at the rate of 10 per cent per annum shall be paid by said bank on such excess.

Eighth. That said ministers of finance are hereby authorized and empowered to suspend one-half of said tax upon any one or all of the said several issues of United States national-bank notes at any time after 1910, and at any time after 1890 said ministers of finance are further authorized and empowered to suspend any portion of the tax then remaining except the 10 per cent referred to in paragraph 7.

#### ADVANTAGES TO NEWER SECTIONS OF OUR COUNTRY.

That great injustice and immeasurable injury is being done to those portions of the United States which are only partially developed, either because of their newness or of adverse conditions such as have prevailed in the South for a quarter of a century by not furnishing them ample money with which to handle their products, no one who has investigated the subject will deny.

#### ANYTHING FOR RELIEF.

The undoubted injustice and the unquestioned injury prevailing in all those sections are the sole causes of the intense feeling which exists there and is impelling the people to seize upon anything that promises relief, even the free coinage of silver, although it can be demonstrated that it would only make matters still worse. But what else can they do when nothing better is offered to them and they are convinced that their conditions could not possibly be worse?

The American people are confronted with a desperate movement upon the part of a very large portion of our citizens. Shall we solve the problem and give them a fair and equal show with the balance of the country, or shall we allow this storm to gather and sweep over us with all its devastating consequences?

## WINDOM ON ELASTIC CURRENCY.

In his report for 1890 Secretary Windom well said:

In my judgment the gravest defect in our present financial system is its lack of elasticity. . . . The demand for money in this country is so irregular that an amount of circulation which will be ample during ten months of the year will frequently prove so deficient during the other two months as to cause stringency and commercial disaster. The crops of the country have reached proportions so immense that their movement to market in August and September annually causes a dangerous absorption of money. The lack of a sufficient supply to meet the increased demands during those months

may entail heavy losses upon the agricultural as well as upon other business interests.

The truth of Secretary Windom's statement is most vividly portrayed in the following diagram, which proves beyond all question of doubt that there is absolutely no relation between our currency and the movement of our crops and the commercial and trade waves of our country:

The following diagrams were prepared by Mr. L. Carroll Root, of New York:

The data given in the heavy line are the statements of outstanding circulation ordinarily quoted. They include, however, notes still held in the vaults and tills of the issuing bank; and, to the extent that this amount varies at different seasons of the year, this puts the circulation on a different basis from the others described, and thus vitiates comparison. Fortunately we have the required data given on the same basis as in the other systems for the five dates in each year for which reports are made to the Comptroller of the Currency. This information is plotted on the diagram in the broken line and is such as to indicate that even if we had similar figures for weekly or monthly periods the elasticity shown would not be materially greater.

First. It will be observed that the movements of currency in 1894 and 1895, what little there was, bore no relation to each other; that is, the slight increase in amount of currency in 1895 having no counterpart in the corresponding months of 1894.

Second. It will be observed that there was practically no variation in the amount of national-bank notes (see heavy line) during the twelve months of 1894, while an actual response of currency to trade demands would have sent the line indicating the demand in the months of August, September, and October, up to the 125 mark, if indeed not beyond the very limits of the chart itself.

## CURRENCY MOVEMENT CONTRADICTING NATURAL LAW.

Third. It will be observed that the increase of circulation in 1895 came at a time when it was not required by any demand of

trade, viz, from April to July, when indeed it should be approaching the lowest limit, barring the simple element of quarterly dividends payable July 1. What, then, was the cause of this slight increase in circulation? Is it not clearly explained by the fact that just at that time the bond syndicate was being formed and the United States bonds were selling at a price at which circulation could once more be taken out at a profit, even if trade did not demand it. And yet, when the crying demands of the cotton and grain growers, the stock raisers, and the manufacturers come from every section of our immense domain, asking for hundreds of millions with which to handle their products, there is absolutely no way under our present system of currency of increasing it to the extent of a single dollar.

## United States national banks.

The currency systems of all the leading nations stand out in most striking contrast with those rigid conditions from which our producers are suffering incalculable loss. The following diagrams and tabulated statements clearly indicate in what months of the year the demand for currency is greatest in the various countries, and precisely what it is at all times, because it corresponds with more or less exactness, according to the degree of elasticity, to the ever-varying requirements of production and transportation.

For a clearer understanding and better appreciation of each illustration, the main features and peculiar characteristics of each system will be pointed out. Since there is no country in which crop conditions are so like our own as Canada, attention is

first called to the currency movements there, where there is the fullest play of expansion and contraction, as demonstrated by the fact that at no time has the amount issued approached a maximum limit.

## CREDIT CURRENCY IN CANADA.

Under the Canadian law, bank charters are granted only where the subscribed capital reaches \$500,000, of which at least \$250,000 must be paid up. The banks may establish branches and issue and reissue notes to the amount of their paid-up and unimpaired capital. These notes are a first lien upon the assets of the respective banks, but are not a legal tender. They are issued in denominations of \$5 or multiples thereof and payable to bearer on de-

mand, and intended for circulation. The paid-up capital of the Canadian banks now amounts to \$62,156,255, and yet the note issue averages only about \$30,000,000, and has never exceeded

\$38,000,000. The highest point of their issue is invariably reached in October of each year, when the crops are being moved, as indicated by the following diagram, covering the years 1894 and 1895.

Canadian banks.

CREDIT CURRENCY IN SCOTLAND.

Since the Canadian banking system was founded largely upon the Scotch, it is most fit that attention should be directed next to the banks of Scotland.

Banking in Scotland began in 1695, more than two hundred years ago, when the Bank of Scotland was chartered with a paid-up capital of \$50,000. The country was poor, and no deposits were made at first, but the bank issued its notes in denominations of \$25, \$50, \$100, \$250, and \$500. From 1695 to 1845 no limit was placed upon the issues of notes by the banks. In 1765 payment of notes on demand was made obligatory by law. Down to 1845 there had been but one failure, the Ayr bank.

1. "It has provided Scotland with an elastic currency, adapted to the condition of her industries and adequate in volume to their changing needs."

Scotch banks.

December 23.....	6,906,079	113.2	December 23.....		

As stated, down to 1844 for a period of nearly one hundred and fifty years there had been but one bank failure in Scotland,

2. "It has enabled the people to carry on numerous commercial and agricultural transactions, for which they could not have found the necessary quantity of coin, and has economized the locking up of capital in the precious metals."

3. "It has made the use of notes of small denominations familiar and popular, and has taught the people the distinction between bank notes as the representatives of credit and the precious metals as the measures of value."

4. "It has brought into active use the available savings and capital of the country."

5. "It has afforded an opportunity for entering upon business to thousands of poor but honest men, and enabled them to lay the foundation of a comfortable home, and in many cases of a fortune."

6. "It has convinced the people so conclusively of the value and safety of the banking currency system that no serious panic has ever lasted beyond a few days, or has ever affected any of the banks except those which were justly the subject of distrust." (Conant, Modern Banks of Issue, page 155.)

although banking had been perfectly free in point of issuing notes, and that failure was clearly traceable to the fact that land loans had absorbed the capital which ought to have been kept in commercial paper, or in liquid assets.

#### CREDIT CURRENCY IN GREAT BRITAIN.

The commercial crisis of Great Britain in 1839 called forth a discussion that resulted in the English bank act of 1844. The authors and advocates of that act falsely assumed that "an expansion of bank-note issues even when redeemable in coin on demand is a potent cause of commercial crises," a theory which is now supported by no one who is informed upon the subject.

#### FIRST SUSPENSION OF THE BANK ACT.

Their error was exposed very soon after the passage of the act which was to be a cure-all for panics, for only three years later the crisis of 1847 entirely dissipated their theories. It was then demonstrated that the limitations placed upon the issues of the

banks throughout Great Britain neither prevented speculation, which is the chief cause of panics, nor reduced the issue of notes to correspond with the export of gold, and the bank was then saved from bankruptcy only by suspending the act and resorting to the issue of notes which had been supposed by its authors to be the sole source of past financial convulsions.

The complete failure of the act to prevent commercial crises was frankly admitted in the Commons by Sir Robert Peel, who had but three years before advocated the measure:

It had neither "put a check on improvident speculation," in the language of the Lords' committee, nor afforded "security against violent fluctuations in the value of money." The law was framed to arrest commercial expansion by limiting the means for carrying on commercial transactions. It failed absolutely in this object, because such operations can be carried on, and usually are carried on, by other means than bank notes, it succeeding in checking the expansion only when other forms of credit had been swept away by distrust, and expansion of note issues to fill their place was absolutely needed to prevent overwhelming commercial disaster. It did not prevent expansion when expansion might do harm; it prevented it absolutely when it might have done good. (Conant, Modern Banks of Issue, 124-125.)

The English bank act of 1844 provided that the Bank of England issue against securities, including the Government debt, Bank of England notes amounting to £14,000,000 (\$70,000,000), which it was thought upon investigation was the amount of notes that trade and commerce would require at all times when in a normal condition, and therefore might be uncovered. In addition to this amount, notes could be issued against any gold coin which might be deposited with the issue department, upon the theory that the extraordinary requirements of trade would thereby be fully met.

#### RESERVATION OF CREDIT CURRENCY.

Fortunate for the people of Great Britain, fortunate for the Bank of England itself, that conservatism which has always been so conspicuous a feature in English legislation where vested rights are involved saved to the banks of Scotland, Ireland, and the joint stock banks of England a credit circulation of about \$70,000,000.

So small is the territory of Great Britain, so great was the wealth of that country even then in the form of money, that only about one-half of this credit issue is usually employed, leaving to-day \$35,000,000 to cover the necessary expansion when crops and manufactures are to be moved or public fear is to be checked in time of panic.

#### RAISING THE BANK RATE TO PROTECT ITS GOLD RESERVE.

Again in 1857 a crisis compelled the Bank of England to suspend the bank act and prepare to issue credit notes, to which remedy the Bank of England for the first time added another method of protecting its reserves, namely, raising the rate of interest through its banking department, a device which proved most effective then and has since been practiced on many occasions with signal success.

#### GREAT BRITAIN'S CREDIT CURRENCY TOO LIMITED.

Whether the fact that London is almost a constant storm center of financial hurries, and that the Bank of England changed its rates of interest from 1845 to 1891 three hundred and fifty-four times, while the Bank of France changed its rates but one hundred and one times and the Bank of Germany only one hundred and thirty times, are not due to its purely arbitrary and mechanical structure is hardly left in doubt when we recall the fact that every severe panic in the London market has been checked only by a suspension of the bank act.

#### FORFEITURE OF ISSUES ASSUMED BY THE BANK OF ENGLAND.

The act of 1844 further provided that when any of the banks forfeited their right of issue for any reason the Bank of England, by the permission of the Crown, could issue against new securities two-thirds of the amount to which the bank had been entitled, the assumption being that the other third had been covered by coin. Through forfeiture of other banks of issue the secured circulation of the Bank of England has now been increased to £16,800,000, or about \$84,000,000.

While the act does not clearly state, and the question has not been settled by adjudication, whether the Bank of England notes are a first lien against the securities and gold deposited with the issue department, they are a legal tender everywhere in Great Britain except by the bank itself.

## BANK OF ENGLAND COMPARED WITH OTHER ENGLISH BANKS.

To bring into bolder relief the very great difference between the currency movements of banks having the power of credit expansion, even though limited, and those of a bank requiring gold deposits, even with all the vast power of the Bank of England to control its supply, attention is called to the diagram and tabulated statement of the joint stock banks of England, most of which are located in London and doing business under the same conditions and right by the side of the Bank of England, making the comparison so fair and perfect in every way as to justify a most conclusive deduction with regard to the wisdom and safety of a credit currency and the struggle the Bank of England is making against a great natural law.

## IMPERIAL BANK OF GERMANY.

But the Imperial Bank of Germany illustrates this principle more strikingly even than the joint-stock banks of England.

That the framers of the German act were largely influenced by many of the provisions of the English bank act of 1844 there can be no doubt; but the differences are still more striking than the points of similarity. The German act, with its very high order of tests for soundness, provides for a system of free banking, pure and simple, with a repressive burden in the form of a 5 per cent tax.

The notes, which are not a legal tender, are issued against the general assets of the bank, which remain entirely within its control, no part of them being set aside to specially secure the notes.

"The law has simply provided by suitable measures that the affairs of the banks, including its issue of notes, and the money and securities held by it, shall meet certain tests of soundness, believing that both the ultimate solvency of the bank and the prompt payment of its circulation are thus made secure." (Dunbar, Theory and History of Banking, 195.)

## AUTHORIZED CIRCULATION.

It fixed a limit of authorized circulation requiring a reserve of one-third in cash or its equivalent, and that the other two-thirds should be covered, by two-name paper running ninety days or less, and that all notes issued beyond the limit so fixed should be covered by cash. However, observing that the want of elasticity had proven a constant danger to the Bank of England, the act provides that should the Imperial Bank issue its notes in excess of the limit and without covering the same with gold coin, it should simply pay interest on the excess of its notes at the rate of 5 per cent per annum.

## NOTE ISSUES EXCEEDING THE LIMIT.

The act was passed in 1875, and the first issue of its notes subject to the tax occurred in December, 1881, and afterwards in the following years: September and October, 1882; December, 1886; in the latter part of 1889 (when the excess reached \$26,000,000); in 1890, 1892, and 1893.

The note issues of the bank December 31, 1894, amounted to

1,835,545,820 marks (\$458,886,455), while the balance due creditors in accounts current amounted to 434,742,297.44 marks (\$108,685,474.38), and the deposits without interest were only 558,669.70 marks (\$139,167.42).

IMPERIAL BANK LOANS ITS NOTES INSTEAD OF DEPOSITS.

It should be observed that for every dollar of deposits without

interest at the Imperial Bank of Germany \$3,298 of the bank's notes are outstanding, making it essentially a bank of note issues as distinguished from a bank of deposit; nor does the Imperial Bank of Germany stand alone in this respect among all the great banks of the world, for the Bank of France belongs distinctly to the same class, as we shall now see.

[Please compare this with the United States National Bank Diagram.]

## BANK OF FRANCE.

The Bank of France differs in its organization from both that of Germany and England. Its capital is 182,000,000 francs (\$36,500,000), and its note-issue privilege is fixed at the enormous figure of 4,000,000,000 francs (\$800,000,000). There is no law determining how much specie or security of any kind shall be held against the notes outstanding which are a legal tender so long as the bank maintains specie redemption of them. The notes outstanding January 1, 1895, amounted to 3,679,215,530 francs (\$735,843,041), while the deposits, public and private, were only 632,988,983 francs (\$126,597,796). But the cash on hand was 3,304,835,974 francs (\$660,567,195), from which it is clearly evident that the cash was the proceeds of notes issued and still outstanding and was not made up of deposits. Do not the conditions and practices of these two last great banks establish beyond question in the minds of every frank man the fundamental truth that there is not the slightest difference between loaning out the notes of a bank and loaning out any deposits it may have? All the notes are just as liable to be presented at the same moment of time as the deposits are to be drawn during a single hour of a day, and no more so. There are certain conditions that make the deposits in the bank safe. There are also certain conditions that will make note issues sound, and the most important condition, and I ought to say the essential counterpart of note issues, is current redemption in gold coin or its equivalent.

## NOTE ISSUES OF SMALL BANKS.

If, then, it is as sound in principle to issue notes as to take deposits, it is as safe to permit a small bank to issue its notes as to take deposits, therefore the objection must be made to the small banks' power to issue notes on broader grounds than its unwisdom in general, the objection being equally good to the same small banks accepting deposits and becoming responsible for them. But is not the story of all those little banks which served the people of New England so well under the Suffolk system, by issuing their notes at a time when the people of New England had no money to de-

posit in the banks, as well as the story of the Scotch banks, covering a period of one hundred and fifty years, issuing their notes when the people of Scotland had no money to deposit, and yet enjoyed a large use of the notes which the banks issued—a full answer to a mere opinion without a fact to rest upon?

## NEW HAMPSHIRE BANKS UNDER THE SUFFOLK SYSTEM.

For a thorough understanding and a proper appreciation of what was done under the "Suffolk system," I submit a statement of the conditions of the banks of the State of New Hampshire on the first Monday in June, 1860. [For statement, see next page.]

It will be observed in examining this statement that while the capital was \$4,991,000, the deposits were only \$1,211,551.88, and yet the notes issued by the banks amounted to \$3,117,444, and the amount of gold on hand (for specie then meant gold) was only \$253,496.35, or only 5½ per cent of the notes outstanding and deposits combined. It must be remembered in this connection that all the notes cleared through the "Suffolk system" were selling at a premium in all parts of the United States, and therefore the people of New Hampshire actually enjoyed the use of the amount of the notes issued, \$3,117,444, or nearly three times the amount of the deposits, and that the notes served identically the same purpose that the same amount of deposits would have done.

## CAPACITY OF OUR PRESENT BANKS OPERATING UNDER A SIMILAR LAW.

Comparing what the banks of New Hampshire then did with what some of our States might do to-day under the provisions of this bill, it will be found that if the money were demanded and the credit of those wishing to borrow were good, the banks of Virginia, out of their own resources, without borrowing money in New York or any other money center, could furnish her people with \$12,217,416; the banks of Georgia could furnish her people with \$16,548,905; the banks of Mississippi could furnish her people with \$4,521,325; the banks of Texas could furnish her people with \$28,678,850; the banks of Iowa could furnish her people with \$43,156,321; the banks of South Dakota could furnish her people with \$4,696,164; the banks of the State of Washington could furnish her people with \$17,438,200; the banks of California could furnish her people with \$59,800,205, and so on through the entire list of States. But I will content myself with representative States in different sections of the country. That this could be done with absolute protection to the note holders and entire safety to the banks is verified by the experience of the banks included in the "Suffolk system."

## EXPANSION OF CURRENCY UNDER THE SUFFOLK SYSTEM AND COST OF REDEMPTION.

"The circulation of the New England banks in 1858 was less than \$400,000,000, and the redemptions for that year through the Suffolk Bank were \$400,000,000. Every note, therefore, on the average, passed through the redemption agency ten times a year, or a little less often than once a month. This frequency of redemption not only tested the solvency of the banks by the ultimate test of a banking currency, but it kept the circulation constantly adjusted to business conditions. The redemptions through the Suffolk agency were \$76,248,000 in 1834 and increased to \$105,457,000 in 1837. There were fluctuations during the period of specie suspension, but the redemptions increased progressively to \$137,000,000 in 1845, \$220,000,000 in 1850, and \$341,000,000 in 1855, until they reached their maximum of \$400,000,000 in 1858. The expenses of carrying on the redemption agency reached a maximum of \$40,000 in 1858, making an average expense of 10 cents per \$1,000 (or one one-hundredth of 1 per cent, or one-tenth of 1 per cent per annum). The suspension of specie payments by the banks of the country at the close of 1861, as the result of Secretary Chase's issue of Government demand notes, arrested the regularity of redemptions through the Suffolk system, and was superseded before resumption by the national banking system. The Suffolk system was never sustained by formal law, but it maintained New England bank currency for a generation at a par with gold, and prevented any losses to note holders larger than a fraction of 1 per cent of the entire volume of circulation."

In the face of all this evidence I do not believe that anyone will have the hardihood to deny the safety and wisdom of ingrafting upon our banking system this right of note issue, safeguarded in the outset as this bill provides.

## GRADUAL ADOPTION.

It will be observed that precaution has been taken to replace all of the United States notes with gold and United States Government bond notes, so that no part of our present money shall be displaced by bank notes until the system has been fully tried in supplying the extra amount of circulation that may be required to move the crops or products in every part of the country, or meet any monetary crisis. Since, then, the money in circulation to-day, if properly distributed, would approximately meet the normal demand, the introduction of this system into our financial operations must necessarily come gradually, and will also be steadied by the graduated tax, and, in addition, be under the constant supervision of the ministers of finance.

A statement of the condition of the several banks in New Hampshire as they existed on the first Monday of June, 1890, made in conformity to sections 17 and 18, chapter 140, of the revised statutes of New Hampshire, approved December 23, 1845.

Name of bank and place of business.	Amount of capital stock actually paid in.	Amount of debts due the bank secured by pledges of its stock.	Value of real estate belonging to the bank.	Amount of all debts due to the bank.	Amount of all debts due from directors, either as principal or sureties, specifying whether on interest or otherwise.	Amount of specie in the vault.	Amount of bills of other banks on hand and checks.	Amount of deposits in the bank.	Amount of deposits in other banks for the redemption of its bills.	Amount of the bills of the bank then in circulation.

STATE OF NEW HAMPSHIRE, Secretary of State's Office, June 15, 1890.

The above is a true statement of the condition of the several banks in this State as returned to this office.

Attest:

THOMAS L. TULLOCK, Secretary of State.

#### THE CONDITIONS OF OUR COUNTRY DEMAND IT.

Let us now speak of its adaptation to our conditions and needs and the advantages that must necessarily come to us from its adoption.

First. As to our condition and needs, it is to be observed that a comparison of our condition, domain, commerce, and population with those of the countries mentioned clearly establishes the fact that if an elastic currency has proved of an inestimable advantage to them, it would be of a still greater benefit to us. For, owing to our immense products at great distances from our financial centers, more particularly in our partially developed sections, it becomes absolutely necessary that the local banks provide money by expressing bills of lading and the notes of our merchants and farmers to the great commercial centers and, borrowing money upon them, ship it out to the various sections thousands of miles away, and when our crops and products are marketed, ship the money back to the far-off centers and express the notes and other collateral home again. What we do in this line of business is without a parallel anywhere in the civilized world.

Lingering prejudice may breed pernicious and unfounded suspicions, but experience, common sense, reason, and justice plainly point the way.

#### IN PRINCIPLE ALL SECTIONS ARE SIMILARLY SITUATED.

Second. What advantages will necessarily follow the adoption of this system in this country may be more clearly seen by some concrete illustration. Choose, if you will, the city of New Orleans, the cotton center of the South; or Kansas City, handling the varied crops of the central West; or Fargo, lying in the lap of our greatest wheat region in the central North; or Seattle, struggling with the diversified products of the great Northwest; or Los Angeles, unable to handle the golden fruits of southern California for the want of an adequate currency; and what is true of these greater centers is equally true of every community having banking facilities throughout the entire length and breadth of our country. Certainly it will not be denied that the notes and bills of lading in the banks of New Orleans, or any other city, are just as good security there for the redemption of any notes the banks themselves may issue as they are tied up in bundles and held in New York City for the security of the currency that may be shipped South. The amount of money used in either case would be the same; the amount of security the same.

#### WHAT A BANK ACTUALLY DOES TO GET CURRENCY.

Then what is the difference? Let us see. A New Orleans bank which has a capital of \$300,000 ties up in a bundle \$125,000, or

perhaps \$150,000, of its best notes and ships them to its New York correspondent, and borrows, if perchance there is no panic on, \$100,000 of money, paying on an average about 6 per cent per annum for it, and loans it out to move the cotton crop in its section. As it must pay the express two ways on the \$150,000 of discounts or notes and the express two ways on the \$100,000 borrowed, the producers of the South must pay anywhere from 8 to 10 per cent for the money, and should do so, considering the risks and what it costs the bank, for we must remember that the banking business pays no great return upon the capital engaged in it. The report of the Comptroller of the Currency shows that the average earnings of all the national banks of the United States were only 5 per cent for the year ending March 1, 1895, and 5.4 per cent for 1896, which is a low rate, considering the risks involved in the double liability of stockholders.

Some of our people seem to think that national banks are favored institutions. That this is a mistaken idea and that its advantages, if any, are open to all of our people alike, let me call your attention to the following facts:

#### ONLY ONE-THIRD OF OUR BANKS ARE NATIONAL.

First. If the national banks are specially favored, why do not the several thousand trust companies, State banks, and private banking firms organize at once under that law? There are but 8,679 national banks, while there are 5,708 State banks.

Second. No one who is a conservative adviser ever suggests national-bank stock to the widow or aged, or those with limited means, because the risk in holding it is so great.

Third. The shares are only \$100 each, so that any frugal person may invest in the stock of a national bank if he desires to do so.

Fourth. We must not forget that if banking under a national-bank charter was so much more profitable than any other business, men of means stand ready at all times to engage in it, bringing the profits down to or below the level of all other investments.

#### DEMAGOOGUES TAKE ADVANTAGE OF IGNORANCE TO AROUSE PREJUDICE.

This suspicion or misapprehension that the Government is extending through the national banks to some one something that everybody else can not get has given birth to a kind of prejudice—the child of ignorance—excited an unwarranted jealousy, and developed a groundless opposition in some localities to a system that has raised the standard of banking in this country and provided the American people with a currency as sound as any in the world, and calling for the admiration of all civilized nations.

Now, recurring to the special matter in hand, let us suppose that this same New Orleans bank, with its \$500,000 capital, was organized under this bill. What could it have done under the section now being discussed?

#### WHAT A BANK MIGHT DO UNDER THIS MEASURE.

The bank need not tie up and ship away \$150,000 of its best securities, but keeping them in its own safe issue \$100,000 of its own notes at a cost of 1 per cent per annum instead of 8 per cent.

Will it be necessary to state that this difference of 5 per cent in the two instances will, every penny of it, amounting to \$5,000 on every \$100,000 loaned, come out of the merchants, farmers, or producers, and practically all of it out of the farmers or producers? Again, we should not fail to observe that the tax paid on the circulation goes into the United States Treasury to help pay the expenses of the Government, and to that extent the people will be relieved of taxation.

#### FARMERS AND PRODUCERS WILL REAP THE ADVANTAGE.

Will anyone seriously urge that any portion of this heavy charge will be borne by the bankers? Nor will anyone at all familiar with the laws of trade doubt that the people—farmers and producers—will ultimately get every farthing of the advantage gained, for competition would very soon bring the bankers' share of profit to a fixed limit, not varying much from its present margin, thus saving to the people, the producers of our country—farmers and laborers—anywhere from 1 to 5 per cent per annum upon the capital borrowed to carry on the commerce of the country.

The value of our finished product, it will be remembered, now annually exceeds \$12,000,000,000.

Mr. Edward Atkinson, the statistician, has estimated that in the transformation from the unmined coal and iron, the unbroken forest, and the fallow fields to the homes in which we live, the things we wear, and those we eat, there are at least three transfers of this vast property, or \$36,000,000,000 passing from man to man. Is it not reasonable to suppose that at least two-thirds of this amount is handled with borrowed capital? If so, even if the loans ran but sixty days and 1 per cent can be saved on this two-thirds, or \$24,000,000,000 every year, or more than two-thirds of all the greenbacks still outstanding. Shall we not cancel them if we can more than make up for them in every succeeding year, to say nothing of the frightful loss they are entailing upon the country every month, and the danger to which the Government is subjected because of them?

Let the reader estimate what the gain to the producers would be if the loans on this \$24,000,000,000 ran six months! What if they ran for the year? More than \$1,000,000,000!

#### FALSE ASSUMPTIONS SHOULD BE DISCARDED.

Is it not a mere fetish to hang on to the greenbacks, then, deceived by the hallucination that the Government can make something out of nothing, when it has been proved in this case, as in all others, that mistakes and falsehoods only lead to misfortune and disaster? If the experience of all other great commercial nations added to this fatal delusion is not convincing enough to determine our action now, we shall simply have to wait to be taught by more bitter lessons still, and more crushing disasters, what has already been demonstrated beyond the shadow of a doubt.

#### EQUALIZATION AND LOWERING OF RATES.

Under the operation of this provision of the bill there is still another object to be attained that is founded in justice and conserves the welfare of the people in all portions of our country alike. It is the equalization of the rates of interest in every section of the land, from Niagara Falls to the Gulf, from Cape Cod to the Golden Gate. Wherever there is banking capital, a demand for money, and an equally abundant supply of equally good commercial two-name, thirty, sixty, and ninety day paper, there the rates should and will be practically the same.

Rates of interest will not then be, as now, particularly low in one locality because there is considerable wealth in the form of money and securities, and particularly high in another notwithstanding there is abundant wealth in the form of cotton, corn, cattle, wheat, and the various other products of the earth simply because it awaits a better day for disposition or sale. The question will not then be so much whether it is stocks and bonds on the one hand and cotton and corn on the other as whether it is good liquid wealth in some form—cattle, hogs, corn, cotton, and wheat being regarded as good wealth, as quick assets, if only the banks have the facilities for carrying them.

#### OBJECT OF GRADUATED TAX.

It will be observed that the tax imposed upon the circulation is an increasing graduation. The object is to give it a repressive effect just in proportion as the expansion increases under the varying pressure from the crop movement to the demands of an acute and general panic.

The same principle is illustrated in the 5 per cent tax imposed upon the credit circulation of the German banks whenever it passes a certain limit.

It is also illustrated in the operations of the clearing houses of New York, where they charge 6 per cent upon clearing-house certificates, and in Boston, where they charge 7 per cent upon them, confident in all these instances that the tax will compel the retirement of the issues. So far this system has worked perfectly, the retirement of the circulation following quickly upon the disappearance of the cause.

#### UNITED STATES NATIONAL BANK NOTE REDEMPTION FUND.

SEC. 9. That all taxes so paid to the Government upon said United States Government bond notes and said United States national-bank notes shall constitute and be known as the "United States national-bank note redemption fund," and be held exclusively for the redemption, first, of the United States Government bond notes; second, for the United States national-bank notes in the event of the liquidation of any bank organized under this law; *Provided, however,* That when said "redemption fund" shall exceed 5 per cent of both the United States Government bond notes and the United States national-bank notes such excess shall belong to the United States Government and may be used by it to defray its general expenses.

For a better understanding of the above section from the standpoint of actual experience I herewith submit a tabulated statement showing the total circulation, amount of notes of failed banks for each year since the system was established, and the percentage they bear to the total circulation for each year:

Year ending October 31—	Total circulation.	Circulation of failed banks.	Per cent of the circulation of failed banks to the total circulation.
1863.....			
1864.....	\$58,813,980		
1865.....	204,635,245	\$44,000	0.02
1866.....	283,080,059	285,000	.09
1867.....	289,084,824	248,900	.25
1868.....	300,116,958	321,800	.11
1869.....	299,724,791	45,000	.03
1870.....	301,859,275	129,700	.04
1871.....	324,475,297		
1872.....	340,930,825	1,398,303	.41
1873.....	348,347,674	2,522,100	.72
1874.....	348,785,986	230,000	.07
1875.....	343,176,018	638,670	.19
1876.....	319,887,070	540,000	.17
1877.....	315,871,190	951,728	.30
1878.....	319,640,580	1,322,725	.41
1879.....	323,120,918	516,825	.15

Year ending October 31—	Total circulation.	Circulation of failed banks.	Per cent of the circulation of failed banks to the total circulation.
1880.....	\$942,048,222	\$508,143	0.15
1881.....	858,824,902	.....	.....
1882.....	880,982,713	989,400	.28
1883.....	850,759,675	108,200	.08
1884.....	832,452,944	830,120	.26
1885.....	814,872,928	486,550	.15
1886.....	800,990,606	302,960	.10
1887.....	271,051,587	388,597	.14
1888.....	229,044,822	557,811	.23
1889.....	201,744,089	56,250	.02
1890.....	179,449,958	171,450	.10
1891.....	171,978,673	641,352	.87
1892.....	172,686,921	623,153	.96
1893.....	208,701,189	1,573,634	.75
1894.....	207,140,104	628,780	.30
1895.....	213,491,147	916,682	.43
1896.....	234,437,572	761,500	.31
Average for period.....	.....	.....	.303

From this tabulated statement, showing that an average tax of one-fifth of 1 per cent on the total circulation for thirty-three years would have covered all the notes of the failed banks, we may certainly assume that the tax imposed will much more than cover the notes of failed banks in the future, and that a 5 per cent safety fund will prove more than ample to take care of any emergency that may arise. When we recall the fact that had there been no bonds to secure the national-bank notes for thirty years the note holders could not have lost to exceed \$1,189,253, of which \$958,247 was still in unclosed accounts, we may confidently believe that this provision will not only insure the notes, but will be a source of large profit to the Government.

#### CLEARING-HOUSE DISTRICTS.

SEC. 10. That the board of finance shall divide the United States into clearing-house districts, and each bank organized under this act shall belong distinctively to some one district, and the number of such district shall be plainly and prominently printed upon the said United States national-bank notes issued by the banks located therein. The several banks of each district, upon receiving United States national-bank notes belonging to any other district, shall forward the same to a bank in a clearing-house city, which shall return them to the district to which they belong.

The object of the foregoing section is to insure the constant redemption of the United States national-bank notes, to materially strengthen our banking system, and becomes essential for the following reasons:

#### OUR SYSTEM WOULD REQUIRE THEM.

First. Our individual banking system does not in itself give us the same facilities for forcing current redemption that large banks with branches in all parts of the country would, and current redemption, it must be remembered, is the essential counterpart of a credit system of currency.

#### THEY WILL DISTRIBUTE CAPITAL BETTER.

Second. This system of districts will draw the normal money—gold, silver, and United States Government bond notes—to the redemption or clearing-house centers and keep it better distributed throughout the year.

#### CURRENCY WILL ALWAYS EQUAL DEMANDS.

Third. The tendency will be to keep the credit money at home, so that it can be retired whenever the bank issuing it desires to do so, and thereby save the tax when there is no further use of the money in circulation.

#### PROFIT ON CIRCULATION WILL GO TO EACH DISTRICT.

Fourth. This system will enable every district of the United States to furnish whatever credit money it needs by sending all credit notes from other districts home and putting out its own, and thereby save all the profit on circulation in each district to the district itself.

Fifth. But the most important and far-reaching effect of this provision is the advantage and protection it gives to every bank belonging to a clearing-house district.

#### EVERY BANK SHOULD BE AS STRONG AS ALL COMBINED.

It is important to observe and remember that every bank belonging to a clearing-house district is individually as strong as the combined capital of all the banks included in the district; and it is not at all likely that there would be a clearing-house district with a capital less than \$25,000,000, and probably none less than \$50,000,000, while the large cities would be many times stronger than that even.

WITH THE STRENGTH OF CENTRALIZED BANKING WE SHALL HAVE THE ADVANTAGE OF INDIVIDUAL BANKING.

This plan would give us all the power of the most perfect centralized system of banking in the world, with all the advantages of individual banking institutions. In fact, I am of the opinion that in power and facility it would surpass any system now in

operation. While it would be perfectly independent in its parts and responsive to the demands of every locality, it would be free from the caprice and discrimination of a management hundreds and perhaps thousands of miles away.

#### IT WILL INSURE GREATER CAUTION.

It will be admitted, I think, that any bank belonging to a clearing-house district will exercise greater caution in loaning its funds, or in issuing its notes, than it would were it not a member of some district, for it must realize that it is in a measure under the surveillance of the associated banks and can not afford to fall under any suspicion on account of poor management; hence the moral effect must necessarily be to improve the character of all our banking, a matter that is always of the very greatest importance to the commercial world.

#### REDEMPTION OF NATIONAL BANK NOTES.

SEC. 11. That the said United States national-bank notes shall be a legal tender at par between all national banks, and the same shall be redeemed upon presentation at the bank of issue in gold coin, or at the option of the bank of issue 40 per cent thereof may be redeemed in United States Government bond notes.

The first provision of this section is the same as that now on the statute books with regard to our present bank notes.

The object of making these United States national-bank notes redeemable in the United States Government bond notes as well as gold is to protect the metal reserve of the bank for the first few years, until the banks can accumulate the necessary stock of gold and adjust themselves to the new conditions; and yet, since the United States Government bond notes are themselves redeemable in gold at the bank of issue, it amounts to a gold redemption.

#### FACILITIES FOR REDEMPTION OF NOTES.

SEC. 12. That each bank organized under this act and doing business outside of a clearing-house city shall select some national bank in the clearing-house city of its own district through which it shall redeem its United States national-bank notes in gold coin, or, at the option of said redemption bank, 40 per cent thereof may be redeemed in United States Government bond notes, and for said purpose shall keep on deposit with said bank a reserve of 5 per cent of the amount at any time outstanding, and said 5 per cent may be considered a part of its required reserve.

The object of this section is to insure the current redemption of bank notes by facilitating in every way their presentation for redemption, and thereby constantly testing their soundness and bringing them back to the bank of issue for retirement if they should be needed no longer in circulation.

#### BANKS WITH \$50,000 CAPITAL.

SEC. 13. First. That in cities with less than 2,000 population banks may be organized under this act with a capital of \$20,000 or any greater amount in multiples of \$5,000; but no bank shall be organized in any reserve city with a less capital than \$100,000.

Second. That under such regulations and restrictions as shall be established by the said ministers of finance, national banks organized under this act may establish branch banks by and with the consent of said ministers, such branch banks to have the right to receive deposits, make loans, grant discounts, and buy and sell exchange, but in no case to be permitted to issue circulating notes other than those of the parent bank. It shall in all respects be considered as a part of the parent bank, and in each case where such branches are maintained the ministers of finance shall receive, in the reports of the central bank, a statement, properly sworn to and attested, of the condition of its branches.

Said ministers of finance shall also have the right of separate and independent examinations, and they may, whenever they deem it necessary, require, before granting the right to any bank to maintain branches, that the paid-up capital stock of such bank be increased to an amount to be fixed by them.

#### BRANCH BANKS MAY BE DESIRABLE.

That the present minimum limit of \$50,000 capital for national banks prevents the establishment of them in many places where they are much needed, all are agreed; and whether a capital as small even as \$20,000 would serve every locality and meet all conditions there is very great doubt. Indeed, this is particularly true, as everyone knows who has studied this question from actual observation, in localities where a considerable amount of money is required for a few months every year and very little or no demand at all during the other months, a circumstance that can only be met by the establishment of a branch. Otherwise the people can never have local and convenient banking facilities at all. However, that the location of small banks and the opening of branches should be carefully investigated and great discretion exercised in granting such privileges will be apparent upon a moment's thought, for while the accommodation of the people should be a constant study, their absolute protection should never be forgotten.

#### GOVERNMENT REDEMPTION OF NOTES IN CASE OF FAILURE.

SEC. 14. First. That in the event of the liquidation of any national bank organized under this act the United States Government shall redeem, upon presentation after notice given as herein provided, any of said United States Government bond notes or said United States national-bank notes, reimbursing itself for the full amount thereof out of the assets of said bank, and distribute the remaining assets among the depositors and all others having claims in the same manner as now provided by law.

Second. That from the time of the suspension of said bank up to the date set by said ministers of finance for the redemption of said United States national-bank notes they shall bear interest at the rate of 5 per cent per annum. Such notice shall be given in some newspaper printed in the clearing-house city where said notes were cleared; but nothing herein contained shall be construed to impose any liability upon the Government of the United States, or any of its representatives, beyond the amount available from time to time out of said "United States national-bank note redemption fund."

## ADVANTAGE OF A UNIFORM SYSTEM OF CURRENCY.

One of the greatest benefits, if, indeed, not the greatest, growing out of our national banking system has been the fact that all of the notes have been equally good everywhere. The note of the bank with \$50,000 capital is as good as the note of the bank with \$5,000,000 capital; that instead of a currency issued under as many different banking laws as there were States, and having as many different values as were represented by the ever-changing credit of 10,000 banks, we have had a uniform currency good not only at home but abroad. We have learned our lesson, and our people will not be satisfied with a currency that is not uniform and equally good in all parts of the country. Therefore we want no money that will not stay away from home simply because it has no standing elsewhere and every transaction forces its holder to suffer discount. We do not want a dollar that is too poor to stay away from home and must necessarily be a constant source of loss to the holder, who invariably turns out to be a laborer if unfortunately a bill should prove to be utterly worthless. It is the duty of this Government to establish a system of currency that will protect the note holder against the possibility of a loss of the millionth part of a cent. No man living anywhere under our flag should be compelled to hesitate a moment about taking any money circulated within the confines of the Republic, which is to-day, practically speaking, owing to our railway facilities, telegraphic and telephonic communication, and intimate commercial relations, one extended neighborhood, one gigantic city reaching from the Lakes to the Gulf and extending from ocean to ocean.

Therefore we want no State-bank notes, but a national currency protected and ultimately redeemed by the Government. Such a currency section 14 guarantees to the American people.

## INSURANCE OF DEPOSITORS.

SEC. 15. First. That any bank organized under this act may at any time after 1905, with the consent of the ministers of finance, insure its depositors against loss by paying into the United States Treasury 1 per cent upon the average balance of deposits of the preceding fiscal year, and one-half of 1 per cent upon the average annual balances thereafter until the amount so paid into the United States Treasury by said bank shall amount to 5 per cent of the average balance of said bank for the last preceding year, and that said ministers of finance may then suspend said tax for the time being. If the deposits of said bank shall increase, or for any reason the amount of the insurance fund to the credit of said bank shall be less than 5 per cent of the deposits, said ministers may reimpose said tax of one-half of 1 per cent upon the deposits of said bank; and if said bank shall fail to pay such tax at any time after the payment of said 1 per cent the amount already paid by said bank shall be forfeited to the United States Government, and the insurance of said depositors shall thereupon cease.

Second. That the amounts of money so received shall constitute and be known as the "depositors' insurance fund," and each bank shall be entitled to receive interest upon the amount standing to its credit in said "depositors' insurance fund," at the rate of 3 per cent per annum, and the same shall be adjusted annually on the 30th day of June.

Third. That in the event of the suspension of payment by any bank so insured of any of its liabilities as they accrue, the United States Government shall, within sixty days thereafter, no reorganization then pending, pay the depositors of such bank in full all their just claims, if no question has been raised thereto; but nothing herein contained shall be construed to impose any liability on the Government of the United States, or any of its representatives, beyond the amount available from time to time out of said "depositors' insurance fund."

Fourth. That the United States Government shall thereupon reimburse itself out of the assets of said bank for any and all such moneys paid out on account of said deposits, less the amount standing to the credit of said bank in said "depositors' insurance fund," and the remaining assets shall be distributed among the creditors in the same manner as now provided by law.

NO CLASS OF INSURANCE IS MORE IMPORTANT, WISE, AND JUST, AND THE PEOPLE SHOULD DEMAND IT.

I am fully aware that in the outset this section will provoke some discussion and gives apparently a better field upon which those differing may array themselves than almost any other provision in the bill; but this partial admission of some possible objection is not due in the slightest degree to a want of soundness of the principle involved in this section of the measure, but simply because such a provision has never been made a part of any banking system. That it will ultimately find its way into all, I have no doubt, for there is no business of such extent as that of banking where to-day the records are so well preserved and will enable the student and statistician to arrive at a basis of insurance that will be as reliable as these; not even mortality tables upon which nearly every human life, in our own country at least, is carrying some insurance. The fire-insurance system of the world is based upon data that enables the actuary to furnish a line of premiums that gives upon large averages an almost mathematically certain result.

The principles that control in the vast operations of both life and fire insurance are identical with those upon which this provision rests. But my maturer thought impels me to the conclusion that in neither is there so much need of averaging risks and escaping the consequences of misfortune as in the proposed remedy for the crash and widespread ruin that almost invariably follows bank failures to-day. It will be observed in this connection that the provision is purely voluntary in its operation, and imposes no burden or risk upon the Government beyond those of a trustee for the fund created.

That we may be able to consider the question in a most practical

way, I have obtained from the actuary of the Treasury the following tabulated statement, which, I have no doubt, will disclose a most surprising and gratifying result to every student of those great movements that look in the direction of equalization in material things and social conditions:

Year.	Deposits-- total of all banks.	Deposits of failed banks.	Per cent of total deposits that would have paid depositors each year.
1863.	\$8,497,082		
1864.	78,070,545		
1865.	830,427,385	\$122,080	0.20
1866.	538,730,433	1,104,044	.31
1867.	637,735,716	3,337,563	.63
1868.	555,874,045	904,112	.40
1869.	550,540,172	220,880	.04
1870.	522,666,547		
1871.	504,356,347	2,493,054	.40
1872.	608,925,580	521,375	.00
1873.	615,470,770	6,703,732	1.00
1874.	643,883,078	312,296	.05
1875.	602,531,811	2,410,582	.00
1876.	620,030,525	1,427,420	.23
1877.	631,760,706	4,061,022	.77
1878.	619,807,293	2,015,140	.33
1879.	673,258,423	472,661	.07
1880.	870,814,637	778,906	.00
1881.	1,053,108,117	2,054,000	.05
1882.	1,056,871,688	3,201,880	.31
1883.	1,054,229,122	600,765	.06
1884.	1,009,749,551	6,364,862	.63
1885.	1,070,498,543	3,037,550	.29
1886.	1,151,010,302	974,551	.08
1887.	1,252,911,657	6,273,257	.50
1888.	1,307,123,561	2,400,477	.11
1889.	1,438,204,779	987,907	.07
1890.	1,508,429,459	1,068,511	.07
1891.	1,556,877,110	16,332,071	1.05
1892.	1,745,849,469	904,689	.05
1893.	1,909,731,110	14,575,565	.91
1894.	1,671,803,716	3,643,597	.22
1895.	1,703,406,071	5,672,511	.33

The average per cent for each year, from 1864 to 1895, inclusive, upon the total deposits that would have been sufficient to pay the depositors in full, had absolutely nothing been realized from the assets of the banks, was only 0.31, or less than one-third of 1 per cent per annum.

## ALL CLOSED BANKS SHOW AN AVERAGE OF 73 PER CENT RETURNS.

The lowest percentage of dividend paid to the creditors of any failed national banks whose affairs are closed was that of fourteen and a fraction, to the creditors of the Cook County National Bank, of Chicago, Ill., being No. 38 on the list of banks placed in the hands of receivers. The next lowest percentage of dividend was seventeen and a fraction, to the creditors of the Tennessee National Bank, of Memphis, constituting No. 5 on the list. The average percentage of dividends paid to creditors of insolvent national banks whose affairs are entirely closed is about 73 per cent.—Report of the Comptroller of the Currency, 1895, page 31.

## THE INSURANCE TAX COULD NOT EXCEED ONE-TWELFTH OF 1 PER CENT PER ANNUM.

Taking the experience of all insolvent national banks whose accounts have been closed, it is to be observed that the actual insurance charge upon the deposits of national banks would have been one-twelfth of 1 per cent per annum or a total of but 2½ per cent in thirty-three years. Would this not have been a most insignificant and inconsequential cost to the banks compared to the great and almost incalculable benefits it would have been to trade and commerce to have saved from failure that great army of merchants who have been brought to ruin by the failure of the banks with which they were keeping their accounts? Let us weigh a matter of such moment carefully and come to our final conclusion with the utmost deliberation, especially since the chief if indeed not the only objection is that it is a new proposition.

With all of our bank notes ultimately redeemed by the Government, as provided in the preceding sections, and the depositors of the national banks insured against loss in case of failure, it is confidently believed that bank failures would be reduced to a minimum; that money panics would be unknown; and that we would escape the most unfortunate and serious consequences growing out of bank failures, the ruin of the merchants and tradespeople.

## HOW THE TWO FUNDS SHALL BE INVESTED.

SEC. 16. That all moneys received by the United States Government on account of the tax upon United States Government bond notes and United States national bank notes, or on account of the taxes paid to insure depositors against loss, may be invested in the following classes of securities, and no others: First, United States Government bonds or United States certificates of indebtedness; second, the bonds of any State which has not defaulted in the payment of either principal or interest of any of its indebtedness for twenty years just preceding such investment; third, the bonds of any city in the United States having a population of more than 100,000, and which has not defaulted in the payment of either principle or interest of any of its indebtedness for twenty years just preceding such investment.

## REASONS FOR THE INVESTMENTS.

But for the fact that some provision that the funds accumulated in the "United States Government bond note redemption fund" and in the "depositors' insurance fund" should be invested in some kind of securities, two objections might arise: First, it might be objected that a large amount of money was being withdrawn from the channels of trade; second, that the Government should allow interest on so considerable a sum, which it would not be prudent to do unless there were some income from that source to offset such allowance.

## POWER FOR PUTTING THE ACT INTO SUCCESSFUL OPERATION.

SEC. 17. That for the purpose of carrying this act into effect and enabling the banks organized hereunder to maintain their required reserves, and for the purpose of equalizing and adjusting the relative use of gold and silver in the United States, the ministers of finance are hereby authorized and empowered to sell and dispose of any of said new 2 per cent bonds at par for gold coin, or to exchange the same for any of the legal-tender money of the United States at par; the bonds so sold or exchanged to be issued in denominations of \$25, or multiples thereof, at the option of the buyer, and to become due and payable in 1904; and the said ministers, for the same purpose (with the concurrence of the Secretary of the Treasury), are also authorized and empowered to exchange from time to time gold bullion or gold coin for silver bullion or silver coin, and silver bullion or silver coin for gold bullion or gold coin.

Every man of affairs will at once realize that it will be of the utmost importance that the ministers of finance be able, in a movement so comprehensive as this, involving as it does the complete readjustment of our finances and recombination of our currency, subject to the approval of the Secretary of the Treasury, who is responsible for the proper conduct of the income and expenditure accounts of the Government, to do anything that the purposes of this act render necessary.

## LIMIT OF LOANS TO OFFICERS AND DIRECTORS.

SEC. 18. That the loans and discounts of any bank organized under this act granted to its executive officers or employees shall in no case directly or indirectly exceed 10 per cent of the capital, and the same shall be secured by proper collateral, or by an additional signature or signatures of financially responsible persons to the notes taken, and that the same be made only upon the written approval of a majority of the board of directors and a separate record thereof kept.

SEC. 19. That no loan shall be made to a director not an executive officer of the bank except either upon a deposit of good and sufficient collateral security, or upon a note given therefor, bearing, in addition to such director's own name, the signature or signatures of one or more financially responsible persons, or unless a resolution has been passed by the board of directors and signed upon the record by at least a two-thirds majority thereof, giving to such director a line of credit covering any advances to be made to him.

## PENALTY ATTACHING TO ANY OFFICER OR EMPLOYEE.

SEC. 20. That any president, vice-president, cashier, assistant cashier, or employee of any bank organized under this act who shall be convicted of unlawfully borrowing or using any of the funds of the bank with which they are connected shall be imprisoned for ten years, and any officer of any such national bank at the time of its failure shall be ineligible to any official position in any national bank thereafter.

## BANKS MUST NOT PROMOTE.

SEC. 21. That it shall be unlawful for any national bank to engage in the promotion of any enterprise, or to loan the funds of the bank upon the bonds or securities of incomplete and partially developed projects of any kind, such as partially constructed railroads, street-car lines, electric-light, gas, water, mining, manufacturing, or irrigation plants.

## DIRECTORS MUST EXAMINE THEIR BANKS.

SEC. 22. That upon a day in each year, to be designated by said ministers of finance, the directors of the national banks shall be, and are hereby, required to make an examination of the affairs of the bank with which they are connected and submit their report thereon upon blanks furnished by said ministers, and said report shall be signed by at least three-fourths of said directors.

The following extract from the report of the Comptroller fully justifies the greater care these sections impose upon the directors and the stricter rules they establish for the officers in the conduct of a national bank:

## CAUSES OF FAILURE OF NATIONAL BANKS AND DUTY OF DIRECTORS.

A careful examination has been made into the causes of failures of national banks and the number failing from each cause, from 1860 to 1890, with the following result:

Three have resulted from defalcation of officers; 23 from defalcation of officers and fraudulent management; 1 from defalcation of officers and excessive loans to others; 3 from defalcation of officers and depreciation of securities; 19 from excessive loans to others, injudicious banking, and depreciation of securities; 18 from excessive loans to officers and directors and depreciation of securities; 6 from excessive loans to officers and directors and investment in real estate and mortgages; 3 from excessive loans to others and depreciation of securities; 4 from excessive loans to others and investments in real estate and mortgages; 1 from excessive loans and failure of large debtors; 8 from fraudulent management; 15 from fraudulent management, excessive loans to officers and directors, and depreciation of securities; 12 from fraudulent management and injudicious banking; 8 from fraudulent management, defalcation of officers, and depreciation of securities; 5 from fraudulent management, injudicious banking, investments in real estate and mortgages, and depreciation of securities; 9 from fraudulent management, excessive loans to officers and directors, and excessive loans to others; 19 from injudicious banking; 54 from injudicious banking and depreciation of securities; 12 from injudicious banking and failure of large debtors; 12 from investments in real estate and mortgages and depreciation of securities; 43 from general stringency of the money market, shrinkage in values, and imprudent methods of banking, and 8 were wrecked by the cashiers.

The inevitable conclusion to be drawn from a study of the causes resulting in these failures is that in the great majority of instances those directly responsible for the management of the banks involved, both directors and executive officers, have been negligent of their duties and wanting in insisting upon the employment of methods of ordinary safety and prudence. It follows that every bank failure has caused more or less loss to creditors and

shareholders, and subjected those connected with these institutions to criticism. The relation which the Comptroller's office bears to the banks and its method of examinations have been so much a matter of public discussion that it seems wise at this time to call the attention of both Congress and the public to these relations, and the duties which it is believed rest directly upon and should be discharged by those whose oaths make it obligatory on them to conserve the interests of the bank.

The duties resting upon directors are not in contemplation of law merely formal ones to be met in a formal manner only. It is expected that they shall be thoroughly conversant, both in general and in detail, with the manner of the conduct of institutions with which connected and the methods employed. Bank directors should know whether the best bookkeeping methods are used in their banks, whether precautionary measures in the verifying of entries upon ledgers and pass books are taken, and whether employees, from president to bookkeeper, are engaged in speculative enterprises and employing the bank's funds, thus endangering the safety of those trusting the bank. The character of the internal management necessarily makes the institution a safe or an unsafe one.—Report of the Comptroller, 1890, pages 31-32.

## POWER OF ASSISTANT CASHIER.

SEC. 23. That the assistant cashier, in the absence of the cashier, or on account of his inability, shall be, and he is hereby, authorized to sign the circulating notes of the bank, and sign and make oath or affirmation to the reports called for by said ministers of finance showing the condition of the bank with which he is connected, and such oath or affirmation and all others required of bank officers may be administered by any notary public or commissioner of deeds.

At present the law limits the authority which this section gives to the assistant cashier, to the cashier, which very greatly interferes with the proper conduct of the business of many banks in cases of absence or sickness of the cashier, and therefore this provision simply facilitates the performance of the duties of the cashier.

## GOVERNMENT CHARTERS FOR CLEARING HOUSES.

SEC. 24. That the clearing houses of the respective districts shall act under charters granted by the United States Government, running for fifty years and authorizing them to effect clearances between banks and to do other business for and between banks, in accordance with such rules and regulations as may be prescribed by said ministers of finance from time to time.

The above section states so clearly its object that when the importance of convenient places for the clearance of exchanges and the current redemption of the note issues is considered in conjunction with the general purpose of this bill, no one will doubt the wisdom and necessity even of granting national charters to the clearing houses as well as to the banks, as they are an important and essential adjunct in completing a sound currency system.

## POWER OF THE SECRETARY OF THE TREASURY TO MEET ANY DEFICIENCY.

SEC. 25. That to provide for any temporary deficiency now existing in the Treasury of the United States, or which may hereafter occur, the Secretary of the Treasury is hereby authorized, at his discretion, to issue certificates of indebtedness of the United States, payable in from one to five years after their date, to the bearer, in gold coin, of the denomination of \$5, or multiples thereof, with annual coupons for interest at a rate of interest not to exceed 3 per cent per annum, and to sell and dispose of the same for not less than an equal amount of gold coin at the Treasury Department and at the subtreasuries and designated depositories of the United States, and at such post-offices as he may select. And such certificates shall have the like qualities, privileges, and exemptions provided in the resumption act (approved January 14, 1875, entitled "An act to provide for the resumption of specie payments") for the bonds therein authorized. And the proceeds thereof shall be used for the purpose prescribed in this section, and for no other.

SEC. 26. That all acts or parts of acts inconsistent with the foregoing shall be, and the same are hereby, repealed.

That the United States Government should have power to meet any emergency that may arise on account of its lack of revenue, no man of business sense will deny. Nor can it be assumed that this Government, any more than a private business, will always have a surplus revenue even with a change in our tariff laws. A large surplus is not now necessary; therefore, should we succeed in adjusting our income to our expenses the coming year, changed conditions might shortly bring about a deficit, which could only be provided for in two ways during that current year:

First. Close the courts and other departments of the Government.

Second. Temporarily provide the means for carrying them on by the sale of certificates of indebtedness under the authority given by this provision, to which every reasonable man of patriotic and practical instincts and business experience who is not controlled by partisan prejudice nor hope of temporary political advantage will give his hearty approval and unqualified support.

Having now discussed in detail the various provisions of the proposed measure, I desire to call attention to certain matters that invariably present themselves in any intelligent discussion of this all-important subject.

## THE PLAN ADOPTED MUST BE CLEAR EVEN TO THE LAYMAN.

First. It would be useless to waste time even in discussing any measure, to say nothing of passing it, unless upon examination it could be readily understood and from the advantages it offered would at once attract practically all of the bank capital in the country, so that we would have a uniform system; therefore it becomes pertinent to inquire whether banks would immediately organize under this act should it become a law.

IT MUST BE SUCH AS TO AT ONCE ATTRACT THE BANKING CAPITAL OF THE COUNTRY.

In the first place, they would do so because of the protection and moral support the clearing houses provided for would give at all

times, and more particularly when any stress was thrown upon the banking interests of the country.

In the second place, they would regard it quite a sufficient advantage of itself, in a great majority of cases, if no other was gained, to be able to issue their own note circulation, and thereby accommodate all their customers, who are entitled to credit, at a cost to themselves of only 1 or 2 per cent and without the least trouble, when at present they can only partially do so, even at a cost of 6 or 7 per cent, and with great trouble and annoyance to themselves and a corresponding expense to the customers of the bank, if, perchance, they can accommodate them at all.

In the third place, that while the people of the United States will save annually in interest on the national debt about \$12,000,000 and an incalculable amount of interest on their loans, particularly in a section where the rates are now very high, the banks would realize a net gain upon the circulation taken out upon the 2 per cent bonds of 1½ per cent and a greater profit upon their own circulation than upon the money hired from their correspondents hundreds of miles away.

In the fourth place, this act would individualize the bank and give it much greater freedom, simplify its methods, and greatly economize its management, which would result in a corresponding and mutual gain to both the bank and borrower.

Indeed, the sooner the American people learn to transfer all taxes from the money engaged in banking to other forms of wealth which they can not use, the cheaper will they make the tools with which commerce is carried on and the shops kept in motion. The earning capacity of labor will be just that much greater, for in the last analysis money is the real tool that fells the trees out of which we build our houses and make our furniture, mines the coal, digs the ore, spins the wool, weaves the cotton, makes our garments, and prepares our food, and should be made as cheap as possible, so that labor can continue to get a greater and greater share of its profits until a perfect adjustment of labor and capital is reached.

#### NOTE HOLDERS SHOULD HAVE A PRIOR LIEN ON ASSETS.

Second. A question may be raised with regard to the relative rights of the note holder and the depositor. But that the note holder should have a prior lien upon the assets of the bank in accordance with our present law is essential, as the notes leave the immediate neighborhood of the bank issuing them. The fact of their being a prior lien upon the assets of the bank justifies their passing current, because the people know they are safe by experience. Again, the note holder seldom knows the officers of a bank as the depositor does who keeps his account with some particular bank because of his acquaintance with the management. Then the depositors of banks are almost invariably the borrowers of the bank and the very persons who first get the notes. It is therefore of the highest importance that the notes be as good as possible in order that one may borrow money at the lowest rate of interest possible, and the notes remain out until he is ready to pay off his loan, for the better the notes the longer will they remain out and circulate; indeed, if they remain unquestioned, the tendency would be to continue to circulate until called in by the bank issuing them.

#### PRACTICALLY HE OBTAINS IT ANYWAY.

It may be suggested by some that the notes should not be a prior lien upon the assets of the bank, because that gives to the note holder an advantage over the depositor; but the reasons already given justify the principle. However, there is still another reason that forecloses all discussion upon the question as a matter of actual practice, and that is this: It will be admitted that a bank will not issue any of its bank notes unless its customers need the money. Now, it is certain that if a bank can not issue its notes it will bundle up a good margin of securities and send them to its correspondent in some distant city and get the necessary amount of currency, giving the correspondent bank a first lien upon all the securities turned over; so it will make no difference in the last analysis whether it issues its notes or borrows the money. The currency used will be a first lien upon a sufficient amount of the bank's assets to insure its redemption. The position of the depositor is the same in both cases. The criticism arises from a mere sentiment, and will always be without any foundation in practice. But, as a matter of advantage to the borrowers of a bank, who are almost invariably the depositors, in commercial banks at least, and as a matter of justice, considering the difference in the relation of the note holder and depositor to the bank, the note should be a prior lien upon the assets. Again, all national-bank notes are a prior lien upon the assets of the bank; therefore this provision is strictly in accord with our existing law.

#### BANKS CAN MAINTAIN GOLD PAYMENTS BETTER THAN THE GOVERNMENT.

Third. It is sometimes urged that the Government of the United States can better maintain gold payments than the banks; but when it is said that it ought to because of its greater credit, the argument is exhausted, since all the facts and experience are the other way. Indeed, the Government, if it maintains redemption in gold payments, can only do so through the assistance of the

banks, as has been most strikingly illustrated through the use of the banks in the gold purchases during the past three years. Therefore it goes without saying that the banks, which are the sole agency through which the Government procures its gold, can certainly do for themselves what they can do for the Government. And the reason is this: The banks have the ways and means or machinery for obtaining the gold if they want it or must have it, while the Government can only obtain gold through the banks by the sale of bonds, which must be paid for by taxing the people.

#### THE GOVERNMENT HAS NO NATURAL FACILITIES FOR MAINTAINING GOLD PAYMENTS.

The Government has no inflowing stream of wealth measured in gold with which to meet its demand obligations; hence its great difficulties and constant danger. By the great increase of its demand obligations, which jumped up from \$346,000,000 in 1879 to \$1,000,000,000 in 1892, with no corresponding increase in its reserve, it strained its credit to an extent that gave rise to doubt as to its ability to maintain gold payments. The persistent effort on the part of some to construe the doubtful word "coin" into silver or a fifty-cent redemption, as well as gold, has thrown a cloud upon our intention, challenged our honor, disturbed public confidence, checked enterprises, and rendered any substantial and permanent prosperity and progress doubtful until our measure of value is definitely and irrevocably settled. This is one of the chief and under the present conditions a fatal objection to Government redemption, and to-day threatens every pending contract and will prevent a vast amount of new ones, especially those running for a long period of time.

#### BANKS IN OTHER COUNTRIES HAVE NO DIFFICULTY IN MAINTAINING GOLD PAYMENTS.

The banks of Scotland, Ireland, England, Germany, France, and Canada have found no such serious difficulty in maintaining gold payments as the United States, nor did the Suffolk system. And this has been done in most instances with a very much smaller reserve than that provided for in this measure. Why is this? Just because every note, draft, or bill of exchange signed by two or more makers or indorsers is payable in gold or its equivalent on demand or in thirty, sixty, or ninety days, giving everyone absolute confidence, and no one ever asks for gold unless it is needed for some special purpose.

How would it be with our own banks? Let us suppose that banks having capital equal to our national banks should organize under this law and the act were in force. What would the condition be? What the result? There would be \$600,000,000 of gold in the United States, about \$600,000,000 of silver, and \$435,194,402 of United States Government bond notes, with such an increase in note circulation from time to time as the seasons or emergency might require, amounting to a maximum of \$650,014,895, making a total circulation of \$2,321,209,297.

#### OUR PRESENT GOLD SUPPLY SUFFICIENT TO MAINTAIN GOLD PAYMENTS.

At a glance it will be observed that \$600,000,000 of gold would amount to nearly 40 per cent of all the rest of the money in the country and therefore would constitute a redemption fund far in excess of any requirement experience has demonstrated necessary. Now add, if you please, the total deposits of the national banks, amounting to \$1,597,891,058, making a total of \$3,233,100,355, and you still have a gold reserve of about 20 per cent. Add to this, if you will, the total deposits of all other banks—private, State, and savings—and loan and trust companies, amounting to \$3,276,710,910, making a grand total of money (including both silver and currency) and deposits of \$6,559,811,265, and we would still have a reserve of 10 per cent, or an amount greater than that maintained in Great Britain, where it runs from 6 to 10 per cent. But should the banks think that more gold is necessary, could they not obtain it far more easily now than we did from 1878 to 1888, when we accumulated \$500,000,000, nearly as much as we have to-day? It has been ascertained by experience that we have quite enough for our commercial needs; and we accumulated this vast sum, too, when Germany and France and other nations were adding rapidly to their stores of gold. If one-half of the product of 1896, or \$107,000,000, or all of it, \$214,000,000, should be wanted more for monetary purposes than in the arts, it would be converted into money. Gold, like silver, wheat, corn, cattle, hogs, cotton, wool, iron, and labor, is nothing but a commodity which can be obtained by anyone who wants it in the markets of the world, and there is no class of merchants so well equipped for procuring it as the banks of the country, whose special business it is to provide safe methods for carrying on the commerce of the world.

#### TOTAL RESOURCES OF THE BANKS.

In conclusion, it should be observed that the banks of the United States have total resources with which to meet their deposits and procure gold with which to maintain the redemption of their notes amounting to \$7,463,810,269 in gold value, which would certainly prove a source of sufficient confidence to the people, and, united with our present facilities for transacting business through the means of checks and drafts, would reduce the requirement of gold

for redemption purposes below any point yet reached in the history of banking; but the possibility of repudiation through a depreciated dollar must be eliminated at once and the suggestion spurned by every man who desires permanent prosperity.

This doubt eliminated and our standard of measure once permanently established, we can confidently expect millions upon millions of capital to pour into every avenue of profitable production. Supplement these forces with a credit currency responsive to the demands of trade at rates of interest for commercial money as low as the lowest in the world, and we shall receive the highest possible exchangeable value for all forms of the products of labor, and the banks of the United States acting under one system will maintain gold redemption with greater ease than any other country on the globe.

Apart from detail and matters of administration, three objects which I regard as fundamental and essential to a complete and sound financial and currency system have been sought in drafting this measure:

#### FIXED STANDARD IMPORTANT TO PERMANENT PROSPERITY.

First. I realize that to secure the most permanent prosperity and the highest returns for the labor of our 20,000,000 toilers, we must have a standard of value that is unequivocal, unchanging, and universal throughout the commercial world.

#### DEMAND OBLIGATIONS MUST BE RETIRED.

Second. That if we would obviate a very great and constant expense to our people and infinite danger to our Government in meeting its demand obligations they must be retired and canceled.

#### A CREDIT CURRENCY MUST BE OBTAINED.

Third. That if we desire to lower and equalize the rate of interest throughout the United States, to secure justice in all sections, to provide money to move our crops and manufactures at the least possible expense, to insure our farmers, tradespeople, and commerce against money panics, we must have a responsive and elastic currency.

To point out exactly why the free coinage of silver would not assist in the slightest degree in accomplishing any one of these essential things may not be out of place here, as it is evident that many of our people have been led to believe that whatever our ills the free coinage of silver would cure them all, when, in fact, it would only aggravate them and add others still more serious.

For your convenience I submit the following table, taken from the report of the Director of the Mint for 1896, page 50:

Estimated stock of gold and silver in the United States and the amount per capita at the close of each fiscal year from 1873 to 1896, inclusive.

Fiscal year ending June 30—	Population.	Total coin and bullion.		Per capita.		
		Gold.	Silver.	Gold.	Silver.	Total metallic.
1873	41,677,000	\$135,000,000	\$6,140,305	\$3.23	\$0.15	\$3.38
1874	42,796,000	147,370,493	10,355,478	3.44	.24	3.68
1875	43,951,000	121,134,906	19,367,995	2.75	.44	3.19
1876	45,137,000	130,056,907	36,415,993	2.88	.81	3.69
1877	46,353,000	167,501,472	56,464,427	3.61	1.21	4.82
1878	47,598,000	213,199,977	88,047,907	4.47	1.85	6.32
1879	48,898,000	245,741,837	117,526,341	5.02	2.40	7.42
1880	50,155,733	351,841,506	148,522,678	7.01	2.96	9.97
1881	51,316,000	478,434,538	175,394,144	9.33	3.41	12.73
1882	52,495,000	506,737,715	208,217,124	9.65	3.87	13.52
1883	53,693,000	542,732,063	235,007,965	10.10	4.34	14.44
1884	54,911,000	585,500,797	255,568,142	9.93	4.65	14.58
1885	56,148,000	638,007,036	285,478,738	10.48	5.05	15.53
1886	57,404,000	690,774,461	313,235,844	10.29	5.44	15.73
1887	58,680,000	654,320,335	362,983,566	11.15	6.00	17.15
1888	60,974,000	705,848,855	386,611,108	11.76	6.44	18.20
1889	61,289,000	690,053,505	430,548,929	11.09	6.86	17.95
1890	62,622,250	605,568,029	463,211,919	11.10	7.39	18.49
1891	63,975,000	646,582,852	522,277,740	10.10	8.16	18.26
1892	65,520,000	664,275,335	570,313,544	10.15	8.70	18.85
1893	66,946,000	587,007,085	615,861,484	8.93	9.20	18.13
1894	68,307,000	627,293,201	624,347,757	9.18	9.13	18.31
1895	69,873,000	626,229,825	625,854,949	9.10	8.97	18.07
1896	71,300,000	590,597,934	608,728,071	8.40	8.81	17.21

#### TAMPERING WITH THE STANDARD.

It will be observed that since 1888, the year both parties began to tamper with our standard of value and talk of bimetalism, we have been losing our gold. During the nine preceding years we gained \$100,077,048, and in the same ratio should now have \$1,165,885,933 instead of \$599,599,964, the amount we hold to-day, the balance having been crowded out by the poorer, cheaper, less valuable metal on account of the doubt raised as to whether we were really a gold-standard country or not.

With this table before us, the following observations seem justified:

#### THE WORD DEMONETIZED.

First. That if the definition of the word "demonetize" is to be taken from Webster, "to deprive of value, or to withdraw from use as currency," the United States has not demonetized silver,

which has to-day full legal-tender quality and has not been withdrawn from use, but increased from \$6,140,305 in 1873 to \$628,728,071 in 1896.

#### FREE COINAGE HAS NOT INCREASED OUR GOLD AS RAPIDLY AS LIMITED COINAGE HAS SILVER.

Second. That the free coinage of gold has increased our stock of gold only \$464,597,964, or from \$135,000,000 to \$599,597,964, while our acts for the limited purchase of silver have increased our stock of it \$622,579,766, or \$150,000,000 more than free coinage of gold increased our stock of that metal.

#### FREE COINAGE DOES NOT BRING ANY METAL TO THE MINT NECESSARILY.

Third. That the free coinage of any metal does not, therefore, necessarily bring any of that metal to the mint, for if it did, all the gold in the United States in the form of bars would have gone there at once and been coined, but, as a matter of fact, for some purposes it is preferred in the form of bars.

Fourth. That if two metals at given quantities, one quantity being worth just one-half of the value of the other, as silver and gold would be at 16 to 1, there would not remain a single reason why the more valuable metal should go to the mint at all; hence, silver alone would go.

Fifth. But we are told that the fact that they both could go there would make them and keep them at the same value.

#### FREE COINAGE NEVER HAS RAISED THE PRICE OF ANY METAL.

(a) From 1793 to 1834 the free coinage of silver and gold at the ratio of 15 to 1 did not increase the value of silver one-half of 1 per cent, and all of the gold left the country and our standard was silver; and from 1834 to 1853 the free coinage of gold and silver at the ratio of 16 to 1 did not raise gold one-half of 1 per cent, and all of our silver left the country and our standard became gold and has been gold ever since. Can it be that any sane man believes that free coinage, then, would raise the value of silver 100 per cent, or actually double its value? Japan did not think so when she established the ratio of 32 to 1.

(b) If they were both to be free coined, the only rational course would be to make the coinage ratio and commercial ratio coincide—that is, about 32 to 1—as Japan did.

(c) However, if the ratio should afterwards diverge to the extent of one-half of 1 cent an ounce, owing to our present facilities for transportation and exchange, the metal worth the most would at once cease to circulate as money, and one-third at least of all the money we now have would disappear. For no man would pay \$1.01 for anything he could obtain for \$1, and every debtor would hide his dishonesty behind the law that made it possible for him to defraud his creditors. The result would be that those pieces of metal which were the most valuable would not circulate at all; so that at no time would we have the use of both metals circulating together, as we have them to-day.

#### WITH THE FREE COINAGE OF TWO METALS THEY WILL NOT CIRCULATE CONCURRENTLY.

(d) That the two metals would remain at any given ratio in value, which is essential to secure concurrent circulation under free coinage, no one believes, not even the free-coinage bimetalist, who now admits that it would be only an alternating use of the two metals; for this has never been true of any two commodities at any time, anywhere, in the history of the world, and to make it possible now, we must assume that the commercial and coinage ratios coincide exactly, say at 32 to 1; that the production of the two metals will then continue at exactly 32 to 1; that the cost of the production will remain exactly equal in the ratio of 32 to 1; that the demand in the arts and finance will be exactly 32 to 1—conditions which are unnatural, improbable, impossible, preposterous!

(e) That if the ratio of coinage were at 16 to 1 regardless of the commercial value, which is 32 to 1, not a single dollar of gold would circulate.

#### THE FREE COINAGE OF SILVER AT OUR PRESENT RATIO WOULD DESTROY TWO-THIRDS OF OUR MONEY.

(f) The effect, therefore, of free coinage at the ratio of 16 to 1, or any other ratio up to an exact commercial ratio, would be to drive all of our gold—now about \$600,000,000, or one-third of all of our money—out of circulation, reduce our \$600,000,000 of silver to one-half its present money value—for it is now maintained at a parity with gold—or to \$300,000,000, and bring our \$580,000,000 of paper to a silver basis, or equal to only \$290,000,000. So that instead of securing more money from free coinage we would have but \$590,000,000, all told, instead of the amount we now have—\$1,780,000,000.

(g) When once upon a silver basis there would be no inducement whatever to take silver bullion to the mint for coinage, any more than there is gold to-day, a truth that is verified by the fact that the free coinage of silver has never given to any country a large per capita circulation. When the silver dollar is worth no more than the bullion it contains, there would be no inducement for the bullion owner to pay the expense of transportation and take the trouble of getting his silver bullion to the mint, for he

could sell it in the open market for the same price the Government would allow him for it. Therefore we have a right to conclude that free coinage would do just the reverse of what its advocates claim for it—reduce, and not increase, the amount of money we now have.

#### WE SHOULD HAVE THE STANDARD OF THE CIVILIZED WORLD.

(h) The silver standard would vary every hour of the day as silver rose and fell in the markets of the world, for all business in the last analysis would have to be adjusted upon a gold basis, and the producers of the country would be ground out of all of their profits by the middlemen under the reasonable pretense that silver might fall before they could in their turn dispose of the products.

(i) Nothing is more essential to an even and permanent prosperity than an unvarying and unequivocal standard; but the free-silver advocates hope for nothing but an alternating standard, which would be the greatest possible curse to our commerce and the utter and eternal ruin of all our farmers and mechanics, reducing them in this country, as it has in all others, to a life of poverty and peonage.

#### FREE COINAGE WILL NOT RETIRE OUR DEMAND OBLIGATIONS.

(j) The most expensive and most dangerous form of money for a nation to maintain is its own demand notes; but there is no pre-

tense that the free coinage of silver will relieve us from this difficulty and enable us to retire them.

#### FREE COINAGE MEANS HIGH RATES OF INTEREST.

(k) The most important aid to every producer is a low rate of interest and a system of currency that always responds to the requirements of his business, but no one claims that free coinage would give us lower rates of interest, but, on the contrary, much higher; nor is it claimed that it would give us a currency that would respond to and reflect the local conditions of trade in all parts of the country at every season of the year.

A full understanding of our difficulties and a clear comprehension of our needs, therefore, does not lead us to conclude that the free coinage of silver would relieve us in the slightest degree from any one of our difficulties, but add another disturbing element to our already complicated problem, bring us universal disaster and a commercial revolution that would subject our producers to the schemes and machinations of the middlemen and speculators.

For the purpose of bringing to your notice certain great truths now established by all experience, and which we must recognize if we would be wise in dealing with this most important subject and prove ourselves true patriots rather than show ourselves blind and slavish partisans, I reprint from the report of the Director of the Mint for 1896 the following tabulated statement found on pages 46 and 47:

Monetary systems and approximate stocks of money in the aggregate and per capita in the principal countries of the world.

Country.	Monetary system.	Ratio between gold and full legal tender silver.	Ratio between gold and limited tender silver.	Population.	Stock of gold.	Stock of silver.			Uncovered paper.	Per capita.			
						Full tender.	Limited tender.	Total.		Gold.	Silver.	Paper.	Total.
United States <sup>a</sup>	Gold and silver.	1 to 15.98	1 to 14.95	71,900,000	\$872,200,000	\$555,000,000	\$75,800,000	\$631,400,000	\$424,400,000	\$9.35	\$8.78	\$5.90	\$24.03

<sup>a</sup> November 1, 1896; all other countries January 1, 1896.

<sup>b</sup> Estimate, Bureau of the Mint.

<sup>c</sup> Information furnished through United States representatives.

<sup>d</sup> Haupt.

<sup>e</sup> Except Venezuela and Chile.

<sup>f</sup> Actually the silver standard, but has since January 1, 1897, adopted gold standard.

<sup>g</sup> Includes Aden and Perim, Ceylon, Hongkong, Labuan, and Straits Settlements.

<sup>h</sup> F. C. Harrison.

<sup>i</sup> Indian currency committee report.

<sup>j</sup> By imperial decree has adopted the gold standard since January 1, 1897.

From a careful study of this table everyone must be driven to admit the following facts, which will dispose of a vast amount of misinformation and a myriad of misstatements now floating about the country:

#### LOCAL CONDITIONS AND ECONOMIC LAWS WILL DETERMINE THE PER CAPITA CIRCULATION.

First. That if any country fixes by law what kind of money it shall have, local conditions under the operation of economic laws will determine what the amount per capita will be.

By referring to the following gold-standard countries it will be observed that there is a great divergence in the per capita circulation. Hawaii, which mines neither gold nor silver nor has any

mint of its own, has \$40 per capita in American gold coins, the highest of all the nations. Then follow in their order Australasia, France, Egypt, England, Germany, United States, Denmark, Norway, Canada, and so on down to Sweden, with only \$1.77.

But a much greater divergence will be found in the silver-standard countries by referring to the Straits Settlements, which have \$63.38 per capita, the highest, and in their order Siam, Mexico, Central American States, China, South American States, down to Russia, which has the lowest, or only 35 cents per capita. It will be noticed that with the exception of the first two, the gold-standard countries use more silver than the silver-standard countries themselves use, which is additional proof that local

conditions and economic laws, and not the free coinage of metals, determine the amount of the metal used.

#### GOLD WILL BE OBTAINED.

Second. If any country unequivocally selects gold as its standard it will obtain all of that metal it requires, as evidenced by the fact that nearly all the gold reserves have been acquired during the past twenty years, the leading nations having increased their holdings from \$1,200,000,000 in 1873 to \$4,143,000,000 in 1896.

#### THE SELECTION OF GOLD AS A STANDARD IS THE RESULT OF EVOLUTION.

The gradual adoption of the gold standard during the past quarter of a century by all the civilized nations of the world has been as distinctly the result of evolution as the adoption of steam in the place of the patient sail or the faithful horse, and more recently the subtle power of electricity in the place of steam; the use of the telegraph for the more sluggish mail; the telephone for the telegraph and the messenger boys. In commerce the end sought is to bring the producer and consumer together at the least possible expense or loss. Freight rates have been driven to the lowest possible point; the middlemen must be eliminated everywhere; the insurance against accidents must be made a nominal sum; doubts must be banished; speculation must be reduced to a minimum; exchange, always a tax upon the producer and consumer, must be in a common and universal measure of value and cost no more than a fair rate of interest for the use of the money involved; for that nation which is handicapped by the speculation incident to a different and varying measure of value will be distanced at the very start and doomed—a fact which is thoroughly understood and appreciated by every nation that has tried it and suffered from the ruinous disadvantages under which they labored. The latest to learn this lesson are Russia and Japan.

#### GOOD MONEY AND PRICES BEAR NO RELATION TO EACH OTHER.

Third. That the amount of good money per capita in circulation under normal conditions bears absolutely no relation to the price of articles except so far as the price may be affected through the rate of interest money commands and the sacrifices producers must make in selling their products under adverse conditions there is no longer any doubt.

#### COMPARISON OF PER CAPITA CIRCULATION.

By referring to the table it will be observed that France has nearly double the money per capita that England has, yet everyone knows who has inquired into the subject that almost every article you want to buy is cheaper in France than in England—just the very reverse of what the free-coinage advocate tells us would be true. Then there is Canada with only \$9.32 per capita, about one-quarter of that of France, and yet things are much higher in Canada than in France. It will be found upon investigation that prices average about the same in all of the following countries, notwithstanding the great difference in the per capita circulation. Greece has only \$7.36, about one-fifth of that of France; Norway \$6.65, about one-sixth of that of France; and Sweden \$2.70, or considerably less than one-twelfth of that of France. From these facts we must conclude that the condition, habits of the people, and practices in the use of money, pass books, checks, drafts, and other devices determine the quantity they use, and that the quantity bears no relation whatever to prices.

This truth is further illustrated and established by the following tabulated statement, prepared by the Treasury Department and issued in Circular 123, pages 53, 54, which gives the per capita circulation in the United States since 1800:

Statement of the specie and bank-note circulation of the United States in the years specified from 1800 to 1899, with amount of circulation per capita.

Year.	Number of banks and branches.	Estimated bank notes outstanding.	Estimated specie in United States.	Total money in United States.	Specie in Treasury.	Money in circulation.	Population.	Per capita.
1800.....		\$10,500,000	\$17,500,000	\$28,000,000	\$1,500,000	\$26,500,000	5,308,483	\$4.99

NOTE 1.—Specie payments were suspended from January 1, 1863, to January 1, 1879. During the greater part of that period gold and silver coins were not in circulation except on the Pacific Coast, where, it is estimated, the specie circulation was generally about \$25,000,000. This estimated amount is the only coin included in the above statement from 1863 to 1875, inclusive.

NOTE 2.—In 1876 subsidiary silver again came into use, and is included in this statement, beginning with that year.

NOTE 3.—The coinage of standard silver dollars began in 1878, under the act of February 23, 1878.

NOTE 4.—Specie payments were resumed January 1, 1879, and all gold and silver coins, as well as gold and silver bullion in the Treasury, are included in this statement from and after that date.

NOTE 5.—This table represents the circulation of the United States as shown by the revised statements of the Treasury Department for June 30 of each of the years specified.

## CIRCULATION IN UNITED STATES AT DIFFERENT PERIODS COMPARED WITH PRICES.

Although prices were high during the first years of the century, our per capita circulation was about \$5. While prices fell very much about 1849, our per capita circulation had doubled. Again, if the circulation from 1863 to 1878 be reduced to the gold standard, the result would be as follows:

1863	9.00	1871	16.19
1864	13.29	1872	16.18
1865	9.67	1873	15.85
1866	13.06	1874	16.29
1867	13.46	1875	14.92
1868	13.23	1876	14.47
1869	13.16	1877	15.19
1870	13.23	1878	15.19
1871	15.22		

It will be observed that there is about 50 per cent more money in circulation per capita to-day than in 1873, and yet average prices were about 20 per cent higher in 1873 than they are to-day, making a divergence of about 70 per cent—just the reverse of what the free-silver advocate tells us.

## CIRCULATION IN DIFFERENT SECTIONS OF THE UNITED STATES TO-DAY COMPARED WITH PRICES.

Finally, let us compare the present monetary conditions of some of our States in different sections of the country:

State.	Capital.	Surplus.	Deposits.	Population.	Capital, surplus, and deposits per capita.
Rhode Island	\$19,947,000	\$6,237,000	\$36,510,000	345,000	\$129.27
New York	555,510,000	208,250,000	1,890,343,000	5,398,000	638.66
North Carolina	5,394,000	1,097,000	10,613,000	1,618,000	10.56
Mississippi	5,518,000	715,000	9,560,000	1,290,000	10.69
Arkansas	5,154,000	856,000	8,313,000	1,123,000	12.69
South Dakota	4,486,000	715,000	8,194,000	889,000	40.71
Washington	17,388,000	4,231,000	19,144,000	360,000	116.46

The actual money per capita would probably not exceed 20 per cent of the capital, surplus, and deposits, or 25.87 for Rhode Island; 87.732 for New York; 2.11 for North Carolina; 2.13 for Mississippi; 2.53 for Arkansas; 8.14 for South Dakota, and 23.29 for Washington.

It must be admitted by every candid man that if there were any relation between the per capita circulation and prices everything in Rhode Island would be 12 and everything in New York 48 times higher than in North Carolina or Mississippi, although as a matter of fact a vast amount of manufactures are shipped to the two latter States, while their products in turn are higher in the Eastern States, to which they are sent for a market.

So we find, both in comparing the different nations of the earth, taking our own history for a hundred years and the relative conditions of our several States to-day, there is absolutely no relation between the amount of money in circulation and prices.

## THE POORER OR CHEAPER PIECE OF METAL WILL ALWAYS DRIVE OUT THE BETTER OR DEARER.

Fourth. There is no country to-day with the free coinage of gold and silver that is not upon a silver basis exclusively, with no gold whatever in circulation.

Fifth. There has never been a time anywhere in the world when free coinage was given to two metals that they circulated side by side evenly, neither displacing the other, but on the contrary the invariable result has been, without a single exception, that the so-called bimetalism brought about absolute monometallism—the use of that dollar only which was made of the cheaper quantity of metal.

W. A. Shaw, in his History of Currency, page 178, says:

The second idea which is commonly entertained with regard to the action of France during this later period, viz, that her action secured for the world at large a fixed and steady ratio, is equally—indeed, still more—fallacious. At no point of time during the present century has the actual market ratio, dependent on the commercial value of silver, corresponded with the French ratio of 15, and at no point of time has France been free from the disastrous influence of that want of correspondence between the legal and the commercial ratio. The opposite notion, which prevails and finds expression in the ephemeral bimetallic literature of to-day, is simply due to ignorance.

## NATURAL, NOT COINAGE LAWS, DETERMINE THE RELATIVE VALUE OF METALS.

One might pertinently inquire if the attempt on the part of France to maintain a parity after 1803 had the tendency of bringing the commercial and legal ratio of gold and silver together, although they never remained together for a day, what was it that kept them just as nearly together for two hundred years prior to 1803? Is it not evident that what she attempted to do had absolutely no influence whatever upon the commercial value of either metal?

## METAL BASIS OF GOLD AND SILVER COUNTRIES COMPARED.

Sixth. By referring to the above table and carefully comparing the seven silver countries, which are the most inferior in commerce and civilization, with the twenty-seven gold-standard countries, which contain all the leading nations of the world, it will be found that the metal basis in value and per capita circulation of the gold-standard countries is incomparably broader than the basis of the silver-standard countries. Therefore when we are regaled with the fears of the bimetalist that there will not be base enough for the commerce of the world in the use of gold alone, it is to be observed that it is physically impossible to have two bases, and as between the two, gold has proven incomparably the broader and better base, and up to the present time has been found in sufficient quantity to meet every commercial burden or demand laid upon it, and proven itself to be peculiarly suited to meet all of the requirements of trade and the financial systems of the entire world, always keeping pace with its gradually increasing use.

## PRODUCERS SWINDLED THROUGH THE SILVER STANDARD.

It is also certain that whenever we have left the gold standard or trifled with it, we have gravitated certainly and irresistibly to a lower standard—silver or paper—and thereby been thrown out of

joint with all the rest of the commercial world, and have been compelled to pay enormously for the privilege of doing business upon any other standard on account of the speculation in exchange. It is not too much to say that on our approximate two billion of foreign business there would be a loss of at least \$250,000,000 which our producers would have to bear, while all our domestic commerce would be subjected to the jugglery of the middlemen, and the producers of this country would be robbed right and left under the pretense of a risk that silver might fall. Facing these incontrovertible facts, can any candid man of intellect, common sense, and patriotic inspiration find one single reason why we should hesitate for a moment about our policy?

What we want above all things is an unequivocal standard of value, the standard of the civilized world, and a system of currency constantly redeemable in that standard, and one which will respond to trade everywhere and at all seasons of the year, insuring low rates of interest, equal privileges, and equal justice everywhere. Free coinage will not bring a single one of these things, but in their stead doubt, disaster, losses, and ruin incomprehensible.

#### HAS THE SELECTION OF THE GOLD STANDARD WORKED INJUSTICE.

But has the selection of the gold standard by all the civilized world resulted in injustice to the people or any part of them? If so, that injustice should be righted.

If, however, some have suffered by the adoption of the gold standard only as others have suffered in all countries and all ages on account of some important discovery or process which has benefited the great mass of the people, relief should not be demanded or expected.

It is claimed by some that gold has appreciated and is appreciating to-day, and because of this fact, and just in proportion to that appreciation, the debtor, who must pay his obligations in gold values, is injured. If there has been any appreciation in the value of gold then it is true that, to the extent of such appreciation during the time the debt of any individual has been running, such debtor has been injured.

#### LIFE OF BANK LOANS.

But the average length of bank loans does not exceed sixty days, and no one will contend that there ever has been such an appreciation in that length of time, at least that any man can estimate it if there has been any; therefore all bank loans may be dismissed from any further consideration.

#### LIFE OF REAL ESTATE LOANS.

The average life of loans upon real estate, farms, and city property is approximately about three years. Now, can anyone say that gold has appreciated during any given three years to an appreciable degree? If so, in what three years?

#### GOLD APPRECIATION OR DEPRECIATION.

How shall this question of appreciation of gold be tested? Certainly all will agree that the most reliable standard is human labor. Measured by this standard, has gold risen or fallen? That is the question. According to the Senate report called the Aldrich report, it will be discovered that wages, measured in gold, have more than doubled since 1840. For the information of those desiring to know the exact and whole truth with regard to this question, I submit the following table, found on page 170, volume 3, of that most exhaustive, comprehensive, and valuable report ever made upon the subject of wages, prices, and transportation:

#### WAGES FOR FIFTY YEARS.

Relative wages in all occupations, 1840-1891, grouped by different methods.

Year.	Simple average.	Average according to importance.	Year.	Simple average.	Average according to importance.
1840	87.7	82.5	1866	153.4	155.6
1841	88	79.9	1867	157.6	164
1842	87.1	84.1	1868	159.6	164.9
1843	86.6	83	1869	162	167.4
1844	88.5	83.2	1870	162.2	167.1
1845	86.8	85.7	1871	163.6	166.4
1846	89.3	89.1	1872	164	167.1
1847	90.8	91.3	1873	167.1	166.1
1848	91.4	91.6	1874	161.6	162.5
1849	92.5	90.5	1875	158.4	159
1850	92.7	90.9	1876	152.5	151.4
1851	90.4	91.1	1877	144.9	143.8
1852	90.8	91.8	1878	142.5	140.9
1853	91.8	92.2	1879	139.9	139.4
1854	95.8	95.8	1880	141.5	143
1855	98	97.5	1881	146.5	150.7
1856	99.2	98	1882	149.9	152.9
1857	99.9	99.2	1883	152.7	159.2
1858	98.5	97.9	1884	152.7	155.1
1859	99.1	99.7	1885	150.7	155.9
1860	100	100	1886	150.9	155.8
1861	100.8	100.7	1887	153.7	156.6
1862	102.9	103.7	1888	155.4	157.9
1863	110.5	118.7	1889	156.7	162.9
1864	125.6	134	1890	158.9	168.2
1865	143.1	148.6	1891	160.7	168.6

Premium on gold and gold value of United States legal-tender notes from 1863 to January 1, 1879.

Year.	Average currency value of gold each calendar year during suspension of specie payments, Jan. 1, 1862, to Jan. 1, 1879.	Average gold value of United States notes each calendar year during suspension of specie payments, Jan. 1, 1862, to Jan. 1, 1879.	Year.	Average currency value of gold each calendar year during suspension of specie payments, Jan. 1, 1862, to Jan. 1, 1879.	Average gold value of United States notes each calendar year during suspension of specie payments, Jan. 1, 1862, to Jan. 1, 1879.
1862	113.3	88.3	1871	111.7	89.5
1863	145.2	68.9	1872	112.4	89
1864	103.3	49.2	1873	113.8	87.9
1865	157.3	63.6	1874	111.2	89.9
1866	140.9	71	1875	114.9	87

1869	133	75.2	1878	108	99.2
1870	114.9	87			

#### APPRECIATION TESTED BY WAGES.

When it is recalled that these are the wages in currency from 1863 to 1878, it will be found upon examination that while wages appear in the table to have been about as high in 1873 as 1891, they were in fact lower by 12 per cent, or were only \$1.46. When account is taken of the disturbance of both wages and prices caused by the war it will be found that from 1840 to 1892 there was a constant gain in wages paid in gold, and when the statistics for 1892 have been gathered it will be found that the average wages paid that year will approximate \$1.75 per day, the highest ever paid to man, and that, too, in the best money in the world.

#### GOLD FALLEN ONE-HALF, OR WAGES DOUBLED SINCE 1840.

The inevitable conclusion from these facts is that either wages have more than doubled since 1840 or gold has fallen or depreciated one-half in value.

Again, let us test the question of appreciation of gold by a comparison of charges for its use. We all know that any commodity falls when abundant as compared with the demand and rises when scarce in comparison with the demand.

#### APPRECIATION TESTED BY THE INTEREST ON GOVERNMENT BONDS.

Gold was scarce and dear during the war, the rate of interest paid in currency being more than 15 per cent at times. To-day the Government could borrow gold at 2 per cent per annum if there were no doubt whatever about its repayment, as is evidenced by the fact that it can fund its entire debt into a 2 per cent gold bond because that very act would forever settle our standard of value. Therefore gold must be abundant and cheap to-day as compared with 1873, when it cost more than three times as much per annum for its use, the rate of interest in gold then being more than 6 per cent per annum. It will be noted that the advocates of free silver, when discussing this question of appreciation, never go back of 1873 nor deal with wages, the most reliable test, nor the rate of interest, but force upon the public view the curse of falling prices—just as though anything could be too cheap in normal conditions when you want to buy!

#### THE REAL BATTLE OF MATERIAL CIVILIZATION.

Right here is the real and the whole battle of material civilization, whether the producer on the farm or in the factory shall get more and more for his labor—that is, be able to buy with the proceeds of his toil more and more of the necessities and comforts of life. It follows, therefore, that higher wages are in inevitable, constant, and eternal conflict with cheaper products. But every human faculty, every human endeavor, and all legislative power are set in motion to cheapen every factor that goes to make up the things we all want to buy, for nothing is cheap enough when we are buying, although everything is too cheap when we are selling. The farmer does not complain because his implements, which cost him only one-third of what they did twenty years ago, are now too cheap. The mechanic is not complaining because he can buy his Sunday suit of clothes for less than one-half of what it cost him twenty years ago.

#### ARE LOW PRICES A CURSE?

Are low prices a curse, then? They may be, but only when they are produced at the same or an increasing expenditure of human labor. When the necessities of life are produced at a lower cost of human toil, they are to that extent and must be a greater blessing to the human race.

Therefore, if the prices of 1891 were about what they were in 1840, notwithstanding the almost incalculable advantage in new processes, inventions, discoveries, methods, and means of transportation, with wages more than double what they were then, the American people of all classes have certainly gained enormously

in the struggle of life, and have moved upward and onward in the march of civilization.

That my candid readers who are seeking to know the whole truth about this matter may be fully informed, I herewith submit

tabulated statements found upon pages 100, 106, and 107, volume 3, of the Senate Report on Prices, Wages, and Transportation.

Again, taking 1860 as a starting point and 100 as a basis, comparison is made for fifty-two years.

TABLE 33.—Relative prices of agricultural products—individual products.

Year.	Barley.	Clover seed.	Corn.	Cotton, upland, middling.	Flax seed.	Hemp, rough.	Hides.	Meat.			Oats.	Rye.	Timothy seed.	Tobacco.	Wheat.	General average.
								Beaves.	Hogs.	Sheep.						
1840	83.1	173.3	85.1	83.2	74.5	88	88	65.8	50.5	-----	102	79.6	82.8	94.1	72.8	87.3

1885-89.....	93.2	96.7	95.2
1890-91.....	92.3	96	94.1

#### FARM PRODUCTS LOWER IN 1890 THAN 1891.

To ascertain what the prices were in gold from 1869 to 1878, in table 33, reference should be had to the table already referred to on page 933. The average price to the farmer on these fifteen products for the first eight years—1840 to 1847, inclusive—was 69.6, while the average price for the same fifteen products for the last eight years—1884 to 1891—was 96.4, or more than 38 per cent higher during the last eight years than the former.

#### SILVER AND CROPS BEAR NO RELATION TO EACH OTHER.

When due consideration is given to the resources and facilities of the farmers to-day as compared with 1840, it can be demonstrated that each man can accomplish twice as much, which is equivalent to doubling the prices of his products. We are constantly told, you will remember, by the advocates of free coinage, that prices of crops and silver always rise and fall together, but when we recall the fact that silver was \$1.33 per ounce in 1840, 98 cents in 1891, and is only 68 cents to-day, we must be convinced that such a statement has not a scintilla of evidence upon which to rest.

It will be admitted, for the sake of argument, that prices have fallen some since 1873, but not so rapidly as prior to that time, as evidenced by the foregoing table, although silver did not fall at all from 1864 to 1873, the period of greatest fall in prices.

It remains to observe in this connection what caused the low prices from 1840 to 1845, the high prices from 1853 to 1873, the low prices from 1885 to 1891, and the still lower prices from 1893 to 1896.

#### LOW PRICES OF 1890 EXPLAINED.

At the close of the Napoleonic wars in 1815 commenced that long peace, during which the working force of the world recuperated for a quarter of a century and turned its entire attention and energy to the production of those things that were needed by mankind, and so successful were they in every endeavor that they made it possible to obtain the necessities of life at lower prices than the world had ever before enjoyed.

#### HIGH PRICES OF 1853 TO 1883 EXPLAINED.

Then came in rapid succession those military events which called the men from the shop and the field and converted the great producing army of the world into an army of wasteful consumers and actual destroyers of property of every kind. The war with Mexico raised prices about 25 per cent. Then followed the revolution in Germany, the French Revolution, the Crimea, the war of Napoleon III to make Italy "free from the Alps to the sea," the Franco-English expedition against China, the great rebellion in the United States, the conquest of Mexico by Napoleon III, the Franco-Prussian war, the era closing with the Russo-Russian war in 1877. Since then the world has been following exclusively the arts of peace and the human family has been unremittingly devoting itself to the production of the necessities of life, and has been assisted in this effort by the most marvelous discoveries and inventions in the history of mankind. The result was that prices of everything except labor continued to fall in a normal and natural way, as they should, down to 1892, when the prices of 233 articles in most common use again reached about the same level of 1840, as indicated in the tabulated statement No. 30, from page 100, volume 3, Senate report on prices, wages, and transportation.

#### RETROSPECT OF THE CENTURY.

Before considering the period between 1892 and 1897, let us look backward for a moment from 1892 over the history of the United States and consider how, if in any way, the fall of prices could have been prevented, and how now the exchangeable value of the products of the United States can be increased. Certainly no one will deny that the period between 1879 and 1892 was not only the

most prosperous in the history of our own country, but the most marvelous in development and advancement ever experienced by any people in the history of the world.

#### HOW TO PREVENT PRICES FROM FALLING.

In the light of the past, then, the exchangeable value of the products of labor could only have been kept from falling from 1873 to 1892 in the following ways:

First. By the perceptible increase in the wages of the producers of the 233 articles covered by the above tabulated statement.

Second. By a disuse or destruction of a very considerable number of those methods and processes by which all the necessities of life have been greatly cheapened.

Third. By setting one-half of the human family to killing the other half and destroying and wasting a considerable portion of the accumulated property now contributing to the convenience and comfort of mankind.

But will any of the advocates of higher prices urge the adoption of either of the two last methods? Certainly no one will withhold his hopes that the first may continue to gain until the equitable adjustment of labor and capital is reached.

#### 1840-1850 AND 1880-1890 COMPARED.

When one compares the prices from 1840 to 1850 with the prices from 1885 to 1891 and finds that they are upon identically the same level, he wonders, in the face of all recent discoveries, inventions, methods, and processes, including the use of steam and electricity, why prices have not fallen to at least one-half what they were in the earlier period; and, indeed, they would have done so but for the simple reason that as rapidly as advantages have been gained in facilities in production wages have constantly risen until now, as we have seen, they are double what they were in 1840.

Certainly no frank and careful investigator will claim that he can discover the slightest trace of the effect caused by silver legislation upon the affairs of this country between the years 1840 and 1891.

It remains, therefore, only to inquire into the events since 1892 and ascertain the causes of our misfortunes, study the sources of our ills, and clearly determine the factors that have produced the long-to-be-remembered crisis of 1893 and mark the reasons for its painful continuance.

#### SPECULATION BEGAN IN 1884 AND ENDED IN PANIC IN 1893.

Beginning with 1884, simultaneously with the same movement in nearly all parts of the civilized world, our people entered a speculative era which terminated in the panic of 1893.

#### THE CAUSES OF THE PRESENT CRISIS.

During these nine years the spirit of speculation crept over every section and into every locality of the land, firing the gambling instinct of the people with that false philosophy that something can be made out of nothing. The result was that all classes invested their fortunes or earnings or the proceeds of mortgages upon their homes in the construction bonds or stocks of railroads, street-car lines, gas companies, or bought lots cut out of farms surrounding every city and village in the land, until all our ready money was consumed in nonproductive investments. Finally every man became frightened at his neighbor's condition, credit was universally exhausted, and forced liquidation began and has been going on steadily ever since.

#### FREE SILVER WILL NOT ERADICATE THE GAMBLING INSTINCT.

Certainly no one will claim that the free coinage of silver will in the slightest degree relieve this situation nor eradicate the instinct that makes the whole human family gamblers at times.

#### NATIONAL CREDIT IS STRAINED.

While individual credit was becoming exhausted, unfortunately for our nation and our people, the Government was laying a breaking strain upon its credit by increasing its demand obligations at the rate of fifty millions a year, without increasing its reserve to the extent of a single dollar, until we exhibited to the world the pitiable spectacle of having more than a thousand million demand obligations out and but a paltry one hundred million to protect it, which in more conservative days we thought necessary to protect only \$346,000,000 of United States notes.

#### FREE COINAGE WILL NOT STRENGTHEN THE CREDIT OF THE NATION.

Certainly the advocate of free coinage will not claim that the credit of the Government would have been strengthened by an unlimited amount of the very thing that was fast carrying us on to repudiation?

Weakened by the expenditures of all the cash accounts of the people and the exhaustion of personal credit, and with our national credit strained to the breaking point, we were in no condition to bear the suspicion that this nation might construe the word "coin" to mean silver as well as gold, thereby compelling our creditors—indeed, all creditors—to accept 50 cents of value as a full payment for 100 cents of obligation. This was the logical and inevitable result of the free coinage of silver; hence its agitation and accomplishment would not only not have relieved us, but plunged us

still deeper into commercial trouble and made our financial ruin complete.

**FREE COINAGE WILL NOT PRODUCE REVENUE NOR LESSEN EXPENDITURES.**

Notwithstanding this combination of untoward circumstances, which called for the highest order of statesmanship and financial skill, little or no thought was given to the real problem calling for immediate solution. But the legislative department of the Government enacted a law that, either because of what it promised, threatened, or did actually do in failing to produce sufficient revenue to support the Government by an average of about fifty millions a year for four consecutive years, brought this, the wealthiest and most powerful nation of the world, to the very verge of bankruptcy, dishonor, and eternal shame. Now, it can scarcely be believed by anyone that the free coinage of silver would, on the one hand, have increased our revenues to the extent of a single cent, to say nothing of \$200,000,000, nor reduced our expenditures a single cent, to say nothing of \$200,000,000.

These were the positive, direct, and incidental causes that led to the crisis of 1893, which has been protracted by unnecessary war cries and the persistent demand of a portion of our people that the Government of the United States offer its people in the redemption of its obligations a dollar that could not exceed 50 cents in actual value.

**ACUTE LIQUIDATION WAS NOT RELIEVED BY A PROPER CURRENCY SYSTEM.**

Severe as has been the strain, difficult as has been our problem, complicated as has been the situation, unfortunately our currency system has not been such as to assist in relieving us in the slightest degree from the consequences of acute liquidation, but on the other hand actually precipitated it with all its disastrous results.

**FREE COINAGE WILL NOT GIVE US AN ELASTIC CURRENCY.**

Now, no one who is at all familiar with the science of exchange will claim that the free coinage of silver would have furnished the one essential element—a responsive and elastic currency—which might and probably would have saved us from the shock of panic and prevented the waste and destruction in values that necessarily follows a change from a credit to a cash basis. Herein lies the secret and full explanation of the ruinous prices of the past four years, and therefore no student of a judicial temperament will attempt to draw any inference from these abnormal times upon which to base a course of reasoning that he can apply to natural conditions.

**IF HIGHER PRICES IS THE ONLY OBJECT WE SHOULD START THE PAPER MILLS AND PRINTING PRESSES.**

From this review of nearly sixty years of our history we are justified in concluding that not a single theory advanced by the advocate of free coinage is substantiated by facts established by our own experience or those of the world, and are compelled to say that if with given wages higher and higher prices are desirable without regard to an increased exchangeable value of the products of labor the United States would be unwise in stopping at any form of metal money, and should at once resort to the paper mill and printing presses.

**WHAT IS MATERIAL CIVILIZATION.**

If, on the other hand, the purpose of this commercial struggle and material civilization is to give greater and greater purchasing power to a day's labor, so that every home may have more and more of the comforts of life, and instead of our present necessities becoming luxuries many present luxuries may become and be regarded as necessities, greater purchasing power should be given to every day's labor, the whole world should continue in the arts of peace, and we should welcome every discovery and process that would tend to lessen the cost of those things that make life worth living.

**THE TWENTIETH CENTURY WILL OPEN WITH THE FIRST REAL BATTLE FOR COMMERCIAL SUPREMACY.**

The twentieth century will open with the first really great battle for the commercial supremacy of the world. With what arms shall we enter the fight? Shall we depend upon bows and arrows while our competitors arm with the most approved muskets? Shall we depend upon the old wooden hull, with its white wings stretching out from the mast waiting patiently for a favorable wind, while other competitors traverse the sea in steel-clad greyhounds? Shall we subject every producer of the United States to an unequal contest by the adoption of a measure of value that will suffer a discount at every turn in every market of the world, when this trade contest is to be settled by a one-quarter, one-eighth, one-sixteenth, or one thirty-second of a cent?

**THE DISADVANTAGE IN EXCHANGE ALONE MEANS FAILURE.**

The certain disaster that is sure to follow the disadvantage in exchange alone by a country using a different measure of value from the great commercial nations of the world has been so keenly felt that Japan and Russia, the only two remaining silver-standard countries where the light of civilization has begun to dawn

and the energizing thrill of commerce has been felt, have since the 1st of January adopted measures establishing the gold standard. Russia, by an Imperial decree of January 3, 1897, established the gold standard, reducing silver to the place of subsidiary coins, while Japan, by legislative enactment just passed both legislative bodies, has determined a ratio for gold and silver—32½ to 1—with the distinct purpose of establishing within their own realm the gold standard also, and reducing the use of silver to the subsidiary coins.

If the United States would take her proper place at the head of all nations in the grand march of civilization, she must remove all barriers between the genius of her people and her mighty army of producers and the world's consumers, instead of inviting the most fatal obstacle to her supremacy.

**THE DEMAND OF THE HOUR.**

Theories must give way to experience; fancy must yield to facts; patriotic impulse must override blind partisanship; prejudice and false assumption will wither in the sunlight of truth. This great question, involving as it does the hope of the people and the future of the nation itself, calls loudly for the display of candor, earnest thought, moral courage, the highest order of patriotism, and our best statesmanship.

In conclusion, therefore, let me express the hope that in the consideration of this subject at least no attempt will be made to overlook, forget, and much less obscure or suppress the truth, but that the responsibilities of the citizens of this Republic may be kept constantly in view.

A careful study of each proposition and the adaptation of the various principles involved in this measure to our condition and needs will, I think, justify the following conclusions:

First. Our banking business would be taken out of politics.

Second. Our Government would be taken out of the banking business.

Third. We would escape the expense and danger always attending fiat money issues.

Fourth. We would save in interest on our national debt \$12,000,000 every year.

Fifth. We would demonstrate to the world that our credit was higher than that of any other nation, the rate of interest on our public debt being reduced to 3 per cent, while that of Great Britain is 2½.

Sixth. Our measure of value being definitely determined and permanently established, hundreds of millions of dollars from abroad and at home would instantly seek the channels of trade and at constantly lowering rates of interest, affording every good enterprise ample means for its promotion.

Seventh. Every dollar of our currency would be good enough to pass current in every land and travel around the entire world side by side with the Bank of England notes.

Eighth. The entire reserves of our banks would be gold or its equivalent.

Ninth. A vast amount of gold and silver, taking the place of our smaller bills, would circulate among all our people with a most salutary effect.

Tenth. Our smaller villages and more remote places would have the advantage of banking privileges, and equal justice would be meted out to every honest man entitled to credit.

Eleventh. The producers of every kind and in every section would be supplied with ample currency at reasonable rates of interest to handle or hold their crops or manufactures until they desired to dispose of them.

Twelfth. The rates of interest would be much lowered and equalized throughout the United States.

Thirteenth. Instead of our eight different kinds of money we would have but two besides gold and silver, and ultimately but one.

Fourteenth. All holders of notes would be guaranteed against loss, the United States redeeming them in case of liquidation.

Fifteenth. All depositors in national banks could be insured against loss in case of a bank failure.

Sixteenth. Bank panics and currency famines would be impossible, and therefore unknown.

Seventeenth. The cotton and grain growers, the stock raisers, and manufacturers would soon learn that their own property—stock, grain, cotton, and merchandise—is as good a basis for money in the form of currency as gold or silver, and that the only prerequisites are a fixed measure of value, means of repayment, and a good name.

Eighteenth. The credit of the nation could not then be strained and brought in question, as it has been during the past four years, paralyzing trade, prostrating commerce, ruining enterprises, and destroying all credit, which has become so important a part of modern civilization.

Nineteenth. All banking institutions would seek protection under this law, the system would become uniform and universal, the individual would be better served, and the public better protected.

Twentieth. Doubt would give way to certainty, fear to hope, confusion to order, hesitation to confidence, and upon our integrity and intelligence would rest the beneficent smile of Providence.

Let us hope, then, that in the consideration of a subject that should be absolutely free from political prejudices, the bitterness of the partisan contest may disappear; that the charge, insinuation, and suspicion even of dishonest intention on the part of a great portion of the American people may linger no longer, but that, with a full realization of the wrongs suffered and injuries and losses inflicted upon them, we may, as true men, patriotic citizens, and wise legislators, having in trust the interests not only of our own immediate neighborhood but of every section, and of every man even living under our flag—realizing that he is our brother—seek out the cause of his complaint and study how to guarantee to him equal opportunities under the operation of just laws.

### The Tariff.

### SPEECH

OF

HON. F. C. TATE,

OF GEORGIA.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 24, 1897.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States—

Mr. TATE said:

Mr. CHAIRMAN: By the tariff act of 1890, known as the McKinley bill, it was proposed to reduce revenues, and by the present bill it is proposed to increase revenues and encourage the industries of the United States.

Now, Mr. Chairman, to raise a revenue you must so adjust the tariff that foreigners will send their goods to this country, for if no foreign goods are imported into this country there can be no revenue; and if they are imported, American manufactures are not protected from competition. Now, sir, how can you keep out foreign products and get a revenue at the same time, or how can you admit foreign products and at the same time prevent them from competing with American manufactures?

Mr. Chairman, the day for the practice of such glittering falsehood is past. The people can not be misled by any such inconsistent statements. Why not meet this question fairly and declare that this bill is for the purpose of protecting and making more profitable the business of the people engaged in manufacturing in the United States by prohibiting in most instances competition from abroad, and by allowing the American manufacturers to form agreements, trusts, and combines whereby they will be able to put up the price of what they sell to the farmers and laboring people of this country? Sir, with all foreign competition shut out by this bill, it will be an easy matter for the trusts now formed and those that certainly will be formed by reason of the passage of this bill to limit their output and increase prices.

#### CONSUMER PAYS THE TAX.

One would think from hearing the speeches of those who advocate the passage of this bill that an abundant revenue and overflowing Treasury meant prosperity to the people. Suppose you pile up money in the United States Treasury; how does that relieve the distress of the people? You say the trouble is due to a lack of revenue. Suppose you raise more revenue than is required to support the Government; how will that add to the prosperity of the people unless you give one class benefits by special legislation in their interests? Then you can only benefit that favored class at the expense of every other class, for if you legislate money into one man's pocket, you legislate it out of some other man's pocket—some one must do the paying.

But you say under a protective-tariff system the foreigner pays the tax. How does he pay it? When he ships his goods to this country the Government collects the tax or tariff when his goods enter our ports, and the foreigner adds the tariff tax to the price that he gets for the goods he sells to our people, just like the merchant adds the freight to the price of the goods he sells his customers, or the barkeeper adds the amount of tax he pays on his whisky to the price at which he sells his whisky. In each case the consumer pays the original cost of every article he buys, including the tariff, the freight, and a profit of the seller. If this were not true, goods would not be shipped to this country and sold, nor would people engage in any kind of business.

On page 160 of this bill we find the following provision:

SEC. 24. That where imported materials on which duties have been paid are used in the manufacture of articles manufactured or produced in the United States, there shall be allowed on the exportation of such articles a drawback equal in amount to the duties paid on the materials used, less 1 per cent of such duties.

And this section further provides:

And the drawback due thereon shall be paid to the manufacturer, producer, or exporter, to the agent of either, or to the person to whom such manufacturer, producer, exporter, or agent shall in writing order such drawback paid, under such regulations as the Secretary of the Treasury shall prescribe.

Now, if the foreigner pays the tariff, why provide that this drawback shall be paid to the manufacturer, producer, or exporter, or to the agent of either? If the importer pays the tax, why pay it back to the exporter or his agent?

No, Mr. Chairman, the "manufacturer, producer, or exporter" pays the tariff, and not the foreigner or importer, and this provision is put in this bill for the purpose of paying back to the "manufacturer, producer, or exporter" the tariff paid for the imported materials used by him while he clamors for higher tariff taxes on everybody else, and, in fact, dictated the provisions of this bill in his own selfish interest.

The manufacturers of my district engaged in the manufacture of leather and those engaged in manufacturing chairs have filed protests against the taxing of oils used in tanning and cane used for making chairs. Mr. Chairman, the manufacturers themselves make such protests on the ground that it would only result in an increased cost to the consumer without any return to the manufacturer. These are candid men of exalted character who make this protest. They know the consumer pays the tariff, and they desire to relieve their customers from the increased cost of the product they sell. [Applause.]

#### DEPRESSION NOT DUE TO FOREIGN COMPETITION.

Mr. Chairman, we only have in existence in this country \$1,700,000,000. The amount required for taxes by the United States each year is \$540,000,000, and the taxes required for the States, counties, cities, and towns amounts to \$500,000,000. How can we expect the American people to be prosperous when \$1,050,000,000 of the \$1,700,000,000 of money in the country is annually taken from them in taxes?

Mr. Chairman, the Wilson bill failed last year by \$25,203,245 to raise enough money to meet the demands of the most extravagant Congress in the history of this Government, except, possibly, the Fifty-first Congress; yet we were told by the framers of this bill that it will increase the tariff taxes to such an enormous extent that it will raise \$113,000,000 more than the present law.

Why tax the people \$113,000,000 more, when \$25,000,000 is all that is needed to pay the expenses of the Government and the appropriations of the most extravagant Congress that this country has ever been burdened with? There can be no reason, unless it be for the purpose of further extravagance and to increase the profits of the manufacturers of this country by putting up the price of what the people buy. By the census of 1890 the output of the manufacturers of this country, after deducting the cost of material, was \$4,860,286,837, and the exports of domestic manufactures the same year were \$151,102,376, making the output more than \$4,000,000,000 in excess of the exports.

The imports for the same year were \$789,310,404, and for the year 1896 were \$779,724,674, being \$9,585,720 less than 1890. On the amount of foreign goods last year imported into the United States, this Government collected import duties to the extent of \$160,021,751. This was under the Wilson bill. Now, if the amount of increase in the price of foreign goods, by reason of the tariff duties, and the price of the goods made and sold by the domestic manufacturers of this country be the same, the school children—whose books are taxed by this bill—would have an example like this to solve: If the Government of the United States collected \$160,000,000 tariff taxes on \$779,724,674 worth of foreign goods, how much did the domestic manufacturers put into their pockets on \$4,000,000,000 of goods manufactured and sold by them to the people of this country?

Then, Mr. Chairman, when they have found an answer to the problem, they can take the answer and work another example of like nature: If to raise \$160,000,000 in tariff taxes the people paid to the protected manufacturers in increased prices for what they bought the amount found in the first example, how much more will the people of the United States pay to the protected manufacturers in raising one hundred and thirteen millions more in tariff taxes by this bill? Then by adding the two answers together they will have the amount of profits of the protected manufacturers of this country, and they will more fully understand why the protected classes have grown rich while the balance of the people have become poorer each year.

Mr. Chairman, it is insisted that the trouble with the country is foreign competition. You tell us that the distress of the men who labor in the factories of America is caused by goods being imported into this country which are made by the pauper labor of

Europe; that the trouble with the American manufacturer is foreign competition. How can this be true when we import to-day less, comparatively, than at any time before in the history of this country? The competition with foreign goods is growing less and less each day. Yet our friends who support this bill tell us that the condition of the labor engaged in American manufacturing is in a worse condition than ever before. With less foreign goods coming into our market, the condition of our labor, and of the manufacturing interest of this country, can not be due to foreign competition.

I have prepared the following table, showing the value of foreign merchandise imported into the United States and the value of domestic manufactures exported from the United States from 1890 to 1896:

Year.	Imports.	Exports of domestic manufactures.
1890	\$789,310,409	\$151,102,376
1891	844,916,196	168,927,315
1892	827,402,463	158,510,937
1893	806,400,929	158,623,118
1894	654,994,622	183,728,808
1895	731,960,965	183,595,743
1896	779,724,674	229,571,178

Now, sir, it will be seen from this table that the amount of foreign merchandise shipped to this country decreased from 1894, the date of the passage of the Wilson bill, and the amount of goods manufactured in this country and sold abroad increased. Now, in the face of these facts, how can anyone insist that the present condition of the country is due to the passage of the Wilson bill or foreign competition?

#### THE LABOR QUESTION.

Mr. Chairman, we hear a great deal upon this floor about the pauper labor of Europe, and in this connection I desire to read from the report on labor of Secretary of State William M. Evarts to the Forty-sixth Congress. I read from page 36:

The average American workman performs from one and one-half to twice as much work in a given time as the average European workman. This is so important a point in connection with our ability to compete with the cheap labor manufactures of Europe, and it seems on first thought so strange, that I will trouble you with somewhat lengthy quotations from the reports in support thereof.

For the first time our manufactures are now assuming international proportions. At a time of universal depression we have met those nations which held a monopoly of the world's markets, met them in their strongholds, and established the fact that American manufactures are second to the manufactures of no other nation, and that, with a proper and patriotic understanding between capitalist and laborer, we can command a fair share of the buying world's patronage, and command that patronage with larger profit to the capitalist and higher wages to the laborer than can be made or paid in any other country.

Then, after showing the superiority of our workmen, he says (page 37):

One workman in the United States, as will be seen from the foregoing extracts, does as much work as two workmen in most of the countries of Europe; even the immigrant from Europe attains this progressive spirit by a few years' association with American workmen.

We have no oppressed and stupid peasantry, little more intelligent than the tools they handle. All are self-thinking, self-acting, and self-supporting.

This is the report of one of the leading Republicans to the Congress of the United States while Secretary of State.

A similar report was made by Mr. Blaine, and I am sure none of our friends on the other side of the Chamber will question the statement of Mr. Blaine, who was the leader of his party for so many years, and who was one of the greatest, if not the greatest, of Republican statesmen of his day. What does he say in his report to Congress on this question? After setting out the facts upon which he based his report, on pages 98 and 99 he says:

The wages of spinners and weavers in Lancashire and in Massachusetts, according to the foregoing statements, were as follows, per week:

Spinners: English, \$7.20 to \$8.40 (master spinners running as high as \$12); American, \$7.07 to \$10.30.

Weavers: English, \$3.94 to \$5.04, subject at the date on which these rates were given to a reduction of 10 per cent; American, \$4.52 to \$5.73.

The average wages of employees in the Massachusetts mills is as follows, according to the official returns: Men, \$5.30; women, \$5.62; male children, \$3.11; female children, \$3.08. According to Consul Shaw's report, the average wages of men employed in the Lancashire mills on the 1st of January, 1890, was about \$6 per week, subject to a reduction of 10 per cent; women, from \$3.40 to \$4.30, subject to a reduction of 10 per cent.

The hours of labor in the Lancashire mills are 56 in the Massachusetts mills 60 per week. The hours of labor in the other New England States, where the wages are generally less than in Massachusetts, are usually 60 to 62 per week.

Undoubtedly the inequalities in the wages of English and American operatives are more than equalized by the greater efficiency of the latter and their longer hours of labor. If this should prove to be a fact in practice, as it seems to be proved from official statistics, it would be a very important element in the establishment of our ability to compete with England for our share of the cotton-goods trade of the world.

From these returns it is seen that every American spindle consumes 60 pounds of raw cotton, while each British spindle consumes only 35 pounds, or less than one-half the American consumption per spindle.

It thus appears that each American operative works up as much raw material as two British operatives, turns out nearly \$1.50 worth of manufactures to the British operative's \$1 worth, and even in piece goods, where the supe-

rior quality and weight of the American goods are so marked, the American operative turned out 2.75 yards to 2.50 yards by the British operative.

Munhall shows the product of each employee in countries other than the United States to be as follows: England, \$793; France and Germany, \$545; Belgium, \$547; Switzerland, \$437; Austria, \$411; Russia, \$384; Spain, \$368; and Italy, \$367; while the census of 1890 shows that 4,717,622 employees in America produced \$9,372,437,388 worth of products, which shows an average per hand of \$1.98.

This shows that one hand in America produced more than twice as much as a hand in England, and more than three times as much as a hand in France, Germany, and Belgium; and four times as much as a hand in Austria, Switzerland, Russia, or Spain, and more than seven times as much as Italy.

Now, sir, I am willing to go as far as any man to better the condition of the laborers in this country; but if these figures of Mr. Evarts and Mr. Blaine are true, the factory labor of the United States is paid less in proportion to what they produce than the factory labor of any other country in the world.

#### THE PEOPLE JUSTLY COMPLAIN.

A tariff for protection places all the burdens on the producers of farm products and the laborers of this country. Under a protective tariff system and our unjust financial system the wealth of the country is fast drifting into the hands of a few millionaires. Any system of laws that enables a few men to accumulate greater riches than kings in a few short years is radically wrong and unjust. [Applause.]

If the people cry out and demand the repeal of laws unjust to them and the enactment of such as will give them equal opportunities, they are told that they must not agitate; they must be quiet and submit; that they will destroy confidence and frighten capital.

Why, Mr. Chairman, the reason for the complaint of the people grows out of the fact that they have lost confidence themselves in the justice and fairness of the legislation of the country, and how can it be otherwise when the rich are growing richer and the poor poorer each day by reason of such laws as the bill now before this House?

The fate of ancient Rome and other nations of antiquity tells us that their decline and fall were caused by the concentration of the wealth of those countries in the hands of a few people. In the language of another, when darkness settled over Egypt and she lost her place among the nations of the earth, 3 per cent of her population owned 97 per cent of her wealth; when Babylon went down, 2 per cent of her population owned all the wealth; when Persia bowed her head, 1 per cent of her population owned all the land; when the sun of Rome set in black despair, 1,800 men owned and controlled all the known world.

The United States for the past thirty years has followed the path traveled by these nations, and to-day 40,000 people own more than one-half of the wealth of the United States, and 250,000 of her 70,000,000 people practically own all the wealth in this country.

In 1850 the farmers of this country owned five-eighths of the wealth of the United States; in 1860, three-fourths; in 1870, a little more than one-third; in 1880, one-sixth, and in 1890, one-seventh.

In 1890 the farmers had \$13,279,252,649 invested in farm lands, and their products, not including live stock, brought \$2,460,107,454.

The manufacturers of this country in 1890 had a capital of \$6,139,397,895, and after deducting cost of material, as I have heretofore shown, their output was \$4,860,286,837, and the amount of wages earned by employees in manufacturing was \$1,221,170,454.

Now, if we take the \$1,221,170,454 paid for labor by the manufacturers of this country from \$4,860,286,837, the value of the goods produced, we have an income to the manufacturers of this country of \$3,639,117,383, or about 60 per cent profit for the year 1890.

It will be readily seen from these figures how the manufacturers took care of the poor laborers who made, in 1890, \$4,860,286,837 for them, and they allowed them \$1,221,170,454 of this sum; and the manufacturers, after allowing 10 per cent on their investment, got in addition \$3 every time the laborer who made the goods got \$1.

#### PROTECTIVE TARIFF DOES NOT BENEFIT THE FARMER.

Mr. Chairman, a large majority of the people of my district are farmers. I was reared upon a farm, and know what difficulties under present conditions surround our farmers. I fully understand the constant toll that is required of our farmers in order to pay store accounts, provision bills, guano notes, and excessive taxes in the fall of the year. They must all be paid out of the year's crop.

If the crop is cotton, there is no protection on cotton; cotton is produced in competition with the labor of the world, and sold in the open markets of the world without any protection. Yet every item of manufactured goods sold the farmer under this bill bears an average tariff tax of 57 per cent, an increase over the McKinley bill of 7 per cent. How can the farmers who make cotton pay this tax and prosper? We are told there is nothing sectional in this bill; that it protects all alike. I would be glad for some one of its champions to point out how it protects the cotton growers of the South. Do you do it by putting a tax on cotton bagging and ties and on cotton gins; on farming tools, and on everything upon God's green earth that he buys?

The labor of the world is engaged in raising cotton, wheat, corn, and oats. "Oh," you say, "the cotton producers get no benefit from this bill. But that is not true of the corn, wheat, and oat growers. They are protected." I deny it. It is true you have a tariff tax of 15 cents a bushel on corn, 20 cents a bushel on oats, and 10 cents a bushel on wheat.

The agricultural schedule of this bill that we are told will relieve and encourage the farmers of this country and bring to them the prosperity promised in the last campaign can not in any way benefit them or relieve them from the present depression due to falling prices. Under this bill a tariff tax of 15 cents a bushel is put on corn. How can this increase the price that the farmer will get for his corn? The farmers of this country produce 2,151,139,000 bushels of corn, while the balance of the world produces only 492,332,000.

This shows that the farmers of this country produce 87 per cent of the entire corn crop of the world. During the fiscal year 1896 the United States exported 101,100,375 bushels of corn and corn meal, and imported 4,388 bushels of corn. How can 15 cents on 4,388 bushels of corn, which come to this country principally for seed, increase the price of 2,151,139,000 bushels of corn made by our farmers?

Why, Mr. Chairman, we made 101,100,375 bushels more corn and corn meal last year than we needed, which we were compelled to send abroad to find a market, and as the price of the 101,100,375 bushels of corn sold in the open markets of the world fixed the price of corn in the home market there was no increase in the price of corn made by the farmers of this country by reason of the tariff on corn, for any country that produces a large surplus of a product and disposes of that surplus in the free markets of the world, the price received for the surplus fixes the price of the product at home. This rule applies to the \$509,879,297 of agricultural products sold in a foreign market last year.

During the fiscal year 1896 the farmers, as I have shown, sent over 100,000,000 bushels of corn abroad to find a market. They exported over 13,000,000 bushels more of oats than were imported into this country; over 58,000,000 bushels more wheat than was imported. The value of wheat flour exported over that imported was over \$52,000,000.

We exported 372,461 head of cattle and only imported 734 head. We exported 25,126 head of horses and imported 9,990 head.

The value of raw cotton sent abroad to find a market was \$190,056,464.

Our exports of lard were over 500,000,000 pounds more than our imports. Our exports of bacon and hams were over 554,000,000 pounds more. Our exports of fresh and pickled pork exceeded our imports by more than 70,000,000 pounds. We sent over 369,000,000 pounds more of fresh, canned, and salted beef out of the United States to find a market than was shipped to this country. We exported 26,691,963 pounds of dried apples last year and imported only 13,648 pounds, and we exported 300,000 barrels more of green and ripe apples than we imported. We exported 11,000,000 pounds more of butter and over 500,000 bushels more of potatoes than we imported.

With the farmers of this country furnishing 86 per cent of our export trade, how can the tariff duties provided by this bill increase the price of the products they are forced to export and sell in competition with the world? Mr. Chairman, the farmers of this country will not be deceived by the rates on farm products in this bill. They know that, if they must ship their products abroad in order to find a market, tariff taxes do not benefit them.

Mr. Chairman, the farmers of this country would not complain at the enactment of a just tariff law that levied duties for the purpose of raising revenue and which distributed the duties levied with fairness, but when the sturdy farmers of this country who are to-day plowing their fields, their hearts fresh in the love of their wives, their children, and their homes, their souls hopeful in the prospect of a coming crop made by honest toil, their lives pure, their consciences clear, fully understand the provisions of this bill, they will justly repudiate those who seek at the dictation of the protected classes to fasten this unjust legislation upon the country. [Applause.]

Mr. Chairman, the paid emissaries of wealth and their representatives, under the false plea of aiding the farmers and laborers of this country, appeal to Congress after Congress for legislation purely in their own interest. They can be relied upon to furnish a scheme at each Congress which they insist will relieve the country. This bill is but another one of their efforts to enrich the few at the expense of the plain people of this country.

Sir, when I first entered the Fifty-third Congress we were told that to bring prosperity to the country we must repeal the purchasing clause of the Sherman Act, and after bringing every influence to bear upon Congress the purchasing clause of the Sherman Act was repealed, but prosperity did not come. The next remedy was the issuing of bonds, which we were told would relieve the people. Bonds to the amount of \$362,000,000—not by authority of Congress, but in spite of Congress—were issued and sold.

I am glad, Mr. Chairman, that representing what I believe to

be the best interest of the people, I voted against the repeal of the purchasing clause of the Sherman Act, and against the proposition to issue bonds; but the repeal of the purchasing clause of the Sherman Act, and the placing of a mortgage debt on the people, their children and their children's children, could not and did not better the condition of the country. The next promise to the people was plenty and prosperity if they would declare against Bryan and Bryanism. This we were told would restore confidence and bring prosperity. The present occupant of the White House was represented as the advance agent of prosperity. It seems that he is far in advance of it; at least four years in advance.

Sir, the people of this country will not have prosperity until we restore the money of our fathers, enact a tariff law for revenue that places taxes highest on luxuries and exempts, as far as practicable, the necessities of life, and is limited to the necessary expenses of the Government economically and honestly administered. Sir, when we give to every American citizen an even chance in the game of life, then eternal justice will rule supreme, and then the people of this glorious country of ours will move forward toward that splendid future of fullest triumph and ultimate glory which it is their destiny to reach. [Applause.]

### The Tariff.

### SPEECH

OF

HON. J. YOST,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 31, 1897.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States—

Mr. YOST said:

Mr. CHAIRMAN: I send to the Clerk's desk the following amendment:

On page 23, line 1, strike out "forty" and insert "seventy-five;" so that it will read:

"Iron ore, including magniferous iron ore, the dross or residuum of pyrites, 75 cents per ton."

Mr. Chairman, it is with the greatest reluctance that I find myself compelled to antagonize the committee upon this schedule. Nothing save an imperative sense of duty to the constituency I have the honor to represent could induce me to challenge the findings of those distinguished gentlemen who have so ably and so zealously devoted themselves to the preparation of a bill the enactment of which will, I believe, bring to this country a rich measure of prosperity.

It is in this spirit that I offer this amendment, believing it to be in full accord with the principle upon which this bill is based, and because, to a degree, it is responsive to the demand which the people of this nation made for tariff legislation.

They had a right to expect, and they did expect, that success upon the issue joined would not only place at the head of this Government a man broad enough to represent the interests of a whole country, but would also be productive of legislation equally comprehensive.

I do not charge that the majority members of the Ways and Means Committee, in framing this measure, intended to discriminate against any section. On the contrary, I believe they were animated by a sincere desire to advance the interests of all upon broad American lines. But these gentlemen are but human and naturally subject to the influence of environment. Necessarily they are more familiar with the needs and requirements of their own sections, and in contemplating immediate interests lose sight of the interests of others which stand in apparent conflict. We of the South who stand on this side of this Chamber, knowing the extent of Southern resources, and believing that the upbuilding of our section is linked with the maintenance of the principle of protection, have, in effect, been deprived of representation in the preparation of this bill.

Our Democratic friends have practically monopolized Southern representation on the Ways and Means Committee. They are doubtless sincere in their conviction, and that very sincerity compels them to oppose the protective principle, and prevents them, under that principle, from advocating and insisting upon those schedules the incorporation of which means the development of the South and the prosperity of her people. For this reason Southern industrial interests have not had that consideration in the preparation of this bill which their extent and importance entitle them to; nor has there been opportunity to call attention to this discrimination since the bill has been under discussion. For nearly two weeks the measure has been under consideration in the Committee of the Whole. Theoretically, it is here that the schedules are discussed and amendments offered.

As a matter of fact, almost the entire time has been consumed

In the revamping of old campaign speeches, so that not even one-tenth part of the bill has been read by sections; nor is there any promise of progress being made should the time be extended. It is the apparent purpose of the minority to prevent an intelligent discussion of schedules. Representatives whose constituents are to be seriously affected, and who desire to present amendments and the reasons therefor, have for days been seeking an opportunity to discharge their duty. That opportunity has been denied them. The time which should have been devoted to an earnest and practical consideration of schedules has been frittered away in declamations and the reshaping of theories which the American people have distinctively condemned. We have passed the theoretical stage. The public policy of this Government has been determined, and the duty of the hour is to carry forward the work on the lines laid down by the American people in November last. The theoretic question was submitted and decided, and in harmony with that decision is the amendment I have offered.

In declaring for a return to the protective policy the people declared for the principle of the McKinley bill, and they declared also for the schedules of that bill where an abandonment of the schedules involves an abandonment of the principle. Under the McKinley bill the duty on iron ore was 75 cents per ton, and we ask that under this bill that duty be restored. Who objects to this? We are told that Eastern furnace men are demanding cheap foreign ore in order to meet the fierce competition with which they are confronted and because their own domestic beds have been exhausted. But the East is not the only producer of iron, although in the past the bulk of the production has come from that section. In recent years new and formidable competitors have entered the lists, and the battle of evolution is now on. They are American competitors and are entitled to a fair field under a broad American policy. For generations the Eastern furnace men, possessing the raw material, ample capital, and proximity to market, and protected as they have been against ruinous foreign competition, for generations we have paid tribute to the East; have practically dominated the trade. They have prospered in the enjoyment of these advantages, and their supremacy would have remained unchallenged had not the wonderful natural resources of the South and West attracted the attention of capital and invited development. The alliance of Southern resources and Northern enterprise and capital is fast transferring the center of iron production, so that to-day the only competition the Eastern furnace men fear is that of their Southern brother. And against that brother they are now crying aloud for an abandonment of the policy under which they have prospered, because a continuance of that policy will result in the utilization of the millions of tons of ore now lying useless in the South.

We are willing to meet these gentlemen under fair conditions. They have the advantage of nearness to market; we the advantage of abundant raw material. Not satisfied, however, with the advantage which their location gives, they are asking the additional advantage which cheap foreign ore would afford. Against this we protest. Instead of bringing this ore from abroad, let us put our own people to work and transfer the scene of activity from across the water to our own doors. The West can furnish all the Bessemer ore needed, and the South can supply the material for the basic steel. There is no reason why the 776,000 tons of iron ore imported last year should not have been produced here. For generations we have paid tribute to the East, and now when the tables are turned and the gifts which nature has bestowed upon the South are ripe for the uses of man, it is both selfish and wrong to undertake to fasten upon us a law which opens the door to the foreign ore and closes the mines of the South.

The true purpose of protection, as I understand it, is development of American resources by American labor. Whenever an article can be produced or fairly substituted in this country, American labor should be given the opportunity to produce it. To this end the tariff rates should be adjusted so as to measure the difference between the wages paid under our system and the wages paid in foreign lands. Apply this principle to the schedule under consideration. There is not a ton of the iron ore imported last year which can not be duplicated here, or fairly substituted. I am aware that gentlemen contend that this foreign ore is different from our domestic product. I admit that it is good ore, but insist that there is no metal into which it enters that could not be made from American ore. It is brought here, not because its place can not be supplied from American mines, but because under our labor system it can not be supplied so cheaply. That is the reason, and the only reason, why the million and a quarter dollars paid in 1895 for foreign iron ore was not paid to American wage earners. To the extent of this importation have our own laborers been deprived of employment. To this extent they have been wronged. The opportunity is presented now of righting this wrong, and we should not hesitate to do it. Let us have back the principle of the McKinley bill, and let us prove that our party is national, and that it looks to and labors for national development and not for the benefit of any special section, however great that section may be.

The principle of Republican protection is in the manufacture and sale of American products and the taxation of foreign imports.

### The Tariff.

### SPEECH

OF

HON. DANIEL W. MILLS,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 24, 1897.

On the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. MILLS said:

Mr. CHAIRMAN: In all history of national growth and development it has been wisely said that experience is a valued teacher. Sometimes this experience is accompanied with joy and prosperity; sometimes with sadness and demoralization; and I believe I can truthfully state, without fear of contradiction, that the American people have tasted the fruits of both. In all the history of our experience, considering the advantages we should have gained by rapid growth and development, we have had no period of depression and general demoralization greater than that which confronts this Congress, assembled as it is in extraordinary session to provide proper remedies for the evils existing by reason of Democratic mismanagement and stupidity.

#### PRESENT CONDITIONS.

Progress is a system of changes and developments, and a government in order to properly govern must be capable of meeting those exigencies which arise from conditions prevalent at the time.

For the last four years the American people have lived in an era wrought from the darkest clouds of despair. The merchant, the farmer, the toiler, have all witnessed the evil omens in the skies of distrust, and with that conscious instinct of self-preservation taught in the school of experience and practice, they have asked that present conditions be changed.

Distrust and Democracy—the two are correlative terms—have given way to Republican rule, which, like a beam of sunlight in the wake of a fearful storm, bids godspeed to the coming of a brighter day. Reason is once more established in high places of governmental management, and throughout the length and breadth of this great nation men have begun to feel that "the Government at Washington still lives."

To meet this emergency, Mr. Chairman, we have been called together to pass a tariff bill which will provide sufficient revenue to carry on the Government and to enable American industries to again resume active operations. It seems to me that the greatest argument which presents itself to the minds of all honest-thinking men in favor of a protective tariff is the present condition of our country, its industries, and its people. Words are inadequate to express a more forcible reason for protection than these.

#### THEORY VS. EXPERIENCE.

In all tariff discussions there have been two dominant ideas rising above all others, one based upon theoretical reasoning, the other upon the sound principle of actual experience and condition. One is a matter of caprice, the other a matter of fact, and in this discussion of taxation we have had Democratic theory vs. Republican facts.

The Democratic party, in a moment of spasmodic forgetfulness on the part of the people, was thrust suddenly into power and controlled all avenues of legislation, which gave them a wide field to put into operation all their cherished ideas of a tariff.

Like a lot of schoolboys drilled for a commencement exercise, they went onto the stage of political action and either forgot what they were told to do or were jealous of each other. Their brains were full of theoretical delusions, and, after wrangling for months over pet fancies, they passed a bill a part of which has since been declared unconstitutional by the Supreme Court, and which also became a law without the President's approval, and left the country a continuous deficit of over \$203,000,000 in four years, or over \$50,000,000 per annum, and which, we are informed by the late Secretary of the Treasury, will be augmented by a further deficiency of \$45,000,000 for the fiscal year beginning on July 1 next, if existing conditions continue.

We have here a practical demonstration of what it cost the American people to indulge in Democratic fanaticisms. Yet we are told here by these learned gentlemen of Jeffersonian proclivities that the Republican party seeks to impose unnecessary burdens upon the people by its tariff legislation. What greater burden could be imposed upon the people than the increased bonded indebtedness of \$262,815,400, made necessary under the last Administration by the decrease of the revenue? Common sense seems to dictate a change from the economic conditions forced upon the nation by Democracy and its followers, whether they be middle-of-the-road Populists of the South or Bryan Silverites of the West.

## NEED OF MORE REVENUE.

No one will attempt to deny that the Government must have a sufficient revenue to meet its expenses, and since the income-tax law has been declared unconstitutional by the Supreme Court, what else remains but to pass a tariff measure to meet the exigencies of the occasion?

To meet these conditions we are now offered a tariff measure which presents the following figures:

*Rough preliminary estimate of revenue from proposed bill.*

Schedules.	Duties—			
	Collected in 1893.	Collected in 1896.	Estimated.	Increase.
Chemicals, oils, and paints....	\$6,369,522	\$5,513,545	\$5,196,226	\$2,682,681
Earthen, earthenware, and glassware.....	12,118,305	7,644,422	11,901,532	4,257,110
Metals, and manufactures of.....	27,082,729	13,332,002	17,343,676	4,010,984
Wood, and manufactures of.....	1,857,803	384,713	2,143,588	1,758,375
Sugar.....	193,294	20,910,016	51,645,896	21,735,880
Tobacco, and manufactures of.....	14,831,990	14,859,117	22,257,788	7,398,671
Agricultural products and provisions.....	13,905,671	7,859,600	14,109,998	6,310,128
Spirits, wines, and other beverages.....	9,704,393	6,995,648	9,732,827	1,797,179
Cotton manufactures.....	11,536,005	9,311,330	11,077,119	1,765,799
Flax, hemp, and jute, and manufactures of.....	18,974,850	12,018,063	19,834,845	7,816,733
Wool, and manufactures of:				
Wool.....	8,303,323	20,027,589	17,538,399	17,538,399
Manufactures of wool.....	26,404,798	12,504,006	50,274,704	27,240,935
Silk and silk goods.....	20,310,259	1,242,125	14,357,536	1,853,550
Pulp, paper, and books.....	2,070,124	10,929,164	1,300,331	88,406
Hundries.....	15,006,544	37,879	14,198,898	3,248,794
Unenumerated—unmanufactured.....	717,531	124,258	37,879	.....
Articles transferred from free list to dutiable.....	368,951	.....	124,258	.....
			4,000,000	4,000,000
Total revenue.....	198,373,466	155,025,917	200,106,710	113,479,790

From these deductions we are assured of an increase of \$113,479,798 over that of the last fiscal year, and while seemingly large, is not more than the contingencies liable to arise seem to warrant.

In this hour of financial distress, when people are on the verge of questioning the stability of the nation's credit, too much money will do no harm, while too little has already stifled the freedom of speculation and interchange of commercial transactions. In all transactions which effect prosperity and progress the nation must lead, while the people, being a part of that nation gathering together their individual interests, follow on in that road which leads to safety. When you deplete the resources of the Government, you frighten the people and stampede capital into seclusion. No people can be considered safe and contented when there exists distress at the fountain head of government. Government means guidance, and there can be no safer guidance than sufficient means.

## PROTECTIVE TARIFF AS A LICENSE.

But our Democratic friends on the other side tell us we collect more revenue than we need, and that our bill will collect from the people more than the requirements demand.

I am not ready to admit, Mr. Chairman, that the people pay this tax. Tariff taxation is principally levied on importations, and importations come from abroad. Whatever tax, therefore, may be laid upon importations is paid by the persons who cause these articles of commerce to be brought to our shores. They have an object in bringing these goods here, and that object is to place them upon our markets for sale. We have a great nation, which is without question the greatest manufacturing nation in the world, and if any men or set of men choose to engage in the business of importing articles of foreign manufacture to our shores for the purpose of placing them in competition with our own products, I do not know of any reason why they should not be made to pay for the privilege of trying to close up the manufacturing industries of the United States. Nobody has any more rights than ourselves. We pay our workmen good wages, and as a result we stimulate active energy, which produces marvelous results. Even our friends who wrote the minority report on this bill tell us that we have the highest skilled laborers of any civilized country of the world. They also tell us that our advanced intelligence enables us to have a greater productiveness than any other nation in the world. Yet, notwithstanding the fact that we are a nation of intelligent workers and a nation of great productiveness, our Democratic friends complain because we make the foreigner pay a license for encroaching upon our domain of industrial energy. We have here a further exhibition of Democratic contradiction and fallacy.

They tell us when we tax foreign products we impose burdens upon the poor who pay the tax.

The life of every nation is its industry; destroy industry, and you take away the life that actuates the power of existence. No injury could be more effectual than an injury which seeks to impair industry, and when we stock the markets of this nation with arti-

cles of foreign manufacture, we put so much energy of foreign importation against the energy of American institutions.

## CONDITION OF AMERICAN WORKINGMEN.

Within the last three or four years the American workman has learned a sad lesson of experience, which came from Democratic theorizing upon the subject of free trade and low tariff.

The principle of Republican protection is in the manufacture and sale of American products and the taxation of foreign imports. If there are those who choose to buy foreign products, let them pay the penalty of a revenue tax for their failure to support home industry.

Labor-saving machinery is now an important factor in all manufacturing interests, and with the sharp competition which now exists among our own manufacturers we need have no fear that the tariff rate will affect the price of American commodities.

It is folly to suggest a remedy for an evil which is productive of other evils far greater. There can be no evil worse than that which seeks to close up American industries for the benefit of foreign manufactures. The American laborer is first, the foreign laborer last.

The people, after an experimental trial with Democratic tariff tinkering, have called the Republican party to the rescue, and have asked for protection, which we expect to give them.

A great deal, Mr. Chairman, has been said about the workingman in these tariff debates, and as a Representative from one of the greatest manufacturing cities of the world, which offers to the workingman inestimable advantages in the way of employment, I desire to put myself on record as a friend of the toiler.

Our city, which for American ingenuity, enterprise, and thrift can not be excelled by any other, is a world of industry within itself, and it seems strange that a business center like this should overwhelmingly declare for Republican protection. Why? Because they have had a practical test of Democratic tariff doctrine, and I believe the greatest protectionists in the country to-day are the workingmen in our large cities.

## INCOMPETENT JUDGMENT.

I respect my distinguished friends from the South and give them all the rights accorded to private opinion; but when men from the sunny fields of the South attempt to lay down tariff doctrines for the guidance of Northern industries, they step upon a field of action foreign to their knowledge of practical experience.

Let me give you a few figures, by way of comparison:

*Statistics of population and manufactures of the States of Tennessee, Texas, and Illinois.*

	Population.	Number of establishments.	Number of employees.
Tennessee.....	1,767,306	4,559	42,759
Texas.....	2,235,459	5,298	59,475
Illinois.....	3,826,351	20,482	312,198

	Wages paid.	Capital invested.	Cost of materials used.	Value of products.
Tennessee.....	\$16,899,351	\$51,475,002	\$40,463,782	\$72,355,286
Texas.....	18,586,318	46,815,181	36,152,308	70,451,551
Illinois.....	171,523,579	502,004,512	529,019,089	938,640,280

This is a comparison, Mr. Chairman, of the two States represented by the rival leaders [Mr. McMILLIN and Mr. BAILEY] of Democratic tariff doctrine with the great State of Illinois, which I have the honor to represent in part. My district alone represents a population of 209,208, while the city of Chicago has a population which in time will equal that of either of the States named. Yet, notwithstanding the facts given in the table, these gentlemen come here and plead the cause of the workingmen—a class of citizens with which they have little to do or know little of.

Chicago, which rose in a night from the ashes of the greatest conflagration ever known, stands to-day a model of American enterprise and industry, and the bone and sinew of its life is in the employment of its working classes. No city in the Union has felt the pangs of financial distress and misery greater than the Garden City of the West, and I would feel that I had violated my most sacred trust did I return to its people without having done everything in my power to protect their interests through the medium of a protective tariff.

Democratic management has closed our factories and our banks. Our homes are left without means of proper existence and our streets are filled with idle men. What care men for theory or experiment when they suffer as a result? What they need and what they shall get, if the Republican party has the power to give it to them, is employment. Home production and home consumption go hand in hand; the destruction of one destroys both.

## TRUSTS AND THEIR REMEDY.

But our friends tell us we create trusts through the medium of our system of taxation.

Trusts are evils which menace the life of trade, and I am ready at all times to record my vote in favor of any bill which will destroy trusts and monopolies. But, Mr. Chairman, I am not ready to vote for free trade or inadequate protection in order to destroy a small proportion of individuals who take advantage of a protective-tariff measure to enhance their own interests. The cure seems to be worse than the evil; and knowing as I do that men will always grasp the opportunity to enrich themselves at the expense of others, no matter what methods they may adopt to accomplish their purpose, I am of the opinion that other means are at hand to crush these gigantic evils than the systems advanced by our friends. It is an insult to the intelligence of the age to say that trusts can not be wiped out by adequate legislation in other channels.

#### RIGHTS OF CAPITAL AND INTERESTS OF LABOR.

Capital honestly invested and righteously managed is entitled to a fair and reasonable profit, and I think I will not be contradicted when I say that the American capitalist is to-day the most liberal of all the world, for in no nation is the rate of wages so high as in our own country. This is self-evident and conclusive, and without the investment of capital labor is without employment. Any person with a moderate knowledge of political economy is familiar with the fact that labor and capital are really one. Capital is an aggregated result of labor, and without it there is no labor.

The idea of legislation to give the laborer a cheap product in which he has had no hand in manufacturing is to give him nothing at all, for the principle of commerce and industry is in the interchange of commodities. Capital and labor, production and consumption, are synonymous, and depend upon each other in order to produce an equitable adjustment of coexisting relations.

It is fallacy to try and run this Government upon the plans suggested in the many platform enunciations of Populistic creeds. The stability of capital means the stability of labor, and labor is never more contented than when capital is at work opening up the avenues of commerce and industry. The greatest capitalists of the age have been men of toil, and the surest way to wealth, which stands open to all, is in the prosperity and encouraging conditions of the nation.

I believe in legislation against trusts and monopolies, but let it be specific and direct, not as advanced against protection and justifiable taxation. We have met serious conditions before and have dealt with difficult problems of state. We can do it again.

In conclusion, Mr. Chairman, I desire to say that I come here as an inexperienced person so far as national legislation is concerned; but coming fresh from a people whose prosperity and happiness have been seriously impaired by such reckless legislation in the past, I believe even a meager knowledge of the affairs of government would dictate a favorable vote upon the pending bill, which I shall give.

It may be that there are imperfections in the bill, but no imperfection, no matter how great, could possibly be greater than the imperfections of the existing tariff schedule. Knowing that the Senate is to deliberate upon this matter fully, which will return it to this House for further consideration, I will record my vote in its favor now in order that all possible haste may be made in its final passage.

Protection is no longer a dream, but is a bright star of hope in the vast field of commercial activity which will lead prosperity and progress from the gloomy shadows of an inglorious past.

#### The Dingley Tariff Bill.

#### SPEECH

OF

HON. JAMES A. NORTON,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 31, 1897.

On the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. NORTON said:

Mr. CHAIRMAN: When this measure was being considered under the operation and restrictions of the five-minute rule, I sought to call the attention of the committee to simply one of the great wrongs out of the many that the bill contained.

But before I could define and make plain the fact that this measure, if it became a law, would by its operation seek for revenue in throats of sick children and deny to the suffering the privilege of procuring life-saving remedies, I was notified that my time had expired. Months, days, and hours had been devoted outside of this House to the consideration of the special interest of

trusts, combines, and corporations. And even here upon this floor the slightest sound when created by the touch of the finger of sordid capital upon the telegraph key could be heard by the attuned ear of the chairman of the Ways and Means Committee, and he promptly answered; and he was alert and fleet of foot to respond to the call of those who had contributed to the corruption fund of his party, and who by unlawful and despicable means had intimidated and coerced thousands of American workmen into supporting the nominees of the St. Louis convention.

But the appeals of the stricken and the despairing cry of the suffering fell upon deaf ears and unsympathetic hearts, and the click of the rich man's gold drowned out the wail for help and relief coming up from the common people. Pleadings of the Representatives upon this side of the Chamber for a few minutes of time in which to point out wrong and to ask for justice at the hands of the majority were disregarded, and the right denied under your iron rule of despotism that is an outrage upon free speech and parliamentary decency. You assure us that we have the right and privilege left to us to print our appeals and opinions in the RECORD. Most gracious privilege, indeed. Appeal when? Print when? After you have done your work of iniquity, when we can only cry out to a dead past—to the graveyard of the people's hopes—when argument and reason can only come in the form of protests against a wrong already consummated and hope for remedy is abandoned. [Applause.]

Legislation for the people by the people's representatives becomes a farce when in the legislative halls of seventy millions of free people free speech is trammelled, throttled, restricted, and silenced by dictatorial rules and autocratic power, and that power generated from the power house of capital and greed. When the shackles are riveted upon the people, labor, agriculture, and honest industry are enchained by law to the juggernaut of subsidized aristocracy, and we desire to raise our voice against such treason to the people's right, we are silenced by rules and told that we may speak through the columns of a Congressional newspaper having a limited circulation of less than 20,000 among more than seventy millions of people. Gracious boon indeed! Let us thank God that we are permitted to live and breathe, to starve, and die a natural death not governed by the rules of this Congress. [Loud applause.]

While this, the most monstrous measure and menace to the rights of our people ever introduced into an American Congress, was being briefly alluded to by permission, I briefly indeed referred to one of the most ungrateful and un-American characters that ever received honors and preferment at the hands of the American people. The language used by me on that occasion has been subject to criticism. Very well. It may not have been as ornate, classic, or elegant in phraseology as it should have been. My apology is that it was the truth, the plain truth and simple, and within the comprehension of every American citizen, and believed and indorsed by most of them. It was a truth the expression of which was justified by the course of Grover Cleveland as President of the United States. His financial policy was British, Republican, and un-American; was a breeder of trusts and a defense of combines and unlawful corporations. It ruined trade, enslaved labor, depressed industries, lowered values of all things but gold, and violated the law and the Constitution that he swore to uphold and defend. His foreign policy was unpatriotic and dictated by foreign and domestic enemies to the prosperity of the United States, and brought our flag into the dead calm of the shadows of shame. [Applause.]

But, gentlemen of the majority, he should be your ideal and your idol. He was our Judas, and your Moses. We are justified in repudiating and execrating him. You should glorify and honor him. You should build monuments to his infidelity. And I see you are not slow to grasp the opportunity, and the so-called Dingley bill, No. 379, should be dedicated to his memory and occupy a place in his biography, for it is like him in line, character, and lineament. Great in its monstrosity, outrageous in character, deceitful as a whole, despicable in detail, false to Government and the people, cruel in its application, without mercy or humanity, vain of its power, a servile, fawning sycophant to the rich and opulent, and a crushing, tyrannical robber of the poor and toiling classes. [Loud applause.]

Permit me to place before you the title of the McKinley bill, and ask your attention thereto: "To reduce the revenue and equalize duties on imports, and for other purposes."

And now let us read the title of this production of robbery: "To provide revenue for the Government and to encourage the industries of the United States."

As honest men, let me ask you what you think of the two propositions. If the title of the McKinley bill portrayed the truth of the intent and purposes of the measure, and that increasing the rate of duty would decrease revenue, how, in the name of reason, can you expect to increase revenue by the Dingley law, whose rate of duty is higher in almost every schedule than the McKinley law? I may be justified, therefore, in saying that it will not

increase the revenue; but, by its prohibitive rates of duty, it will decrease the revenue below the now existing point under the Wilson law, and thereby force again the recourse of issuing bonds in time of peace. So much of the mission of the Dingley law, if it becomes law, I believe it can and will accomplish.

Will it "encourage the industries of the United States"? No reasoning man believes that it will "encourage" any honest industry, but I believe, and the country will witness under its provisions, dishonest combinations crushing out of existence the thousands of struggling industries who can not compete with the giant organizations brought into existence by this breeder of trusts.

It will protect none but those who do not need and ought not to have protection. It will withhold and deprive those who need protection from most of the benefits thereof.

This bill is un-American, for it violates every principle upon which American ideas, American fairness, and American justice are founded. It is legislation virulent and vicious, with all beneficial provisions framed to reach only the few, while its direful and blighting hand of oppressive taxation falls upon the many. The classes are screened, protected, and largely exempted from all the burdens it imposes, while the masses are made to bear the load and responsibility of supporting the Government, and to pay tribute at the same time to those who live, thrive, and grow rich out of the miseries of the people. It establishes a British and brutal policy, and will build up a snobbish aristocracy. It will create trusts, and will protect and defend combinations and destroy honest competition and legal and legitimate trade. It will destroy and not create reciprocity in trade, and drive what few there are left of our American trading vessels from off the seas. It is unchristian and unconstitutional, violates the common law of humanity, and levies taxes with discrimination and in violation of the rules and mandate of the organic law of the land. [Applause.]

It is a measure of pretense and deception. It promises protection to agriculture while it stabs to the heart that great industry of our land. It plants a worthless, rotten fence post of protection at the front door of the homes upon the farm, but at the same time it places a legalized robber and burglar in every house, barn, and granary to pillage, plunder, and purloin the hard earnings of the tillers of the soil. It is cowardly to give 60 per cent of protection to the woolgrower and rob him of 150 per cent upon the finished product he must buy. He may well cry out, "God save me from such friends!"

You tell us that this bill is the key that will open the mills. Of what use will it be, or what benefit will be derived by opening the mills while the pockets of those who would purchase their products are empty? All the mills that have ever been or ever will be opened with the keys of high protective tariff legislation have and will become but mints in which to coin out of the sweat and toil of the employees therein ingots of gold to go into the employers' pockets, while the laborer and his children go hungry and live upon promises and fairy tales of confidence restored and prosperity to come. This bill, in a word, assassinates labor with a legal poignard, for it not only fails to provide a means whereby to buy the products of labor, but still further diminishes their ability to do so. It increases the cost of living and gives in return nothing but stale, mouldy, and often repeated promises of benefits to come.

If you are honest in your asseverations that you desire to protect labor, then so nominate it within the bond. Place the provisions within the bill, and not leave it to the option of the mill owner and manufacturer, for he will, as he ever has done, be unfaithful to his pledges and his promises so soon as you have given into his hands the interest of those who depend upon him for employment. I will gladly vote to fix by law equitable compensation for labor done. I will gladly vote to protect the interest of agriculture and the farmer upon the farm. Give me but such an opportunity. You dare not, for such is not your purpose or design. [Applause.]

I would not charge that all mill owners and manufacturers are oppressors of labor, for, thanks to human kindness, there are men who will do justice to those who toil for them. But I have seen, and the world has seen, too often the lockout, the reduction of wages, and the starvation prices for labor established within the protected institutions. And when men complained, they have been charged with being disturbers and denounced as anarchists and enemies of good government. I have seen, and the world has seen, justice meted out to them, measured in the scales of greedy iniquity, until at last, driven to desperation, they have gone out from the workshops upon the streets to live upon the charity of the people. The blacklist and government by injunction and the bayonet are natural sequences of overprotection to overfostered and legally cherished organized institutions who are not beneficial to government or society, and who are not in harmony with the laws of God or man, but are actuated only by the instincts of greed and avarice. [Applause.]

Let me for a moment appeal to your better natures, to your sense of justice; let me ask you to look upon the rights of human-

ity and not upon the seductive and alluring picture of emblazoned wealth.

Why, in the name of common decency, of justice and equity, are we not permitted to discuss this bill as American Representatives chosen by American constituents? It ought to be a business proposition, and not a measure of reciprocal brigandage. Why close our mouths? Are you afraid that the people will secure some of the rights to which they are entitled if their will and wish shall be made known that the favored classes do not desire or intend they shall have?

We invite, we beseech, you to come out into the open, like honest and brave men, and lay this measure within the sunlight of honest and fair criticism. Do this as fair-minded American citizens chosen as the conservators of the people's rights, and if your bill shall be found to be in the interest of American industries, American labor, American agriculture, and American prosperity, it will receive the indorsement and affirmative vote of every member of the minority upon this floor. [Applause.]

You refuse to grant time to consider the schedules of this measure seriatim. Why? Are you afraid that the putrid, cancerous excrescences, that will eat out the very life of the people, that are hidden within these schedules will be exposed to the public gaze, to condemnation, to ridicule and execration.

We plead for this opportunity, not as obstructionists, but as men willing to aid in a public service for the public good.

You deny this right, the common right of remonstrance against oppression and wrong, and give as your only excuse that the country is suffering from industrial depression, that confidence is dead, that prosperity is languishing and must be restored, and time must not be wasted, but relief given at once. In one sense you are right; the country is suffering, business is prostrate, labor is idle, confidence has taken flight, and prosperity abides not within our land. Worse still, hunger and want are the unwelcome but enforced guests at the fireless hearths of thousands in this land, blessed of God, but accursed by man's perfidy and evil laws.

The country does not suffer for want of higher taxation of the people, but because of overtaxation. Business is prostrated because by your laws and your construction of them you have made all business unprofitable except the business of usury and extortion. Labor is idle because you have stolen from the people, through financial legislation, the means that enabled them to purchase the products of labor. Confidence is destroyed because you have betrayed the confidence of the people; prosperity is dead because you have sapped the very foundations of prosperity and destroyed its life-giving principles by handing over to Wall street the care, culture, and generation of prosperity, and no honest or genuine and general prosperity will ever come to the people when the money power of this and foreign nations controls the actuating means whereby it can be created and conserved. [Applause.]

You need not, you ought not, be in haste in the work of passing this bill. It will bring no relief. It only carries to the people more misery, to business more uncertainty and ruin, to labor less employment.

Higher rates of duty upon imports will do nothing toward lifting this nation and its people out of the slough of despond into which they have been so unnecessarily and ruthlessly plunged. Such a policy will only take from the pockets of the people and add nothing to their comforts or their necessities.

You tell us that you must act speedily and without deliberation because the revenues of the Government are not sufficient to meet the expenses of the nation. Stop squandering the revenues; administer the affairs of government honestly and economically; shut off the leeches of Wall street and the bandits of England from making raids upon the Treasury; give back to the people the constitutional money of the fathers; pay your obligations in the kind of money stipulated and agreed upon within the body of the original contracts. [Applause.]

Compel your Secretary of the Treasury to administer the affairs of his Department according to law and the Constitution. Let him be the servant of the people and not the agent of money brokers, bond sharks, and foreign and domestic bank syndicates, and then your revenues will be sufficient, and then will no longer remain the necessity of erecting the barriers of unjust and discriminating tariff. Open up the channels of legitimate trade with all the world, take down the barred doors from the market houses of the nations, and cultivate reciprocal relations from all sources in legitimate and honest trade. Discourage speculation and spoliation and give us a tariff law based upon common-sense principles.

A tariff for revenue sufficient for all needs of government when the affairs of government are economically administered, and if incidental protection shall follow, none will complain, but peace, contentment, and prosperity will come and remain. [Applause.]

Strong as the defenses of West Point were, even they would have availed nothing had Benedict Arnold succeeded in his plan of introducing within the American line the British foe. Strong now as you may build your tariff walls, England cares not, for she knows that there are still Benedict Arnolds living in America who are

willing that she shall hold the keys to our Treasury that was surrendered to her in 1873. [Applause.]

Gentlemen tell us that they have just come from the people victorious and carrying the indorsement of the people; that they went to the country upon the tariff issue. I do not deny that you were victorious, but I do deny that the people elected you because they desired a higher tariff law. If the truth were known, I believe it would disclose the fact that William Jennings Bryan was elected, and not William McKinley. But be that as it may, we know and the nation knows how you went to the people. You went with polluting and corrupting gold, with intimidation and coercion, with threats, menaces, and the active cooperation of corporations in your work of controlling the suffrages of men who could not and dared not resist you. [Loud applause on the Democratic side.]

You deceived the unsuspecting, purchased the purchasable, frightened the timid, and under threats of discharge from service forced the workmen of the land to give their unwilling support to your ticket.

Your victory was one of shame and infamy, of wrong and outrage upon the free ballot, and now you come in the name of tariff to surrender the people over into the hands of the contributors of your debasing fund, that they may be pillaged to discharge your obligation.

And now, Mr. Chairman, I desire to call the attention of the committee to a few of the schedules in this bill that I know you will not reach and consider in this committee; and I say without hesitancy that you never intended to consider them, but I hope the manhood and common decency of the Senate will lead them to open wide the door of investigation into these nests of iniquity, and if they do you will not recognize the bantling of Dingleyism when it is returned to this House, for honor and fair play will cause them to tear up by the roots and cast to the winds the thorns and thistles planted therein to grow up to plague and wound the common people.

From this floor I ask men in the factories, purchasers of these necessities, to carefully study the following tables until you thoroughly understand them. To the workmen who produce these articles let me say that when this bill becomes a law your employers will again find some pretext upon which to base a cut in your wages; and when they do, I want you to turn to these tables and ask them if it is because they are not sufficiently protected.

Your wages will not be increased; and when you find the promises made to you are not to be kept, turn to these schedules and look your employer in the face and ask him why. To the millions who must buy these articles I would say, examine well into these comparisons, see how carefully and designedly the wealthy are protected, and how flagrantly the poor are robbed. I shall not go exhaustively into the details of the different schedules, and only point out a few samples, not the most flagrant, but enough to show you that the protectionists who framed these schedules were either protection mad or devilish.

I would first direct your attention to the rates of duty on cutlery. All are high, none reasonable, and many absolutely prohibitory. Upon the finer goods within the reach of the rich the rates are the lowest, and upon the cheaper and coarser goods that the people who are poor or in ordinary circumstances must buy the duties are the highest.

Here they are:

12.50	35	85	80	†85

\* These cheap guns are not made in this country.

† This class is made in this country, and has been made for years, under a 35 per cent tariff.

And now, Mr. Chairman, I wish to call attention to a job lot of protection insanity in glassware. Here is where the banks overflow and protection reaches high tide:

## GLASSWARE.

## Seven-inch opal shades.

	Cents per dozen.
Selling price at factory abroad	30
Value of case	6
Packing and strapping	4
Freight from factory to seaport	4.30
Expenses and insurance	1.20
Ocean freight	8.50
Duty, 40 per cent ad valorem on 30 cents	12

Total cost 56

Protection, 180 per cent.

## Ten-inch opal shades.

	Cents per dozen.
Selling price at factory abroad	53.50
Value of case	13.20
Packing and strapping	5.80
Freight from factory to seaport	9.60
Expenses and insurance	2.40
Ocean freight	13
Duty, 40 per cent ad valorem on 72 cents	28

Total cost 125

Protection, 112 per cent.

## Student chimneys.

	Cents per dozen.
Selling price at factory abroad	5.50
Value of case	1
Packing, strapping, and papering	1.70
Freight from factory to seaport	1.10
Expenses and insurance	.30
Ocean freight	1.50
Duty, 40 per cent ad valorem on 8.30 cents	3.50

Total cost 14.60

Protection, 140 per cent.

## Night-lamp chimney (nutmeg).

	Cents per dozen.
Selling price at factory abroad	2.80
Value of case	.24
Packing and strapping	.24
Freight from factory to seaport	.24
Expenses and insurance	.12
Ocean freight	.50
Duty, 40 per cent ad valorem on 3.28 cents	1.32

Total cost 5.60

Protection, 100 per cent.

## Silver vases.

	Per case.
Selling price at factory abroad	\$10.80
Value of case	2.80
Freight from factory to seaport	2.80
Insurance	.30
Ocean freight	4.00
Duty	4.30

Total cost 25.00

Protection, 150 per cent.

## Cuspidors (chinaware).

	Per case.
Selling price at factory abroad	\$12.40
Value of case	2.80
Freight from factory to seaport	2.00
Insurance	.36
Ocean freight	1.75
Duty	4.35

Total cost 23.66

Protection, 96 per cent.

I can not refrain at this point from submitting to the committee a communication received by one of the members of the Ways and Means Committee, and which ought to have challenged their attention and appealed to their reason, but reason was dethroned and mad folly ruled in place thereof. In referring to the rates on floor matting, jute carpets, and oilcloths, the gentleman writing to the committee sent this communication.

BALTIMORE, March 19, 1897.

DEAR SIR: If you are making notes of the effect of the proposed tariff on household requirements of low square-yard cost, found more or less in every household, the following is submitted relative to Schedule J:

Floor matting, now selling throughout this country at 3¢ cents to 30 cents per square yard, costing in China and Japan, packed ready for shipment, at present rate of exchange, from 4 cents to 25 cents per square yard:

Proposed duty (paragraph 332): Up to 10 cents per yard in value, 8 cents per square yard; above 10 cents per yard in value, 8 cents and 25 per cent ad valorem.

This is equivalent to 200 per cent ad valorem on lowest grades, and but 55 per cent on the highest grades.

Fully 80 per cent of all imported cost less than 10 cents per yard.

It is practically prohibitory and will seriously interfere with the freights homeward of the American sailing ships carrying case oil to the far East. (See particulars inclosed.)

It has heretofore been taxed as follows: 1874, 30 per cent ad valorem; 1883, 20 per cent ad valorem; 1890 and 1894, free.

The article is not manufactured in this country.

Carpets of jute, now selling throughout this country at 7 cents to \$1 per square yard, costing in Calcutta, India, and Japan, at present rate of exchange, from 5 cents to 70 cents per square yard, United States gold:

Proposed duty (paragraph 333): If valued at 30 cents or less per square yard, 6 cents per square yard and 35 per cent ad valorem; if valued above 30 cents per square yard, 12 cents per square yard and 40 per cent ad valorem.

This is equivalent to 150 per cent on lowest grade, and but 55 per cent on the highest grades, used by the wealthy. They have heretofore been taxed as follows: 1883, 6 cents per square yard; 1890, 6 cents per square yard; 1894, 20 per cent ad valorem.

The fiber jute out of which the above are made is to continue on the free list, where the act of 1890 placed it. (See paragraph 540.) In 1883 it was dutiable at 20 per cent ad valorem.

Oilcloth for floors, and linoleum, an improved floor cloth, now selling throughout this country for 12¢ cents to 30 cents per square yard for the former and from 17¢ cents upward per square yard for the latter, used to cover floors, wholly or partially, under washstands, stoves, and furniture, to more or less extent in every home; and oilcloths on cotton backs, known as table and shelf oilcloths, and imitation-leather cloth, in wide and general use wherever a waterproof cloth, like or unlike leather, is wanted, selling now from 10 cents to 15 cents per square yard for the grades in wide and general use, the duty proposed is, viz (paragraph 336):

Oilcloth for floors, etc., 10 cents per square yard and 15 per cent. This is equivalent to 110 per cent on the cheapest printed oil floor cloth and 80 per cent on the cheapest printed linoleums.

Imitad linoleums and cork carpets are provided for in the same paragraph at 30 cents per square yard and 20 per cent ad valorem, equivalent to 45 to 50 per cent ad valorem. These are high-cost floor coverings used by the well-to-do.

Waterproof cloth, i. e., table, shelf, and imitation leather (cotton back) cloth, it is proposed to tax 10 cents per square yard and 20 per cent ad valorem, the equivalent of 120 per cent, on the grades found in every household, to some extent and in some shape, throughout the land.

The duty has been and is now as follows:

1874, valued at 50 cents or less per square yard, 35 per cent ad valorem; valued above 50 cents, 45 per cent ad valorem.

1883, 40 per cent ad valorem.

1890, valued at 25 cents or less, 40 per cent ad valorem; valued above 25 cents, 15 cents per square yard and 30 per cent ad valorem.

1894, valued at 25 cents or less, 25 per cent ad valorem; valued above 25 cents, 40 per cent ad valorem.

No cotton-back oilcloths whatever are imported. There are about ten manufacturers in the United States.

For full particulars of the existing trust, see accounts herewith.

Respectfully submitted.

LYON BROS. & CO.

HON. BENTON McMILLIN.

Shipments of straw mattings from Hongkong to Atlantic coast ports of the United States during the shipping season, from May 1 to January 1, 1897, were 417,775 rolls, or about 60,000 tons, on which the average freight rate paid was \$4, United States gold, per ton. This quantity was transported as follows:

1 Hawaiian ship, about 2½ per cent, or 1,000 tons, earning about \$6,000.

12 British steamers, about 17½ per cent, or 10,500 tons, earning about \$12,000.

23 American ships, about 80 per cent, or 48,000 tons, earning about \$192,000.

The above figures approximately represent also the business done in the same article from Kobe and Nagasaki, Japan, to Atlantic ports, the entire business from both countries amounting to about 800,000 rolls, in round numbers.

As is well known, the China and Japan trade is now about the only thing left for the old guard of American deep-water ships which look to straw mattings for at least two-thirds of their homeward cargo, some ships loading nothing else.

A prohibitive tariff on straw mattings would sacrifice this fleet to the greed of American manufacturers of cheap carpets. And this, too, at a time when we are looking about for ways and means of upbuilding our commercial marine instead of destroying it, as this contemplated legislation will surely do.

This most clearly demonstrates the object, purpose, and design of Mr. Dingley and his conferees in placing the rates of duty now in his bill upon floor mattings, jute carpets, and oilcloths. It was to prohibit importations of these articles and place the people at the mercy of the carpet manufacturers of New England.

Schedule after schedule, as they fall under the scrutiny of honest examination, arouses our amazement and indignation and makes us wonder how long it will be under this class of legislation ere our ports are sealed and we will go to the level of the Chinese decades ago.

This sectional, greedy, grasping policy of tariff legislation can but produce in America at last, deserts of our fair and fertile lands, financial ruin and social degeneration. The mighty productive interests of the United States are, as all know, grain and cotton. And those who toil in the fields to produce these have been heretofore taxed without mercy, and now comes the climax in this measure, and they will be taxed, robbed, and despoiled to a greater extent than any people ever were in any government, free or monarchical, since governments began. I say to the farmers of my own great State and the South and great West, beware of the wool-schedule of this bill of deception; it is a pitfall for your hopes, and under its provisions no permanent good can come to you. Temporarily

it may raise the price of wool, but contained within its provisions is the deadly upas of high, most monstrously high, rates upon finished products necessary to your comfort, your health, and your life, that will steal away the little it gives you and leave you despoiled and despairing in the end. [Applause.]

I cherish the hope and belief that this bill can never become a law, for I believe the second, sober thought will come to you who now so heedlessly push on and forward this element of our nation's destruction. Somewhere and at some hour before this session of Congress shall close the statesman will arise and put aside the carping politician. Upon the other side of this Chamber I know there are good and true men who love their country and the people. Now they sit mute and silent, condemning within the very heart of their reason and judgment this menace to justice and liberty. The lash of party discipline and the rules of steel hold them fast, but their humanity and sense of justice will break forth at last, and they will speak for the people and their interests.

I congratulate the American people that the rules of this House, far-reaching as they are, do not pass the doors of the Senate of the United States. There, at least, the voice of the people may yet be heard, and the Americanism of that body will cause at least a modification of this measure. And they will send it back to you so changed as to leave hope at least for the people. If they do not, then I warn you to beware of the wrath of the people.

Elections by syndicates, followed by a carnival of criminally unjust taxation, will destroy the patriotism of the people and in its stead will arise horrid discontent, and at last will come a revolt only to be stayed by military power. [Applause.]

You are taking from every family in the United States an average of \$30 per annum by direct appropriations of Congress, and you squander much of it recklessly and uselessly. This bill, if you enact it into a law, will take indirectly a much larger sum to go into the pockets of protected plutocrats.

How much do you think the people can stand? I would lose confidence in the bravery, the courage, and manhood of the American people if they would supinely bow and receive this scorpion lash of taxation. Already the mutterings of disapproval of your course can be heard, and I predict that when the voters within this Government can again reach the polls they will put the seal of their condemnation upon your folly by repudiating you and your party. So, at least, they ought to do, and so I believe they will do.

What a blackened page in the history of our land will this bill leave if it becomes a law—this conspiracy against the peace, the comfort, and the prosperity of the people, their homes, and their families! Compare it with the law to tax incomes, and it will create wonder and amazement. It has been declared that the right to tax the incomes of the rich, the millionaire, and those who have grown wealthy by favoritism, is unconstitutional. If that be true, then what ought this bill to be declared? It should be declared "A covenant with death and a league with hell." Sugar, clothing, medicines, lumber, and the very necessities to man's existence are arranged in order and taxed to the limit that human ingenuity can devise, and gentlemen on the other side of this House cry out, Amen! [Applause.]

For revenue you can rob by law, under the Constitution, the poor and toiling millions, but for revenue you can not touch the hoarded gold of the extortionate usurer and aristocrat. Such constitutional provision, if it exist, should exist no longer.

If that be part of our organic law, then it should be eradicated ere it brings our nation to ruin and extinction. [Applause.]

Mr. Chairman, an examination of the recapitulation made by the Committee of Ways and Means, and which we are bound to accept as the best showing they can make, discloses the fact that the Dingley law will average in all the schedules except, perhaps, Schedule C, metals and manufactures, in equivalent ad valorem rates higher than the war tariff of MORRILL, higher than the McKinley bill, and far reaching above the Wilson bill.

I submit the following comparisons of equivalent ad valorem rates in per cent, taken from the committee's recapitulation, leaving out comparisons of dutiable value of merchandise and estimates upon revenues:

Schedule.	McKinley bill.	Wilson bill.	Dingley bill.
	Per cent.	Per cent.	Per cent.
A.....	31.07	27.99	31.33
B.....	51.20	35	52.62
C.....	57.21	37.58	45.62
D.....	14.94	22.87	16.58
E.....	14.55	40.94	71.10
F.....	117.82	109.06	164.05
G.....	33.17	23.28	39.94
H.....	69.78	61.54	77.01
I.....	55.25	43.75	54.14
J.....	43.68	40.39	49.52
K.....	80.50	47.62	81.57
L.....	53.56	46.90	53.89
M.....	23.85	22.18	29.82
N.....	26.06	23.65	30.57

This ought to startle the people and arouse them to a realization of what is being done to their detriment by their professed friends. In time of profound peace, war rates of duties and taxation outdone and overreached!

In time of financial distress more money demanded from the people. With markets ruined, homes mortgaged, and millions idle, the bitter cup of additional sorrow is pressed to the lips of the people by this bill.

The people ask for bread; you give them stones. May the God of our fathers protect this nation. May reason return to you, the despoilers of the people. And may the places upon this floor that know you now soon know you no more forever. [Prolonged applause on the Democratic side.]

### The Tariff.

### SPEECH

OF

HON. GEORGE EDMUND FOSS,

OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 31, 1897.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 359) to provide revenue for the Government and to encourage the industries of the United States—

Mr. FOSS said:

Mr. CHAIRMAN: There is one feature of the bill now under consideration which is attracting a great deal of attention throughout the country and is the subject of much adverse criticism, and that is the proposed tariff upon books, engravings, maps, charts, etc., which shall have been printed more than twenty years at the date of importation, and also books, etc., printed exclusively in languages other than English, as well as books, etc., imported in good faith for the use of educational, philosophical, and literary societies, colleges, schools, seminaries, and public libraries.

I have the honor of representing a district in which schools, seminaries, and higher institutions of learning greatly abound. In the beautiful city of Evanston lies the Northwestern University, which ranks among the leading educational institutions of the country. A few miles above is the Lake Forest University, a growing seat of learning, which is doing inestimable good for the cause of higher education. In fact, scattered all over my district are innumerable schools and seminaries where the young men and women are learning the lessons of true American citizenship.

From all these sources have come strong protests against the proposed tax upon books, maps, etc., used for educational purposes.

In my judgment we can ill afford at this time or at any time to place what might be considered a tariff upon education. Strong as may be the necessity for more revenue for governmental needs, yet it is not so strong as to justify a proposition of this kind. The Republican party from its beginnings has always favored the largest opportunities for the enlightenment of the people. In a Republic like ours, where each citizen is a sovereign, national education is and always will be the bulwark of national safety and national defense. For just as true as a stream can never rise higher than its source, so true will our nation never be better or stronger than the intelligence, character, and virtue of its citizens.

I beg herewith to submit a very able and exhaustive letter from Messrs. A. C. McClurg & Co., one of the largest publishing houses in the country:

CHICAGO, March 20, 1897.

DEAR SIR: In your responsible position as representing the interests of the people of the State of Illinois, we desire to call your attention to an omission in the proposed new tariff law that is a very important one, and we must think, quite unintentional.

Both the Wilson tariff now in force and the McKinley tariff preceding it provided that three classes of books should be on the free list. These were, roughly speaking:

1. Books which had been printed more than twenty years.
2. Books printed in other languages than English.
3. Books imported in good faith for State and public libraries.

(Tariff act of August 28, 1894, sections 410, 411, 413.)

The proposed new tariff, if newspaper reports and others are to be believed, omits these three classes of exemptions, and we think the matter is of such general importance and interest as to make it worthy of the serious and earnest attention of the people's representatives in Congress. We shall have to admit frankly that as importers our interests are naturally opposed to provisions which tend to restrict the volume of importation. As manufacturers and publishers of American books, however, we are in a position to be keenly sensitive to all influences affecting the American production and the American producer of books, so that perhaps our testimony in a matter like the present is entitled to some weight.

The tariff law, we presume, is framed with two main objects in view—the production of revenue for the National Government and the protection of the American manufacturer. The production and dissemination of books, however, is a matter so vitally important and deserves to be so encouraged by all enlightened governments that as few restrictions should be thrown around the industry as possible. We take it to be a fundamental principle underlying all civilized educational legislation that the widest possible circulation should be given to learning and knowledge. To restrict the book trade,

therefore, for the sole purpose of supplying revenue for the Government, we think would be universally recognized as unwise legislation.

In considering the three classes of books mentioned on the first page of this letter, therefore, we shall assume that the proposed new tariff, if it did not strike them from the former free list by mistake, considered that a tax on them would benefit the American producer.

1. Books which have been printed more than twenty years can hardly be said to be in need of protection, as it seems to us. There is no American industry engaged in making twenty-year-old books. If a book which has been in print for twenty years has not enough inherent merit and vitality to retain its hold on the public, no legislation can help it. If a foreign book is very successful either it will have been copyrighted in this country also, making it practically an American book, or else it will, soon after issue, be imported notwithstanding the duty. In the former case the American manufacturer is not protected; in the latter only partially so. After the book has been on the English market for twenty years, however, it is hardly possible to imagine how a duty upon it could be of any benefit to American authors and publishers. We think the proposed omission of such books from the free list of the new tariff must clearly be a mistake.

2. Books printed in other language than English.  
This country does not assume to produce foreign books or books in foreign languages. Our national policy, in fact, distinctly discourages such production. In most of our States it is considered wise public policy to limit public-school instruction to the English language, stimulating recent residents and the children of foreign-born citizens by every possible means to acquire rapidly the English speech and republican habits of expression and thought. There is no American industry of producing foreign books, and we should not want one.

On the other hand, many of the finest scientific works in the world are being constantly issued abroad in foreign tongues. Our own scientists want them and must have them in order to keep abreast of the times and acquire inspirations and suggestions for new discoveries of their own. It would be notably bad policy to tax such books and restrict their importation merely to add a few dollars to the National Treasury. It would surely be a mistake to take these books off the free list.

3. Books imported in good faith for State and public libraries.  
This provision applies to all books of every kind. We aim to make all knowledge open to our citizens by the maintenance of a public-school system and a public-library system throughout the Union. Shall we take money out of one pocket to put it into the other? These libraries are maintained at public expense. Every penny of tax paid by them on imported books comes out of the public pocket. On what ground can a tax on such institutions be justified? Many of these institutions, as we are in a position ourselves to know, are hampered by lack of sufficient funds. The imposing of the proposed tax would seriously impair their purchasing ability. We venture to predict that such a provision as proposed by the new law would cut off two-thirds of the importations by libraries in this State, and thus deprive the struggling, hard-working, studious reading classes of our community of part of that knowledge which they have learned to prize as one of their most valued privileges.

The foreign importations by libraries in this State are very small in amount at most, speaking comparatively, and when diminished, as we think they must be, under the proposed new provision, they would yield but a very insignificant revenue to the national coffers. Surely it was not for revenue that such books were to be taken off the free list, but it must have been an unintentional mistake.

We have no doubt that other considerations will occur to your mind, as they will to most thinking and educated men, bearing on the same question. Publishers and importers of books everywhere throughout the country will undoubtedly scrutinize the provisions of the proposed new tariff in this same regard and present their criticisms to their Representatives in a similar way. As one of the largest—perhaps the largest—establishments of the kind in the West, we take it upon ourselves to speak for the trade, and we venture to hope that your personal knowledge of our house, as well as the intrinsic and obvious general importance of the matter urged, will bespeak your earnest consideration of the matter herein presented and induce you to impress upon the proper committee and urge upon Congress the restoration of the three classes of books which we have mentioned to the free list of the new tariff. With great confidence in the ability and earnest desire of our Illinois Representatives to exert their influence in every possible way for the best interests of our people, we remain,

Very sincerely and respectfully, yours,

A. C. McCLURG & CO.

Hon. GEORGE E. FOSS,  
House of Representatives, Washington, D. C.

### Our Tariff and Our Trouble.

The malady: Want of funds and lack of faith.

The remedy: Greater confidence and more cash.

To deprive the Federal Government of the means of maintaining gold payments and preserving the parity of all our money and relegate those important and responsible functions to private banking institutions would be full of peril to our monetary standard and a serious and constant menace to our financial interests.

### SPEECH

OF

HON. MARRIOTT BROSIUS,  
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 31, 1897,

On the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. BROSIUS said:

Mr. CHAIRMAN: No one feature of this discussion impresses me so much as its amplitude. The tariff bill has been used as a John Doe or Richard Roe to introduce into court and to the country an interesting variety of subjects, all having in the view of their proponents some relation to the existing financial and industrial situation, but which bear very remotely, if at all, on the question

of revenue. Any light that can be thrown upon the cause or the cure of the distresses we have suffered during the last four years ought to be welcomed by every lover of his country. That the money question is a part of the general situation is quite true, and a betterment of the monetary conditions may fairly be included in the curative possibilities claimed by the advocates of the various schemes suggested by the wise and otherwise doctors who are prescribing for the patient. That the opportunity for a "free-for-all" debate afforded by the special order under which we are proceeding has invited some discussion of the vexed question of our currency and its relation to government and to banks is my excuse for submitting some reflections in opposition to the views of some who have proposed remedies, it seems to me, without a very comprehensive understanding either of the nature of the malady or of the effects of the medicine; so that I am apprehensive, if some of the prescriptions should be administered, that the patient will be sure to die either of the disease or the remedy.

Many of the complaints made against our national banking system, the best in a general way the wit of man ever devised for a country like ours, are so grotesque as to be amusing, and if collected, would constitute a rare cabinet of curios. They, indeed, rival the famous strictures of Tooke, one of the most noted economists of his time, on the Bank of England. In his great work on the History of Prices he said: "The Bank of England is one of the most wanton, ill-advised, pedantic, and rash pieces of legislation that has ever come under my observation." But nobody in England believed him. Some of the criticisms it is the fashion to make in these days have as much to commend them as the celebrated complaint of Sydney Smith against the solar system when he said to his friend Jeffrey, "D—n the solar system; bad light; planets too distant; pestered with comets; feeble contrivance; could make a better with ease."

#### THE NATURE OF OUR TROUBLES.

The first requisite to rational discussion of the question is an understanding of the nature of the existing situation. Our troubles flow from no visitation of Providence; not from famine or pestilence or war, nor from any external public calamity. They spring entirely from unwise interferences by legislation and administration with approved institutions, which by their beneficent results in the past have established their title to the acceptance of the American people. We have suffered from two causes, want of funds and lack of faith; the remedy is greater confidence and more cash.

By increasing the volume of our paper money through the purchase of a large amount of silver bullion on a constantly falling market and issuing therefor Treasury notes which became a gold liability until it ceased to be apparent how the Government could keep its pledge to maintain the parity of all our money, the public confidence at home and abroad became impaired, and serious suspicion was cast upon our ability to maintain the gold standard and meet all our obligations in the money in which they were contracted. This apprehension increased as the free-coinage propaganda advanced, until the fear that we might at any moment fall to a silver basis caused a general stoppage in business, money sought hiding places rather than goods, and industrial depression settled like a fog bank upon the country.

In the second place, the last Administration, "Democracy triumphant," by curtailing customs duties disordered our revenues, diminished our receipts, produced alarming and continuous deficits, and brought the whole business of the country into confusion and dismay, transforming the fog banks into lowering clouds and pouring rains.

#### THE REMEDY.

This is the nature of our maladies, and they will yield to rational, wise, and patriotic treatment. We have but to do the right thing, say the right word, and we are healed. The first thing is to provide adequate revenue. That requires legislation. The next thing is to make it clear to the apprehension of every American citizen and every nation having fiscal relations with us that we are firmly intrenched in the existing monetary standard, where we have been practically for sixty years, and where all the great nations of the Christian world are to-day, and that we intend to remain there until by the cooperation of the leading commercial countries we can secure real bimetalism without danger to our monetary system.

This done, confidence will be restored; money will come from its hiding places, as it has been doing rapidly in the last few months, and seek investments; business will begin to move; labor will be employed; capital will put itself in motion; prices will rise; prosperity will return; happiness once more will run singing with the plow and the loom, and the music of content gladden the homes of American labor. The mighty industries of America, which have been locked in the paralysis of fear, stricken with the blight of triumphant Democracy, will rise regenerated and leap like athletes into the arena of activity the moment the people of the United States utter the word which will allay public alarm and restore public confidence.

When the Republican party, with the wand of American protection and sound money, smites the rock of the customs and unfetters the limbs of enterprise, abundant streams of revenue will gush forth to replenish our Treasury and of wealth to gladden the hearts and swell the depleted purses of our people. From this point of view it is very obvious that the present measure or some other that will secure revenue is pressing with extreme urgency upon Congress and will not admit of unnecessary delay in being enacted into law. This proposition needs no discussion.

#### VARIETY OF REMEDIES PROPOSED.

In the field of financial legislation there is great danger of stumbling unless we proceed with great caution, and my purpose is to admonish the swift-footed against the danger of speed on an insecure roadway. It is said we can not have prosperity until our finances are readjusted and our currency reformed. This generality is unsatisfactory because it conveys no information of the character and extent of the defects which need readjustment and reformation. What the statement means depends on who utters it. To some it means the abolition of our national-banking system and the reestablishment of State banks. To others it means the free coinage of silver at the ratio of 16 to 1. To still others it means the cancellation of our greenbacks and the substitution of bank paper issued against the assets of the banks, or, in other words, an unsecured currency. Each class, knowing the power of a shibboleth, has a short mode of expressing the cause it champions. For example, that of the State-bank class is, "Local currency, and plenty of it;" that of the free-coinage class is, "The money of the Constitution;" and that of the class advocating the abolition of the greenback and a credit currency is, "Take the Government out of the banking business." These watchwords seem to me to be equally destitute of warrant in reason and common sense, and can have no higher function than to "gull gudgeons."

#### A WIND INSTRUMENT.

I repeat to-day what I said on a former occasion, because the lapse of time has strengthened my conviction of its truth, that the money question resembles a wind instrument into which many people—not here, but elsewhere—empty their lungs instead of their brains. Each perforation of the instrument stands for a distinct note, and the variety of expression is only limited by the length of the scale. The quality of the music covers the whole gamut, from a comic song to a divine symphony, from the unintelligible gibberish of the untutored mind to the articulate utterance of superior reason.

The distinct admonition which such a situation conveys is that we should move cautiously in legislation on the currency question until we arrive at some degree of unity on the subject. As much as can be said of the Banking and Currency Committee of the Fifty-fourth Congress is that its members succeeded by dint of strenuous exertion in dwelling together in love and mutiny. And that is about the situation among bankers and financiers throughout the country. At this very moment the pendulum of opinion on the vexed question swings over an unusually long arc. Some of us happily occupy the middle ground which ought to be the rock of reconciliation on which men of "sweet reasonableness" can embrace, and we are urging legislative measures that are moderate, safe, and conservative; perfectly innocuous, incapable of harm, and calculated to relieve to some extent the lack of available currency in some sections of the country.

#### SAFE MEASURES.

There ought to be unity among us in support of amendments to the national banking act to authorize, first, the institution of banks on smaller capital; second, to issue circulation to the par of bonds deposited; third, to reduce the tax on bank-note issues to the amount necessary to defray the expenses of the Comptroller's office; fourth, when necessary, the use of other than Government bonds to secure circulation; fifth, to reenforce the gold reserve by utilizing the idle silver in the vaults of the Treasury for that purpose, using it at its gold value. I have at different times introduced bills providing these simple remedies. If enacted into law, they would enable the banks to be more serviceable to the people without in any way endangering the safety of our currency, and at the same time would help to restore confidence by strengthening the reserve, and yet they meet with disfavor in some quarters.

#### OPINIONS DIFFER.

The fact is, as General Rosecrans once said to a captain who had lost his regiment, "You can go in anywhere, as there is beautiful fighting all along the line."

Indeed, the fierceness of the struggle, the intensity of feeling it produces, and the minds that lose their balance in the fray give some color to the observation of Sydney Smith, that currency and exchange, next to love and religion, fill our lunatic asylums. And singularly enough, the bankers themselves are quite as much at variance in their views as others, giving some color to the state-

ment of Mr. Conant, in his History of Modern Banking, a statement in which I do not acquiesce, that bankers seem to know less about the science of money than anybody else. This view has the support of Mr. Juglar, who says: "There is always something which blinds those who are in the best place to see." So the committee appointed to inquire into the causes of the unfavorable exchange in England, and who made the celebrated bullion report of 1810, arrived at conclusions quite adverse to the opinions of English bankers.

#### EVOLUTION OF OPINION ON BANKS.

That there is some contrariety of view on the subject is not remarkable. It has always been so. The fluctuations of opinion in the United States on the subject of banks constitute an interesting chapter in American history. In 1803, in Vermont, two bank acts were vetoed on the ground that banks demoralized the people by gambling. In 1811 a writer on the subject said:

Think of the locusts of Egypt. These were to the people exactly what the banks are to the farmers.

In 1821 the constitution of New York was amended, requiring a two-thirds vote of the legislature to charter a bank. The woes which banks were supposed to bring to the people were so burdensome in some States that they sought relief by renouncing them altogether. Sumner says, in 1852, that there were no banks in Florida, Texas, Arkansas, Illinois, Missouri, Iowa, Minnesota, Oregon, California, and the District of Columbia.

But the conduct of banking institutions in our earlier history may have justified the disfavor in which they were held by many people. They were sometimes oppressive, secret in their operations, rude and despotic in their treatment of customers. The Hartford Bank had this rule:

Whatever passes in this bank is not to be spoken of at any other place.

Banks were often secret societies, and people took alarm lest these institutions would sweep away their liberties. Many evils doubtless were charged to banks for which they were in no way responsible. People were extravagant and contracted debts imprudently then as now and banks were blamed. Nicholas Biddle, replying to the popular complaints of the banks, said:

The bank can not erect itself into a special providence to modify the laws of nature and to declare that the ordinary fate of the heedless and improvident shall not be applied to the United States.

Nowadays there is a complaint, and a just one in some sections, that the farmers have not adequate banking accommodations; but in 1849 the governor of South Carolina said it was an injury to an agricultural community to afford too many banking facilities, that the more numerous and difficult the obstacles in the way of obtaining bank accommodations by that class the greater their contentment and the more certain their success in their vocation. Banks were quite apt, also, to abuse the issuing function, to the great loss of note holders. Issuing notes was regarded as the chief function of banks. This was so even as late as the time of Webster, who, it is said, propounded this conundrum: "What is that without which an institution is not a bank?" The answer was, "The power to issue promissory notes."

The evolution of the years in banking sentiment has left these primitive notions far behind, and our idea of a bank and its uses is quite different from that our fathers held. It is a long reach of development in the mechanism of exchange from the time when in Tennessee, according to the statement of Senator White in the Senate in 1838, the salaries of governor, chief justice, and other great officers were paid in deerskins and those of inferior officers in raccoon skins, and when the tax collectors cheated the treasurer, who was not an expert in skins, by putting raccoon tails on opossum skins and paying them as raccoon skins. Under the present national-bank régime we have witnessed the financial miracle that in the \$2,000,000,000 issued since 1863 no note holder ever lost a farthing. So that the debate now is not whether banks shall or shall not be established, but rather how shall they be established and regulated to make them most useful.

#### BANKING CONDITIONS.

The conditions under which banking was carried on prior to the war were so dissimilar to those now existing that it is not possible to reason from one to the other. I have taken the trouble to compile some figures showing the condition of banks in the several States in the year 1862, which I will incorporate in my remarks at this point that they may be available to those desiring to compare them with the corresponding figures of recent years, which are easily accessible.

Condition of banks in the United States in 1862.

**BANKING AND CURRENCY.**

The existing agitation on the subject of banking and currency is due to the supposed need of more money in some sections of the Union. In the more densely populated, enterprising, and wealthy portions of the country there is a great abundance of money, and banks afford needed accommodations, supplying all the currency the people can use under normal conditions. In the more sparsely settled sections, with limited resources, business, and wealth, banks are less numerous, their accommodations more curtailed, currency less abundant, and the people think they are not adequately supplied.

Banking is, in most respects, like any other business in which services are rendered the public. It can only be carried on successfully when there is enough service required by the public to sustain the business. A grocery store in a community so sparsely populated as not to afford a living to the grocer would go into

bankruptcy. A bank established in a community in which the need of banking accommodations is so meager, the use of discounts so infrequent, by reason of the small amount of business carried on, as not to pay the bank to keep money for the use of the community, would close its doors and its capital would seek a more hospitable investment. Where there is little capital there will be little money, and interest will be high, the latter depending upon the supply of capital in all forms suited to productive uses compared with the opportunity to use it productively. If there were more capital in those sections which complain of a dearth of money, the complaints would cease, for the volume of money will, under normal conditions, correspond with the volume of capital.

#### THE REAL PROBLEM.

The problem for solution is how to provide a uniform system of banking that will meet equally well the needs of sections of the

Union which show a marked disparity in those conditions which underlie successful banking. On a former occasion I submitted a series of tables which brought into view the disparity to which I refer. I will not repeat them now, but the substance of the results shown are that the 33 McKinley States have in round numbers 35 and the 22 Bryan States 65 per cent of the total area, while in population the ratio is substantially reversed, the McKinley States having 64 and the Bryan States 36 per cent of the total.

In school expenditures the McKinley States rise to 78 and the Bryan States fall to 22 per cent of the total. In the former the per capita expenditure for education is \$2.71, and in the latter \$1.37.

Of personal property the McKinley States possess 68 and the Bryan States 33 per cent of the total. Of real property the former hold 76 and the latter 24 per cent of the total. Of farm lands the McKinley States have 71 and the Bryan States 29 per cent of the total in value.

Of farm products the McKinley States produce 60 and the Bryan States 40 per cent of the total product. Of real estate mortgages the McKinley States are burdened with 81 and the Bryan States with 19 per cent of the total incumbrance. Of manufactured products the McKinley States produce 87 and the Bryan States 13 per cent of the total product. Of the wages paid labor in manufacturing the McKinley States pay 88 and the Bryan States 12 per cent of the total wage paid. In silver product the Bryan States are far in the lead, producing 98 and the McKinley States but 2 per cent of the total product. In number of savings-bank depositors the McKinley States show over 98 and the Bryan States less than 2 per cent of the whole number, reversing the ratio in the case of silver.

It must be admitted that these are most pregnant facts and are of the profoundest significance in the consideration of the banking and currency question and its bearing upon those sections of the Union which exhibit such marked inferiority in all the elements which constitute the basis of modern economy in the mechanism of banking.

It is not to be expected that communities comparatively weak in the material resources which must precede banking facilities can maintain a banking system suitable to stronger, more developed, wealthy, and populous sections any more than we can expect the feebleness of childhood or the decrepitude of age to admit of the regimen suitable to the vigor of mature manhood. Banks can not be maintained where there is no banking to do; credit money is unavailable where credit does not exist; but these will grow up in every community just as fast as material development, capital, wealth, and business require them.

#### COMPARISON OF BANK RESOURCES.

On a former occasion I also submitted a series of tables presenting the banking situation in all sections of the Union, which showed with great distinctness the weakness that comes from lack of nourishment, and that, with a sparse population, limited capital, small resources in wealth and production, and a limited use of the instruments of economy in finance, there will be in the nature of things inferior facilities for conducting the operations of banking. What we would expect from an *a priori* view is precisely what we find in the comparison to which I refer.

The exhibit, which I will not now reproduce, shows that the McKinley States contain 75 and the Bryan States but 25 per cent of the total number of national banks. Of the capital stock the McKinley States have 83 and the Bryan States 17 per cent of the total. Of bonds deposited to secure circulation the McKinley States have 89 and the Bryan States 11 per cent of the total. Of bank-note circulation the McKinley States have 88 and the Bryan States 12 per cent of the total. Of individual deposits the McKinley States have 85 and the Bryan States 15 per cent of the total. Of loans and discounts the McKinley States have 91 and the Bryan States 9 per cent of the total. Of the money due from national and State banks and from reserve agents the McKinley States have between 80 and 85 and the Bryan States an average of about 20 per cent of the total. Of the stocks and securities held by the banks the McKinley States have 87 and the Bryan States 13 per cent of the total.

A glance at these percentages will show how completely they conform to those in the previous exhibit, demonstrating that banks will exist where they are most needed and will multiply in proportion to the means of creating them and the need for their use.

Now, let me, in the way of an object lesson, submit an illustration of the disparity of banking benefits enjoyed in different sections on account of differences in the conditions under which banking operations are carried on.

Lancaster County, Pa., which constitutes the Tenth Congressional district of Pennsylvania, contains an area of less than 1,000 square miles and has a population of about 150,000. It is an agricultural county, containing 500,000 acres of cultivated land divided

into 9,000 farms, which are assessed at nearly \$90,000,000. Its agricultural product in 1890 was \$7,657,790, exceeding by at least 25 per cent that of any other county in the Union. Its people have \$21,500,000 invested in judgments and mortgages. It has 26 national banks, with a capital stock of \$3,650,000 and a note circulation of \$1,087,430. No citizen in the county need travel from his residence more than 12 miles at most to a national bank, where he can obtain all the accommodations he needs if he possesses the necessary collaterals.

The following table exhibits the banking situation in that county on October 6, 1896:

Bank statement for Lancaster County, Pa.

Number of banks.	Capital stock.	Bonds to secure circulation.	Notes in circulation.	Individual deposits.	Loans and discounts.
26.....	\$3,650,000	\$1,344,500	\$1,203,929	\$5,568,909.60	\$7,983,301.78

I now present, in order to bring the contrast fully into view, a corresponding statement of the banking situation in the seven Southern States named:

Banking statement for seven Southern States named.

State.	Number of banks.	Capital stock.	Bonds to secure circulation.	Note circulation.	Individual deposits.	Loans and discounts.
North Carolina.....	28	\$2,766,000	\$806,000	\$705,385	\$4,809,968	\$6,432,705
South Carolina.....	15	1,848,000	490,750	446,785	3,744,481	5,856,344
Georgia.....	28	4,016,000	567,000	1,109,457	6,631,493	8,925,600
Florida.....	17	1,350,000	405,000	382,000	3,911,651	3,567,624
Alabama.....	27	3,405,000	1,215,500	1,063,060	5,727,797	6,417,525
Mississippi.....	10	855,000	242,650	216,700	2,032,424	2,634,329
Arkansas.....	9	1,220,000	348,500	298,100	1,601,422	2,355,437
Total.....	134	15,460,000	3,924,400	4,173,197	28,582,236	35,589,573
Average.....	19	2,208,571	590,628	590,171	4,083,176	5,084,224

In the foregoing comparison we see side by side two agricultural sections of our country—one a single county, with an area of 973 square miles, with a population of 150,000 and one Representative in Congress; the other, seven sovereign States, with an average area of 48,985 square miles, an average population of 1,225,524, and an average representation in Congress of seven members. The result of the comparison shows that the former area, limited in extent and population as it is, has 37 per cent more banks, 65 per cent more capital stock, 140 per cent more bonds deposited for circulation, 100 per cent more circulating notes, 39 per cent more individual deposits, and 57 per cent more loans and discounts than the average number and amounts in the States embraced in the latter extended area.

Here is a concrete case which brings into view one section of our country in which our national banking system works well, and another in which, it is claimed, it does not work satisfactorily. Its analysis will reveal the cause of the difficulties experienced in the complaining sections. You will say at once that in Lancaster County you have wealth, capital, business, and therefore money, credit, and banks. Your proposition is most sound, and the converse of it is equally sound; with less wealth, less capital, and less business we would have less money, less credit, and fewer banks. The conclusion is as plain as the way to church. Where the conditions precedent exist money and banks come into being; where they do not exist money is scarce and banks few. This is the result of inexorable law, and legislation can bring no relief unless it can create the conditions precedent, which no one asserts.

#### A DIFFICULTY THAT LAW CAN NOT REACH.

William E. Dodge, of New York, the other day at a meeting of the Chamber of Commerce spoke with touching pathos of the unhappy conditions in some sections where, as in Virginia, a four-days search failed to find change for a fifty-dollar note. But how the evil was to be remedied Mr. Dodge confessed he did not know. A recent financial writer, it seems to me, comes very near the nerve of the case when he says:

A community is made up of individuals, and individuals can provide themselves with money only by earning it or by borrowing it, and the power to do either can not be conferred by law. Establishing banks in imppecunious regions has been advocated, but banks can not be established without capital, nor can they long do business where there are no depositors and no borrowers who can be relied upon to repay when it is due the money that is lent them. Money was once as scarce in New England and New York as it is now in Virginia, and it has become plenty there only by the slow process of creating wealth and saving it. The same process will in time enrich Virginia and other States at present so poor, but it must be the work of their own citizens and not that of Congress.

In the West and South to-day a considerable portion of the capital invested in national banks is nonresident capital, coming from

the North and East, where there is a surplus. The Comptroller of the Currency in his last report says:

In evidence of the extent of this investment it was shown by an investigation made in 1899 that nearly one-third of the capital stock of 529 national banks in Iowa, Minnesota, Missouri, Kansas, and Nebraska had been contributed by Northern and Eastern shareholders, while in Dakota, Idaho, Montana, New Mexico, Utah, Washington, Wyoming, and Arizona more than one-half of that of 144 national banks was held by nonresident shareholders. In the States of Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Arkansas, Kentucky, and Tennessee, of the shares of 410 national banks, a little more than one-sixth of the total was held by nonresidents. The investments of this character made by nonresidents since the date given, and especially so during the years from 1890 to 1892, have been at least as large, if not larger, than in the years prior, but the figures are not at hand to state with accuracy the proportion. The facts alluded to, however, form of themselves such data upon the point made as to make them worthy of consideration.

The conditions which account for such disparity in banking facilities as are revealed in the foregoing comparisons are conspicuous factors in the problem of national banking. They render impossible of attainment the proposal of some enthusiastic currency reformers, viz, a banking system which will furnish equal facilities to and make credit equally available in all portions of the country and distribute the loanable capital of the country so as to meet the needs of all sections. This might be possible in a country of more homogeneous conditions than ours, but here and now it is one of the "iridescent dreams" of financial Utopia, for dissimilar conditions will never yield similar or equal results in banking any more than in other realms. The best we can do will be an approximation to this ideal; to so amend our system as to secure the least of the worst and the most of the best results of a uniform national banking system.

#### STATE-BANK NOTES NOT DESIRABLE.

The remedies proposed are numerous and as varied in their character as Joseph's coat in its color. The Comptroller of the Currency received in one year forty distinct propositions to improve the national banking system. Some of our Southern friends who have given the Banking and Currency Committee the benefit of their counsel have advocated the repeal of the tax on State-bank circulation and to allow all banks to issue currency against their assets. Some of them admitted that such a currency would be at a discount outside of the State of issue, and argued that that would be its chief excellence; that the only currency that would remain with them would be one that would be sent home as soon as it went abroad; that homing money, like homing pigeons, is of great value. In other words, the best currency for them was a currency so bad that other people would not have it.

That a State-bank circulation could not compete with our national-bank currency was demonstrated during the war. On July 1, 1864, there was State-bank currency in circulation amounting to \$180,000,000 and only \$31,000,000 of national-bank notes. On July 1, 1865, three months after Appomattox, there was \$143,000,000 State-bank notes and \$146,000,000 national-bank notes in circulation. When the 10 per cent tax went into effect in 1866, it found but \$20,000,000 State-bank notes in circulation, so much had the local currency dwindled in the presence of uniform, sound, and safe national currency.

#### CURRENT REDEMPTION.

A currency that has to be constantly homing for redemption to keep its character is not a desirable currency for this country. A note that is equally good at all times and in all places needs no current redemption. It is as serviceable in any bank in which it happens to lodge as in the bank which issued it. Current redemption cut a very small figure in our banking system from the inception of national banks down to a very recent period. The means of redemption, of course, are necessary, for sometimes there is occasion to redeem. The holder of a bank note may require a legal tender to pay a debt. Soiled and mutilated notes must be exchanged, and banks may wish to exchange notes for legal tenders to replenish their reserves. Beyond this, under normal conditions, there is no need for current redemption.

#### THE SUFFOLK SYSTEM.

It is now suggested that we remodel our national system in the similitude of the Suffolk system, in vogue in Massachusetts fifty years ago. What an anachronism that would be! It may have been necessary in that early day to keep the State bank notes in countenance to redeem them over and over a dozen times a year. The average daily redemption of the Suffolk Bank in 1850 was \$750,000. In 1849 the total bank-note currency of Connecticut was redeemed at Suffolk every sixty days. The bank employed seventy clerks. Under that system, with a circulation of \$40,000,000, the redemptions were \$400,000,000 a year, while under our national system, with a circulation of \$360,000,000, the redemptions never exceeded until recently \$25,000,000 a year. Under the Suffolk system the annual redemption was ten times the circulation, while

under our national system it has been but a fraction of the circulation.

Professor Sumner in his History of Banking says the Suffolk system would not probably have succeeded, except for the fact that Boston was the great emporium of that section. It was tried elsewhere with but little success, and it was in a condition of partial disruption when the national banking system came. To discard our national and go back to the Suffolk banking system would be like discarding the modern greyhound of the sea, driven more than 20 knots an hour by a quadruple expansion engine, and calling back to service the wind-driven, creeping craft of fifty years ago.

The idea that sending notes home to the bank of issue promotes elasticity is a crude and antiquated notion. When the notes of all banks are equally good, what advantage is derived by each bank holding its own notes and sending home those of other banks? One is as good to loan as another, and unless it needs to replenish its reserves the sending of notes back and forth across the country is a wasteful and vain performance. If banks have to hold currency waiting a demand for it, it costs no more to hold the notes of other banks than its own, and it could meet a new demand for discounts as effectively with the notes of other banks scattered from Maine to California as with its own issues.

So, looking the matter squarely in the face, it does seem that the remedy of a local currency issued by the State banks would be worse than the disease, and with the experience of the past to guide our footsteps, as practical legislators we can not administer the prescription.

#### PAST EXPERIENCE.

Contemplate for a moment the financial experience of this country. It has been most extraordinary. Without summoning the ghost of our continental currency, we have seen hundreds of millions of dollars, the circulation of a portion of our country, engaged in an unfortunate attempt to break up our family house-keeping, like the apples of Sodom, turn to ashes in the hands of the people, sweeping away great blocks of the wealth of its holders.

We have seen other hundreds of millions of bank notes issued by State institutions depreciate in value, lose their currency, and become worthless in the hands of their unhappy holders. On the other hand, we have witnessed a currency exchanged for the wealth of the country to carry on a war for the preservation of the Union appreciate from the value of 36 cents on the dollar to the par of gold. From the ragged edge of worthlessness it rose in a few fleeting years to the value of specie the world over, commanding its face in gold in every commercial city on the globe. This achievement of unrivaled splendor in finance was due to wise legislation and the invincible integrity of the American people.

#### SOUND MONEY AND NATIONAL HONOR.

One of the first steps we took after the war in our splendid march to the imperial place we now hold among the nations was to make our paper currency the equivalent of the world's money and equally good everywhere the flag floated. By our steadfast adhesion to the principle of national currency we have maintained the national honor and kept our money good. After so many years of such a currency, Mr. Chairman, all provincial schemes of finance, all local currencies and State-bank notes, are anachronisms. In an age of steam and electricity, when intelligence flies on electric wing and commodities are transported with a speed and safety only possible to the marvelous instrumentalities of our day, commerce and currency are twin sisters, living and journeying in loving companionship. Whither one goes the other must also. Where ships sail, steamers ply, or cars run, over all the waters and roadways of the land, on which the exchanges of the country fly to and fro like mighty shuttles weaving the wondrous web of interstate commerce, there should the nation's currency be current. The bank note that pauses for inspection and discount at the bank of a river, or about-faces for fear of insult at a State boundary, is a ragged tramp, a limping vagabond, which would be a disgrace and reproach to this grand, imperial Republic.

#### NATIONAL BANKS AND PROSPERITY.

I can not be persuaded that a banking system that worked so well for so many years while we were in a normal condition down to 1892 or 1893 needs to be turned down at this time. I doubt if any kind of a system would work with ideal perfection under the present circumstances. The English system has broken down four times since 1844, and the French system missed fire in 1848, and again in 1870, when specie payments were suspended until 1877.

Under our system as it is now the country enjoyed for many years a high—I may say an unexampled—degree of prosperity. Wealth increased at an enormous ratio, our debt was rapidly paid, and the United States became the greatest debt-paying nation in the world. No other country ever contracted debt so rapidly or discharged it with such alacrity as our own.

Under the compulsion of a patriotic necessity, in the small

space of five years we contracted a debt of almost \$3,000,000,000. Our annual interest charge was \$150,000,000. In thirty years we extinguished more than \$2,000,000,000 of that colossal pile, in addition to nearly \$2,500,000,000 of interest and \$118,000,000 premiums on bonds, making a total of over \$4,500,000,000, or an average annual payment of over \$150,000,000 for the entire period. This, you will agree, is debt paying on the most stupendous scale recorded in human history, and it has excited the wonder and admiration of the civilized world.

Gladstone, when we had gone but a little way—only twelve years after the war—in this phenomenal experience of debt paying, speaking of the financial sequel to the great conflict, said:

England in sixty-three years after the Napoleonic wars reduced the huge total of her fabulous debt by only \$500,000,000, while the United States in twelve years had reduced her debt \$700,000,000, doing in each twelvemonth what England required eight years to do. American self-denial and wise forethought have been, to say the least, eightfold ours.

This was the homage Gladstone paid to what he called the "most unmitigated democracy known to the annals of the world."

As Americans our breasts swell with pride at the splendid pre-eminence we have achieved in this among the other manifold triumphs which have shed upon our history a glory whose luster can only be dimmed by the misfortune, which God forbid, of the necessity or the habit of increasing instead of diminishing our national debt becoming inveterate, or of settling down into English indifference to the payment of our national obligations and shifting the burden upon posterity, with the idea which prevails in England, that a great debt is an eminently respectable institution and one of the blessings of a perfect constitution. This would indeed dim the luster of our financial history, for it would be the dawn of the day of disaster to the pride, prosperity, grandeur, and glory of the United States.

#### THE SOUTH AND NATIONAL CURRENCY.

Mr. Trigg, of Richmond, in his examination before the Committee on Banking and Currency, said that the 10 per cent tax on State-bank circulation has brought greater loss and distress to the South than the desolation of the war. Is that so? I have before me the figures which express the growth and development of the Southern States during the decade between 1880 and 1890. It is almost phenomenal, and I do not hesitate to assert that a sound national currency was a conspicuous agency in that development. I commend this table to the prayerful attention of my Southern friends.

These are the figures:

Statement showing the development in the Southern States in ten years.

	1880.	1890.	Per cent of increase.
Population.....	14,628,936	17,556,920	19.9
Whites.....	9,067,187	11,361,936	26.2
Colored.....	5,561,749	6,194,984	10
Wealth.....	\$6,008,000,000	\$9,751,815,635	62.5
State debt (not).....	\$118,195,232	\$95,469,126	18.4
Public debt.....	\$120,345,464	\$183,772,353	5
State revenues.....	\$13,249,896	\$26,535,240	100
Bank capital.....	\$62,575,000	\$171,699,670	86.1
Capital invested.....		\$2,339,170,000	
Railroad mileage.....	10,522	41,118	110.1
Men employed.....	86,250	188,731	118.8
Railroad equipment.....	\$612,000,000	\$1,301,006,740	110.9
Manufactories.....	34,563	56,714	61.2
Capital.....	\$179,306,230	\$351,483,900	207
Value of product.....	\$315,924,704	\$742,865,200	135.2
Cotton mills.....	161	334	107.4
Value of products.....	\$16,353,182	\$54,191,000	231.4
Cotton-seed products.....	\$7,600,921	\$27,310,836	267.1
Pig-iron product..... tons.....	200,772	1,684,063	480.9
Steel product..... do.....	4,380	183,625	4,121
Coal product..... do.....	3,820,550	17,536,456	362.9
Precious metals.....	\$225,170	\$712,789	218
Total minerals.....	\$3,643,029	\$35,008,615	877.5
Lumber output.....	\$35,680,151	\$102,122,100	183.4
Forest products.....	\$46,979,002	\$123,998,800	163.8
Land under crops..... acres.....	54,679,145	75,551,429	38.1
Agricultural machinery.....	\$67,372,500	\$120,750,000	79.2
Cotton product..... bales.....	5,731,675	7,776,215	3.6
Value.....	\$359,521,911	\$940,208,005	32.6
Fruit value.....	\$9,084,173	\$24,620,500	171
All farm products.....	\$611,679,145	\$984,707,000	60.9
Live stock.....	\$300,066,863	\$555,905,108	54.1
Schools.....	44,280	60,647	30.1
Teachers.....	49,182	74,055	50.5
Pupils enrolled.....	2,018,640	3,359,173	67
Attendances.....	1,361,743	2,181,109	58.9
School revenues.....	\$5,067,081	\$14,707,306	163.6

#### A HITLESS SWORD.

Such a currency, Mr. Chairman, will bless any nation wise enough to create and maintain it. On such a currency no statesman should lay his hand in violence. The blow you strike, my

Southern friends, at such a currency will fall upon yourselves. It is a hitless sword you draw in this contention.

The closer your clutch of the steel,  
The deadlier the blow you would deal,  
Deeper wound in your hand is made,  
And your own blood reddens the blade.

#### UNSECURED CURRENCY.

It is doubtless true that a currency issued against the assets of the banks is the cheapest currency that can be provided, for it costs nothing, and sometimes it is worth nothing to the last holder; at least this has been so in the past. The difference, however, in cost between such a currency and one secured by bonds or other securities is not so great as many suppose. Many of the figures made on this subject by mathematical financiers are exceedingly misleading; not that figures lie, but that liars sometimes figure. If a bank has \$100,000 capital and invests it in bonds at 6 per cent, and receives \$100,000 in currency which it can loan at 6 per cent, it receives the same income as if it loaned to its customers its \$100,000 of capital and an additional \$100,000 of currency issued against its assets.

In fact, it makes a great deal more when its capital is in bonds, for it is yielding a constant income; it works every day in the year; whereas if it were in the vaults of the bank waiting discounts it would be unused a portion of the time and the interest would be lost. As a matter of fact, banks do not undertake to keep all their capital for current loans. They can not afford to do so, for every dollar of it costs them its face. The only money they can afford to keep in idleness waiting a chance to earn something is money that cost them nothing. They invest a large part of their capital in stocks and bonds which yield a constant return. The capital, surplus, and undivided profits of the national banks, according to the last report of the Comptroller, on July 14, 1896, were \$974,882,159, of which \$469,052,298, or about one-half, was invested in Government and other bonds. The capital, surplus, and undivided profits of banks of all kinds in the United States at the same time amounted to \$1,748,317,260, while they had invested in bonds of all kinds the sum of \$1,679,879,887, and a considerable portion of this vast investment was not bringing more than 4 or 5 per cent interest.

When, however, the bonds of the Government are at a premium and the rate of interest is low and the amount of currency issued on the bonds less than the par value, the income on that investment diminishes and the comparison as to cost redounds proportionately to the benefit of the purely credit currency. At their present price, if banks were allowed to issue to the par of bonds deposited, as provided in this bill, and the tax on circulation were reduced to one-fourth of 1 per cent, they would realize on their capital 8 per cent, 2 per cent more than could be realized on that portion of their capital used in current discounts. At that figure banks would put out all the circulation the people need, for they can not make that profit in any other form of investment, and they ought not to ask legislation that would enable them to make more.

#### SECURITIES.

When the time comes, or at once, if, as some insist, it has already arrived, that Government bonds are too scarce to suitably meet the banking requirements of the country, we ought to provide for the use of other securities, under such conditions and restrictions as will adequately guarantee the Government against loss. This would cause little inconvenience to banks, for they already invest largely in securities, as I have abundantly shown. They would, of course, have to select such securities, municipal or State, as would meet the requirements of the Government. But it would impose no burden, and would supply the banks with an inexpensive medium of circulation, while it would preserve for the use of our people a secured currency, to which they have been accustomed for a third of a century and with which they would be very reluctant to part.

#### CREDIT CURRENCY.

In this connection I desire to record my opposition to the principle of credit currency, which receives much favor in some quarters. I am unalterably opposed to authorizing a bank to receive the money of the people for safe-keeping, and then to issue an unsecured currency which shall be a first lien upon the people's deposits. No bank should issue a note to go into general circulation whose redemption is not secured by property in some other custody than that of the bank itself. This I believe to be a sound principle of banking. It is recognized in the constitution of Pennsylvania, which forbids the enactment of any law authorizing a bank to issue a currency until it has deposited with the auditor-general ample security for the full amount to be issued as a guarantee of its redemption. This is Pennsylvania doctrine. I stand foursquare upon it, and I believe it enjoys the favor of a great preponderance of the good people of the United States.

There is, in my judgment, much fallacy indulged in by some who advocate an unsecured currency. It is said that a bank circulation is safe and serviceable in proportion to its likeness to

credit paper, such as checks and bills of exchange, notes, etc. It should be issued against assets which will admit of prompt realization in order to insure speedy redemption. A bank note, it is said, is issued by the owner of property, and to the holder it conveys a legal right to a specified amount of that property or assets, and that makes the note at all times convertible and safe. That is, as Horace White says, the bank, when it issues its note, puts property in circulation. If I lend my neighbor money to buy a wagon, I have loaned him a wagon. These are verbal propositions which have no corresponding reality. It is like saying, as some writers do, that no bank issues a note until there is an equivalent in value deposited for its redemption. Yes; but under the proposed system the property which is the security remains in the hands of the bank.

Moreover, a commercial note does not represent property any more than money does. A bill of lading does, of course, for it can not be separated from the specific goods. But the holder of a promissory note has no property in the goods for which it was given. If I buy a horse and give my note for \$100, the holder of that note or the bank that discounts it has no property in the horse. I may sell it and take another note. The buyer from me may do the same, until there are ten notes or more out for that identical horse, and the same bank may discount them all and hold \$1,000 worth of commercial paper against one horse worth a hundred dollars, and in which it has no property whatever.

If you would go to a pawnbroker and propose to pawn your watch for \$25 and would suggest that the watch remain in your own hands as security for your own debt, you would hardly get out of the shop with your money. Place the value which is to cover the note in the hands of a trustee, and there is safety. As a matter of fact, attested by all human experience, a bank note is unsafe just in proportion as it resembles the transactions to which it is likened by Mr. White and some other writers. A bill of exchange may not be paid, likewise a check or a note, and the holder may lose his money, and oftentimes does; and every man who handles such a paper takes a risk. If I loan my wagon, the borrower may steal it; or, if I sell it and take a note for sixty days, the buyer may never pay it.

These risks and dangers are incident to all such commercial and financial transactions, and but for the opportunity men have to investigate and learn the character and competence of those with whom they deal there would be no credit transactions. But when you handle a bank note you are dealing with a paper of superior credit, a form of currency that was created to avoid the risks incident to ordinary credit paper. It possesses a character that gives it a passport everywhere. You take your promissory note to bank and obtain bank notes because they have wider credit; you could not circulate your note. The bank note's universal credit makes it go. It stands for an indefeasible title in the holder to the amount of property it represents. Those who receive it have no means or opportunity to investigate its origin or to establish its credit. It must travel by faith, and not by sight, and no degree of security can be commensurate with the character and prerogatives of such paper short of absolute safety. To leave the note holder to dependence on the honesty of the bankers and the solvency of the bank's debtors is to leave him insecure.

#### COMMERCIAL ASSETS.

If we knew how much of these commercial assets turn out valueless, we would be more sensible of the danger of relying upon them as security for circulation. James G. Cannon, vice-president of the Fourth National Bank of New York, at the last annual convention of the New York State Bankers' Association, said:

A writer in one of the Boston daily papers not long since stated that the Boston banks from September 1, 1892, to September 1, 1894, had charged to profit and loss \$10,175,322, and that the banks of New England had charged off during the same period \$30,960,000, the larger proportion of these amounts being for bad debts.

It appears, moreover, from the last report of the Comptroller of the Currency that from 1863 to 1896, 1,234 State banks failed, with an aggregate capital of \$51,515,458; aggregate liabilities, \$220,598,999, and the total dividends paid amounted to \$95,037,724, or an average of 43 per cent. It is furthermore shown that of these failed banks 203 paid a dividend of less than 50 per cent, 192 less than 25 per cent, and 282 none at all. So I think it a fair assumption that if the commercial paper for which the bank currency is exchanged is without credit or liable to default, since no multiplication of uncounted units can give soundness to the aggregate, the currency issued against it can not itself be secure.

#### DEPOSITS OUGHT NOT TO BE LOOTED TO PAY BANK ISSUES.

I am unalterably opposed to the Federal Government conferring upon any body of men under a free banking law the power to issue circulating notes on their own property under their own control. I do not dispute that the notes might be substantially safe, but it would be at the cost of others whose property is entitled to the same protection as that of their neighbors. Notes secured by the assets of a bank with a prior lien on the deposits may be safe; but in proportion as they are, the deposits are unsafe. If deposits

could be made as secure as the notes, there would doubtless be fewer panics, for depositors would not draw their money out in times of stringency. The need for security for depositors is really as great as for notes. It is to the interest of the public that all the money remain available for use in circulation under such conditions as will secure immunity from loss. For the Government to charter a bank, give it a certificate of character and honesty which invites my cash and authorizes me to trust it, and when it becomes the custodian of my money it empowers it to issue its own notes, which shall be a first lien upon the funds I have entrusted to it, does not seem compatible with honor and honesty, and is not a suitable business for the Government to engage in.

Let me fortify these views by the testimony of an eminently competent witness.

William L. Trenholm, Comptroller of the Currency, in his report for 1887, says:

The national banks owe their prosperity entirely to the confidence of the general public, as the volume of individual deposits shows, and it would be a hazardous thing to introduce into the system any feature which would be likely to disturb the confidence of depositors. It is doubtful whether any real strong and prudent banks would like to risk their credit with depositors by issuing notes as a first lien on their assets, and in that case, if the proposition led to the establishment of such a bank, currency notes would be issued chiefly by banks having small deposits, and their assets might very easily be so handled as to constitute a very poor security even for the preferred notes. There would certainly be a great temptation to a bank to become speculative when once it had floated all the currency allowed and found itself free from the observation of numerous and vigilant local depositors. If these views are correct, they would seem to be fatal to all schemes of establishing a bank currency secured only by a first lien upon all the assets of the issuing bank, unless some sufficient counterpoise to the objections can be found among the various suggestions as to a 25 per cent reserve, a sinking fund deposited with the Government, the consolidation of all issuing banks into one association, etc.

While none of these devices appears to me likely to prove practically effective in removing the objections, it is probable that considerable diversity of opinion will arise on the subject, and as individual views can not be anticipated, it seems useless to spread the discussion over the whole field of possible contention. It is important, however, to bear in mind that any computations as to the proper ratios of reserve or redemption funds to the volume of currency which may be drawn from the history of national-bank circulation will be misleading, because the conditions heretofore obtaining will all be changed when, on the one hand, banks have every temptation to force out circulation, and, on the other hand, the public acquire the habit of presenting these notes for redemption every time the general credit of the bank is affected.

In times of panic, now, banks have to take care of their depositors only, the ordinary process of the redemption of notes is not materially varied, nor is the volume of general currency diminished; but when there is no special security behind these notes the case will be very different; every rumor of monetary trouble will bring both the note holders and the depositors clamoring for payment, and just when there is most need of money to pay them with, the currency will be contracted by the discredit of national-bank circulation.

In answer to these general objections to the first-lien principle, it may be said, of course, that the assets of the bank will be increased by the whole amount of its issue of notes, while now its assets are actually diminished by the difference between the cost of the bonds and the circulation received from the Government. This is very true, and if those assets were set aside, as the bonds now are, as specific security for the notes, and if, moreover, they could be always maintained in a form as intrinsically valuable and as readily convertible as the bonds are, the force of the objection would be destroyed; but no one familiar with practical banking can really believe that either of these conditions could be maintained in even a single case, while it is more than probable that in most cases they would be disregarded, and the old adage "easy come, easy go" would receive fresh illustration from numerous instances in which the facility of uttering currency would lead, as it did under the old State-bank system, to very lax and speculative methods of employing the resources so obtained.

If the views here submitted are correct, it would appear that no substitute yet proposed for the present basis of national-bank circulation is sufficiently free from objection to be adopted. The 4 per cent bonds will not mature for twenty years; and, apart from other considerations, there is enough in this fact to justify caution and delay in making any radical change in the basis of circulation. In that time no doubt something acceptable will be devised, but at present all that seems practicable is to modify the existing law so as to obviate its inconveniences, and as a first step toward this end it appears both safe and wise to reduce the minimum amount of bonds to be kept on deposit.

#### BANKING SYSTEM OF CANADA.

It may be well to remember, in connection with the contention in favor of issuing notes on the assets of banks, that there is not a country in the world in which that mode of issue is permitted under a general law providing for a free system of banking.

The Canadian system is set before us as an example worthy our imitation, but no one advocates the introduction of the Canadian system as a whole into this country. But a fragment of the system, a single feature of it, namely, the mode of issuing notes, it is claimed, should be adopted by the United States. That such a mode of issue works under their system is no evidence that it would work under ours, for the two banking systems are totally dissimilar. The restrictions and limitations upon banking under the Canadian law are calculated to safeguard their issues, and, under those restrictions and limitations and the conditions incident to the character of their people and the state of business, I concede that their manner of issuing notes may be compatible with safety. But under our banking law, free as it is, and under the conditions created by the extent of our country, the number of our population, the character of our people, and the state of business here it would not be safe.

What is their system? There is not a free banking law under which any five men may organize a bank. There every bank is

chartered by act of Parliament and must have \$500,000 of capital stock. After a hundred years of development they have but 45 banks, with a territory larger than ours. Ten of these banks have no branches, and 35 of them have an aggregate of 400 branches. All the banking business of the Dominion is controlled, regulated, and operated by 45 responsible centers, while our national-banking business is operated in nearly 4,000 separate and independent institutions. They have a capital stock of \$60,000,000; we of \$800,000,000; New York City banks have over \$61,000,000, and Boston nearly \$52,000,000. Their maximum circulation is \$38,000,000; their minimum, \$31,000,000, leaving a margin of elasticity of \$7,000,000. Their issue does not exceed 60 per cent of the authorized limit, yet they never have a panic caused by fear of stringency in the circulation. Their issue can not exceed their paid-up capital stock, and two of their great banks can not exceed 75 per cent of their capital stock without depositing cash or bonds equivalent to the excess. They pay to the minister of finance 5 per cent of their actual circulation as a redemption fund and receive 3 per cent interest on it. The redemption fund is kept up by an assessment on all banks, not exceeding 1 per cent annually.

Forty per cent of their reserves must be in Dominion notes, which they must buy and pay for, and every debt must be paid to the extent of \$100 in Dominion notes if demanded. These notes are small—25 cents, \$1, \$2, \$3, and \$4, and upward. There must be redeeming agencies for every bank at the cities of Halifax, St. John, and five other places. The banks reissue their notes when redeemed and may take interest not exceeding 7 per cent. The Dominion notes are secured by gold or securities deposited, and \$25,000,000 may be issued by the minister of finance, nearly half of their paper money. There are \$22,000,000 out now, \$15,000,000 of which are held as bank reserves. These notes are legal tender. The bank issues are returned to the central bank for redemption or to authorized agencies. Their stock of money consists of \$20,000,000 in gold; silver, \$6,500,000; paper, \$22,000,000 Dominion notes and \$35,000,000 bank notes, with metallic reserve of \$17,000,000, which makes the amount of uncovered notes about \$13,000,000.

The limited issue of the Canadian banks and the small margin of elasticity are due to the lack of that activity in commerce and trade which prevails in the United States. Business is sluggish in Canada. It keeps an even tenor; it is about the same yesterday, to-day, and forever. Canada started with a population equal to ours a century ago, and she has now about 5,000,000 population while we have 70,000,000. One dry-goods store in New York sells almost as many goods as the whole of the Dominion buys in a year. Business does not become inflated to any extent, and panics do not frequently occur for the same reason, though in a different degree, that they do not in Alaska. It is thus easily seen that in such a country, with such limited banking facilities, with so much capital and so few banks, so little enterprise in business, so little fluctuation in the annual amounts of deposits and discounts, so little inflation of credit, so little exposed to the dangers which beset the banking system in a country like ours, there is comparative safety in the mode of issuing notes now in vogue in Canada.

#### CONDITIONS IN THE UNITED STATES.

In the United States all the conditions of banking and business are different. Here enterprise is active; business has a pulse which rises and falls. We trade and overtrade. We use credit to a large extent, and at times to great excess, and our business history is characterized by seasons of buoyancy and depression, with marked fluctuations in volume of circulation, amount of deposits and discounts, and an acute sensitiveness to distrust and alarm which are liable when credit is under severe tension to derange our whole system. Credit in the United States has been likened by Mr. Harvey to a top which gyrates on a small metallic point sufficient to support it as long as it spins rapidly, but inadequate when the rotary force is relaxed. Credit is the rotary force of our financial system. So long as this force is unimpaired the system spins merrily on, but when it fails, the top wobbles and falls.

These were the conditions in both our ante-war and our post-war periods. In the former, circulation was issued by banks almost without limit, and it was fully demonstrated that a free paper currency was not a safe one and that the severest limitations upon issues known to that period did not achieve safety. From 1814 to 1815 bank circulation increased from \$5,200,000 to \$10,000,000, and by 1819 it had fallen to \$3,000,000. The Bank of the United States increased its circulation from \$5,400,000 in 1822 to \$13,000,000 in 1828. From 1837 to 1843 the bank circulation was reduced from \$140,000,000 to \$58,000,000. The number of banks fell from 901 in 1840 to 691 in 1843, and rose again to 751 in 1848, and the paper circulation rose from \$58,000,000 to \$128,000,000 in 1849, and by 1857 had reached \$214,000,000, while the number of banks had increased to 1,416. In nine years our paper circulation doubled, and in 1857 the crash came.

The balance sheets of the banks register in cold figures the undulations in business and currency which mark the periods of

prosperity and depression and show the fluctuations in the volume of money and the extent that credit is used and abused.

Discounts rose to \$525,000,000 in 1837 and fell to \$234,000,000 in 1843, and by 1857 they had swelled to \$684,000,000.

The state of our currency in our post-war period is familiar to all, but let us look at the unerring record of the banks' discounts and deposits. Our national-bank discounts rose from \$166,000,000 in 1865 to \$944,000,000 in 1873. We were ready then for the panic. By the end of that year they had fallen to \$846,000,000, and by 1879 to \$814,000,000, when prices were lowest and the depression greatest. Then the tide began its flood again, and by 1884, when the next disturbance arrived, the discounts reached \$1,300,000,000. In one year they fell to \$1,200,000,000, then rose to \$1,470,000,000 in 1886, and to \$1,587,000,000 in 1887, and to \$1,684,000,000 in 1888, and then we were in the midst of a period of development, prosperity, and high prices.

The record of deposits tells the same story. From 1865 to 1873 they rose from \$183,000,000 to \$656,000,000, and then took a downward trend. From 1879 they began to rise again, and by 1888 reached \$1,350,000,000. All through our history increased deposits and discounts, extension of credit, rise of prices, inflation of business, and booming prosperity have been the precursors of panic. The ten panics which have come to us since 1813 have visited the great commercial countries about the same time, and were unquestionably due to the same cause—overtrading and inflated credit until business needed more money and credit than were available in the country.

Panic has been well defined as a stoppage of the rise in prices; the period when buyers are not in pursuit of commodities, but the latter are looking for buyers. Thus the three phases of our business life are said to be prosperity, panic, and liquidation. These constitute the business cycle, or circle. Prosperity from five to seven years, panic a few months or years, and liquidation a few years more or less.

In 1893 it is said there were two panics. The first occurred in May, and was the culmination of a long-continued drain upon the capital of the country by foreign investors who distrusted our ability to maintain gold payments. There was no scarcity of money at that time. The second panic, in July, was caused by the hoarding of paper money, which reduced the quantity in circulation below the needs of business. These are the ups and downs incident to a highly organized, active, enterprising, progressive people like ours. They could not occur to the same extent in a country like Canada under any conceivable banking system.

#### BANKING SYSTEM OF ENGLAND.

A word as to some other banking systems which some Americans extol without much discrimination. The English system in some respects is similar to our own. The Bank of England can not issue a note unsecured by an equivalent value in gold or the pledge of salable securities.

Robert W. Hughes, in his work on currency, speaking of the Bank of England, says:

Its notes are not really notes of the bank itself, but of the issue department of the bank, which is virtually a bureau of the British exchequer. Its notes are virtually notes of the British Government, redeemable in specie through the agency of the Bank of England. In principle the system in the United States is the same as that of England. The same three principles lie at the base of the English and American systems. They are: First, Government control over the issues; second, redeemability, directly or indirectly, in specie, and third, the subjection of the paper issues to the action of the efflux and reflux attending bank discounts.

The purpose of the Peel banking act of 1844 was to make the notes of the Bank of England absolutely secure, as we are striving to keep our national-bank notes, and to keep within narrow limits all other bank paper. No banking system in the world makes so little provision for elasticity as the English system. No new banks can be organized—none have been organized since 1844—with the power to issue a note on its assets. Many of the banks in existence in that year have surrendered the right to the Bank of England, so that the limit of unsecured bank notes in England is a receding one. The issues of the joint-stock banks are redeemable in the notes of the Bank of England, as our national-bank issues are redeemable in United States legal tenders. The English system has quite enough faults to keep it from perfection, though it has many elements of strength. In 1847, 1857, and 1866, and, I think, once since the latter date, the banking act had to be suspended to allow the issue to be increased on securities deposited, and Mr. Bagehot said the Bank of England would not have survived without those suspensions.

The joint-stock banks of England can issue about \$30,000,000 of unsecured notes, the Scotch banks about \$13,000,000, and the Irish banks about \$33,000,000. In addition to this they can all issue dollar for dollar on gold deposits. Anybody can turn his gold into money, as in our own country.

The members of the banking companies issuing notes in England as well as in Scotland and Ireland are subject to unlimited liability

as far as the notes are concerned. The aggregate amount of uncovered notes in England, Scotland, and Ireland is about \$76,000,000. Moreover, the Bank of England, because it has the machinery and methods of a bank in contradistinction to a government treasury, has been able to render effective service in moderating the severity of panics. The most memorable instance of this known, perhaps, in the history of that bank occurred in 1890, on the collapse of the Baring Bros. It is so notable in its way that it stands as a landmark in English financial history.

The house of Baring Bros. was unable to meet its engagements, amounting to about \$140,000,000. The Bank of England received notice on September 7, and by the 15th had secured from a syndicate composed of the great London houses a guaranty that it would be protected from loss to the amount of \$20,000,000 if it would liquidate the Barings' business, and from the British Government the right to issue \$35,000,000 of notes, provided that sum was used to loan the Barings, and it therefore assumed on that date the task of paying the Barings' acceptances of \$105,000,000 and \$37,500,000 of other liabilities. This heroic and unprecedented service of a moneyed institution is believed by those most competent to judge to have averted what would have been the greatest financial cataclysm in the world's history.

As an answer to some groundless statements made by those who find pleasure in extolling the English banking system and disparaging our own, I insert here some remarks by Mr. Matthew Marshall, financial writer on the New York Sun:

#### REMARKS OF MR. MARSHALL.

The truth is, that the currency of the United Kingdom is the least elastic of all the currencies of the world, and it has been so for more than fifty years. In 1844 Sir Robert Peel carried through Parliament what is known as the bank act of that year, and it has ever since been the law of the land. By that act the note issues against assets only of all the banks in the Kingdom, except the Bank of England, are rigidly limited to the average amount of their outstanding issues for the year 1844. As fast, however, as the banks of England and Wales give up issuing notes, they lose the right to resume it, and the Bank of England acquires the right, in their place, to issue two-thirds of the amount they surrender. To the Bank of England was originally given the right to issue \$14,000,000 of notes secured only by a Government debt to that amount, which amount has been increased to \$16,800,000 by the addition of two-thirds of the amount of notes surrendered by other English and Welsh banks. The Scotch and Irish bank issues are, to the amount in existence in 1844, secured by the assets of the banks only, but they may exceed the limit upon condition that they add, for the excess, an equal amount of gold to their reserves.

In like manner the Bank of England may issue an indefinite number of notes beyond \$16,800,000, but against each pound sterling of these additional notes it must hold a pound in specie, of which one-fourth may be silver, but in practice is all gold. The act also provides that the note-issuing department of the bank shall be kept entirely distinct from the banking department, and it is as much so as if the two were separate institutions. Both Sir Robert Peel and Mr. Gladstone are on record as declaring that note issuing is not banking, but quite another function.

The practical working of the Peel bank act is that at the end of last month the note issues of the Bank of England, covered only by Government securities, amounted to \$16,800,000, and those covered by gold to \$34,500,000 more, making a total of \$51,300,000. Of this amount \$25,900,000 was held by the banking department as reserve, leaving only \$25,700,000 in the hands of the public. The latest report of the other banks of the Kingdom shows that the outstanding circulation of the English and Welsh private banks is the trifling amount of \$211,000; that of the English and Welsh joint-stock banks, \$1,100,000; that of the Scotch banks, \$7,275,000, and that of the Irish banks, \$5,900,000, making a total paper currency of about \$40,000,000. All the rest of the currency used in the United Kingdom is gold and silver coin, of which the gold coin is computed to amount to between \$90,000,000 and \$95,000,000, making the total of all kinds of currency in actual circulation from \$160,000,000 to \$153,000,000, two-thirds of which is gold coin.

It thus appears that the only elasticity permitted to the British currency, except in the case of the English and Welsh private and joint-stock banks, is that proceeding from increases and decreases of the stock of gold in the country. The circulation of the excepted banks may lawfully be expanded from its present volume of \$1,320,000 to about \$4,500,000, but that is all.

For instance, the rise and fall of the circulation of the English joint-stock bank in 1895 are shown in figures to have been between \$1,144,899 in May and \$906,081 in August, while those of the private-bank circulation for the same year were from \$720,329 in May to \$643,819 in August. The total difference between the lowest and highest point is, therefore, but \$224,598, while between the \$27,113,025 of the circulation of the Bank of England in October, 1895, and the \$24,629,005 in February the difference was \$2,483,920. The lowest point of the Scotch bank circulation in 1895 was \$6,276,907, in February, and the highest, \$7,764,561, in November.

In Ireland the circulation of the Bank of Ireland in July, 1895, was \$2,310,000, while in November, 1895, it was \$2,773,126. That of the Irish joint-stock banks was \$3,598,317 in September, 1895, and \$4,311,956 in November. Thus the total elasticity of the bank currency of Scotland and Ireland amounted in 1895 to but \$2,064,328. Adding to this the \$224,598 expansion of the English and Welsh banks and the \$2,483,920 of a like expansion of the Bank of England makes altogether \$5,772,846, or barely 5 per cent upon the Kingdom's \$190,000,000 circulation.

According to the monthly reports of the Treasury Department of the United States the amount of currency of all kinds in circulation in this country on February 1, 1895, was \$1,530,720,607. On July 1, 1895, the amount had fallen to \$1,508,755,210, and on the 1st of the present month it had risen to \$1,605,977,653. Here is an elasticity in one year of \$156,222,443, or nearly 10 per cent, being double the percentage of the fluctuations in the currency supply of Great Britain during 1895.

#### BANKING SYSTEM OF FRANCE.

The French banking system is perhaps the simplest in the world, but it would be unsuited to our wants and could not be operated in this country. It makes no provision for the safety of bank issues over and above deposits. All the liabilities of the Bank of France stand upon an equality, and all are charges on the general assets. That may do where there is but one bank of issue for a whole nation, but would not do for a country where there are

nearly 4,000, and others can be organized ad libitum under a free banking law. There are to-day less than 300 places in all France where banking facilities are found, and all are tributary to the Bank of France. In Pennsylvania alone there are twice that number. The notes of the Bank of France are legal tenders, and there are no others. The limit of issues at this time is \$800,000,000, or 4,000,000,000 francs, all redeemable in specie. The uncovered notes amount to about \$32,800,000.

But the Bank of France is not perfect. Before it had been in existence, under its present organization, fifteen years there were three runs of note holders which made it necessary to limit the amount of daily redemptions. In 1848 specie payments were suspended, and again in 1870, and were not resumed for seven years. Still, for a country like France, their system operates fairly well. In our country it would be a total failure. The rate of interest is fixed in Paris without much regard, it is said, for the needs of the country, and the managers make money plenty or scarce.

Thomas H. Benton tells how the philosophic Voltaire, from his retreat in Ferney, gave a description of the operation of the Bank of France by which he was made a winner without the trouble of playing. "I have a friend," said Voltaire, "who is a director of the Bank of France, who writes to me when they are going to make money plenty and make stocks rise, and then I give orders to my broker to sell; and he writes to me when they are going to make money scarce and make stocks fall, and then I write to my broker to buy; and thus at a hundred leagues from Paris, and without moving from my chair, I make money."

#### BANKING SYSTEM OF GERMANY.

The German system in some points resembles our own. Their currency consists of imperial treasury notes and bank issues. The former are limited in amount to, and are secured by, the gold set aside as the war fund. They are legal tender in private transactions, and are receivable at par at all public offices in the Empire, and are redeemed in coin at the imperial treasury. Of these notes there are out now, approximately, \$30,000,000. The banking act of 1874 limited the right of issue to the imperial bank and thirty-two independent banks, with the right of the imperial bank to take up the issue of any bank that surrendered it, as in the English system. The independent banks of issue do not now exceed thirteen in number. There is no limit to the possible issue of those banks, subject to 5 per cent on all in excess of a certain limit.

This is the familiar elastic limit which has worked well in Germany, and was adopted to correct the supposed disadvantages of the rigid provisions of the English banking act. The elastic limit has been availed of several times by the smaller banks and by the Reichbank in 1881, 1882, 1883, 1886, three times in 1889, and possibly since that time, but I am not advised. It is believed in those instances to have been beneficial in mitigating the severity of panics. As in France, the law gives note holders no special lien on assets in preference to other creditors. All share alike. The Imperial Bank has 240 branches throughout the Empire—less than half the number of banks in Pennsylvania. The amount of uncovered notes is about \$90,400,000.

Those who ridicule our Treasury system of issue and redemption and call it "banking business" seem to forget that some of the foreign systems they extol possess the same feature. In Canada the minister of finance redeems all Dominion notes in gold as presented. In Germany all imperial treasury notes are redeemed in gold at the imperial treasury, and in substance, if not in form, the same operation takes place in England and France, for the Bank of England and the Bank of France are quasi government institutions largely controlled by government agencies and transact the financial business of their respective Governments.

It is thus easily seen that while these foreign banking systems have special adaptations to the conditions of the countries in which they are operating, and while they have certain features common to our own, they would not suit our country and could not be operated here as successfully as our banks under our democratic-republican-American free banking law.

#### ELASTICITY OF CURRENCY.

But it is said in these latter days that a currency secured by bonds can not be elastic. It has even been said by some writers that elasticity is incompatible with absolute safety. If this is true, then we are driven to elect which we will have at the cost of the other. When such an alternative is presented to the American people, they will not be long in pronouncing their preference for safety. The idea, however, that safety and elasticity are incompatible qualities proceeds, in my opinion, from a misconception of what constitutes elasticity. This, indeed, is the very crux of the whole matter. The idea of it is variously stated by different writers, but the substance of it, divested of unnecessary verbiage, is that the amount of circulation adjusts itself to the needs of business, going out when needed and coming in when the need has passed.

Now, it is obvious that to put out notes when the need arises requires that they be on hand when no need exists. The bank

must be oversupplied when the need is less in order not to be undersupplied when the need is great. This involves keeping notes idle in the vaults at times, and unless the bank can obtain the notes on conditions which will enable them to keep them idle at times without too great loss, elasticity is impossible. The situation is developed in the following examination of Mr. Butler, president of the National Tradesman's Bank of New Haven, before the Banking and Currency Committee of the Fifty-third Congress, which I take the liberty of reading:

Mr. BROSIUS. I desire to bring into more distinct view your thought upon the real nature of the difficulty of inelasticity in our present banking currency. If I understand you, the chief difficulty is that in order to have an elastic paper currency the banks must be able to keep on hand at times a greater amount than is needed in order to have it to use at other times when the need is greater?

Mr. BUTLER. Yes, sir.

Mr. BROSIUS. The portion of the currency which the banks are required to hold idle must not cost them too much. Under the present system you say it costs the banks too much to hold any amount of idle notes for issue when the need increases.

Mr. BUTLER. That is correct.

Mr. BROSIUS. That is the idea, is it?

Mr. BUTLER. Yes, sir.

Mr. BROSIUS. Then in order to have the volume of currency sufficiently elastic the banks must get that currency gratuitously; they can not afford to pay anything for it. Is that the idea?

Mr. BUTLER. They can not afford to pay very much for it.

Mr. BROSIUS. When the banks themselves issue the notes, as proposed in your plan, that costs them nothing?

Mr. BUTLER. No.

Mr. BROSIUS. And when the notes are required to lie idle in the bank, there is no expenditure on the bank?

Mr. BUTLER. That is correct.

Mr. BROSIUS. But they have to spend a part of their capital for the bonds to secure their notes, and that costs them too much. Is that the idea?

Mr. BUTLER. That is correct.

Mr. BROSIUS. Now, suppose the bonds of the Government were sufficiently abundant to be obtainable with ease, and that they paid a sufficient interest, so that the banks could afford to hold in their vaults at all times a sufficient amount of currency to use when the need increased—you understand me?

Mr. BUTLER. Yes, sir.

Mr. BROSIUS (continuing). Without any loss to the bank; then the elasticity would not be diminished, because the currency would be based upon Government bonds as security.

Mr. BUTLER. On the condition that the bonds carried the rate of interest that the bank must make on its loans, and only on that condition.

It is thus evident that elasticity does not concern itself with the source from which the notes emanate, nor the character of the security behind them, but only about the fact of their presence or absence when needed. The authority to issue notes and the incentive to do so result in the act of issue. From the union of power and profit springs elasticity. Any system of banks, whether national or State, which has authority to issue notes, and there is sufficient incentive in the profits to do so, will supply an elastic currency. The note in bank waiting to be used, whether it is issued on Government bonds or against the credit of the bank, goes out to meet a demand and returns when the demand ceases. If the note is not there, because the bank could not afford to keep it in waiting, or for any other reason, the need goes unmet, and the currency is inelastic because it does not adjust itself to the needs of business.

The conditions of elasticity may be present in a bank without any circulation at all if its deposits supply all the money it can use. The Mechanics' National Bank of New York, with \$50,000,000 of deposits, needs no circulation. There is always money on hand to meet any need that arises; and money that costs them nothing they can afford to hold to meet the coming need.

So that, on reason and principle, the conclusion is irresistible that if the cost of carrying a circulation is not too great, and bonds can be supplied that will yield a rate of interest that will make it profitable for banks to issue notes, they will be issued to meet the demands of business, and we will have an elastic currency. But the conclusions of reason, as we would expect, are confirmed by experience and observation, and accordingly we find that during the period when the interest on bonds was high enough to make it profitable to carry sufficient circulation, there was no complaint of lack of elasticity, and circulation steadily increased until it reached the sum of over \$360,000,000 in 1883. That it subsequently diminished and became somewhat less elastic was due in part to the fact that the channels of circulation were filled with Government paper and partly to the cost of the bonds and their reduced interest, making it expensive to carry more circulation than could be used at all times.

#### A CLOUD OF WITNESSES.

In support of these views and of the general excellence of our banking system, I take the liberty of reading some extracts from the reports of the Comptrollers of the Currency from 1880 down to the present.

John J. Knox, Comptroller of the Currency in the years 1880 to 1883, inclusive, said:

The political economists of the world regarded the resumption of specie payments with so little gold and so much paper as impossible. No country had ever won such an achievement. They said no nation maintains at par a convertible currency which has not in its banks or among its people an equal amount of coin. From the date of resumption our gold holdings increased, coming in from abroad in payment of exports. It has been the practice for a

long time for large sums of money to be annually drawn from the banks of New York by the banks in the interior for the purchase and shipment of grain and other products. The banks in the West and South supply the grain buyers with money, who pay it to the farmers, and by them it is disbursed to the country merchants. It then goes to the wholesale merchants in the larger cities of the interior, by whom it is deposited in the banks and returned again to the money centers of the East.

No nation has ever authorized the organization of banks under a general banking law with the right to issue notes proportionate to capital, except under a restriction requiring a deposit with the government as the basis for the issue of such notes. Banks organized under special charters with large capital might safely issue such notes properly guarded. Under the Suffolk and safety-fund systems, held to be the safest and best next to the national banking system, the annual losses were considerable even in New England. The failure of the bank to pay its notes would throw discredit on the whole volume of the currency. It would be better that the circulation should diminish in volume than that the issue should be increased at the risk of placing in the hands of the poorer classes uncurrent and irredeemable circulation, or to give to circulation issued by unscrupulous men an opportunity to use an excellent system of banking for bad purposes. I think as long as we have enough United States bonds outstanding legislation should be shaped so as to continue them in use as a basis for national-bank circulation.

Henry W. Cannon, Comptroller in the years 1884 and 1885, said:

There is no doubt that the national banking system has been of great value to this country in many ways other than the supplying of a sound and almost perfect paper currency. This form of currency, which can be increased or diminished in accordance with the natural laws which control business, should be continued in preference to any other now permitted by law. It is extremely doubtful whether after the experience of the last twenty years the people would be satisfied with a currency based on any security other than United States bonds.

The reduction of circulation of national banks has been due, in addition to the call of bonds, to these causes: Small profit remaining to national banks on circulation; reduction in rates of interest throughout the country occasioned by the abundance of money in the financial centers; uneasiness among bankers as to the outcome of the increase of silver in the Treasury, indicating that possibly the interest on the public debt and some portion of the principal might be paid in standard silver dollars, and Government bonds might thereby become depreciated in foreign markets, which would affect their price in this country.

William L. Trenholm, Comptroller from 1886 to 1888, inclusive, said:

As long as the bonds remain the national-bank currency will continue to enjoy the confidence of the public. The national banking system will always stand splendid in history as an example of financial skill successful under very difficult circumstances. The Treasury will be in a better position than now to maintain silver coinage at par with gold. The banks will hold specie more largely than now, and this will relieve the strain on the Treasury. Our national banks are the best that ever existed in this or any other country.

Edward S. Lacey, Comptroller of the Currency from 1889 to 1891, inclusive, said:

The history of national banks shows that the system is not only adapted to the changed conditions developed by the lapse of a quarter of a century, but is also suited to the wants of the inhabitants of widely separated States, living under varied social conditions and transacting business in accordance with customs as dissimilar as climate and race differences can produce on this continent. It is the most extensive, complete, and successful banking system that has ever existed in any country. Has any other ever furnished such complete security to depositors, such low rates of interest to borrowers, and such prompt, reliable, and cheap service in the way of collections and exchanges? Has any other ever furnished a superior circulation to the people, or done more to unify and harmonize the financial interests of all portions of the country?

The retirement of bank notes is rendering our circulation less elastic. Its volume should automatically expand and contract, so as to adjust itself to the varying requirements of business. This can be best accomplished by the redemption of paper money during periods of diminished activity and a corresponding release when the movement of crops and other causes make an expansion necessary. Such an adjustment was facilitated by the use of national-bank notes, for the reason that they did not possess the legal-tender quality, nor were they available for lawful money reserves by the banks. Hence, when a decreased volume of business caused currency to accumulate in the reserve cities, national-bank notes, being unavailable for reserve, were presented to the Treasury of the United States for redemption. Their temporary retirement was followed by reissue, and a healthy expansion resulted when an increased circulation was demanded. The coin and paper money of the Government is inelastic because it possesses the legal-tender quality and is available for lawful money reserves.

A. B. Hepburn, Comptroller of the Currency in 1892, said:

The Government, in the very nature of things, can not supply an elastic currency. The national banks can and have supplied this want fully and completely. Large appreciation of the price of United States bonds, long depreciation in rates of interest, and onerous taxation have made circulation unprofitable, and the volume has fallen from \$362,869,134, on September 30, 1882, to less than \$200,000,000 in 1895. All solicitude as to what shall serve as a basis for circulation when Government bonds cease to exist is premature. There is likely to be no reduction in the near future in the amount of bonds. There is money enough, and everybody can get it who has an equivalent value to give for it. Any bank in any part of the country can have money shipped to it at a cost of 15 cents per thousand dollars in paper; but such bank must have the collaterals or of course it can not get the money. Right here is the trouble. The clamor for more money comes from the newer, less developed sections of the country, and from people who have nothing to sell that anyone wants to buy, or their securities are not satisfactory. People can always borrow on good security. People with any equivalent of money can get it. The law ought to be changed so as to allow the deposit of \$1,000 in bonds as a minimum. Our national banks have given our country the best currency and the best commercial service it has ever had, and the good, solid business of the country can be relied upon to protect and preserve the system.

James H. Eckels, Comptroller of the Currency from 1893 to the present time, in his report for 1893 said:

Aside from the recommendations I have made to relieve the banks of their burdens, the public good will be best subserved at this time by making no radical change in the provisions of the law. The financial situation of the past months was not the result of either a lack in the volume of currency or a want of elasticity in the present system of issuing it, but came from loss of confidence on the part of the people in the solvency of the monetary institutions of the country. It is worthy of note and of serious consideration that

at the very time the scarcity of the currency for business purposes was at its height the country's volume of currency was increasing the most rapidly and the amount per capita was the largest. Under the conditions which existed from May to September no system, no matter how elastic, or volume of currency, however large, could afford relief.

In his report for 1894 Comptroller Eckels said:

The complaint made against the present system is that, lacking in elasticity of issue, it fails to meet as fully as it ought the varying wants of the country's trade. This defect must attach to every scheme for currency issued by the banks against a deposit of bonds, the market value of which fluctuates while the percentage of issue remains the same. It is safe to say that a note-issuing bank's best assets are its good business notes falling due and paid each day.

It is worthy of note that this is the first intimation from any Comptroller that currency based upon bonds deposited could not be elastic.

In his report for 1895 Comptroller Eckels said:

It might be well for Congress to make it more profitable for banks to issue notes. National banks would largely increase their circulation if the embarrassments arising from the needless locking up of a large part of their capital and the lessened profit through taxation did not confront them. They certainly would do so if the legal-tender issues of the Government were paid and canceled and the channel now clogged by them freed for bank-note circulation. It has been demonstrated that issues made direct by Governments are expensive, and under every circumstance a source of danger and loss to the people's interests. No clearer proof of this could be had than that furnished by the difficulties which we have witnessed on the part of this Government in its efforts to maintain the full credit of its practically limitless amount of demand obligations.

Worthy in every way to be associated with what I have just read is the encomium pronounced upon our national banks by the late Hon. Samuel F. Miller, associate justice of the Supreme Court of the United States. In his work on the Constitution, Justice Miller says:

It is a matter of interest, which I can not forbear to mention here, that the present national-bank system, in my judgment, and in that of many thinking men, statesmen, and financiers, is the best that the world has ever seen.

A banking system that deserves to be thus extolled can not be wholly bad at any point; and, as a matter of fact, our bank currency has been subjected to tests which demonstrated its possession of a high degree of elasticity. No system of banking could meet all exigencies. When nearly \$400,000,000 of deposits are withdrawn from the banks and pocketed by the people in five months, as was done in 1893, no freedom of issue consistent with safety would supply the need. It requires more than a flood of currency to relieve a panic. In September and October, 1890, the circulation was increased nearly \$63,000,000, yet the New York banks held less than in August. It was hoarded by the people. In ten months from July 1, 1893, the circulation increased nearly \$150,000,000, and then shrank in a few months \$50,000,000, leaving the increase \$100,000,000. From July 12 to October 3, 1893, nearly \$30,000,000 was added to the bank circulation. There was an increase of \$3,250,000 of bank currency from November 1 last to March 16 last.

In the year ending October 31, 1896, there was a net increase in the circulation secured by bonds of \$26,329,053, and the present volume of circulation outstanding was, on October 31, 1896, \$234,553,807. These figures show a creditable capacity in our currency to increase and diminish according to the demands of trade.

#### A MYTH.

Having made this feeble defense of the elasticity of our bank currency in reply to what is urged against it, I want to say that, while theoretically there is such a quality as elasticity in bank currency, yet, in the extent of its actual effect in practice, it is a monumental myth. McLeod, in his great work on banking, says the circulating medium of a country is the totality of its money and credit, that any addition to the credit currency has the same effect as if gold had come from the mines. The business transacted in this country calls into requisition but 2 per cent of coin and 6 per cent of paper money and 92 per cent of credit money.

In the nature of things, slight variations in the amount of the 6 per cent of our aggregate medium of exchange can not seriously affect the course of business, provided the remaining 92 per cent remains unimpaired. Credit money through the agency of banks and clearing houses performs the function of exchange more effectively than actual money, and in proportion to the extent of its use the necessity for actual money diminishes. Professor Sumner, in his *History of Banking*, says:

If a bank could get all the transactions in its hands, all the promises to pay everybody, it would need to pay nobody. The whole would be resolved into a book transaction. If all the people in a community would find themselves in a snarl of debts, so that no one could move, there would be a thread of mutual obligation running through the whole which, if it could be found, would liquidate them all, and this miracle is performed by the operations of the bank.

Credit money is infinitely elastic. Business creates it, and when no longer needed, it goes out like an exhalation. This is shown by the reports of the clearing houses of the country. Mr. Harvey, in his work on money, likens credit to a top which gyrates on a small metallic point sufficient to support it as long as it spins rapidly, but inadequate when the rotary force is relaxed. Credit is the rotary force of our financial system. So long as this force

is unimpaired the system spins merrily on, but when it fails, the top wobbles.

#### RETIREMENT OF LEGAL-TENDER NOTES.

Another remedy proposed is the retirement of the legal-tender notes and relegating the issue and redemption of all paper money to the banks. To this I am unalterably opposed. The suggestion to convert \$300,000,000 noninterest-bearing into an equivalent amount of interest-bearing debt will be repelled by the almost united acclaim of the American people.

They are attached to this child of war. Some one has said that for sixteen years our legal tenders were redeemable in patriotism. That is true, and that is a good redeemer. It not only redeemed the legal tenders, but the Union as well. After that memorable redemption, patriotism and faith in the national honor lifted the legal tenders to par in gold the world over. John Sherman's praise of the legal tender is none too lavish, and I quite agree with him that a note issued by the Government redeemable in gold is the best currency we can adopt, at least for the minimum amount, and it will be the currency of the future, not only in the United States but in England as well.

The few who advocate their retirement are sincere and honest, but, I think, mistaken. The fact that it meets with no general acceptance perhaps supersedes the necessity for further discussion; still it may not be unprofitable to consider the claims advanced in its behalf. However alluring that theory may be to sanguine minds, I doubt if any monetary mechanic is able to make the working drawings for such a plan. It is not practicable, in my judgment it is not possible, in this country, in view of the conditions under which the undertaking would have to be carried into execution, for the banks to maintain gold redemption of the enormous amount of paper which would be in circulation.

Think of the situation with a monetary stock of \$800,000,000 of gold, \$300,000,000 of silver, and a thousand millions of paper, as might easily be under some of the many bills now pending, with the Government out of the banking business, whatever that means, issuing no notes and redeeming none, keeping no gold reserve and exercising no control over the money of the country, the entire business being surrendered to the banks, with a panic brewing after a season of overtrading and inflated credit. The thought of such a situation appalls me, and I am surprised that it does not appall every member of the House. If distrust would arise and a season of anxiety and alarm would prevail, a condition incident to our highly organized and sensitive system of finance and business, and the people doubted the ability of the banks to redeem their paper in gold, or supposing the pressure for gold for the settlement of foreign balances with price of exchange above the shipping point produced a gold stringency, what a rush there might be upon the banks for gold redemption of notes; and who will risk his reputation for financial acumen and foresight by asserting that the banks would be equal to such an emergency?

We must not forget that if we should adopt this ostrich method of getting out of sight of danger by putting our head in the sand, we do not relieve the main difficulty. The body of our trouble remains exposed. A demand for gold for export must be met whether the metal is in the vaults of the Treasury or those of the banks, and the Treasury with an accumulation of gold is a more suitable agency to meet such an exigency than the banks, upon which the draft might come with such inequality that while some could meet it others could not and would have to suspend. It must be apparent to the least observing that a given amount of gold in a consolidated fund is more effective as a reserve than it could possibly be if divided into 4,000 parcels, each bank having a share.

John Stuart Mill argues with great force and commanding reason that there ought to be a central establishment alone required to pay gold, the others being at liberty to pay their notes with those of the central establishment. The object of this is that there may be one body responsible for maintaining a reserve of the precious metals sufficient to meet any demand that could reasonably be expected to be made. This is the system of the United States, though it was not in existence when Mill wrote his great work on the principles of political economy.

It is on the same principle that the clearing house is able to render such effective service if not in averting at least in avoiding the worst consequences of bank suspensions. The demands of depositors sometimes exhaust the weaker banks and compel suspension of payment. If this occurs in one bank it is likely to lead to excessive demands on other banks. Illustrations of this are found in the crises of 1873, 1881, 1890, and 1893. By combining, or "pooling," the reserves of all the banks and making a common fund all the weaker ones were saved by the strength of the stronger ones, and the panic at least mitigated.

The suggestion that a business man having outstanding demand obligations would fund them or pay them off with funds in hand is a truism, but has no utility in this discussion, for the situations are too dissimilar to admit of reasoning from one to the other. The so-called demand obligations of the Government are not intended to be paid. They carry no interest; they are a part of the

volume of our money, an annex to our circulation. Their redemption is only their exchange for gold, and when exchanged they do not relinquish their character as money, but are equivalent to gold in the payment of the expenses of the Government. What business man having obligations out in the form of notes that are non-interest bearing, and can be utilized in the payment of his expenses as so much gold, would borrow an equivalent sum and pay interest on it to liquidate the noninterest-bearing obligation? Certainly no man would do so in his lucid intervals.

#### ENDLESS CHAIN.

But, it is said, the retirement of the legal tenders is necessary to break the endless chain. Under normal conditions of faith and confidence there would be no endless chain. For fourteen years there was none. But when conditions supervene which require an endless chain, it will be created in one place or another as long as paper currency is issued redeemable in gold. If the banks redeem, the endless chain will draw their gold as effectually as it draws it from the Treasury when it is needed for export in payment of foreign balances. The English method of protecting reserves by regulating discount is not available to us.

#### ENGLISH METHOD.

Under normal conditions of trade and confidence this method works well where a single institution, like the Bank of England, contains all the reserves and by raising or lowering discounts regulates the rate of interest throughout the country. Under that method this is the sequence of events: First, unfavorable exchange; second, an outflow of gold; third, low reserves; fourth, increase of discounts; fifth, scarcity of money; sixth, fall of prices; seventh, favorable exchange and return of gold, effecting a restoration of the equilibrium. England being a creditor nation and the stability of her monetary standard enjoying the confidence of the world, the laws of trade and exchange have their normal operation, and the results seem satisfactory.

But such a method would utterly fail in this country under our free banking system because entirely unsuitable to our conditions. If we were to attempt to protect reserves by regulating discounts, there might be as many rates of discount as there are banks in the country, each one raising or lowering it to suit the state of its reserves. But to employ this futile and ineffectual method would require that every bank in the United States exercise unrestricted liberty in fixing rates of discount, as the Bank of England does, and this would require the overthrow of all the laws of the States governing the rate of interest and subject to which all discounting is done in the national banks to-day.

But if this labor of Hercules were performed, all the State laws repealed, and all the banks compelled to act in concert, how would it meet a situation such as we experienced in our recent Treasury difficulty? That was a situation, it must be remembered, that was not amenable to the normal operation of the laws of trade and exchange, under which unfavorable exchange tends to work its own cure. In the very midst of our trouble the trade balance was largely in our favor, yet exchange was heavily against us. A condition existed which even in England would have rendered her reserve-protecting method wholly abortive. The credit of our system of finance was shaken and confidence in the stability of our standard and our ability to redeem our obligations in the money in which they were contracted was impaired throughout the commercial world.

What brought this calamity upon us I will not stop to inquire. The surgeon diagnosing a gunshot wound does not inquire whether the gun was discharged by accident or design; that is a question for the district attorney. We realized what England realized in 1866—that the economic law which regulates the distribution of money among nations under normal conditions is suspended in the pressure of shattered credit and confidence, and that in such a case the rate of discount does not control the flow of gold. No rate of interest will attract capital when there is a doubt whether the principal will be paid. Accordingly, foreign investments were withdrawn from the United States in spite of opportunities for investment because of the fear that we would abandon the gold standard.

#### DEBTOR NATION.

Being a debtor nation, it was in accordance with every reasonable expectation that under such circumstances our securities held abroad should return and turn exchange against us. Our annual foreign liability, outside of our trade account and unregistered in custom-houses, amounts, it is believed, to at least \$300,000,000. This is made up of the following items:

Interest on a foreign indebtedness of .....	\$300,000,000
Expenditures of Americans traveling abroad .....	75,000,000
Freights paid foreign shipowners .....	36,000,000
Total .....	311,000,000

Will you stop to think how long we could supply this amount of gold if it should be demanded annually, without borrowing or buying it? No device of banking can hold our gold against a for-

eign balance, or absolve us from the obligation to liquidate foreign obligations when presented, short of a suspension of gold payments. Does anyone believe that a matter of such transcendent importance to the American people as the suspension of gold payments can be safely left to the determination of private banking institutions, influenced as they are by the principle of enlightened selfishness? Can there be a reasonable doubt that wisdom, if not patriotism, demands that the Government of the United States should keep the control of a matter affecting the interest of every citizen and the honor of the country?

It is said by some that the banks are better adapted to the regulation of our finances than the Government, and that they have facilities for obtaining gold that the Government does not enjoy. But this view is wholly untenable. In a crisis such as we have passed through, when gold had to be borrowed or bought, how could the banks obtain it? Their credit is inferior to that of the Government. They are, taken singly (and they are independent of each other), weak in influence and limited in means. But the Government in an exigency can command gold from the four corners of the globe as long as the credit of the nation is good.

It is my firm conviction that if the obligation of gold redemption had been on the banks exclusively in our recent experience, gold payments would have been suspended in the United States. With the reserve divided into 4,000 parcels, in the custody of 4,000 institutions, with an export demand falling not ratably upon each but unequally, the bank that could not meet the draft would suspend; that would cause others to suspend, for when the strain was on one section the banks in another would be reluctant to afford relief, lest the stress reach them the next day. The result would be that one at a time, and most likely in rapid succession, the banks would refuse gold payment.

#### THE BANKS ALONE CAN NOT MAINTAIN THE PARITY.

But there is an objection of still greater gravity to which I now call your attention, and I am sure you will recognize the extreme urgency of its claim upon your consideration. When we have retired the legal tenders, parted with our gold reserve, gone out of the banking business, restricted the Government to its legitimate functions of collecting the revenues and paying the expenses of the Government, having gone that far, we can not stop. One other step we must take under the compulsion of logic and consistency. We must repeal the provision of the act of 1890 declaring it to be the established policy of the Government to maintain the parity of the two metals.

What use would such a law have after the Government had relinquished all control over the redemption of money, surrendered to the banks its agency in keeping all our money equal in purchasing power, and voluntarily abdicated its sovereignty over its own money? It would be a word of promise to the ear to be broken to the hope. It would be a pledge without the power of redemption. What power can it wield, what influence can it exert, to maintain the parity of our money and redeem the pledges of the nation after it is deprived of the right to issue, control, and redeem; what other possible agencies are there for maintaining the equality of our money? When the Government has washed its hands of this responsibility and turned it over to the banks, are they equal to the task?

When the legal tenders are gone, the banks would necessarily redeem their notes in gold or silver, or both. To keep up the credit of their notes, issuing banks would have to elect, as the Government now does, to pay in gold. Does anyone believe they could do so? If money is needed to pay foreign balances, it must be obtained by exchanging notes for it or it must be bought in the market, and in that event it goes to a premium. Who knows whether the banks with half their reserves in silver will not redeem in white money instead of yellow; and if they do, the parity is gone and we are on a silver basis. Who can tell how soon the demand for gold at the counter of any bank may exceed its ability to honor the draft, and in such an event silver redemption and gold suspension must ensue. In such an event, is any man bold enough not to tremble when he contemplates the disaster that must follow in its wake?

With the volume of our money consisting of three nearly equal parts of gold, and silver worth half its face, and paper worth nothing only as it acquires value by convertibility, how is the equality of all that money to be maintained? Silver is now the equivalent of gold in purchasing power. It is held to that equivalence by the power of a people's faith in a nation's pledges. Could the banks of the United States hold it at that level? We have witnessed how at times the strongest faiths wavered and the stoutest hearts faltered in their belief in the power of the Government to maintain the parity. The overshadowing and paralyzing doubt of this has kept us in a boiling caldron of anxiety and alarm, to the disturbance of business and the confusion of our finances.

If great alarm prevails now, when all the wealth of the United States is behind silver to hold it up and maintain it, so that the people hoard gold and greenbacks and hurry silver and silver paper out of their hands as speedily as possible to the embarrassment of the Government, how much more apprehensive would

they be with more than half the coin in the country depreciated 50 per cent, with only the national banks behind it to maintain its parity? It looks to me as plain as the way to parish church that while we are using silver on a gold basis, with the disparity in value now existing, we must keep the Government in a position to protect it or we are in imminent peril of serious disaster at any time.

Let us not deceive ourselves in this, wherever else we may go astray. The consequences are too grave to admit of experiment. The contention that the undertaking can be entered upon with safety is entirely fallacious, utterly illusory, as unsubstantial as the baseless fabric of a dream, and if I thought there was danger of the Government entering upon so rash a venture I would solicit, entreat, and pray that our hands might be stayed before we put them to the depreciation and degradation of the money of the United States and the infliction upon our people of the loss, the suffering, and misery that must ensue.

#### REINFORCE THE RESERVE.

This brings me to the larger and more interesting proposition which has for its object the reinforcement of the gold reserve by utilizing for that purpose the idle silver bullion in the Treasury vaults and the United States mints. The main point I have in view is to strengthen the reserves and restore public confidence. It is time we had ended the stupendous folly of keeping \$100,000,000 worth of silver bullion in utter idleness, not available even for the redemption of the notes issued for the purchasing of it.

A bill for this purpose should provide for uniting the unappropriated and idle silver bullion purchased with the Treasury notes of 1890 with the gold reserve, constituting a consolidated reserve redemption fund to be set apart and kept separate and apart for the exclusive purpose of redeeming our legal-tender paper. In the operation of redemption the Secretary of the Treasury should have the option of using gold, or silver bullion at its gold value in the leading markets at the time the paper is presented, or to redeem in silver dollars at the option of the holder. When the United States legal-tender notes are redeemed, they should be reissued as under existing law. The Treasury notes of 1890 when redeemed in silver should be canceled and retired. The gold fund should be maintained as under existing law, and the silver portion, when in the judgment of the Secretary of the Treasury it requires reinforcement, by the purchase of silver at the market price with any surplus in the Treasury or at the option of the Secretary of the Treasury with Treasury notes of the same character as those of 1890.

The consideration which impels me to retire the Treasury notes of 1890 when redeemed in silver is twofold. First, it keeps the treatment of the notes in harmony with existing law, which forbids any of them to be outstanding in excess of the cost of the silver bullion, and the standard silver dollars coined therefrom then held in the Treasury purchased by such notes.

In the second place, I am of opinion that it would be better for our monetary system if the Treasury notes of 1890 were redeemed and canceled. The United States legal tenders, known as the greenbacks, constitute as large a volume of Government paper as it is prudent to maintain. That amount we can safely and wisely keep out on the principle advocated by John Stuart Mill, which, I think, is sound, that the minimum amount of paper money needed in the circulation should be supplied by the Government, leaving the balance of the volume to be supplied by the more elastic bank currency.

Nothing would be more likely to stiffen up the public faith in our intention and ability to maintain redemption in gold or its equivalent as to lay \$100,000,000 of silver by the side of our \$100,000,000 of gold and pledge it all at its gold value to the redemption of Government paper, using one or the other at the option of the Secretary. If we had done so three years ago, I do not believe we would have had any need to borrow a cent in the recent exigency. It would have operated in two ways: First, it would have increased the supply to meet any necessary demand for redemption, and it would have curtailed the demand, because people bringing notes for gold, finding they would get silver of equivalent value, would conclude they could do without redemption. The unmistakable effect would have been to check the endless-chain performance.

The Treasury has been crippled for lack of the kind of money it could use for redemption purposes, though it had an abundance of value in the next vault. J. Lawrence Laughlin says: "It is like an army with guns but not sufficient ammunition of the right size; plenty of cartridges, but not of the right caliber; they won't fit the gun." We have an arsenal pretty well filled, but not available. One hundred million dollars silver bullion made available for redemption would enable the Treasury to do vastly more work without buying gold. We should not have so much useless ammunition. The Treasury should be in position to defend itself with the silver it has at its gold value. This large accession to our reserve would tend to dispel the fear that is lurking in many quarters that some portion of our paper money will sooner or later be redeemed in silver dollars. In addition to that, it would

give additional credit to the Treasury notes by placing their full face value in bullion behind them and make it available for their redemption at its gold value.

No one can say that this use of the bullion is a degradation of the white metal. It is directly the reverse. That bullion is in the mud now; it can get no lower. It is dishonored and cast down. It is not even permitted to be useful. This will lift it up toward its lost estate and give it the rank and dignity of money. It will be as suitable for export as gold, and, being used at its gold value, no one can suffer injustice. The danger of loss by a fall in price before it reached its destination abroad presents no practical difficulty, for putting silver to use will be more likely to sustain the market than to depress it, and the holder would be more likely to make than lose.

Lesley C. Probyn, in the Journal of the Royal Statistical Society of London, says that in the United States the large stock of silver held is absolutely useless in maintaining the parity of that metal with gold. He says our currency would be in much sounder condition if the entire holdings of silver were converted into gold. "We are living in a fool's paradise," says this writer, "and the liability on account of the currency is concealed by the creation of a fictitious asset in the form of the difference between the nominal and real value of the silver held in the Treasury." It will be remembered that Secretary Windom, in his annual report for the year 1889, recommended the issue of Treasury notes against deposits of silver bullion and the redemption of the notes in bullion at its market value. In his own words, the proposition was:

Issue Treasury notes against deposits of silver bullion at the market price of silver when deposited, payable on demand in such quantities of silver bullion as will equal in value, at the date of presentation, the number of dollars expressed on the face of the notes at the market price of silver, or in gold at the option of the Government, or in silver dollars at the option of the holder.

But I would apply the same mode of redemption to all legal-tender paper, otherwise we might discredit one portion of our money. While we are maintaining the parity of all our money, like kinds of paper should be treated in like manner. The Windom idea met with quite general acceptance, and accordingly it was embodied in a bill and introduced in the Fifty-first Congress. It was reported favorably by the Committee on Coinage, Weights, and Measures, and passed the House. In the Senate it was converted into a free-coinage bill, and in the conference committee it underwent another transformation and came out the act of 1890.

Mr. Windom, in his report, says the advantages of retaining the option to redeem in gold are threefold: First, it would give additional credit to the notes; second, it would prevent the withdrawal and redeposit of silver for speculative purposes; third, it would afford a convenient method of making change when the weight of silver bars does not correspond with the amount of the notes. In the course of his argument Mr. Windom brought into distinct view the inexpediency of piling up in the vaults of the Treasury a large quantity of silver bullion which could not be made available for the redemption of the very notes which were based upon it. Singularly enough, that is the precise situation we are in at this time, and it was to improve that situation that I introduced the bill I am advocating.

At the risk of being tedious, I will reproduce some of the advantages of the measure which were presented by Mr. Windom, as far as applicable to our present situation.

#### MR. WINDOM'S PROPOSITIONS.

(1) It would give us a paper currency not subject to undue or arbitrary inflation or contraction, nor to fluctuating values, but based, dollar for dollar, on bullion at its market price; and having behind it the pledge of the Government to maintain its value at par, it would be as good as gold, and would remain in circulation, as there could be no motive for demanding redemption for the purposes of ordinary business transactions.

(2) By the utilization of silver in this way a market would be provided for the surplus product. This would tend to the rapid enhancement of its value, until a point would be reached where we could with safety open our mints to the free coinage of silver.

(3) The volume of absolutely sound and perfectly convenient currency thus introduced into the channels of trade would also relieve gold of a part of the work which it would otherwise be required to perform. Both of the causes last mentioned, it is confidently believed, would tend to reduce the difference in value between the two metals and restore the equilibrium so much desired. It would furnish a perfectly sound currency to take the place of retired national bank notes, and thus prevent the contraction feared from that source.

(4) There would be no possibility of loss to the holders of these notes, because in addition to their full face value in bullion they would have behind them the pledged faith of the Government to redeem them in gold, or its equivalent in silver bullion.

The force of these propositions must be admitted, and it is difficult to discover countervailing reasons sufficient to overthrow them.

In considering the necessity for strengthening the gold reserve by the use of our available silver bullion, it must not be forgotten that when the \$100,000,000 limit was adopted we had but about \$340,000,000 of legal tenders to be covered, whereas now we have nearly \$500,000,000, to say nothing of the silver certificates and bank-note currency. That we need a larger reserve for the work it has to do, I think is too obvious to need to be argued.

Indeed, every consideration that occurs to me bearing upon the application of curative measures to the present situation, with a view to allaying the anxiety, alarm, and distrust which has so long existed, and of reassuring the public mind and restoring that confidence so necessary to bring normal conditions to the help of our monetary system, unites in commending and urging upon the attention of this committee of Congress and of the country, not only the suitability of this measure to the existing situation, but as the most promising form of remedial legislation now possible.

#### FIVE POINTS OF CURRENCY CALVINISM.

These reflections I submit with the hope that they may admonish us against the error of precipitancy. In legislating upon banking and currency we must not fall into the error of supposing that the Treasury difficulties of the last three years are due to defects in our national banking system. They had their origin in quite other and different causes, and the note-issuing function of our national banks had no more to do with them than had the Turkish massacre of Armenian Christians. This is the last subject in the world for experimental legislation. Let the defect clearly appear before we undertake to correct it. Let us make sure that in mending we do not mar our system. Let us hold fast to the five points of currency Calvinism—uniformity, safety, convertibility, elasticity, and sufficiency. While these tenets constitute the standard of our faith and practice we can enjoy the complete and final assurance that in banking and currency at least we are orthodox.

#### The Tariff.

#### SPEECH

OF

HON. JOHN MURRAY MITCHELL,

OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 31, 1897.

On the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. MITCHELL said:

Mr. CHAIRMAN: Our Democratic friends who have a leaning toward free trade are pleased to characterize our attempts to raise revenue as measures increasing taxation, and to blame us for taxing the people more than they are taxed under the present Wilson bill, claiming that when the people are situated as they have been since the Wilson bill was passed—"poverty stricken"—we ought not to increase their taxation.

I have always found in my arguments with free traders that they omit one very important factor in their arguments and conclusions, namely: It costs money to run a government. The whole tenor of free-trade arguments which I have heard from the advocates of the free-trade theory, both on the floor of the House and by those who are not members of the House, has been on this basis. The cost of running the Government is practically omitted.

To-day we are confronted with the fact that the United States Government, a great corporation, is spending more money than it earns, for its receipts must be looked upon as the revenue or earnings of all other corporations. Even our free-trade opponents will admit that if a corporation is spending more money than it makes, it will ultimately become bankrupt, and in the meantime its credit will be constantly impaired.

This Government is by no means bankrupt, but its credit was decidedly impaired, as shown by the panics of 1892 and 1893. The silver men have taken advantage of this impaired credit to advance their theories that the Government was suffering from the gold standard, claiming that bonds had to be issued in order to maintain the gold reserve in the Treasury.

These bonds were issued as mortgages are given and paper issued for loans by business men or corporations when they find that they have spent their surplus and can not continue in business unless they have more money. Unfortunately, when the Government borrows money, it must, under our laws, borrow it for a long term of years instead of for a short term. A business house, under the same circumstances, ordinarily issues three or four months paper from time to time as they need more money, and retires this paper when their revenues warrant it. The President of the United States had no such authority, and he was therefore compelled to issue long-term bonds.

We are confronted with a deficit in our Treasury, and it is the duty of Congress, as it would be the duty of a board of directors, to devise some ways and means of stopping the deficiency and putting the country on a sound basis of having more income than its expenses, or to immediately reduce our expenditures below the requirements of the country.

As far as I have been personally able to judge, we have certainly had in our Speaker of the Fifty-fourth Congress and in our chairman of the Appropriations Committee two most able men, who have done their utmost to keep down to the lowest possible limit the expenses of this Government.

No one can doubt this who is acquainted with the numerous bills of the Fifty-fourth Congress which would have called for the appropriation of large sums of money. Most of these bills were never heard of on the floor of the House. Had they been, many of them would certainly have been carried, and our deficiency would have been by that much the greater. The question, therefore, of increasing our revenues is absolutely vital and essential to the maintenance of the credit of the Government and to enable it to attend to its business properly. How, then, are we to raise this revenue?

The policy of the Republican party has been a protective policy. The people have placed the Republican party in power in the executive branch and in the House of Representatives, and the logical conclusion is, therefore, that the majority of the people believe in the principles which have been enunciated in the Republican platform. We naturally, therefore, believe we have the indorsement of the people in our views, and that the majority of the people believe that protection is for the interest of the people of the United States. Conservative protection incidentally and naturally raises revenue, and revenue is what we want.

It has been charged that the revenue placed on many articles by our Ways and Means Committee is too great. I have received communications from many people who claim they are too great in many instances, many from my own district. I referred all these matters to the committee, and discussed them at length and on numerous occasions with its different members. They have carefully considered them, and have proved their freedom from bias by amending the bill as requested by my constituents in at least five cases. In the other cases their arguments seemed stronger than my own people's arguments, and they declined, after careful consideration, to make the amendments desired. They showed in every instance the greatest familiarity with each subject discussed, and had really expert knowledge of it. I believe when you have selected an intelligent, conscientious physician, who has carefully considered and diagnosed your case for many months, that it is better to follow his advice, even if his remedies may be a little disagreeable and even painful to certain portions of your anatomy.

I feel the same way about our Ways and Means Committee, for they have been carefully selected, are certainly most able men, and have devoted themselves to this subject with tireless and unremitting toil for many months, and I therefore believe it safer to trust their judgment as to what is for the best interest of the country at large than to be influenced by the personal bias of certain people whose particular interest may be somewhat injured by this bill.

It is perfectly natural that people should dislike to pay out money and to be taxed, and therefore the free traders have a very enticing argument, which would naturally appeal to the thoughtless, namely: "Follow us, and we will lessen your taxation—lessen the amount of money you have to pay out." If it cost nothing to live, the poorest man could grow rich.

That the protection of our own industries is advisable seems to me to be warranted by every page of history. England built herself up by a system of protection and subsidies. She controls the seas to-day with her merchant marine by a system of protection through subsidies, all of which costs the English Government money, all of which increased British taxation, all of which has resulted in making England to-day the greatest maritime power and the richest nation of the world. These subsidies have been increased year by year. In 1870 the postal subsidies alone amounted to \$18,000,000, and since 1892 have been \$24,000,000 annually. Of this \$24,000,000, about two-fifths is paid to control the vast commerce between the United States and Great Britain. Besides these postal subsidies by the Empire, the colonies, the Dominion and the Australasian islands, are all giving considerable sums in the way of subsidies. Again, there are naval subsidies. All the officers and men on the great steamers that are accepted as cruisers and transports are carried on the rolls of the royal marine and each receives small pay; but the aggregate is a large sum, over 80,000 sailors and officers being added in this way to the effective force of the British navy. If we are to learn by her experience, let us continue to protect as she did until we have the ships—the power and the wealth in our hands. We, too, can then defy competition.

The vast development of industries in our own country shows what protection has done for us. We have to-day the very finest steel rails made in this country at \$18 a ton, whereas a generation ago iron rails cost \$125 a ton. When Thomas Jefferson established the first nail factory near Monticello, nails were sold at 25 cents a pound. The duty on nails has ranged from 90 to 105 per cent, and nails are now selling at \$1.80 per hundred pounds. Little more than a generation ago the best prints made in America sold at 12

cents a yard, English prints at double that price, whilst the finer cotton and woolen goods for women's wear, which were all imported, sold for from 30 to 50 cents per yard. The duty on these articles since the Republican tariff policy was first adopted has been from 60 to 110 per cent, and how American prints as good as any in the world sell for 8 cents, and the finer goods, all American-made, at from 12 to 20 cents. We have the best and cheapest shoes in the world. We have to-day every class of goods necessary to be worn for the comfort of our citizens manufactured in this country, and the workingman can buy as good a suit of clothes here to-day of domestic goods as the English laborer can in England of English domestic goods. It is entirely true that those who wish to wear English broadcloth or French silks must pay a higher price than they would under free trade, and they should pay this additional price.

A great cry has been made by the opponents of this bill of the tax placed by it on the workingman's breakfast table. Let us consider this a few minutes. In the first place, the American workingman is paid better wages by virtue of the protective tariff, which has diversified his employment and enabled him to do something more than mere grain, cattle, or hog raising. If the whole American people were nothing but agriculturists, the competition between them would be so great that the value of their products would be reduced to the smallest possible figure.

I think it was stated on the floor of the House that only 7 per cent of the capital invested in this country is now invested in agricultural pursuits. So much the better for that 7 per cent, as they have the other 93 per cent working at other industries and fed by the 7 per cent. If that 7 per cent complain that times are hard, how much worse they would be if the other 93 per cent were all in the same pursuit with them as competitors instead of being consumers. The competition for their products being great, the price is naturally greater than it would be if everyone was a farmer.

In the same way the competition among the various manufacturing industries makes a smaller number of men who can be employed in any one of these industries. The supply of labor being reduced in each branch by the diversity of employment, there are fewer laborers in each particular line than there otherwise would be, and the price of labor is naturally increased.

That American wages are higher than wages of other countries has been proven by the very intelligent work of the Commissioner of Labor, the Hon. Carroll D. Wright. He shows that the average rate of wages paid to the English workmen is about 60 per cent of that paid to the workmen in the Northern American States, while in continental Europe the wages are about 40 per cent of the amount paid the American laborer.

Starting, therefore, with our American workmen being certainly better paid than they would be were they all farmers, and with the admitted fact—no matter what the reason—that they are being better paid than the workmen of other nations, we come to the tax on their breakfast tables.

There is still a large amount of lumber in the United States, and an abundance certainly to make breakfast tables for all the people in this country. There is, therefore, no tax on that.

His tablecloth he can buy from any one of a vast number of manufacturers in this country competing with each other for trade.

His cooking ware and kitchen utensils, his glass and crockery, are purchasable from domestic manufacturers of the same who are in like competition with each other.

His beef, wheat, pork, ham, beans, butter, and cheese are all purchased by him from producers in their respective lines and from various market stalls which are in lively competition with each other. As no one prefers to import stale milk and old eggs when he can get fresh milk and eggs at home, these articles of the breakfast table pay no tax.

His clothes and his family's clothing (unless he wishes the extravagance of broadcloth and silks of foreign make) he can get from domestic manufacturers paying no tax. In spite of all the trouble trusts have caused our political bodies, there is not a single article of manufacture that I know of to-day which is not cheaper than it was years ago, and which is not being steadily reduced in price by reason of home competition and the ingenuity of the American people in devising more economical means of producing these articles, so as to meet not only foreign but home competition, and so undersell their rivals in trade abroad and at home.

Even the hens have been deprived of their favorite pastime of hatching eggs by the invention of the incubators. These would not have been introduced had it not been found to be economical and to enable the farmer to ultimately have more hens, and consequently more eggs. This is a simple illustration, but the same principle applies to every branch of trade. We find the farmer using improved machinery for the gathering of his grain, and one man doing the work of several score, with much less labor to himself and better wages. The appliances used by him are

manufactured, by virtue of the protective tariff and the skill of American inventors, in our own country, and give employment to thousands of men in this line alone.

These laborers in the machine shops buy the farmer's products and buy their clothes from the manufacturers of domestic goods, who, in their turn, employ thousands of men in their line, and these men all buy the farmer's products. And so on around the circuit, a circuit making a complete nation, self-supporting and independent. Each branch of industry helps the other, and all tend to a homogeneous entity. With this protection to our people and industries, we also naturally get from our imports a vast sum for our Government expenses, and we get this income from those people who must have imported goods, and who would not have them unless they could afford to pay for them.

These so-called tax burdens fall, therefore, not on the poor, but on the well-to-do and the rich, and tend to benefit the poor, not only because they do not have to pay this tax, but because this very tax encourages domestic manufacture and domestic development, thus giving employment in every line of manufacture to many thousands of our citizens. As goods are not manufactured unless there is a market for them, the natural result is that every dollar's worth made in this country is a dollar kept here instead of going to a foreign manufacturer.

In conclusion, I most sincerely hope that this bill, when it shall have finally passed, will be sufficiently conservative to remain a fixed law for a long time to come. We need protection; we need revenue; we also need stability, confidence, and peace; with these assured, our country has nothing to fear.

#### The Tariff.

#### SPEECH

OF

HON. PETER J. OTEY,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 26, 1897.

On the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. OTEY said:

Mr. CHAIRMAN: I desire to offer the amendment which I send to the desk.

The amendment was read, as follows:

After the word "namely," line 9, on page 1, insert:

"Provided, That on and after July 1, 1897, there shall be paid to every exporter of agricultural products an export bounty of 10 per cent on the market value of said products at the port of shipment on the day of clearance, and to this bounty shall be added 1 per cent on said market value when said products are shipped in American-built, American-manned, and American-owned vessels, sailing under the American flag.

"SEC. 2. That to meet the payment of said bounty the Secretary of the Treasury shall cause to be engraved export certificates in multiples of a dollar, of convenient size for circulation, and issue the same in payment to said exporters, all fractions less than a dollar to be paid in coin; and the said export certificates shall be payable on demand in the lawful money of the United States and shall be receivable for all Government dues, including duties on imports, at their face value, and when so received may be paid out again in the ordinary transaction of the Government, but when redeemed shall be canceled.

"SEC. 3. The Secretary of the Treasury is hereby authorized to make such rules and regulations as, in his opinion, are necessary to carry out the above provisions."

Mr. DINGLEY. Mr. Chairman, I make the point of order against the amendment that it is not germane.

The CHAIRMAN. The Chair sustains the point of order.

Mr. OTEY. Mr. Chairman, the export price of a commodity regulates the home market. The price of wheat in Chicago will be the export price per bushel less the freight charges to New York. So it will be at the country mill less the cost of landing the same wheat at the port of exportation. So the price of the 467,000,000 bushels of wheat produced in 1896 was regulated by the export price of the 126,000,000 exported.

This amendment is no new idea. It is a well-known method of encouraging and protecting agricultural products. It was in operation one hundred years in England. It is now in operation on sugar in nearly all European countries, and on flour in France and Austria-Hungary, and in the United States will be, by way of drawbacks, in this very tariff bill. John C. Calhoun advocated it; Alexander Hamilton advocated it; and the farmer will be in fact paying a bounty to the manufacturer by the operation of this protective tariff bill.

Germany, France, Austria, and Russia pay out millions annually in export bounties, and the United States is the only progressive nation in the world that lays duties at the expense of agriculture.

Mr. Chairman, it is not more taxes and less money, but more

money and less taxes that the people want. It is not more aggrandizement of the rich, but less oppression to the poor that the country needs. It is not protection to classes already burdened with wealth, but the removal of restrictions on the masses that is the crying demand. It is not additional favors to manufacturers in the shape of a double profit, but the removal of double losses on those who receive no favors. It is not class legislation that the people expect, but equal rights for all and special privileges to none. And yet these things are exactly what this bill provides. It is not so much the want of revenue which is adding to our national distress, but the extravagant and wasteful expenditure of the people's money, filched from them under the guise of maintaining the public credit and economically administering the affairs of the Government.

It is the farmer of the country who receives no consideration in this bill. He sees that you have thrown a tub to the whale in placing a duty on some farm products, but observes that you double the price on articles which he has to buy. He knows that he is the real producer of the wealth of the country, and objects to paying 45 per cent additional for harness when all the hides in the world are turned loose to come in free and compete with those which he produces. He does not ask for a duty on straw and cabbage, which you have so generously (?) accorded him, and at the same time invite a clean sweep of his profits on broom corn by passing it through the custom-house free. Your generosity (?) does not cease here, for the fruit of the foreign hen is made dutiable, and the foreign bee is at liberty to furnish wax free. He sees cropping out on his land manganese, bauxite, plumbago, gypsum, and running from his trees tar and pitch and turpentine; his forests abounding with logs, firewood, and hop poles, all of which are admitted from other lands free, and he wonders how this will help him. He sees thousands of other things on the free list, and all paraded as being in the interest of the farmer, and wonders, since ice is among them, why it was that water was left out.

Why it is that you place from 100 to 300 per cent tax on the fish, which is the food of the laboring man, and yet the very things which must come in competition with his labor are admitted free.

Mr. Chairman, this discussion has directed the attention of the women of this great Republic to the iniquities of the bill. No longer will they partake of the love of the beautiful except by paying heavy duty. At random turn to any page of the bill and it strikes at woman.

They will not forget it. Stuffed birds, which are admitted free to adorn the palaces of princes, are, when used on hats and bonnets, subjected to a heavy tax. Feathers and flowers for their hats and bonnets must cost them double, and a tax of from \$2 to \$7 per dozen is added to these bonnets and hats, and still, in addition, a percentage on their value.

All along the line of dress goods and millinery does the exorbitant tax rate continue. Their china and crockery ware must have two-thirds of its value added to the cost and earthenware and stoneware fully one-fourth addition. Camphor, so much used in every household, is taxed 4 cents per pound; unbleached cotton cloth, from 1 to 8 cents per square yard, with an additional tax of 20 per cent on its value. How will the ladies like this? Handkerchiefs, not hemmed, are about doubled in price, and needles are taxed \$1 per thousand, plus one-third of their value.

Even the old grandmother's knitting needles are taxed 25 per cent, and grandmothers know what this means. Plushes and velvets, cordings, not bleached or dyed, are taxed 10 cents per square yard; if bleached, 12 cents per square yard plus one-fifth per cent of its value. Chenille curtains and table covers of cotton are taxed 55 per cent. Stockings, hose, and half hose, one-third more per dozen than invoice price plus 15 per cent on value. Shirts and drawers, pants, vests, union suits, combination suits, underwear, and corset covers are taxed from \$1.50 to \$1.75 per dozen and 40 per cent additional on their value. Bandings, belting, binding, bone casing, braids, cords, garters, gorings, ribbons, tapes, tubing, webs or webbing, made of cotton, not embroidered, and cotton damask are all taxed 40 per cent. In other words, if a lady could get ribbons before entering the custom-house for \$1 a bolt, she would have to pay \$1.40 before she could get it out.

And this is not all that may interest the ladies. They want nice floor matting, and they have gotten it at 10 to 12 cents a yard. This bill taxes that quality 8 cents a yard; if valued at over 10 cents a yard it is taxed 10 cents a yard. In other words, 10-cent matting will cost under this bill 18 cents, and 12-cent matting will cost 22 cents.

Then look at carpets. Suppose on arrival here the price was 30 cents; 16½ cents are added by way of tax before it leaves the custom-house. If 31-cent carpet, 24½ cents are added.

Now, bear in mind that all the articles referred to or to which I shall refer will cost largely in excess of the figures I name, as I give the figures at which the goods stand when in the hands of the importer. So his profit, the jobber's profit, and the retailer's profit all have to be added.

But it is said this occurs no matter if the tariff duty is lower. But profit is added by percentage, and if 25 per cent is added by the importer it is easy to observe that if goods stand the importer at \$1 the ladies pay 25 cents profit, but if it stands him \$2 they pay 50 cents profit.

Ladies are interested also in laces for window curtains, tidies, pillow shams, napkins, bed sets, edgings, insertings, galloons, flouncings, handkerchiefs made in part of lace, nets, nettings, veilings, etamines, trimmings, neck ruffings, tuckings, flutings, quillings, if embroidered in any way, composed of flax, hemp, or other vegetable fiber. All are taxed two-thirds of the invoice price at the custom-house. In other words, any of the said goods imported at a value of \$1 is taxed 66 cents. If a lady buys it, she pays the 66 cents tax, of course. Plain handkerchiefs, not hemmed, are taxed 50 cents for every dollar's worth. Cloths and knit fabrics, not valued at more than 30 cents per pound, and not otherwise taxed in the bill, are taxed three times as much as a pound of unwashed wool is taxed. This would tax these articles over 100 per cent. Blankets and flannel underwear, if valued at 30 cents per pound and up to 50 cents per pound, must pay a duty the same as 1½ pounds of wool of the first class plus 5 cents a pound, with still an additional tax of 15 per cent on its value. A pound of wool pays a duty of 11 cents, so the tax in this case would be 26 cents.

On women's dress goods, coat trimmings, Italian cloth, valued at not exceeding 15 cents per square yard, there is a tax of 2 cents per square yard, and so on; if valued at 22½ cents per square yard the tax is 5 cents per square yard.

On women's and children's dress goods, linings, etc., the oppression continues, and we find a tax of 11 cents per square yard when composed in part of wool.

So, too, with shawls and wearing apparel, and plush and pile fabrics part wool, worsted, hair of camel, goat, etc., the good work goes on, and the women must pay a duty on these goods, if they want them, equal to four and one-half times the duty on 1 pound of wool, but can not stop then till 60 per cent on the value additional is extorted. Cloaks, dolmans, jackets, talmas, ulsters, and other outside garments for ladies, part wool or camel's hair, or goat, etc., four and one-half times the duty on a pound of wool and 60 per cent of the value of the article besides.

And then look at carpets. Treble ingrain, three-ply, all-chain venetian, valued, say, at 19 cents per square yard, these are taxed about 8 cents per yard; druggets, of 22 cents value, taxed 10 cents per yard; mats and rugs, screens, hassocks, bedsides, 40 per cent tax. They do not stop here; still adding burdens to our women.

Beads of all kinds are taxed 35 per cent, and trimmings and ornaments, such as jet trimmings and bead trimmings, are taxed 50 per cent. Mr. Chairman, not only do you tax braids, plaits, willow sheets or squares composed of straw, chip, grass, willow, or osier, for making hats and hoods 20 per cent, but you then proceed to tax hats, hoods, and bonnets \$3 per dozen, plus 20 per cent; or if a hat cost 50 cents, you tax it 35 cents, and leave it to the importer, jobber, and retailer to add some 50 per cent additional to the price before it reaches the man or woman for wear. Buttons: One-half cent, 1 cent, 1½ cent per line per gross, but on none less than 50 per cent additional to the import price.

You are still persecuting the ladies, and we find fans, 50 per cent; hair for braid, 20 per cent; ladies' shoes, \$3 per dozen and upward; plain pins, safety, hat, bonnet, and shawl pins, 35 per cent taxation; parasol frames, 65 cents per dozen and 20 per cent additional on value; feathers and down of all kinds, not dressed, 15 per cent; but when dressed, including birds for millinery purposes and such as ornaments, artificial fruits, grain, leaves, and flowers, a tax of 50 per cent is laid. Even you tax the tooth brushes and hair brushes 50 per cent.

A 32-inch black serge cotton warp costs in England to-day 15½ cents per yard, and here, after paying freight and duty, it costs 22½ cents per yard. Under this bill it will cost 30 cents per yard, or 7½ cents more.

A 27-inch cotton warp drap d'été costs there 17½ cents per yard; here, 25½ cents; and under this bill 35½ cents, or 9½ cents more per yard.

A 27-inch black sicilian costs there 15½ cents per yard; here, 23½ cents; and under this bill, 34 cents, or 10½ cents more per yard.

A 36-inch black orleans costs there 9½ cents; here, 14½ cents; under this bill, 20½ cents, an increase of 6½ cents per yard.

A 38-inch black pure mohair costs there 18½ cents; here, 27½ cents; but under this benign measure, 36½ cents, or 8½ cents more per yard.

A wool and cotton cloth costing 24 cents there is 33½ cents here, but by way of favoring the ladies, it is 67½ cents under this bill, or 34½ cents more per yard, or over 100 per cent.

All worsted cloth costing 50 cents there, 70 cents here is, under this bill, \$1.30 per yard, or an increase of 60 cents per yard.

Corduroy weighing 6 ounces per square yard, valued at 40 cents, is taxed under this new departure 28 cents per yard.

Verily you would make of the mothers, wives, daughters, and sweethearts "hewers of wood and drawers of water," all for the

sake of protecting the wealthy manufacturers, who can no longer plead infancy.

Mr. Chairman, I have not attempted to go through this bill in any regular order. But, sir, it must be apparent to even those who have nursed it with that care that they would have bestowed on one of their own children that they have ignored the farmer, laborer, and the good housewife, and that the day is not far distant when the people will rise up and rid themselves of the iniquity, the wrong, the fraud which you will fasten on them by means of this bill.

Your party is in power. It has promised prosperity. You propose to bring it about by taxing everything the farmer buys and lowering the price of all he sells. You meet him on the very threshold of your Administration with taxation before him, taxation behind him, taxation below him, taxation above him, taxation to the right of him, taxation to the left of him. For what? Not for the support of the Government; not to maintain the national credit. It is for the purpose of fostering trusts and sustaining extravagant and largely useless expenditures of public money, nine-tenths of which go to the more favored manufacturing States.

Look at the work of the last Congress. Does anybody really believe that it was an economical expenditure of money to appropriate for the District of Columbia \$12,000,000; for fortifications, \$17,000,000; for Indians, \$15,000,000; for pensions, \$282,000,000, and for rivers and harbors, \$12,000,000?

And while the Republicans were offering amendments striking out an appropriation of \$130,000 for seed for the farmer on the score of economy, how great was the straining at a gnat and swallowing a camel when we see annually the following economy (?) manifested in order that the privileged classes might live on the sweat of others' faces, to wit:

For pay for retired army officers and men .....	\$1,837,555.12
For pay for retired judges .....	36,851.82
For pay for retired navy officers .....	947,043.60
For pay for retired marines .....	73,634.00

A total of ..... 2,895,084.54

To perpetrate such outrages, the producer must suffer. The farmer must suffer. To consummate such iniquity, the farmer must be taxed on everything he uses on the farm. He goes to his blacksmith shop, and the anvil is taxed 2 cents per pound; the hammer and sledges, 1½ cents per pound; bolts and hinges, the same. He looks over his farm and sees that his cast-iron pipe is taxed 1 cent per pound; cast-iron vessels, stove plate, andirons, eight-tenths cent per pound. He picks up chains, trace chains, never laden with less than 50 per cent of their value in taxes, and ranging from 1½ to 3½ cents per pound. Pocketknives are taxed from 40 to 50 per cent, and razors about the same; scissors, 75 cents per dozen and 20 per cent additional; table and cook knives, from 10 cents each down to 1½ cents and 15 per cent on value added, and cutlery in no case less than 45 per cent; and the farmer, not the manufacturer, pays this tax.

The mechanic notices that he is not overlooked, and he sees that files pay tribute of 40 per cent, crosscut saws 8 to 10 cents per linear foot, handsaws 40 per cent, and grindstone \$1.75 per ton. The hammer, plane, adz, ax, hatchet, broadax, drawing knife, brace and bit, drill, chisel, trowel, wrench, lathe, screw-drivers, paint brushes, and tools of every description are taxed, ranging from 25 per cent to 60 per cent. On screws a tax is levied of from 5 to 14 cents per pound; cut nails, six-tenths cent per pound; wire nails, 1 to 1½ cents per pound; horseshoe nails, 2½ cents per pound; spikes, washers, horseshoes, 1 cent per pound; cut tacks, brads, sprigs, 1½ cents per pound; rivets, 2 cents per pound; and thus it is he, too, is favored (?).

Tubs and basins are taxed. Even matches are taxed 10 cents a gross. Hubs for wagons and wagon block are taxed 20 per cent; casks and barrels, 30 per cent; copper bottoms, 2 cents per pound; cast hollow ware, coated, glazed, or tinned, 2 cents per pound.

You did not forget that the farmer used wire rods—rivet, screw, fence, and other iron and steel wire rods worth 4 cents per pound—and immediately added 25 per cent to their cost by taxing them, and pretty much all kinds of iron used by him is taxed from one-half to 6 cents per pound. Even the window glass is not overlooked, and 1½ cents per pound is added to its cost by means of a tax on it, and even the green bottles are taxed 1 cent per pound.

So everything used on the farm, whether of the vegetable, animal, or mineral kingdoms, is of course heavily taxed. He must feel grateful to the Republican party for taxing harness 45 per cent, including saddlery, and all other manufactures of leather 35 per cent, and at the same time letting hides in free to compete with his own product. Indeed, the many idiosyncracies of the bill are appalling. Why wheat should have a duty on it of 25 cents and corn 15 cents is simply incomprehensible. Protection! Why not put a duty on water, since ice from Greenland's icy mountains is on the free list? Ashes are on the free list, and straw is made dutiable at \$1.50 per ton. Soap grease free and soap taxed.

Now, Mr. Chairman, it must be clear to the most unobserving

that high taxes do not encourage enterprise and prosperity, and it is not too late to direct attention to the fact that the exorbitant rate of taxation carried by this bill means less money in circulation, monumental riches for the few favored ones, and more pinching poverty for the many. It means princes by the hundred and paupers by the million. It means strikes, lockouts, half time for labor. It means lower prices and harder times for the masses of the people.

Excess of revenue, if this bill should obtain it, will be worse than a deficit, and under existing conditions it is more dangerous, because for every dollar of revenue in excess of necessary expenses there must be contraction of the circulating medium to that extent, and no calamity that could befall the country could be greater than a further contraction of the currency. It would but add to the epidemic of assignments, failures, bankruptcy, and bank robberies which have characterized this country since the act of 1890.

Mr. Chairman, I am not in favor of free trade. I am not in favor of a tariff for protection. I am not in favor of bounties per se. I am in favor of a tariff for revenue. I favor raising enough money by a tax on imports limited to the expenses of the Government economically administered. I would have no internal revenue from any source except from whisky and incomes, both of which are luxuries, both of which can afford to pay a tax, both of which, when produced in too great an excess and in the hands of bad men, may be used to the detriment of the public interest.

Mr. Chairman, I said I am not in favor of bounties per se, and I am opposed to paternalism, which is taking hold of every avenue of trade of this country except the farming industry. I am opposed to it, whether it be in the shape of millions annually paid out to pensioners who never drew a sword or heard a gun, or whether by the insidious means known as retirement of officers, military and civil, on good pay to do nothing; whether by the drawbacks in high tariff bills, or by large and wasteful appropriations for rivers and harbors; whether by useless expenditures on fortifications and the hundreds of items in appropriation bills, all for the purpose of taking this or that interest or person under the paternal and protecting wing of our great Republic.

But equity steps in and demands that what is done for one class of our citizens should not be withheld from other classes. So if some interests must be protected; if Congress by its great Republican majority not only admits this, but aggressively asserts it, then, representing a district largely composed of farmers, I boldly assert that they should be accorded in this bill that which not only you do not deny to others, but from which you have especially excluded the agricultural interest.

I have, therefore, offered the amendment to the bill which the Republican majority has declined to permit a vote on, hiding itself behind a point of order, thus ruling it out.

What does the amendment provide? Simply that the home price of farm products shall be raised by an export bounty of 10 per cent, and in order to raise the money to pay this 10 per cent the Secretary of the Treasury shall issue export certificates, payable on demand in lawful money of the United States and "receivable for all Government dues, including duty or tax on imports." That farm products which have reached the export point would be enhanced 10 per cent in the home market by this amendment is to every one apparent.

It needs no argument to establish this. It is logically certain. That it will in fact cost the Government not a cent can not be denied, because commerce will be stimulated, thus increasing imports on which the duty would be levied, and the certificates would go back to the custom-houses and automatically operate without redemption.

Could my amendment be obscured and a line or two slipped in the bill carrying its provisions under another name, there would be those on the Republican side of this House, who are now bound by the despotic chain of trusts that sits like a nightmare on this country, who would be glad to advocate it. But the eye of the mighty "combines" is upon them, and though they would like to help the farmer they dare not do so except under the order of those whose grasp really holds the purse strings of the nation.

It is not to the interest of these monarchs of aggregated capital that wheat, corn, tobacco, cotton, and other staple farm products of the West and South should advance in price. Hence they are opposed to the free coinage of silver. Hence they are opposed to my amendment. Hence they are in favor of gold monometallism, contraction, and a high protective tariff.

Mr. Chairman, if protection really protects, then your party has great sins to atone for, if withholding equity and justice be a sin. I said I was not a protectionist. True. But if protection is to be, must I sit idly by and see it dealt out liberally to every class except the farmer and not raise my voice in behalf of those struggling in my district and State? Call me inconsistent if you choose. In such inconsistency I glory.

Mr. Chairman, although contrary to my idea of political economy and not in keeping with the policy that I would institute if I could, I believe that the best means of ridding ourselves of this iniquitous

measure is its enforcement. That a high protective tariff will permanently benefit trusts and aggregated capital I do not doubt; that it is to be placed on our statute books for this purpose is a conclusion that is irresistible; that it will be blotted from its pages in no very distant time is logically certain; but during its life I am in favor of doing everything within our power to give some protection to the tobacco, the wheat and corn, and other products of the farmers of Virginia. Every speaker on this side of the House has admitted that the bill does not do this. Every Republican knows that it is true. Most of those who have alluded to the subject admit that it can be done only by an export bounty.

If the farmer indirectly, but no less certainly, furnished the Government 75 per cent of imports on which to levy a duty for revenue to provide the interest on our debt and to meet governmental expenses (because his exports brought back these imports), he should receive the same proportion of consideration in this tariff bill as the manufacturer, whose exports were only 25 per cent. As there is only one way to accord this consideration under this high protective tariff bill, and that is to raise the price in the home market of his products, and as this can be done in a tariff bill only by an amendment such as I have offered, then I have no hesitancy in offering it; and I have the temerity to advocate it.

It was hoped that a slight gleam of fairness would be discerned in the agricultural schedule, but such was the sham deception and delusion shown in it that suspicion of all the other schedules was logical. Pretending protection to the farmer and according it not uncovered the nakedness of the whole bill, and honest men hid their faces for very shame.

Protection is an enchanting word. An infant will turn to its mother for protection on the approach of real or imaginary danger. The protection that our forefathers talked of (so often quoted in this House) referred to infant industries that needed the aid of the Government. Is the sugar trust an infant? Protection means the hand of the mighty in aid of the weak. Is the oil trust weak? Government aid may protect the weak, but in it there is a tyranny which destroys the aspirations of the young and blights the hopes of the yeomanry of every land that employs it.

The American citizen has drawn the spirit of liberty and independence from his mother's breast, and he needs no protection save that afforded him by the flag of his country, and he owes it to himself and his country to work out his own destiny.

If protection per se is right, if it is beneficial to be protected, then it should be carried to its legitimate conclusion and be confined to no locality, circumscribed by no political divisions. What is true of the United States should apply everywhere. Then logically free trade between sovereign States is wrong, and it should be right for Virginia, if she chose to do so, to protect her shoemakers against the shoemakers of Massachusetts. The only answer is that protection by the United States is restrained by no law, while the other is met by a constitutional inhibition.

Protection saps the foundation of those noble traits which make up the patriot, and the tyranny of trusts has reduced him to that point where he has no refuge but in poverty and want.

So, Mr. Chairman, if the blight of this bill is to come, we must accept it till the people can speak again.

There are sometimes advantages to be gained even in the infliction of a great wrong. The souls of great men have taken their flight from the agonies of the stake that posterity might be benefited. The witches burned in New England left salutary lessons for a free people, and even this bill will not be without its benefits in this respect, that future generations may not again be led into the great national error of 1897.

So, while the mailed hand is being laid upon us, we have a right to see that it is with as near a velvety touch as possible, and we are entitled to as fair protection from its withering blight as is admissible—at least to that protection which was promised, but which in this bill is denied.

And as it is more particularly the farmer from whom this protection is withheld, I advert to this aspect of the bill. Is it to be supposed, Mr. Chairman, that he is so wanting in intelligence that he can not discern such absurdities as putting a tariff duty of 3 cents a head on cabbages and a dollar and a half per ton on straw, and at the same time giving acorns a prominent place on the free list; that guano is free, while the bags that hold it are heavily taxed?

It has been said that the tree of liberty grows when watered by the blood of tyrants, and hence it is inferred that the "blood and bones of our fathers from the temple of the Gods" are meant when blood and bones are on the free list.

A duty has been imposed on wheat of 25 cents per bushel and on corn of 15 cents per bushel. Is it not clear that this was done to throw free sand, for sand is on the free list, in the eyes of the farmer "to make believe," as Huckleberry Finn says, that he is protected?

The corn product in 1896 was.....	bushels.....	1,150,000,000
We imported.....	do.....	4,300
Revenue.....		\$350
We exported.....	bushels.....	101,000,000

This exportation brought back to this country revenue-producing commodities, in the shape of imports for which the corn was exchanged, the equivalent in gold.

In what manner could the 4,300 bushels imported have hurt us? How could a duty of 15 cents per bushel have protected the farmer? But an export bounty of 5 cents a bushel would have raised the price of corn in the home market, and our farmers would have realized \$50,000,000 additional on the crop in the United States.

If you want to protect the farmer and add to his profit as you do to the manufacturer, this is a way by which you can do it.

Now, 25 cents a bushel protective (?) duty on wheat protects with a vengeance. This is simply an intentional deception. It does not even produce any revenue, and yet the title of this bill is "to provide revenue and to encourage industries." Does this encourage the wheat-growing industry? Does it provide revenue?

In 1896 we raised 467,000,000 bushels and exported 126,000,000 bushels, which brought back to this country not less than \$70,000,000 revenue-producing commodities. If we imported 2,000,000 bushels, which would pay under this bill \$500,000 duty when exported in the shape of flour, 99 cents for each dollar duty paid would be returned to the miller or exporter, being a bounty of \$495,000 to the one or the other. And yet had we paid a bounty of 5 cents a bushel, it would have cost the Government apparently \$5,000,000, but the farmer would have received \$23,000,000 more for his wheat, or 5 cents a bushel on the whole crop. And if, as some claim, it was imported as improved seed wheat, it should be free if the farming industry was to be encouraged.

In 1896 we raised 3,600,000,000 pounds of cotton. We exported 2,300,000,000 pounds. Our imports were 55,000,000 pounds. An export bounty of 1 cent per pound would have apparently cost the Government \$23,000,000, but the cotton growers would have received \$36,000,000 more for their cotton. The 55,000,000 pounds imported would, under the drawback clause, have received drawbacks of 99 per cent of import duty as a bounty when exported in fabrics made wholly or in part of the staple imported.

Why should the farmer who raises horses and cattle have protection, and he who raises the staple products—cotton, corn, wheat, hops, etc.—have none? A duty on them affords no protection. It is the great staples of the West and South that furnish the trade that creates the revenue-producing imports, and yet the producers of these staples are in no wise protected. If we are to have protection as a cardinal feature of your policy, let us have equity and justice in its enforcement. The objection is not so much to 11-cent duty on wool as to 100 per cent duty on clothes.

It is also well known that but for our great agricultural exports our imports would dwindle into insignificance. The total agricultural products amount to \$2,000,000,000. Outside of our home market we find a market for two-thirds of our cotton, one-third of our wheat, or 30 per cent of our total of agricultural products. Over 70 per cent of our exports are from the products of the farm. Cut off our farm exports and our revenue must be cut off 70 per cent, or we must have a balance of trade against us of 70 per cent, which must be paid in gold.

Duties on agricultural imports, like the tub to the whale, are offered our farmers as if they were blind. They are fully aware that while we exported last year some \$600,000,000 farm produce, we imported, including animals, only \$12,000,000. A duty of 50 per cent ad valorem would have been only \$6,000,000, while our \$600,000,000 exports produced not less than \$600,000,000 imports, which, at 40 per cent, would have produced \$240,000,000. What is the remedy as long as we must bow to the inevitable and have a tariff for protection? Clearly it is to do what we can to raise the price of farm products in the home market.

Take the staple products of the farm exported and allow an export bounty of 10 per cent ad valorem, and it would amount to little more than one-third of the amount paid out for pensions—no more than appropriations and contracts for rivers and harbors and the bounty paid to the thousands of military and civil officers of the Government, who are doing nothing to earn a dollar but are retired on large salaries as a privileged class, just as if they were not munificently paid during the performance of active duty. And it would not be much in excess of other appropriations indulged in constantly, which amount to wholesale robbery of the people. Pensions, river and harbor bills, retirement pay rolls, useless fortifications, extravagant expenditures for the District of Columbia and for the Indians are simply species of expensive paternalism.

Professor Sering, of Berlin, says that a country producing a surplus of agricultural products over its own needs can afford no protection to said products by a tariff on imports. It is clear to anyone that if we are selling more wheat than we consume we will of course import none. He adds:

If a country produces a surplus of staple products in such quantities and of such quality that there does not exist any economical possibility of importing them from foreign countries, a duty on such staples would seem perfectly ridiculous.

And yet our Congressional savants have put a duty on wheat,

under the miserable pretense that it protects the farmer, when it is known that we can not consume all we produce, and hence must export it.

Dr. Schumacher said:

I agree with the opinion that articles of export can not be protected by import duties.

Giovanni Carlo Siemoni, of the ministry of agriculture and commerce of Italy, says:

If we produced a surplus of agricultural staples for export and desired to protect agriculture so long as manufactures were protected by duties on imports, we could do it only by a bounty on exports.

It must be clear to any ordinary mind that protection countries which are exporters of farm products can not extend protection to the farmers by placing a duty on said products. An export bounty is the only way to reach it.

Do not forget, and if you do you will be reminded of it in 1898, that the farmer is as much a living factor in this country with his great producing power as is the trust with its great consuming capacity, and the time is not far distant when the inequity and injustice shown him annually will cease, and again the fields which he waters with the sweat of his brow will blossom like a rose, bringing forth profitable fruit and yielding peace, prosperity, and happiness, the just heritage of years of toil.

The Republican party, on the demand of the trusts, have decreed protection. But when we analyze the vote of the people on the question of the classes against the masses we are struck with the fact that a large majority of the more intelligent, cultivated, educated, and capable people of the country registered their votes against this iniquity. I presume no man on this floor will be so bold as to deny that the Anglo-Saxon and white people of this country constitute this large majority, and no one will deny that the great commerce of this nation and its great business interest are carried on by the white people who inhabit the United States. It is equally clear that the negro vote is almost solidly Republican.

Look, then, at the vote for McKinley as the representative of the idea of protection, and what was the white vote for this idea and the white vote against it?

Deducting the negro vote for McKinley we have:

Total vote McKinley .....	7, 106, 199
Less negro vote .....	1, 500, 000
Total white vote .....	5, 606, 199
White vote against McKinley .....	6, 817, 444
White majority against protection .....	1, 211, 245

or 10 per cent more of the white people of the country against McKinley than for him. This, too, without counting the whole negro vote as going for McKinley.

If it be claimed that the vote for Palmer and Buckner should not be counted as against McKinley, but in fact that they were protectionists, still there would be over 5 per cent of the white vote against this protection idea. I assume that the good Democrats who voted for Palmer would, however, protest that they were Democrats in all save the money question; and if so, then the business people of this country—the brain and brawn of it—registered against protection by a majority of 10 out of every 100. In other words, 55 per cent were against, while 45 per cent were for it, even supposing that the vote of the 45 per cent had been cast according to the wishes of the voter; and we all know that \$20,000,000 for "legitimate" election expenses in the hands of the imperial taskmasters of the great manufacturing centers means "Go to the polls and vote for protection or to-morrow you go somewhere else!"

So then, Mr. Chairman, when protection is to be enforced it is but justice that the agricultural interests be protected. I am well aware that it is claimed by the advocates of this bill that the farmer is protected. But it does not require any very great degree of acumen to discern that this is a deception, and an intentional fraud or the hallucination of a warped and blinded intellect.

No import duty on any farm product that has reached the export point can "provide revenue or encourage (farm) industries." This must be clear to any mind, for it is the demand from abroad that causes export of any article. Demand means a vacuum to be filled. Where, then, is any to come from to be imported? Obviously none will come. Then, whom does it protect? What revenue will it produce? What industry will it encourage?

But we are told that we have a reciprocity clause which enables us to lessen the cost of many articles that we consume. Reciprocity means simply transferring the taxing power from Congress to the President. It embraces retaliation. For example, if a coffee-producing country should lay an import duty on steel rails, the trust would come to the President and complain of it, and the President at its behest might (I do not say he would) do what this bill authorizes him to do, viz, lay an import duty on coffee of 3 cents per pound, thus, by means of reciprocity, making us pay more for our coffee.

If China, Japan, Brazil, Mexico, and other countries should lay an import duty on any of our products which the President should deem too high, he could by one stroke of his pen retaliate on them by making us pay 3 cents a pound more for coffee and 10 cents a pound more for tea. Beautiful reciprocity is this!

But in admitting reciprocity, Mr. Chairman, the Republican party surrenders the whole principle of protection, for it says: "Accord us open markets for our products and we will accord you the same for yours." This is Democratic doctrine.

I said that it embraces retaliation. It seems that in their earnestness to make us pay more for tea and coffee under the guise of retaliation there was a most fitting opportunity to ingraft on the bill a clause to protect the great tobacco growers of the States of this Union. The people of my district and State are large growers of tobacco. At one time it was the most prosperous industry in Virginia. But the encroachments made by the despots of Europe, added to other enervating influences in this country, have well-nigh ruined it, and when the Republican party has now the opportunity to remedy it—at least in part—it refuses to do so.

There are four nations called the regie countries—France, Austria, Italy, and Spain. To each of these nations a certain quality of tobacco raised in this country is adaptable. No citizen of these United States is to-day permitted to ship a pound of tobacco to either of these nations unless he is the agent of the country to which he ships it. And when he so ships it, he ships it, not as his property, but the property of the governments to which it is consigned. It is claimed, I know not how truly, that these countries can and do control the price simply by fixing the price at which it is to be purchased by agents appointed in this country. Each nation is, however, a tobacco monopoly.

These Governments are permitted to come into this country and get certain classes of tobacco on their own terms. Spain can not use the class that France wants, neither can Austria-Hungary use that which Italy buys. Neither uses the particular class that the other wants, and there is little or no home market for these tobaccos. The best quality goes to Austria-Hungary, bought by its consuls. The next to Italy and France, purchased by agents appointed in this country; and the worst in quality to Spain, through agencies selected in the United States or Spain.

#### NO COMPETITION.

There is then no competition between buyers here. Neither the farmer who raises the tobacco nor the dealer who handles tobacco can ship a pound of any tobacco known as regie tobacco to either of the four countries named. But the profit inures to the Governments themselves and the United States is virtually shut out; indeed, actually debarred from any commercial relations, so far as tobacco is concerned, with the people of these countries by reason of these tobacco monopolies.

These regie tobaccos are produced principally in Kentucky, Virginia, and Maryland.

In 1896 Virginia produced \$58,000,000 on 92,000 acres, averaging 5 cents per pound. Formerly it brought from 10 to 20 cents.

I have placed in a tabulated statement the tobacco-growing States in four groups, taking the seven largest tobacco-producing States first, and a glance at this table will disclose, by the low average price, which States are the regie tobacco growing States:

Groups.	Pounds.	Value.	Average per 100 pounds.
<b>FIRST.</b>			
Kentucky .....	143, 000, 000	\$6, 032, 000	\$4.15
Virginia .....	57, 000, 000	3, 000, 000	5.21
Maryland .....	9, 300, 000	1, 300, 000	4.31
<b>SECOND.</b>			
North Carolina .....	68, 600, 000	5, 490, 000	8.00
Pennsylvania .....	16, 200, 000	1, 290, 000	8.00
Missouri .....	7, 400, 000	666, 500	9.00
<b>THIRD.</b>			
Connecticut * .....	10, 500, 000	1, 300, 000	12.50
<b>FOURTH.</b>			
All other States .....	80, 600, 000	6, 000, 000	7.00

\* Connecticut is separated from other States because it is principally a cigar tobacco State.

Mr. Jefferson said, "Where nations impose a high duty on our productions, or prohibit them altogether," as is the case with these tobaccos, "it may be proper for us to do the same by them."

In the first group the prices average below 5 cents per pound; in the second, over 9 cents. Clearly some underlying cause is producing this great difference. The eye of kings is upon the tobacco of the first group. It is the heavy, dark, rich tobacco, demanded very little in our home market, but without which the four nations

named could not get along. They must have it; and it is grown nowhere else. Here, then, is a place for retaliation. But perfect submission to this wrong inflicted openly on American citizens prevails in your committee rooms and in this House.

As long as a single American citizen is forbidden to ship any of his goods to a foreign country by reason of the discriminating laws of that country, we ought to have the courage to forbid the importation of their wares and goods into this country. Let them put a high tariff on them, if they choose. England has a tariff on tobacco, grown in these same States, of 76 cents a pound, an average, perhaps, of 800 per cent ad valorem. We do not complain; we only want reciprocity. You decline it. I knew you would. The farmer, and not the manufacturer, is the one that would be benefited, and the Southern farmer principally. This is sufficient reason for you to turn your back on the mere suggestion of equity and justice.

France made a profit not less than \$70,000,000 by reason of this discrimination against Southern farmers last year. This profit is of course in a very large measure the accumulated wealth created by the American producer, and of which under just reciprocal laws he would not in future be deprived.

Certainly the farmers of my district, of Virginia, of Kentucky, Maryland, and part of Tennessee have a right to look to this bill to correct this great and growing evil. By retaliation, if no other way, can be devised means to remove this great injustice. I would be untrue to the trust reposed in me did I not raise my voice and protest against the absence of anything in this bill looking to any recognition of this demand for relief.

Mr. Chairman, I believe I have made it clear that a high protective duty on staple products or such agricultural products as have reached the export point will neither raise revenue nor protect the producer; that placing a duty on buckwheat, corn, oats, wheat, corn meal, and even on cabbage and peanuts, will accomplish neither. The munificent sum of \$32.57 was added to the revenue in 1896 from buckwheat, and it protected whom? Why, peanuts produced prodigious revenue, \$471.02; even shelled peanuts added to our revenue 85 cents.

Thus we might go on through the whole list, and the nakedness of the sham and deception become more and more apparent at every step.

When we come to commodities of which, if entered free, the benefit would accrue to the farmer, we find them heavily taxed: and if he would be helped by the imposition of a duty, they are admitted free. And where no good one way or the other, a duty is imposed to produce an impression that it is for his benefit, or made free for the same purpose. Straw has a duty on it, when farmers generally have it to burn; and yet hides are free, which he might sell at a profit if accorded simple justice. Tobacco stems are free, because it might help manufacturers, while lowering the price of tobacco; but the hoe and the plow to make it are taxed.

Why imagine that 3 cents a head duty on cabbage will protect the farmer, and free broom corn will do the same? Eggs are protected and beeswax is free.

Twine for the Western farmer is free, but bagging and cotton ties for the Southern farmer are taxed. Spices to pamper the appetite of the princes of the land are free, but the salt, so much used by the farmer, is taxed. Diamonds to ornament the wealthy are free, but the buttons necessary for everyday clothes are taxed. Ashes are free, but soap is taxed. Corals are free and horseshoe nails are taxed. Green fruit is free, but cans to receive it taxed. Hides are free and harness is taxed. Wagon hubs are taxed; logs are free.

Why should acorns, rags, moss, ice, insect eggs, clay, sand, bones, skeletons, blood, bladders, intestines, ashes, bristles, chalk, worm gut, dragon's blood, shavings, old paper, rope ends, mother of pearl, turtles, hop poles, fence posts, and flint be free?

The hat, coat, pants, vest, shirt, collar, cravat, undershirt, drawers, shoes, stockings, shoestrings, eyelets to shoes, suspenders, buttons, thread, dresses, hose, ribbons, hoods, bonnets, trimmings, bindings, ruffles, aprons, ulsters, shawls, bedding, furniture, carpets, knives, forks, cups, saucers, plates and dishes, bottles, jars and jugs, saws, hoes, tools, grindstones, plows, nails, horseshoes, screws, chains, buckles, harness—everything the farmer uses is taxed, taxed, taxed, and we look to the free list for relief, and we find on it such articles as agates, alizarin, amber, ambergris, annatto, ronoon, rocoa, extract of Orleans, apatite, art educational stops, balm of Gilead, Brazil paste, breccia, cerium, civet, cocculus indicus, coir, cudbear, cutch, divi-divi, gambier, iridium, kelp, kieserite, lactarene, myrobolan, osmium, pulu, salacin, salep, storax, zaffer, and so on, all of which are supposed to help out the agricultural interests.

Virginia, which I in part represent on this floor, is largely an agricultural State. This bill largely increases the burdens which we have to bear, laying the heavy hand of taxation on that which we must buy and discriminating against us on that which we must sell.

To raise the cost of the one, to lower the price of the other, is what is accomplished by this measure. We produced in 1896 as follows, in round numbers:

Product.	Quantity.	Value.	Yield per acre.
Corn.....bushels.....	38,000,000	\$12,000,000	26.2
Wheat.....do.....	5,700,000	4,500,000	10.9
Oats.....do.....	8,500,000	2,207,000	18.5
Rye.....do.....	419,000	201,000	10
Buckwheat.....do.....	85,000	40,000	18
Potatoes.....do.....	3,000,000	1,200,000	93.2
Hay.....tons.....	637,000	178,000	1.8
Tobacco.....pounds.....	58,000,000	3,000,000	630
		23,326,000	

With fair prices, this production should have yielded over \$50,000,000. Ignoring our tobacco, as this bill does, we receive \$3,000,000 for it, while we should receive \$9,000,000. Corn and wheat, potatoes and oats, by reason of gold monometallism, brought \$20,000,000, when relief we ask for would have given us \$40,000,000, and this bill will aggravate the evil. Extravagance in expenditure—rivers and harbors, fortifications, pension payments, and favored classes and retired officers—all make taxes heavier.

A short crop of money depresses prices, while a short crop of farm products no longer raises them, because the force of contraction with its downward pull predominates over demand with its upward pressure.

Every State in this Union has witnessed the growing oppression to which the farming interest is subjected by reason of unfriendly legislation. The farm mortgages to-day are living monuments to the crime. The following statement from the Department of Agriculture speaks volumes:

*Amount of incumbrance on owned farms in the United States in 1890.*

Alabama.....	\$1,937,100	Nebraska.....	\$47,078,132
Arizona.....	225,021	Nevada.....	47,807,019
Arkansas.....	2,032,345	New Hampshire.....	4,219,278
California.....	46,707,837	New Jersey.....	25,755,006
Colorado.....	5,573,154	New Mexico.....	373,245
Connecticut.....	8,507,786	New York.....	134,900,703

Montana.....	1,548,816	Total.....	1,085,905,900

Mr. Chairman, I would that every Republican on this floor could go with me to some sections of the once prosperous and favored Southland of ours, where the moth and rust of the pension agent do not corrupt, and where the river and harbor thieves do not break through nor steal. There they would see the broad acres of bottom land grown up with weeds, and they would wonder why such ruin and desolation stalks abroad. Where are the tobacco hills that once dotted these favored uplands; where the yellow grain that waved as far as the eye could reach, like a golden sea under the soft Southern breezes; where the wide expanse, burdened with the green blades of Indian corn; where the cheerful and contented farmer, with his loving wife and rosy-cheeked children? All are things of the once happy past.

Instead, we turn to the picture of the bent form and saddened face of the farmer, as with tearful eye he looks upon the careworn and pinched face of his devoted wife, and around them their hungry and ragged children, and we ask, "Is this to continue, and why is it so?" The answer comes, "Yes, and because of high taxes for protection's sake."

Mr. Chairman, while there are other causes which lend their aid to this scene of misery and discomfort (and I need not refer to them here), still suffice it to say that this bill but makes existing conditions worse. The scene of the once busy and prosperous life is all changed, and where the music of the mower and the song of the scythes were heard in harvest time, the fallow deer now has its home. The cabin chimney is fallen down, and the vine-clad porch is lost under the moss-hidden roof, while birds are building their nest in the eaves as they sing the song of desertion and decay.

The mill wheel is still and the water is wasting its energy as the monotonous sound of its ripples adds to the gloom that surrounds this once happy home. We turn to go and see "Taxation"

written on every leaf and every stone. Above the door of the cabin, where once hung a frame in which were embroidered the words "Home, Sweet Home," an epitaph now hangs, "Died of taxation." Then our thoughts would turn to the trusts, and we would remember the prophecy of the Apostle James:

Go to now, ye rich men, weep and howl for your miseries that shall come upon you.

Your riches are corrupted, and your garments are moth-eaten. Your gold and silver is cankered; and the rust of them shall be a witness against you, and shall eat your flesh as it were fire. Ye have heaped treasure together for the last days.

Behold, the hire of the laborers who have reaped down your fields, which is of you kept back by fraud, crieth: and the cries of them which have reaped are entered into the ears of the Lord of sabaoth.

Now, Mr. Chairman, in conclusion, I beg your party to heed this prophecy of the Apostle James before it is too late, and, in the language of one who has watched the march of nations, their rise and fall, remember that—

He who plows must plow in hope, and woe betide the country where the furrows are watered with the tears of a strong man's despair.

#### The Tariff and Money.

#### SPEECH

OF

HON. WILLIAM T. ZENOR,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 31, 1897,

On the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. ZENOR said:

Mr. CHAIRMAN: Since the assembling of this Congress in extraordinary session it has been apparent to all observers that it has not been possible for Representatives, other than the majority of the members of the Ways and Means Committee, to make even a casual, much less a critical and careful analysis, of the provisions of this bill. A bill covering 163 pages and containing 50,750 words is, within one hour after convening of the session, laid upon the desks of members, without any time granted the minority of the members, of that committee to make and submit a minority report or frame a substitute for the majority; and with marvelous haste we are forced to proceed to its consideration. But this is not the most extraordinary phase of this proceeding.

From the Committee on Rules, made up of a majority of Republicans, came in precipitate haste a report restricting the right of general debate to twenty minutes without the right of amendment, and only permitting this privilege when we reached the reading of the bill by paragraphs under the five-minute rule, when it must have been apparent, and clearly within the contemplation of the majority of the committee, that but a small portion of the numerous items and paragraphs of the bill could be read under this restriction, and that members would be cut off and deprived of the right of amendment to a very large portion of this bill, as will be demonstrated by the result.

Members having constituents vitally interested in certain items and articles included in paragraphs of certain schedules will not have the opportunity of presenting amendments or be able to be heard at all before the close of the right of amendment, there being less than 26 pages of the 163 reached under the operation of this arbitrary and despotic rule up to this point, and the time about exhausted. Complaint has been made because of this denial of the rights of members, and through them the rights of the people represented upon the floor of this Hall; and this not alone from the members of the minority party, but protests in violent and menacing language have been heard from the opposite side of this Chamber, for many of them felt that they had wittingly or unwittingly been made the victims of a majority policy by which their constituents were to be disfranchised, that they little dreamed would follow the enforcement of rules intended to apply only to this side of the Chamber.

But be this as it may, aside from the principle involved, the threatened destruction of the sacred right of representation upon the floor of this Hall, the invasion of the sacred right of public discussion, and the danger always more or less involved in the denial of the privilege of open, free, and fair debate upon all questions affecting the people in their property rights, their liberties, and their pursuits, which every measure imposing the burdens of taxation, directly or indirectly, involves, the question, so far as this measure is concerned, is not very important; for it has evidently been the purpose of the Republican party, since the result of the late election was known, to make a radical and revolutionary change in the system and policy of the Government in regard to taxation. It matters but little what latitude of discussion was granted in the consideration of this measure, it would

evidently afford but little satisfaction to those who are opposed to this line of policy, except perhaps to expose the inequalities and unfair discriminations in the rates of duty imposed and the folly of attempting to restore prosperity to the people through the medium of adding additional burdens, already too onerous to be borne.

It is and has been from the beginning the suspicion of this side of the Chamber that the policy of the majority was to railroad this measure through the House in defiance of all opposition, regardless of its consequences; and this suspicion has, in view of the tactics resorted to, become a settled conviction; but we wish to suggest that while impotent to resist and powerless to amend those features of the bill that we believe are in the interest of the cool and calculating avarice of trusts and combines, or at least must result in fostering their growth and tightening their grip upon the people of this country, that the people are not clamorous for the relief proposed in this measure of legislation; that you have mistaken the paramount issue involved and the questions decided at the recent election, to which you owe your recent victory.

It was not and is not higher taxes that they demand; the great agricultural classes and labor of this country need not be told—they already too well understand—that they have no part or parcel in any advantages accruing from such a revision of the tariff as here proposed; they fully understand that any revision of tariff laws raising duties beyond the requirements of ample and sufficient revenues for the support of the Government is not meant for their good and can not operate to their advantage, but must necessarily inflict upon them and all others not brought within the range of their paternal care additional distress, hardships, and oppression. The great mass of the people can not and will not fail to understand that it is utterly illogical and impractical to raise the prices of the products of one class of persons and increase profits by law of certain industries without at the same time making some other people contribute to the payment of these increased prices and profits; and the arguments have long since been exhausted in the attempt to conceal, under the guise of reducing the price of the manufactured article and enhancing the value of labor, the national curse of exacting from one section or class or classes of its citizens tribute and tithes to be paid out and distributed to the favored few.

The claims recently made by the leaders of the Republican party in the late campaign that what the country wanted was to open the "mills" and not the "mints" was answered by the reply that it would be useless and stupid to start the mills with an already overstocked and glutted market, a surfeit of goods, the product of the factories and mills, with no market and no purchasers, and this, too, because of the want of means with which to purchase of the thousands and millions of people who stand in urgent need of these things; that it was not more manufactured goods and the products of the mills to store away in the warehouses or lie idly upon the shelves that were demanded to relieve the prevailing distress, but a greater, more abundant supply of the means with which to buy—more money and a more equitable distribution of money and the profits of the industries of the country.

This has been the contention; this has been the ceaseless but unheeded cry of the great mass of the people for years; this has been the appeal coming up from every quarter and section, except from the great money centers of the East, the home center of paternal favoritism, of the policies of high protection, who have amassed colossal fortunes through the medium of laws such as is now proposed. And for more than twenty years the demand for relief through reforms in our financial system and a restoration of the free coinage of silver as part of the money of ultimate and final redemption has been met by the gold barons of the East and their allies, the Government bondholders and national banks, with the Shylock plea that personal and national honor forbid. They insist that the only honest dollar is the dollar that has been made the measure of all values by the most defiant, high-handed, and treacherous betrayal of a public trust in all the annals of our history. They insist that having secured an advantage under that beneficent system of lawmaking and law-producing wealth, and having utilized the opportunities given them thereby to change the standard of values of all kinds and species of property, although the act by which it was accomplished has ever remained under the shadow of a grave suspicion, and has often and openly been charged by those who have since become its apologists as being the result of a criminal conspiracy, that that act has all the sanctity and binding force of the ancient laws of the Medes and Persians, and must not be permitted to be disturbed by the agonized and agonizing cries coming up all over the land from its helpless and despairing victims.

The only way to obtain these results is by the inauguration of some policy that will inflate, if you please, the values of all kind of tangible property.

Think of the spectacle presented to the country by the efforts of the Republican party in trying to restore prosperity by restoring high and prohibitory rates of duty upon foreign imports in

order to encourage American industries, while at the same time refusing to legislate to give the people relief from their oppressions at home, occasioned by the destruction of about one half of their money and the appreciation of the remaining half to double its purchasing power; relief from the ruinous and self-destroying policy of the gold standard, that has carried with its increasing purchasing power a corresponding depreciation of all forms of property until it has reached the point where the farmer, the debtor, and taxpayer must all suffer a common loss, a loss they are not able to sustain and will not long be able to endure, for the consequences of this policy can not well be foretold.

It has well-nigh destroyed all hope upon the part of many who are involved from ever being able to pay their debts and liquidate the mortgages upon their small homes. It has so impoverished the great majority of farmers through the reduction of prices for their products and shrinkage in the values of their small holdings that they contemplate the future with constant dread and apprehension, not knowing how soon the title to their homes will be transferred through the sheriff's sale to satisfy the debt that but for this heartless policy of contraction and appreciation would have disappeared without a shadow of trouble.

I know it is charged by the advocates of the present existing gold standard, and will be repeated and reiterated, that the Democratic party and its Populistic allies who supported the Chicago platform are a wild, reckless, and irresponsible set of fellows, who are in favor of a cheap 50-cent dollar; in favor of a debased and depreciated currency; in favor of paying their debts in dishonest dollars; in favor of the Government, as well as all other debtors, paying their creditors in cheap and depreciated money, including the pensions due the nation's defenders. These are charges with which they have delighted to entertain their credulous followers since their sudden, though not miraculous, change of heart wrought at the St. Louis convention, in obedience to the mandates of the money power and its allied forces, the trusts and combines, whose masterful influence molded and shaped the financial plank of that convention, as they have molded and shaped the schedules of this Dingley bill.

Sir, the patience and forbearance of a long-suffering people must not be mistaken. Their patriotism and devotion are strong, earnest, and sincere; their trust and confidence rest in the firm belief that those intrusted with authority will not long permit the wrongs from which they suffer to go unrebuked. They demand that this shall be done, but the constant and persistent refusal to consider their distressful condition by those in authority, and to enact some measures of legislation for their relief, will ultimately weaken, if not destroy, that sentiment of attachment and reverence for the law and the lawmaking power which has borne such bitter fruit in the experience of other countries, to whose melancholy fate we may not prove an exception if we do not relent.

We may not intend any such consequences; certainly we do not. But we can not safely ignore the interests, the welfare, and prosperity of the great mass of the people by juggling with interpretations of the results of popular elections and seeking to justify or excuse, under dishonest pretenses, our further refusal to join in their demands for relief so far as that relief depends upon legislation. And I feel sure that, whatever is asserted to the contrary, one means of affording this desired relief—whatever others there may be—is the enactment of a law for the restoration of bimetalism; a law that will authorize the free and unlimited coinage of the standard silver dollar and place it back in our monetary system as it stood prior to its demonetization; and with this remedial legislation will come a revival of confidence, hope, and energy among the great agricultural interests, and values will again be restored to property and the products of enterprise of all kinds.

It is more money in circulation, more money to do business upon, but above all, better and higher prices for what the farmer sells—a better market. This is what the people want, instead of higher taxes and higher protection, as proposed by the Republican party. Prior to that about face of the Republican party you will search in vain for a single public declaration of any prominent leader of that party committing it to the gold-standard policy. It was professedly as strong, if not more zealous, in its assertion of the doctrine of the double standard, consisting of gold and silver as the basic money of the country, as the Democratic party. But this profession of friendship, while in many instances, no doubt, sincere on the part of many members of that party, yet as a party inconsistent with its record and at variance with every official act that has characterized its legislative history.

Cowering under the fear of openly declaring in its platform to what it was thoroughly committed in its legislative policy, it for many years successfully practiced this deceit upon the rank and file, and not until its last convention did it have the courage to avow its true and real position upon this question; and even then sought to placate and hold within its following many who otherwise would have abandoned its support but for the declaration, never

intended to be observed, in favor of international bimetalism. If it was meant to carry out in good faith this declaration as a principle or policy of the Republican party, why is it that in the message of the newly elected President, convening Congress in this extraordinary session upon the grounds of the urgent needs of the Government for more revenue, and the general depression existing throughout the country, from which there ought to be immediate and appropriate relief, the President did not mention and call attention to this subject, as he did to the tariff legislation?

You will search in vain every line and page of this message for an intimation in favor of immediate action of Congress upon this subject; not one word upon the question. Again, it will be found impossible to reconcile the policy of the majority of this House with any design or purpose to keep in good faith this pledge made to the people, for it is the open and avowed policy of the management of the majority side to refuse to legislate upon any and all subjects aside from the passage of the appropriation bills and what is already known as the Dingley tariff bill; and to this end the Speaker has refused to appoint any committees except those necessary to the passage of the bills mentioned, without which, as a matter of course, no general legislation can be done, though the members of this House will in all probability be compelled to remain in attendance until late in the summer, waiting on the Senate to consider and pass this and the other bills already passed this House. If this course does not forestall the policy of the party so recently intrusted with the responsibility of legislation, and clearly indicate its predetermined purpose not to permit any financial nor any other general legislation at this session, then I fail to interpret the situation aright.

In the course of the discussion upon this bill it is clearly disclosed by the leaders upon the other side of this Chamber that it is not the opinion of the Republican party that any change of the present policy as regards the gold standard is demanded, for it is openly and repeatedly stated, almost in every speech made upon that side of the Chamber, that the result of the last election was decisive upon the question of sound money and conclusively shows that the country wants no change; that the result of that election is, and must be, understood as conclusively settling the question against the free coinage of silver. Upon this interpretation the majority seem to rely as an excuse for their refusal to enter upon any financial legislation at this time. If you are correct in your view of this verdict at the ballot box, you may find ample justification for your present course; but if you mistake as to this, as we sincerely believe you do, then you may find much difficulty in explaining your action.

The Democratic party now, as in the last campaign, aided, if you please, by the cooperation of the Populist party, because in full harmony with us upon the all-important and paramount question of the money and financial system which we believe and contend should be restored to the people of this country as the first and most essentially important reform upon which must rest the future hopes and reliance of the masses for relief, will not permit this question nor this issue to be obscured by any attempt upon the part of our adversaries to evade either its importance or its responsibilities. I am fully aware that during the last campaign it was in many parts with the utmost reluctance that Republican speakers would admit that the money question was at all involved in the contest, or that this had anything to do with the prevailing hard times.

You were exceedingly anxious then and equally as ingenious now in the employment of evasions in trying to divert public attention from this subject. Then, as now, you preferred to emphasize the importance of the tariff, and claimed then, as you now pretend, that all the calamities that afflicted the country were brought about by President Cleveland and the Democratic party in supplanting the McKinley tariff law with the Wilson bill, in changing the policy from high protection to freer trade, when the only difference between the two was a little less than 10 per cent on an average.

The country will not be willing to accept now as the only relief offered them a return to still higher tariff rates than the McKinley bill levied as a full performance of the promise and pledge of your party. The country will demand the enforcement of the policy proposed in your platform, namely, the restoration of bimetalism by international agreement, which you asserted you were in favor of, and which you contended could only be accomplished through this foreign intervention. If, as your party declared, the gold standard is not calculated to promote the best interest or suitably adapted to be incorporated as a fixed principle in our monetary system and should be discarded for the bimetallic system as soon as that could be accomplished through an international agreement, then your party will have failed to give the country that full measure of relief to which they are entitled unless in addition to your tariff legislation you go further, and pass some measure at the earliest opportunity looking to the accomplishment of this end.
